In Memory

It is with sadness that we report the death of Kieran Dugan, who was an associate editor of *Current Biography* from 1964 to 1988 and served as our consulting editor, writing obituaries, until this year. Kieran crafted obituaries that not only succinctly summarized the facts of their subjects' lives but also illuminated their uniqueness and offered glimpses of the influences they had had on their societies and cultures. Kieran loved the job of researching and writing *Current Biography* obituaries, and—to use a cliché that in his case rings true—he put his heart and soul into all of them. We will miss Kieran greatly for his diligence and meticulousness, his warmth and good humor, and his fine writing.

His former wife, Sheila Dugan, has provided us with the following obituary, written to approximate Kieran's own style:

Kieran Dugan, June 27, 1925–April 26, 2009, a writer who brought his own concise style to *Current Biography* in the early 1960s and, after formally retiring and moving to Oregon, continued to write the publication's obituary section. He will be best remembered for his understated wit and outstanding memory.

Born Thomas Russell Dugan in Taunton, Massachusetts, he entered the Holy Cross religious order at Notre Dame, Indiana, in 1943, where, as Brother Kerran, he attended the University of Notre Dame and taught in its high-school system. During that time he began to hone his writing skills, producing many articles for Catholic magazines. Upon leaving the order, in 1951, he chose to keep the name under which he wrote, changing the spelling to "Kieran." Three years later, after furthering his education at Université d'Angers, in France, and Howard University, in Washington, D.C., he joined the staff of Dorothy Day's pacifist commune and newspaper, the *Catholic Worker*. He became an anti-war activist and worked with groups seeking racial equality. In 1958 he met and married the former Sheila Johnson. Although they eventually divorced, they remained lifelong friends. He is survived by his daughters and sons-in-law, Marianne Dugan and Michael Fields, Felicia and Tom Hazel, Ianthe Dugan, Elena Dugan and William Shaw, and Erika and Denny Gordon; his grandchildren, Selena Dugan-Fields, Sophie DiStefano, Trevor Williams, Caitlin Cooper, and Audrey Hazel; his brother, Edward Dugan, and sister, Carol Lucet; his former wife, Sheila Dugan; and his cat, Brandy. He was preceded in death by his grandson Evian DiStefano in 2006.

PREFACE

The aim of *Current Biography Yearbook 2009*, like that of the preceding volumes in this series of annual dictionaries of contemporary biography, now in its seventh decade of publication, is to provide reference librarians, students, and researchers with objective, accurate, and well-documented biographical articles about living leaders in all fields of human accomplishment. Whenever feasible, obituary notices appear for persons whose biographies have been published in *Current Biography.*

Current Biography Yearbook 2009 carries on the policy of including new and updated biographical profiles that supersede earlier articles. Profiles have been made as accurate and objective as possible through careful researching of newspapers, magazines, the World Wide Web, authoritative reference books, and news releases of both government and private agencies. Immediately after they are published in the 11 monthly issues, articles are submitted to biographees to give them an opportunity to suggest additions and corrections in time for publication of the *Current Biography Yearbook.* To take account of major changes in the careers of biographees, articles are revised before they are included in the yearbook.

Classification by Profession–2009 and *2001–2009 Index* are at the end of this volume. *Current Biography Cumulated Index 1940–2005* cumulates and supersedes all previous indexes.

For their assistance in preparing *Current Biography Yearbook 2009*, I thank the staff of *Current Biography* and also the staffs of the company's Computer and Manufacturing departments.

Current Biography welcomes comments and suggestions. Please send your comments to: The Editor, *Current Biography*, The H. W. Wilson Company, 950 University Ave., Bronx, NY 10452; fax: 718-590-4566; E-mail: cthompson@hwwilson.com.

Abrams, J.J.

June 27, 1966– Filmmaker; screenwriter; producer

Address: c/o William Morris Agency, One William Morris Pl., Beverly Hills, CA 90212

"A lot of people in Hollywood have one great idea, one great movie in them," Steven McPherson, the president of ABC Entertainment, told David Segal for the *Washington Post* (May 5, 2006). "J.J. [Abrams] gives you four great ideas over lunch. Plus he's talking about the soundtrack, the amusement ride, the video game. He thinks about the whole world of entertainment." Abrams came to prominence in the 1990s, as the screenwriter for the feature films *Regarding Henry* (1991), *Forever Young* (1992), and *Gone Fishin'* (1997). In the latter part of the decade and the early 2000s, he amassed television credits, as the writer and producer of three critically acclaimed shows: the coming-of-age drama *Felicity*, the spy thriller *Alias*, and the cult series *Lost*. In 2006 Abrams made his feature-film directorial debut with the third installment of the *Mission: Impossible* franchise. Recent projects include the 2009 adaptation for the silver screen of the *Star Trek* television series and the Fox science-fiction TV show *Fringe*.

Jeffrey Jacob Abrams was born on June 27, 1966 in New York City and grew up in Los Angeles, California. Both of his parents are television producers. His father, Gerald W. Abrams, a former retail commercial contractor, has earned Emmy Award nominations in the outstanding-miniseries category for *Family of Spies* (1990) and *Nuremburg* (2000), and his mother, Carol Abrams, a former lawyer, is the president of Let's Pretend Productions. "I became incredibly comfortable and familiar with that world, so it never felt like anything but second nature to be on a set. Even as a little kid, all I ever wanted to do was be one of those guys on any level," Abrams told Jake Coyle for the Associated Press (May 4, 2006). He began making 8-mm movies at age eight, after witnessing a special-effects shoot during a visit to the Universal Studios backlot with his grandfather. "I remember thinking, 'There is nothing in the world that's cooler than this,'' he recalled to Jacob Bernstein for *W* magazine (May 1, 2006). When Abrams accompanied his father to his office on the Paramount Pictures studio backlot, he would watch rehearsals for *Happy Days* and *Mork and Mindy*, among other television shows. "I would go and I would be so absolutely desperate to be on the floor and be working, doing something, it was like a physical pain, I so wanted to do it. And I didn't care what. I wanted to be there and do anything," Abrams told an interviewer for madeinatlantis.com.

Upon graduating in 1984 from Palisades Charter High School, in California, Abrams enrolled at Sarah Lawrence College, a small liberal-arts school in Bronxville, New York. During his senior year he and his classmate Jill Mazursky, the daughter of the director/producer Paul Mazursky, wrote a screenplay about an escaped criminal who impersonates the advertising executive whose wallet and keys he has found. Shortly after receiving his bachelor's degree, in 1988, the 22-year-old Abrams sold the screenplay to Touchstone Pictures. Two years later *Taking Care of Business*, a big-screen comedy directed by Arthur Hiller and starring James Belushi, was released. Though the film failed to achieve box-office success, it officially launched Abrams's filmmaking career.

Abrams's sophomore effort, *Regarding Henry* (1991), a dramatic film that he also co-produced, is about a ruthless, arrogant New York City lawyer (played by Harrison Ford) who undergoes a life change following a gunshot wound to the head. The film, directed by Mike Nichols, opened to mostly negative reviews. Kenneth Turan, writing for the *Los Angeles Times* (July 10, 1991), called the movie's script "fundamentally schematic and undemanding," while Jack Mathews described it as "contrived" in his review for New York *Newsday* (July 10, 1991). Abrams also wrote and co-produced *Forever Young* (1992), which starred Mel Gibson as a 1930s test pilot and grieving widower who submits to a cryogenics experiment and awakens decades later.

After serving as the producer of the romantic comedy *The Pallbearer* (1996), which was directed by his childhood friend Matt Reeves, Abrams collaborated with Jill Mazursky on the screenplay for the lighthearted, forgettable *Gone Fishin'* (1997), in which Danny Glover and Joe Pesci played two friends who embark on a disastrous fishing trip. Abrams had better box-office success with the Bruce Willis/Ben Affleck blockbuster *Armageddon* (1998), for which he co-wrote the screenplay, with Jonathan Hensleigh. The film, about a group of oil drillers who travel in space to intercept a giant asteroid before it destroys Earth, grossed more than $500 million domestically. Also in 1998 Abrams made his first foray into television, with *Felicity*, a drama he created and penned with Reeves. The two conceived the story as a feature film before deciding that it would work better on the small screen. Their script centered on the title character, a recent high-school graduate, played by Keri Russell, who forgoes college and medical school and instead follows her high-school crush to New York City. During the show's four-year run (1998–2002) on the WB network, *Felicity* earned a Golden Globe nomination for best television show (1999); the same year Russell won a Golden Globe Award for best performance by an actress in a TV series. Abrams also produced the 1999 independent film *The Suburbans*, a comedy.

Alias, Abrams's next television project, was conceived as an edgier version of the critically acclaimed *Felicity*. "In college there are no stakes. You are supposed to play around, fail classes, get drunk and so on. But there is nothing really at stake," Abrams told Donald Clarke for the *Irish Times* (May 5, 2006). "So, I suddenly thought: what if Felicity was a spy? What if a college student was also an agent?" The spy drama, which revolved around Sydney Bristow (played by Jennifer Garner), a secret agent for a classified division of the CIA, earned favorable reviews when it premiered, on ABC, on September 30, 2001. Miki Turner wrote for the *Fort Worth Star-Telegram* (September 30, 2001), "This series . . . is riveting from start to finish." Robert Bianco, writing for *USA Today* (September 28, 2001) added, "Hip, bright and done with a great deal of flair, *Alias* is like some candy-colored—and very violent—comic book come to life. Created and directed by *Felicity*'s J.J. Abrams, who was clearly looking for a change of pace, *Alias* exhibits an assured artistic style without crossing into the artsy/phony territory of NBC's *UC: Undercover*. *Alias* has no pretensions to anything but entertainment." Although *Alias* was not a huge ratings hit, the series earned a loyal cult following—particularly among the coveted 18–49 demographic—during its five seasons on the air. It also won several awards, including a best-actress Golden Globe for Garner in 2002.

In 2004 Lloyd Braun, then the chairman of ABC Entertainment, contacted Abrams about developing a fictional show modeled after the CBS reality show *Survivor*. "I thought if I were to do this, it would be far too weird and borderline sci-fi and he'd never want to do it. But his response was no, I love that idea," Abrams told Tony Horkins for the London *Guardian* (August 6, 2005). In one week Abrams wrote the outline for *Lost*, and over a 12-week period, he wrote, cast, and shot the show's two-part first episode, which was filmed in Hawaii at a cost of about $12 million—making it one of the most expensive pilots ever produced. Abrams thrived under the fast-paced shooting schedule. "That was an incredible challenge," he told Horkins. "Though the lack of development *was* one of the greatest assets for *Lost*—we didn't have time to second-guess what we were doing and sanitize it into a more middle-ground story." (Abrams's hectic schedule prevented him from accepting an invitation from the actor Tom Cruise to pen the screenplay for an adaptation of H. G. Wells's 1898 novel, *War of the Worlds*.)

Although Braun's approval of the pilot episode's multimillion-dollar budget presumably led to his firing, his decision proved to be wise. Premiering on September 22, 2004, *Lost* was a critical and ratings success, attracting an average of 16 million viewers per episode in its first year. In a review for the *Palm Beach (Florida) Post* (September 22, 2004), Kevin D. Thompson wrote, "Forty-eight plane crash survivors are stranded on a desert island that's probably not on any map. It's a mysterious desert island, where spine-tingling creature noises can be heard in the lush jungle. The 48 strangers are scared. They're hungry. They're confused. And they're not alone. That's the delicious premise for *Lost*, ABC's intriguing *Lord of the Flies*-like new series from J.J. Abrams." The series quickly amassed a loyal following for its continuing, mysterious plot line and technique of intercutting present-day scenes with flashback or flash-forward scenes regarding the characters' lives off the island. *Lost* won several industry accolades in 2005, most notably two Golden Globes, in the categories of outstanding directing and outstanding drama series, and a Writers Guild of America Award for outstanding achievement in writing for a television series (drama).

Also in 2005 Cruise contacted Abrams again and offered him the chance to direct the third installment of the *Mission: Impossible* franchise, in which Cruise stars as special agent Ethan Hunt. After being granted creative control, Abrams teamed up with his fellow *Alias* writers Alex Kurtzman and Roberto Orci and retooled the screenplay into a more character-driven story. "In the first two movies you've learned almost nothing about who the character is. That's not going to be the case with this movie," he explained to Laura Miller for the *New York Times* (November 21, 2004). *Mission:*

Impossible III, Abrams's feature-film directorial debut, opened on May 6, 2006. Two months later Abrams signed a five-year contract with Paramount Pictures and a six-year deal with Warner Bros.; the two contracts totaled more than $55 million. Also in 2006 Abrams served as an executive producer of the ABC dramas *What About Brian* and *Six Degrees*, which were both canceled in 2007.

For his next big-screen project, *Cloverfield*, Abrams collaborated with Reeves and Drew Goddard, a fellow writer on *Lost* and *Alias*, on the script about a monster terrorizing New York City. The screenplay was inspired by Abrams's visit with one of his sons to a store in Tokyo, Japan, that contained toys based on the classic 1950s fictional Japanese movie monster Godzilla. "I loved monster movies when I was a kid, and I had not seen a monster movie since then that made me feel anything, where I got that rush. I just desperately wanted to have that sensation," he told Mark Olsen for the *Los Angeles Times* (January 16, 2008). In his film Abrams included visual references to the September 11, 2001 terrorist attacks on the U.S., and he shot *Cloverfield* in cinema-verité style to give the appearance that the footage was being recorded on a handheld camera by one of the characters. During the marketing campaign for the film, Abrams kept the monster's identity a closely guarded secret. *Cloverfield* was released in the U.S. in January 2008 and grossed more than $170 million worldwide.

Also that year Abrams had success on the small screen, as the writer and producer for the Fox science-fiction series *Fringe*, which was renewed for a second season in May 2009—the same month that Abrams's next film, *Star Trek*, the 11th film installment in the science-fiction franchise, was released to overwhelmingly favorable reviews. "Summer officially hits warp speed with *Star Trek*, a burst of pure filmmaking exhilaration that manages to pay homage to the classic 1960s TV series and still boldly go where no man, William Shatner and Leonard Nimoy included, has gone before. I couldn't be more surprised," Peter Travers wrote for *Rolling Stone* (May 6, 2009). "After six TV series and 10 movies . . . the franchise has been milked so hard, it's a wonder the udders haven't dried up and disintegrated. So how does this newbie break the jinx? By plugging in livewire J.J. Abrams, a director of style and substance . . . who fuels this origin story with killer action, bracing wit and a sense of true discovery."

Abrams's next television project is a medical drama based on Jerome Groopman's book *The Anatomy of Hope: How People Prevail in the Face of Illness* (2003). He signed on as director and executive producer of the series, which was scheduled to air on HBO in 2009. Abrams will also produce the film "Morning Glory," starring Harrison Ford and Rachel McAdams; the fifth installment of the *Mission: Impossible* franchise (which he will also co-write); and a sequel to *Star Trek*.

Abrams lives in Pacific Palisades, California, with his wife, Katie McGrath, and their three children, Henry, Gracie, and August. An avid musician, Abrams composed and recorded the theme songs for *Alias* and *Lost*.

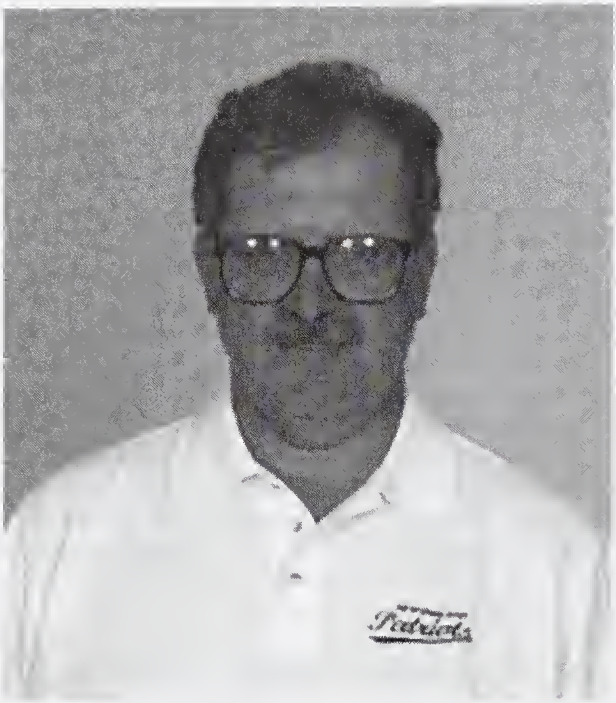
Adams, Ernie

1953(?)– Director of football research

Address: New England Patriots, One Patriot Pl.,
Foxborough, MA 02035

In football circles Ernie Adams, the director of football research for the New England Patriots, is regarded as a mysterious figure. No one with that title appears on the payroll of any other team in the National Football League (NFL), and many Patriots players and staff members profess not to know precisely what his job entails. According to the Patriots' on-line media guide, Adams handles the team's "computer analysis" and "statistical evaluation"; when Andy Cline, a reporter for the *Alumni Magazine* (Fall 2004) of the Phillips Academy, which Adams attended, asked him to describe his responsibilities, he replied, "Think of things to help us win." Adams's ideas have proved to be very helpful indeed: since his arrival, in 2000, the Patriots have been ranked among the most intelligent and disciplined teams in the league, and between 2001 and 2008, they played in five Super Bowls and won in four. Adams works closely with Bill Belichick, the Patriots' head coach, who is



New England Patriots

Ernie Adams

widely regarded as one of the greatest and most innovative coaches in the history of the NFL. During the football draft Adams provides Belichick with information about the players in the pick; before games he helps the coach come up with game plans designed with the opposing teams' particular strengths in mind; and during games he views the field from the press box and makes suggestions directly into Belichick's ear.

Adams and Belichick have been good friends since they met in 1970, at the Phillips Academy, a private secondary school where they both dreamed of becoming coaches of professional football teams. Except for two stints with Wall Street firms, Adams has been employed by NFL teams since his college graduation, in 1975. He served as an unpaid "graduate assistant" with the Patriots (1975–79), quarterback coach with the New York Giants (1979–85), and offensive coordinator with the Cleveland Browns (1991–96) before rejoining the Patriots in 2000. A football enthusiast since early childhood, he possesses knowledge of all aspects of the game that is arguably unrivaled by anyone in the league, as are his skills at analyzing live and recorded games, evaluating players' abilities, and applying his findings. "His ability to recall particular instances is the best I've ever seen," Bill Rees, then the San Francisco 49ers' director of player personnel (he now holds the same position with the Cleveland Browns), told Pete Thamel for the *New York Times* (January 16, 2004). "He could tell you a play from when he was at Northwestern [University] in 1974 that someone ran against him, the down and distance, the yardage and how they blocked it." As Belichick's right-hand man, Adams told Thamel, "I stick my finger in as many pies as possible. It's important that I don't have everyone in the organization thinking I'm in their way. If I come to a conclusion on something, I go to Bill and give it to him." He also said, "The reason we're successful here is everyone is on the same page. We sing from the same hymn, the same notes. No one deviates."

Ernest Adams was born in Brookline, Massachusetts, in about 1953 to Helen Adams, a schoolteacher, and her husband, a career navy officer. According to Wright Thompson, writing for the ESPN magazine *eTicket* (2008, on-line), his father "wasn't around much." As a child Adams was fascinated by naval tactics and football tactics and read whatever books he could find on those subjects. From kindergarten through eighth grade, he attended the Dexter School, a private boys' school in Brookline. He began playing football when he was in third grade; even then he understood that in order to win a game, many players must function in ways for which they will not get credit. Adams's favorite play, introduced to his team at his request, was one in which he served as a decoy so that an offensive lineman could receive the ball. As an adolescent and teenager, Adams read many additional books about football, even obscure texts, such as a primer of which there were probably only about 400 copies in print; called *Football Scouting Methods*, the primer was written by Steve Belichick, Bill's father, a former navy football coach. Adams also sent away for game films and built a large collection of them.

By the time Adams enrolled at Phillips Academy, a prestigious boarding school in Andover, Massachusetts, he had acquired an encyclopedic knowledge of football history, strategy, and tactics. While he became one of the best Latin scholars at the school (which is often referred to as Andover), it was obvious to many people that he was destined to become a football coach. "Andover is the kind of place, all those young men with all that talent and ambition, where everyone knows who is going to be who in later life . . . ," H. G. Bissinger, one of Adams's classmates at Andover, told David Halberstam, who included that quote in his book *The Education of a Coach* (2005), a biography of Bill Belichick. "Ernie was going to be the coach, he loved coaching, he was always doing Xs and Os." Adams played for the school's football team as a lineman and spent his free time in the library dissecting football plays, watching and analyzing televised games, and sneaking into Boston University's stadium to watch that school's football team practice. Adams also went to coaching clinics where most of the participants were at least 10 years his senior. His near-obsessive interest in football, along with his old-fashioned way of speaking and his quirky attire, which included high-top football cleats, earned him a reputation as an eccentric.

In the fall of 1970, during his senior year, Adams met Bill Belichick, who was completing a one-year pre-college program at Andover. Belichick, he discovered, was as passionate about football as he was. The two became close friends and spent many hours together watching football films and drawing the formations of famous football plays. That season the Andover team, for which both Adams and Belichick played (the latter as center), went undefeated. Adams devoted his senior thesis to an analysis of all of Andover's offensive plays during the season. One of the highlights of his senior year was a dinner to which Steve Belichick treated his son and Adams. Adams revealed to the elder Belichick his goal of becoming a football coach; Steve Belichick was struck by the young man's passion for and knowledge of the sport.

Adams enrolled at Northwestern University, in Chicago, Illinois, in 1971. As an undergraduate—with the help of a reference from Steve Belichick, who described him as "very, very smart," according to Halberstam—he secured a position as a manager for the school's football team. At the end of his freshman year, Adams sent the head coach, Alex Agase, a letter asking if he could help coach the Northwestern team the next season; he also included a lengthy discussion of the importance of "the drop-back quarterback movement in the T-formation football." (In T-formation football, three running backs line up in a row about five yards behind the quarterback, who is positioned behind the center, so that they form the shape of the letter T. In the drop-back quarterback movement—used mostly by professional teams, whose offensive strategies rely on passing to a greater extent than do college teams—the quarterback "drops back" behind the line of scrimmage before throwing.) Agase and his assistant coach, Jay Robertson, were impressed by what he wrote and even more so with Adams himself, whom they had not met until then. "He was eighteen, I think, and I still don't know what the bottom of his knowledge is, what it is that he doesn't know, because he knows so much," Robertson told Halberstam. "I was impressed by everything about him—his intelligence in all areas, his work ethic, and his innate decency." Adams was assigned the task of "breaking down" film for Northwestern: that is, watching a single football play dozens of times to determine precisely what each player on the field was doing at any particular moment and speculating as to why. Adams proved adept at analyzing the action during live as well as filmed games, and at 18 he was made a full-fledged scout for Northwestern. Adams became a de facto assistant coach, helping during practice sessions and guiding visiting high-school coaches on tours of Northwestern. He became so influential that in 1973, when Agase became the head coach at Purdue University, he asked Adams to leave school to become his assistant. Adams turned that offer down and graduated from Northwestern in 1975, with a B.A. degree in education.

In the spring of 1975, thanks to Robertson's intercession, Adams won a job interview with staff members of the New England Patriots. He overcame the disadvantage of his lack of college playing experience by displaying his expertise, enthusiasm, and initiative: in a single day he memorized the team's entire offensive playbook. Amazed, officials offered him an unpaid position as as a "graduate assistant." His duties included analyzing film for the Patriots and preparing scouting reports about the tactics of opposing teams. "Every Monday morning, I got the most thorough report that I have ever gotten from anybody in my whole career in football," the former Patriots coach Chuck Fairbanks told Bob Hohler for the *Boston Globe* (February 3, 2008). Adams also stood out because he had intellectual interests outside football, among them Latin and finance. (Every morning he committed to memory much of the information from his newspaper's stock-market pages.) Adams grew particularly close to Ray Perkins, the Patriots' receivers coach in 1976 and 1979, who regarded Adams as "a kind of football genius," as he told Halberstam. The Patriots posted winning records during each of the three seasons that Adams spent with the team in the 1970s; in 1976 and 1978 they placed first in their division.

When Perkins became the head coach of the New York Giants, in 1979, Adams was the first person he asked to join his coaching staff. At the age of 26, Adams became the Giants' quarterback coach, even though he had never played that position. That same year, in the opinion of various observers, he in effect launched the career of Bill Belichick, who had been working for the Denver Broncos, by persuading Perkins to hire him; Belichick accepted the post of special-teams coach. He and Adams often jogged together after practice while discussing strategy. In time Adams was promoted to director of pro personnel, with responsibilities including the assessment of talent on the Giants and other teams. He presented a game plan for each team the Giants played and, by observing the Giants at practice, tried to determine whether his plans had a chance of success. For four of the six seasons Adams spent with the Giants, the team struggled to post a winning record. In 1985 the team's new head coach, Bill Parcells, helped the Giants finish in first place in the American Football Conference (AFC) East Division. Still, Adams reportedly became frustrated in New York; in 1986 he resigned to take a lucrative job as a bond trader at the Wall Street firm Mabon, Nugent & Co.

In 1991, when Belichick took his first head-coaching job, with the Cleveland Browns, he immediately hired Adams as his offensive coordinator. The Browns had a complicated history. Since 1961, when the public-relations and television executive Art Modell had purchased the team and put many controversial changes into effect, the Browns had not once made it to a Super Bowl. At the end of the 1990 season, the team's win–loss record was 3–13. Hired with a five-year contract, Belichick developed, with Adams, a long-term plan to improve what had become an undisciplined and downtrodden team. The two became known for their ability to work steadily for hours on end. "During the season, we usually start around 7 in the morning and can go as late as midnight," Adams told a reporter for the *Columbus (Ohio) Dispatch* (December 26, 1994). "That's Monday through Thursday." As a behind-the-scenes strategist, Adams gained a reputation as mysterious; Modell famously offered $10,000 to anyone who could tell him precisely what Adams was doing to earn his salary. In 1996 Belichick was fired, after clashing with Modell and the media, failing to improve the Browns' record significantly, and making the unpopular decision to fire Cleveland's much-loved quarterback, Bernie Kosar, in 1993. Adams quit, again taking a highly paid job on Wall Street.

Belichick next took assistant-coaching jobs with the New England Patriots and then the New York Jets, both under Bill Parcells, each team's head coach. In February 2000, when Belichick became the head coach of the Patriots, Adams left his job in finance to join Belichick's coaching staff. "I'm not money-motivated," Adams told Hohler. "I don't look at life in terms of how many chips I can pile up. The important thing in life is to challenge yourself and enjoy what you're doing." The Patriots were considered weak in 2000; when the team's owner, Bob Kraft, asked Adams whether he thought the team would make the play-offs that season, Adams said no, according to Halberstam. That year the Patriots won five games and lost 11.

In the following off-season, Adams and Belichick acquired several new players in the 2001 draft, including the defensive tackle Richard Seymour and the offensive tackle Matt Light, and worked to build a club based on a philosophy of team-oriented, ego-free football. The backup quarterback Tom Brady, a late-round draft pick in 2000, became the team's starting quarterback when the former starter Drew Bledsoe was severely injured in a collision on September 23, 2001. Brady emerged as an outstanding talent, leading the team to a season record of 11–5. In the 2001 Super Bowl, the Patriots faced the St. Louis Rams, who had defeated the Patriots handily during the regular season and were widely favored to win. After poring over films of Rams' games, Adams concluded that the team's offense revolved around giving the ball to the team's strong running back/receiver, Marshall Faulk, at critical moments. On the plane ride to New Orleans, Louisiana, the week before the Super Bowl, Adams and Belichick (who had drawn the same conclusion) devised a strategy in which the Patriots' defense would hit Faulk during every play, even if he had not gotten the ball, in order to wear him down. The scheme worked. In Super Bowl XXXVI Faulk gained just 76 yards, and the Patriots won, 20–17, with a last-second field goal. After the victory, Belichick, aware that the win was more the result of strategy than sheer talent, hugged Adams and said, as quoted by Halberstam, "Can you believe we won the Superbowl against the Rams with this team?" The Patriots won the Super Bowl again in the 2003 season, against the Carolina Panthers, and in the following year, in a contest with the Philadelphia Eagles.

Adams has discovered ways to make improvements in areas designated by Belichick, often seeking out the latest thinking on strategies, leadership styles, and statistical analysis. When the Rutgers University statistics professor Harold Sackrowitz made public the results of a study that might help teams determine, for example, when a moment was right to try for a field goal, many NFL coaches consulted him, but none asked him as many questions as Adams. "He got to what was really important," Sackrowitz told Hohler. "He wanted to know where the gray areas were and where it was black and white." "With every team in the NFL working full time to study their opponents and prepare their teams to compete, the margins are small," Adams told Andy Cline, "and it is often the details and the subtleties that can give one team an edge."

Before the start of the 2007 season, the Patriots acquired several strong players, including the former Oakland Raiders receiver Randy Moss; some of them agreed to take significant pay cuts to join a team that had gained a reputation for the cohesion of its coaching staff and roster. The Patriots broke many records in 2007 and became the first NFL team to complete a season with a perfect record of 16–0. (In 1972 the Miami Dolphins had a perfect record, but at that time there were only 14 games in a season.) Then, on February 3, 2008, in Super Bowl XLII, the New York Giants won an upset victory, 17–14, over the Patriots. During the 2008 season the Patriots struggled more than they had the year before; Brady sustained a season-ending knee injury in the opening game, against the Kansas City Chiefs, and was replaced for the rest of the season by the second-stringer Matt Cassel. Despite a winning record of 11–5, the team failed to advance to the play-offs. In 2009 Brady returned as a starter; as of October 20, 2009 the Patriots were in first place in their division, with four wins and two losses.

On September 10, 2007, a day after a game between the Patriots and the Jets, the Patriots were accused of having videotaped the Jets' offensive signals from a sideline location. (It is permissible to view a team's signals from the press box or on the field, but recording signals during a game violates NFL rules.) An NFL investigation into "spygate," as the taping became known, revealed that the Patriots' coaching staff had been taping signals for most of Belichick's tenure with the team. In September 2006 the NFL vice president of football operations, Ray Anderson, had sent out a memo stating that coaches were prohibited from videotaping during games; Belichick maintained that he had misunderstood the rule. He claimed to have been acting in accordance with a certain NFL Constitution bylaw that prohibits a team from using videotaped information about an opponent in the same game in which it was collected, but not from videotaping signals in the first place or from using the information in future games. Though a number of observers came to Belichick's defense—in part because videotaping opponents' signals is widely practiced in the NFL—Belichick was fined $500,000, the greatest sum ever levied against an NFL coach. The Patriots were fined $250,000, and the team was prohibited from participating in the first round of the 2008 draft.

Further investigations, conducted by the NFL in May 2008 and including an interview with the former Patriots' video assistant Matt Walsh, revealed that the tapes of signals were not used during the Jets game itself but were given to Adams. Belichick told the CBS reporter Armen Keteyian (May 17, 2008) that Adams would often glean information from such tapes "as one part of a very broad—hundreds of things that are put into preparation and game-planning." The spring 2008 investigations turned up no evidence of wrongdoing for which the team had not already been fined. When a *Boston Globe* (February 23, 2008) reporter asked Adams whether he was surprised that the spygate controversy remained a "hot topic," he responded, "You guys need something to put in your papers. . . . I'm sure you guys will keep grinding it out."

Thamel reported that Adams wears oversize glasses and "look[s] more like a doctor or a dentist than a football coach." An intensely private man, Adams does not use a computer and rarely uses the phone. He relishes watching films in the solitude of his office, and when the Patriots moved into new offices, Adams traded his second chair for an extra bookshelf, to discourage visitors from staying very long. Adams lived with his mother in Brookline until her death, in 2004.

Adele

May 5, 1988– Singer; songwriter

Address: c/o September Management, 80
Chiswick High Rd., London W4 1SY, England

The British singer/songwriter Adele has often been compared to the legendary American vocalists Ella Fitzgerald and Etta James—whom she has cited as her two biggest influences—and to the award-winning British crooner Amy Winehouse. To many of her fans, however, Adele is "simply too magical to compare her to anyone," Matthew Chisling wrote for the All Music Guide (on-line). In February 2009, when she was three months short of 20, Adele won a Grammy Award for her debut album, *19*, and another for the single "Chasing Pavements"—in what a critic for *Maclean's* (March 23–30, 2009) termed "a rare triumph of talent over sales in the music industry." "Smashing" is the word a critic for *People* (June 23, 2008) chose to describe *19*, writing that it "seamlessly weaves R&B, pop, jazz, folk and blues into her own torchy tapestry. With a knockout voice that's rich and supple, robust and sultry, it's hard to believe that this singer-songwriter is barely out of her teens." Adele, widely quoted as saying that she has always liked to be the center of attention, Adele completed a rigorous course of study at a performing-arts high school in London, England. Recordings of several of her songs that she uploaded to her MySpace.com profile won her a contract in 2006 with the independent British label XL, whose roster also includes Radiohead, White Stripes, and M.I.A. In 2008 she was named the first recipient of the Brit Awards Critics' Choice Award. Several of Adele's singles became hits in her native land before the release of *19*. The album landed at the top spot on British charts as soon as it went on sale; in the U.S., where it was released five months later, it drew only moderate attention until October 18, 2008, when Adele performed on the TV show *Saturday Night Live*. Thanks to the appearance of the 2008 Republican vice-presidential nominee, Governor Sarah Palin of Alaska, on the same installment, the show attracted 17 million viewers—its biggest audience in years. Sales of *19* immediately jumped;

Dave Hogan/Getty Images

they received another huge boost after Adele's Grammy wins, and the record has achieved platinum status (selling more than a million copies). In early 2009 150 British music critics ranked Adele first in the BBC's "Sound of 2008" poll of most promising new music talent.

Adele Laurie Blue Adkins was born on May 5, 1988 in Tottenham, an area of North London, England, and spent her early years in Brixton, a multiethnic community in South London. Her mother, Penny, was an unmarried 18-year-old at the time of Adele's birth. Her father, a Welsh dockworker, took no part in her upbringing. To eke out a living, her mother worked odd jobs, among them freelance masseuse and furniture maker. "She's the most supportive mum ever," Adele told Hamish Bowles for *Vogue* (April 2009). "She's my best friend." Beginning at a very young age, Adele told Stuart Husband for the London *Sunday Telegraph* (April 27, 2008), she was fascinated by singers' voices: "I used to listen to how the tones would change from angry to excited to joyful to upset." She liked to sing for her mother and her mother's friends, sometimes imitating the styles of the Spice Girls, Gabrielle, and other pop acts. During Adele's childhood her mother married; her husband works for Wickes, a British home-improvement chain, and Adele has a half-brother. When Adele was 11 the family moved to West Norwood, a mostly residential section of South London. There, she attended a rough comprehensive school, where she was the only white student in most of her classes. Outside school she was exposed to R&B and hip-hop acts including Destiny's Child, Faith Evans, and P. Diddy.

When Adele was 14 her mother enrolled her at the tuition-free London School for the Performing Arts and Technology, an independent school funded by both the government and charitable donors. Known as the Brit School, it is the alma mater of many British recording artists, among them Amy Winehouse, Leona Lewis, Kate Nash, Katie Melua, Imogen Heap, and members of the indie pop bands the Feeling and the Kooks. In addition to taking courses in singing, as a student there Adele studied the guitar and learned how recording studios operate, how to interpret legal contracts, and other aspects of the music business. "I never got bored, so I was never getting in trouble," she told Hamish Bowles. "I'd always had a problem taking teachers seriously, whereas there, you wanted to listen to them because they'd all done it, practiced whatever subject they were teaching."

One day while browsing in a bargain bin at a local record shop, Adele came upon albums by the soul and jazz masters Etta James and Ella Fitzgerald. She bought them because the singers' photos on the covers—in particular, their hairdos and James's eye makeup—appealed to her. "Chart music was all I ever knew," she told Husband. "So when I listened to the Ettas and the Ellas, it sounds so cheesy, but it was like an awakening. I was like, oh, right, some people have proper longevity and are legends. I was so inspired that as a 15-year-old I was listening to music that had been made in the Forties. The idea that people might look back to my music in 50 years' time was a real spur" to her in aiming for a singing career. She told Hamish Bowles that hearing James and Fitzgerald sing "changed my life. It was so heartfelt compared with the music I'd been listening to." She began listening to recordings by other "old legends," as she thought of them: Roberta Flack, Diana Ross and the Supremes, and Johnny Cash.

During that period Adele lived next door to and frequently jammed with Shingai Shoniwa, the British vocalist and bassist for the indie rock band the Noisettes, who encouraged her to write her own songs. She received further support from a friend of her stepfather's, a music producer who was impressed by the skill with which she sang the Blondie song "Heart of Glass." With the producer's help she recorded a demo of her first song, "Hometown Glory," an ode to Tottenham that she wrote at age 16. One of Adele's friends then posted the song on the social networking site MySpace.com, where it drew a lot of attention. On Christmas Eve 2004 Adele launched her own MySpace page, as a way to gauge reactions to her songs.

One night after she graduated from the Brit School, in May 2006, Adele performed at the Troubadour, a small London club, as the opening act for her friend Jack Peñate. With seating for about 100 people, "the whole room was packed," Adele recalled to Bowles. When she began to sing, "the whole room was silent, and I saw these random girls just, like, crying. That was the time I was like, 'Oh, my God, this is amazing, can't live without it.' There's nothing more freeing than playing live, nothing." In November 2006, largely on the strength of three songs on her MySpace page, Nick Huggett, then the A&R (artist and repertoire) manager of XL Recordings, recruited Jonathan Dickins of September Management to be her manager and signed her to a contract for her first album.

In early 2007 Adele started performing at small pubs in North London. She then toured in the United Kingdom with the singers Jamie T., Raul Midon, Devendra Banhart, Amos Lee, and Keren Ann and the band Exist. That June she made her U.K. television debut on the popular BBC2 music program *Later . . . with Jools Holland*, on the same day that the major music stars Paul McCartney and Björk also appeared. Adele performed her song "Daydreamer," about a bisexual friend with whom she had fallen in love. The song later received a lot of airplay on BBC Radio 1. Writing for the London *Observer* (January 20, 2008), Casper Llewellyn Smith praised "the way she stretched the vowels" in her singing of "Daydreamer," as well as "her wonderful soulful phrasing [and] the sheer unadulterated pleasure of her voice." In October 2007 Adele released "Hometown Glory" as her debut single, on the Pacemaker Recordings label (founded by the British singer Jamie T, a friend of hers); the limited-edition, seven-inch vinyl also featured the song "Best for Last" on its B-side. According to Llewellyn Smith, "Daydreamer" proved that Adele is "a rare singer." That month she also embarked on her first U.K. headlining tour. Meanwhile, the British press had begun referring to her as "the new Amy Winehouse." (Winehouse's two dozen awards include five Grammys, won in 2007.)

In December 2007 some 1,000 music-industry insiders and critics named Adele the first recipient of the Critics' Choice Award; the newest of the so-called Brit Awards, it was introduced by the British Recording Industry Trust to recognize the most promising among the artists or groups poised to release their debut albums in 2008. At the Brit Awards ceremony, held in February 2009, Adele performed with Mark Ronson, one of the producers of *19* and a winner of the 2008 Brit Award for best British solo artist.

In Great Britain *19* was released on XL Recordings in January 2008. The 12 songs on *19*—including "Chasing Pavements," "Cold Shoulder," "Crazy for You," "Melt My Heart to Stone," "First Love," and a cover of Bob Dylan's "Make You Feel My Love"—are mostly about heartbreak, or, as Brett Johnson wrote for the Associated Press (2008, on-line), "the twisted emotions that spring from tainted love." The disk immediately resonated with British music fans and entered the U.K. charts at number one. "Chasing Pavements," which arrived on the U.K. singles charts at number two and remained there for three consecutive weeks, was inspired by Adele's discovery that her boyfriend had cheated on her. After pummeling him in a club late one night, she left the premises and began to run. "I was running down Oxford Street," she recalled to Melinda Newman for the *Washington Post* (February 1, 2009, on-line). "I get cabs everywhere, right? So for me to be running is a big thing; it's never going to happen again. And I thought 'What are you doing? You're just chasing a road.' And then I thought, 'Oh, chasing pavement. I like that,' and went home and wrote it." In the chorus she sings, "Should I give up, / Or should I just keep chasing pavements / Even if it leads nowhere? / Or would it be a waste / Even if I knew my place / Should I leave it there? / Should I give up, / Or should I just keep chasing pavements / Even if it leads nowhere?" Thanks in part to unexpected support from the hip-hop superstar Kanye West, who uploaded the video of "Chasing Pavements" onto his personal blog, the song remained in the United Kingdom's Top 10 for seven weeks.

After signing a U.S. deal involving a collaboration between Columbia Records and XL Recordings, Adele embarked on a short North American tour to promote *19*. The album was released in the U.S. in June 2008; produced by Ronson, Eg White, and Jim Abbiss, it was greeted enthusiastically, for the most part. Matthew Chisling wrote for the All Music Guide Web site, "Bluesy like it's no one's business yet voluptuously funky in a contemporary way, Adele rocks out *19* with a unique voice and gritty sound that dazzle endlessly. Synthesizing blues, jazz, folk, soul, and even electric pop, Adele mystifies through her mature songwriting skills and jaw-dropping arrangements. . . . This debut isn't an empty promise of a career; *19* is a fleshed-out stunning portrayal of a young woman with a talent beyond her years who deserves immense credit for a unique style that never fails. A beyond stellar debut in both quality and originality." Ron Hart, in a review for the Pop Matters Web site (July 1, 2008, on-line), proclaimed, "This is music . . . that clear blows the roof off any other blue-eyed R&B album that has come out of Great Britain since Macca [Paul McCartney] got down with Stevie Wonder [in 1982]." The critic for *Variety* (June 10, 2008, on-line), Phil Gallo, wrote that Adele has "an affinity for strains of soul music largely forgotten by U.S. artists. Her phrasing, for the most part, veers toward the softer R&B singers, a bit of Dionne Warwick, Minnie Ripperton and Dusty Springfield sharing a pot of tea in a plush and comfortable room. *19* is a most agreeable, soulful album. . . . Yes, Amy Winehouse comparisons are justified in spots. But whereas Winehouse, Kate Nash, Lily Allen, Joss Stone and Duffy are plowing single plots of R&B soil, Adele is taking a broader perspective, assimilating various pre-disco R&B styles to create a field with the potential to bear fruit for years to come." Earlier, Andy Gill, the chief rock critic for the London *Independent* (January 25, 2008, on-line), had offered a different perspective: "The iTunes/MySpace revolution has speeded up the pop process to such an extent that a new act barely has time to draw breath before being acclaimed in ever-growing hyperbole and seeing their debut album go straight to No 1. But, though superficially impressive, this is often disastrous for the artist's long-term prospects, destroying the vital growth period during which musicians develop their performing acumen, musical tastes, and the kind of world-view obtained only through years of hard knocks. Instead, artists are now catapulted up the pop mountainside and expected to grab hold of whatever outcrop is within their grasp, and grimly hold on for dear life. . . . Adele . . . is the latest recipient of this hype. Am I the only one to find something slightly sinister in the way we're being brow-beaten into unanimous acclaim for her modest talents?" Although he deemed *19* to be "a passably decent debut," he complained, "It's pretty much the same sort of shallow-but-showy vocal facility favoured by TV talent contests that's being praised, [Adele's] delivery sounding like a convenient blending of Winehouse's R&B chops with Nash's mockney mannerisms: interesting in small doses (notably 'Hometown Glory'), it becomes irritating over a full album. In sparse settings, as here, [Adele] struggles to sustain one's interest—a situation not helped by a narrow, youthful focus on romantic themes. There's a limit to the appeal of teenage crushes, brush-offs and frustrations, and Adele sails blithely beyond it."

To promote *19* in the U.S., Adele appeared on television on programs including *The Today Show, The Late Show with David Letterman,* and *The View.* The album debuted at number 56 on *Billboard*'s Top 200 album chart, and sales remained mediocre. Then Adele landed a coveted guest spot on the October 18, 2008 installment of *Saturday Night Live.* Buildup to that particular show grew enormous amid rumors, which turned out to be correct, that the Republican vice-presidential nominee, Sarah Palin, would make a guest appearance that night. (Contributing to viewers' heightened expectations were the half-dozen cameos on the show in which Tina Fey, a former *Saturday Night Live* writer and actress, had performed impressions of Palin.) That night Adele sang both "Chasing Pavements" and "Cold Shoulder," and in the following week, the popularity of *19* rose tremendously. As of mid-2009 it had sold upwards of 1,200,000 copies worldwide. In December 2008 Adele was nominated for four Grammy Awards: song of the year, record of the year, best new artist, and best female pop vocal performance; she won the last two, for *19* and "Chasing Pavements," respectively. At the awards ceremony, held in February 2009, she performed "Chasing Pavements" with the country musician Jennifer Nettles.

In the course of an extensive U.S. tour in June 2009, Adele performed with Chaka Khan and Janelle Monae in the Hollywood Bowl, in Los Angeles, California. The following September she performed with Jennifer Hudson, Jordin Sparks, Kelly Clarkson, Leona Lewis, and Miley Cyrus at the Brooklyn Academy of Music, in New York City, as part of a VH1 "Divas" concert that raised money for the Save the Music Foundation. Adele's sophomore album is scheduled to be released in 2010.

Adele has spoken openly about being overweight. "It doesn't bother me . . . ," she told Sylvia Patterson for the London *Observer* (January 27, 2008). "I'm very confident. Even when I read people saying horrible stuff about my weight. Until I start not liking my own body, until it gets in the way of my health or stops me having a boyfriend then I don't care. I'm fine. Since I was a teenager I've been a size 14 or 16, sometimes 18. And it's never been an issue in any of the relationships I've had." "Fans are encouraged that I'm not a size 0—that you don't have to look a certain way to do well," she told Hamish Bowles, whose article about her for *Vogue* was accompanied by photos of Adele by the celebrated portrait photographer Annie Liebovitz. Adele currently shares an apartment with her mother in the Battersea section of London.

Allen, Ray

July 20, 1975– Basketball player

Address: Boston Celtics, 226 Causeway St.,
Fourth Fl., Boston, MA 02114

While he has not attained superstar status, Ray Allen, a 12-year veteran guard of the National Basketball Association (NBA), has developed a reputation as one of the league's "pure" shooters—meaning that there is a deftness and smoothness to his shots. "He's among the league's most explosive players. His skill at dropping in floaters and finger rolls makes him more dangerous still. Give him a step and, with the most elegant of strokes, he'll bury a medium range jumper. Give him two steps and he'll hit the three pointer . . . ," L. Jon Wertheim wrote for *Sports Illustrated* (February 26, 2001). "It's not that he's elusive or shy—in fact, as far as star athletes go, he is uncommonly engaging and personable . . . ," he continued. "This prompts an obvious question: Why is Allen still on the B-list of NBA stars? . . . . A player this well-rounded and with this much charisma ought to be on the front lines of the league's marketing offensive, scooping up endorsements by the handful." As an undergraduate Allen helped the University of Connecticut's Huskies gain three consecutive Big East Conference regular-season titles while becoming the fourth-leading scorer in the school's history, with 1,922 points, and the school's single-season record holder for three-pointers scored (115). During his first 10 NBA seasons, Allen averaged 21.2 points per game for the Milwaukee Bucks and the Seattle SuperSonics. Traded to the Boston Celtics in 2007, Allen helped lead the team in 2008 to their 17th title and first NBA championship in more than 20 years.

Wortheim partly answered his own question about Allen when he wrote, "His enthusiasms and experiences are so disparate and often incongruous that no coherent profile emerges. Allen admits his interests are all over the map, but he figures it's because that's where he spent his childhood." The third of five children, Walter Ray Allen Jr. was born on July 20, 1975 to Walter and Flora Allen in Merced, California. His father was a welder and

Stephen Dunn/Getty Images

Ray Allen

machinist for the U.S. Air Force, and Allen spent his childhood living on military bases in the U.S. and abroad. "We moved around a lot, which is pretty natural when you're a military kid," he told Perry M. Lamek for *Milwaukee Magazine* (February 27, 2003). "We were in most places for about three years, then we'd have orders to go to another place. I was born in California, then we moved to Germany, then to Oklahoma, then to England, back to California and then to South Carolina." While in grade school Allen participated in sports, including baseball, football, and soccer, at the youth-activities centers on the various bases. At the age of about nine, he started playing basketball with his father and brother. His father first noticed Allen's talent for basketball when the boy was 12. "He was . . . playing in a tournament at Edwards [Air Force Base, in California's Mojave Desert]," Walter Allen told Pat McKenna in an interview posted on the Air Force Link Web site. "Ray was dribbling down the floor on a fast break, and he had a man wide open underneath the basket. I was thinking 'throw it, throw it,' but didn't know if he saw the man. All of [a] sudden, he fires this no-look pass downcourt for the score. I thought, 'Man, how'd he see that guy?' At that point, I knew." When Allen was 13 years old, he and his family transferred to Shaw Air Force Base, in South Carolina, where he honed his basketball skills at the base gym during pick-up games against former college and high-school players. (Allen often found ways to circumvent the gym's minimum age requirement of 16.) On the court he felt compelled to score five lay-up shots with each hand before leaving. During his youth and early adulthood, he hid that compulsion, later diagnosed as mild obsessive-compulsive disorder, from his family and friends. "I was almost embarrassed by it," he told Jackie MacMullan for the *Boston Globe* (April 20, 2008). "It was just always beating inside my brain when I was young and trying to make sense of who I was."

At age 15 Allen attended Hillcrest High School, in Dalzell, South Carolina, where he played on the varsity basketball team. As a junior he averaged 25.5 points and 11.5 rebounds per game. Allen, whose on-court performance earned him the high-school nickname "Candy Man," improved on those numbers during his final year of high school (1992–93), averaging 28.5 points and 13.5 rebounds while helping lead his team to a 27–4 record and a state championship title. After receiving scholarship offers from a number of top colleges, including the University of Kentucky, he decided to attend the University of Connecticut, in Storrs, where he played point guard for the Huskies men's basketball team, under head coach Jim Calhoun. Allen, a business-education major, struggled offensively in his rookie season (1993–94). Following a four-game scoring drought, during which he scored 32 percent from the field and had only nine field-goal attempts, Allen began toting a basketball with him everywhere he went, adopting a practice of the legendary Milwaukee Bucks player Oscar Robertson. "I wanted to be more familiar with the ball, more comfortable with it," he told Ken Davis for the *Hartford (Connecticut) Courant* (November 25, 1994). Allen regained his offensive stroke; at the end of the season, he averaged a team-leading 12.6 points and 4.6 rebounds in 34 regular-season games and also shot 40.2 percent from three-point range, earning Big-East All-Rookie Team honors. That same year he helped the Huskies win the Big East regular-season title. Allen attributed his first-year success to the greater emphasis on Huskies' forward Donyell Marshall, who planned to forgo his senior year to enter the 1994 National Basketball Association (NBA) Draft. "When I came in, I wasn't the focal point," Allen told Davis. "Donyell was. That's where I think I got my confidence, because a lot of people didn't pay attention to me."

Allen's offensive numbers improved during his sophomore season (1994–95)—his first year as a starter. He averaged 21.1 points, 6.8 rebounds, 2.3 assists, and 1.9 steals per game, helping the Huskies capture their second consecutive Big East regular-season championship and advance to the National Collegiate Athletic Association (NCAA) Tournament's Elite Eight. Next came Allen's breakthrough 1995–96 season, in which he established himself as one of college basketball's most dominant shooting guards by averaging 23.4 points, 6.5 rebounds, and 3.3 assists per game. At the 1996 Big East Championships, held at New York City's Madison Square Garden, Allen scored the dramatic game-winning shot to give the Huskies a one-point victory (75–74) over the Georgetown University Hoyas. "That was the best feeling I've ever had in basketball," he told Percy Allen for the *Seattle Times* (February 15, 2004). "Hitting the game-winning shot in the Garden is something that probably every kid dreams about." For his effort Allen was named to the All Big East First Team and the All-America First Team and also earned player-of-the-year honors from the Big East and United Press International (UPI).

At the end of his junior year, Allen announced that he was leaving the University of Connecticut to enter the 1996 NBA Draft, joining other top-ranked college players, including Allen Iverson, Kobe Bryant, Stephon Marbury, Marcus Camby, Shareef Abdur-Rahim, Antoine Walker, and Derek Fisher. Even as a team member for three years rather than four, Allen currently ranks as the Huskies' fourth all-time leading scorer (1,922 points) and also holds the single-season record for three-point shots made (115). (His number was retired in February 2007, as part of a halftime ceremony honoring the accomplishments of 13 former players and three former coaches. Prior to that he was named honorary captain of the 25-member UConn All-Century Basketball Team.)

In 1996 Allen was selected fifth overall by the Minnesota Timberwolves, who subsequently traded him, along with the center Andrew Lang, to the Milwaukee Bucks for the fourth pick, Marbury. The trade announcement elicited loud boos from Bucks' fans. "That was one of the most discouraging moments of my life, to know that I got booed," he told Jason Wilde for the *Wisconsin State Journal* (March 22, 1998). "I cried. I did, really. That whole night. . . . I've always gone to a place where people wanted me and I felt wanted. And that was the one time where I was like, 'If the people don't want me, then trade me.' My heart was broken. I didn't know what I should do. I talked to my parents and a couple of my friends, and I just decided to go out there and play and be myself. All I could do was try to keep a smile on my face and play like I played in college."

Allen had a strong debut season (1996–97), appearing in all 82 regular-season games and averaging 13.4 points—third-best on the team. He led the team in games started (81) as well as three-point percentage (.393) and free-throw shooting percentage (.823). Allen was selected to play in the NBA Rookie All-Star Game, in which he scored eight points. During that period he unexpectedly embarked on an acting career, after the film director Spike Lee, a famously avid New York Knicks fan, approached him about trying out for the starring role in *He Got Game*, about a promising basketball player and his estranged relationship with his father, a recently paroled convict (played by Denzel Washington). (Allen was among a group of young NBA players, including Marbury, Iverson, and Kevin Garnett, who were contacted about the part.) After a successful audition Allen underwent five weeks of intensive private training with an acting coach to prepare for the role. Allen's cinematic debut earned critical raves.

Prior to his sophomore NBA season (1997–98), Allen found himself tangentially involved in a controversy, following claims by John Lounsbury, a sports agent, that he had given thousands of dollars in cash and gifts to several UConn college players, among others, during the 1995–96—a violation of NCAA rules. Allen denied any wrongdoing and was never charged. Two of his former Huskies teammates, Kirk King and Ricky Moore, received suspensions; the University of Connecticut was stripped of its victories in the 1996 NCAA tournament and ordered to pay more than $90,000.

Although Allen averaged 19.5 points, 4.9 rebounds, and 4.3 assists per game in the 1997–98 season, the team, which finished with a 33–46 record, failed to make the play-offs for the second consecutive year. During the strike-shortened 1998–99 season—the result of the failure by NBA players and owners to reach a new collective-bargaining agreement—Allen played in all 50 regular-season games, posting an average of 17.1 points and 4.2 rebounds. His free-throw percentage (.903) was fourth-best in the league. With a record of 28 wins and 22 losses, the Bucks advanced to the NBA Playoffs, where they suffered a first-round defeat by the Indiana Pacers. In February 1999 Allen signed a six-year, $71 million contract extension with the Bucks, despite their struggles. "You can be on a winning team and you may not be content," he told Steve Aschburner for the Minneapolis *Star Tribune* (March 19, 2000). "I hope I'm an example in this league. . . . People said maybe I should go to L.A. if I want to do more movies. But I said why, when I made that one while I was with Milwaukee. It's all in the will of the man. If you really want to accomplish something, you can." The 23-year-old Allen negotiated directly with the team's owner, Herb Kohl, a U.S. senator, retaining the agent's standard 4 percent commission and instead hiring lawyers to examine the contract. In the 1999–2000 season Allen averaged 22.1 points, 4.4 rebounds, and 3.8 assists per game to help the Bucks earn their second consecutive NBA play-off berth. Allen was voted to his first All-Star Game and was a member of the 1999 U.S. Men's national team, which won a gold medal at the 2000 Summer Olympics, in Sydney, Australia. The following season (2000–01), for the fifth consecutive year, Allen appeared in every regular-season game, solidifying his reputation as one of the NBA's most durable players. Averaging 22 points per game, he also showed improvement in his rebounding numbers—from an average of 4.4 to 5.2 rebounds—and in his assists, from an average of 3.8 to 4.6. He also provided a powerful offensive complement to the guard Sam Cassell, who averaged 18.2 points per game, and the forward Glenn Robinson, who also finished the season with a 22-points-per-game average. Their combined efforts helped the Bucks (52–30) claim their first division title since 1986. The team advanced to the Eastern Conference finals, losing the deciding seventh game (108–91) to the Philadelphia 76ers, who advanced to the NBA finals against the Los Angeles Lakers, the eventual champions. In 18 play-off games Allen averaged a team-high 25.1 points, a career-best 6.0 assists, and 1.33 steals in 42.7 minutes per game. During the regular season Allen led the team in average number of minutes played (38.2); he also set career highs in field-goal percentage (.480) and average number of assists per game (4.6), steals per game (1.51), and rebounds per game (5.1). He made his second consecutive appearance at the All-Star Game; he also entered and won the event's three-point-shootout competition.

After narrowly missing the NBA finals in 2001, the Milwaukee Bucks (again led by Allen, Cassell, and Robinson) failed to advance to the play-offs during the 2001–02 season, losing 14 of the final 19 games and finishing with a disappointing 41–41 record. Allen averaged 21.8 points, 4.5 rebounds, and 3.9 assists per game. Despite being sidelined for nearly two weeks by tendinitis in his left knee, which ended his consecutive-games streak at 400, Allen achieved career-bests in three-point percentage (.434), three-pointers made (229) and attempted (528). He also led the league in three-point field goals made (229) and ranked number 10 in three-point percentage (.434). In the off-season Robinson was traded to the Atlanta Hawks for Toni Kukoc, Leon Smith, and a 2003 first-round draft pick. The Bucks continued to struggle during the first half of the 2002–03 season. Allen's field-goal-percentage numbers dropped, from .462 to .437; he also saw a drop in three-point percentage, from .434 to .395. In an interview for *Sports Illustrated*, the Milwaukee Bucks' coach, George Karl, criticized what he perceived as Allen's lack of killer instinct. "I call him Barbie Doll because he wants to be pretty. He's a great player, but he cares too much about having style, making highlights and being cool. Basketball isn't about being cool. It's a tough, competitive game, and to win you have to be mean, you have to be an assassin, and that's not Ray."

In February 2003 Allen was traded to the Seattle SuperSonics (now called the Oklahoma City Thunder). Appearing in 29 games Allen averaged 24.5 points, 5.6 rebounds, and 5.9 assists for the Sonics, who finished the season with a 40–42 record. (In 47 games with the Bucks that season, he had averaged 21.3 points, 4.6 rebounds, and 3.5 assists per game.)

In November 2003 Allen underwent arthroscopic surgery on his right ankle, causing him to miss the first 25 games of the season. Despite that setback he finished the season with solid numbers, averaging 23 points, 5.1 rebounds, and 4.8 assists per game. In 2004–05 he averaged 23.9 points (10th-best in the league) and 4.4 rebounds per game to help lead the Sonics to a 52–30 record and the Northwest Division title. The Sonics advanced to the Western Conference Semifinals, where they lost in six games to the San Antonio Spurs, the eventual champions. In the summer of 2005, Allen signed a five-year, $80 million contract to remain in Seattle. Additionally, Nate McMillan left the Sonics to become the head coach of the Portland Trailblazers. In the 2005–06 season, under head coaches Bob Weiss and Bob Hill, the Sonics finished with a 35–47 record and failed to earn a postseason berth. Allen, however, performed well, averaging 25.1 points per game—10th-best in the league for a second straight season. In July 2006 the franchise was sold to an Oklahoma City–based investment group. Allen's 2006–07 season was cut short after 55 games when he underwent surgery to remove bone spurs in both of his ankles. At the time he was averaging 26.4 points per game—a career high. Allen's tenure with the Sonics ended on June 28, 2007—NBA Draft day—when he was traded to the Boston Celtics, along with the Sonics draft pick Glen Davis, for Jeff Green, Wally Szczerbiak, and Delonte West. During his four seasons (2003–07) with the Sonics, Allen was the team's scoring leader and appeared in every All-Star Game. The Celtics made headlines again in July, with the acquisition of the power forward Kevin Garnett from the Minnesota Timberwolves, in exchange for the center Theo Ratliff, the guard Sebastian Telfair, and the forwards Al Jefferson, Ryan Gomes, and Gerald Green, as well as two first-round draft picks and a monetary settlement.

Following those deals the Celtics, who had finished last (24–58) in the Eastern Conference's Atlantic Division during the 2006–07 season, were instantly regarded as play-off contenders. However, many questioned whether the team's success would be hampered by a clash of egos involving Allen, Garnett, and the shooting guard Paul Pierce concerning playing time. "I've never been insecure," Allen was quoted as saying by Marc J. Spears in the *Boston Globe* (September 21, 2007). "I've never been the jealous type. I don't have a big ego. . . . We have to absolve ourselves of any animosity or any egos out there on the floor. If we win, everybody will ride together on whatever float it is on the championship parade." In his first season with the Celtics, Allen, who was still recovering from the surgery on both ankles, struggled with his perimeter shooting. He averaged 17.4 points and 3.1 assists per game in 73 regular-season appearances—his lowest scoring numbers since the 1998–99 season. He was the team's third-leading scorer, behind Pierce, who averaged 19.6 points, 5.1 rebounds, and 4.5 assists per game in 80 appearances, and Garnett, who averaged 18.8 points, 3.4 assists, and 9.2 rebounds per game in 71 appearances. However, Allen led the team in two categories: three-point percentage (.398) and free-throw percentage (.907). His offensive output helped propel the Celtics to a 66–16 record—a 42-game improvement over the previous season and the greatest single-season turnaround in NBA history—as well as the Atlantic Division title.

Allen struggled with consistency during the play-offs. In the first round of the Eastern Conference play-offs, he averaged more than 10 points in the first six games against the Atlanta Hawks but managed only seven points in the deciding game—a 99–65 victory for the Celtics. Allen's offensive struggles continued throughout the Eastern Conference semifinals against the Cleveland Cavaliers. He averaged only 9.3 points per game during the seven-game series, which the Celtics won, 4–2. With that victory the team advanced to the conference finals, against the Detroit Pistons. Allen regained his momentum, scoring more than 20 points in each of three games and helping his team eliminate the Pistons in six contests to advance to the NBA finals against the Los Angeles Lakers—the Celtics' first finals appearance since 1987. There, Allen continued his strong offense, averaging 20.3 points per game in the series. He tied a franchise record, scoring seven three-pointers in the championship-clinching Game Six victory (89–81), despite learning, just prior to Game Five, that one of his sons had been diagnosed with diabetes. Earlier that year he had also made his eighth NBA All-Star appearance, replacing Caron Butler. Allen, who has scored more than 15,000 points during his NBA career, is currently the second all-time leader in career three-point field goals in the league. He also ranks number eight all-time in the NBA in free-throw shooting percentage.

Although his production in the 2008–09 season was below his career averages in points, rebounds, and assists per game, Allen set personal bests in field-goal percentage (.480) and free-throw percentage (.952). In February 2009 he broke the Celtics' record for consecutive free-throws, with 72. (The previous record, 71, was set by Larry Bird.) That same month Allen made his ninth All-Star Game appearance, when he was called up to replace the injured Orlando Magic guard Jameer Nelson. In the play-offs that spring, after a miserable opening game against the Chicago Bulls, Allen scored 30 points in Game Two, including a game-winning three-pointer with two seconds left on the clock. While Allen and the Celtics moved on to the second round, they lost to the eventual finalists, the Magic, in seven games, due in part to the absence of Kevin Garnett, who was sidelined by injury. As Allen headed into the final year (2009–10) of his three-year contract, in which he stood to earn almost $20 million, observers speculated as to whether he would be offered an extension or would be traded. Allen's expressed preference was to finish his career in Boston.

Allen has garnered attention for his off-the-court philanthropic activities. He has established the Ray of Hope Foundation, which promotes community-based sports programs for young children. Additionally, he has served as a spokesman for junior NBA and WNBA organizations and for the Thurgood Marshall Scholarship Fund, a program that has provided millions of four-year grants to students attending dozens of traditionally African-American colleges. Allen's accolades include the Good Guy Award (2000–01, 2005) from the *Sporting News*, and the Joe Dumars Trophy (2003), also known as the NBA Sportsmanship Award. Allen lives with his wife, Shannon, and children, Walter Ray III, Walker Reese, and Tierra, his daughter from a previous relationship. In 2009 Allen was named to the board of trustees of the Joslin Diabetes Center. (His son Walker has Type 1 diabetes.)

Ambani, Anil

June 4, 1959– Indian businessman

Address: Reliance Communications, Dhirubhai Ambani Knowledge City, Navi Mumbai 400 709, India

The business tycoon Anil Ambani and his close relatives are among the families who have come to embody India's bold and booming economy. The second-richest man in India, after his brother, and for a time the sixth-richest in the world, Ambani has become one of the country's top celebrities. "Think of Rockefeller, Bill Gates and Howard Hughes combined," Gunjan Bagla, the author of *Doing Business in 21st Century India* (2008), told Martin Zimmerman for the *Los Angeles Times*

(June 19, 2008). "That's how well the Ambani family name is known in India." Scion of the Reliance Group, India's largest private company—which, by some estimates, accounts for between 3 and 5 percent of the country's gross domestic product (GDP)—Anil Ambani was for over two decades the flamboyant and charismatic public face of the corporation. Started from scratch by his father, Dhirubhai Ambani, Reliance came to be a world leader in industries including textiles, oil and petrochemicals, energy, telecommunications, information technology, finance, and entertainment; it provided an ambitious entrepreneurial model to a new generation of millions of postcolonial middle-class Indians. "There is a mystical aura that surrounds . . . [the Reliance] empire, a Midas touch ensuring that virtually every project it launches turns to gold," Dilip Bobb and Malini Bhupta wrote for *India Today* (November 30, 2004). "The house that Dhirubhai Ambani built almost from nothing has gone on to become the darling of investors, an all-powerful entity that had, as its legend grew, the power to change governments and ministers. It is not just India's biggest private-sector entity but the burnished showpiece of Indian enterprise. No other private corporation has managed to straddle the old and the new economy with such awesome success. Reliance is, in almost every which way, a corporate fairy-tale."

After Dhirubhai Ambani's death, in 2002, his sons, Mukesh and Anil—much like the brothers in many fairy tales—engaged in a public feud and bitter power struggle over their father's empire, with "the distinction between afternoon soap and corporate drama often blurring," the journalist Govindraj Ethiraj wrote on his blog *DatelineBombay* (June 27, 2005). "Mukesh is a projects and technical man," a senior Reliance official told Ravi Velloor for the Singapore *Straits Times* (December 16, 2004). "Anil is fantastic at marketing and raising money. Together they were a fine pair as long as the father was alive." By virtue of a deal brokered by their mother in 2004, Mukesh retained the chairmanship of Reliance, along with its core industries in oil, petrochemicals, and textiles, while the communications, finance, entertainment, and energy divisions went to Anil, who left the parent company after playing a central role in its success for more than 20 years. Following the breakup, the brothers' individual wealth surged, thanks to the massive growth and strength of the Indian economy, favorable exchange rates, and perhaps in some measure, according to observers, because of their fierce competitiveness with each another. Anil Ambani's wealth rests chiefly with his majority stake in Reliance Communications, the country's largest telecommunications and mobile-services provider. A colorful socialite who hobnobs with Bollywood celebrities and politicians, he was voted MTV Youth Icon of the Year in 2003, a title usually reserved for movie and sports idols. He served in the Indian Parliament from 2004 until 2006. Ambani is famous for his aggressive business style, dealmaking prowess, and innovative approaches to marketing and finance. Along with his father, he has been credited with masterminding India's first major deals in international capital markets. The deterioration of the economy in 2008 severely affected the Ambani brothers. In March 2008, according to *Forbes*, Anil Ambani was the biggest single gainer of wealth among billionaires in the previous year. The following March *Forbes* described Ambani as the previous year's single largest loser: his fortune fell by over three-quarters, or $31.9 billion, to $10.1 billion, and he dropped from sixth place, in 2008, to 34th place, in 2009, on lists of the wealthiest people in the world.

Anil Ambani was born in India's financial center, Mumbai (formerly known as Bombay), to Dhirubhai Ambani and Kokilaben Ambani on June 4, 1959, the year after his father established the family company and two years after the birth of his brother, Mukesh. Ambani also has two sisters, Dipti and Nina. Very much like his father (he was his father's favorite child, according to some sources), Anil studied at the University of Bombay—now the University of Mumbai—where he received a B.S. degree. He then studied management at the distinguished Wharton Business School, a division of the University of Pennsylvania, in Philadelphia, earning an M.B.A. in 1983. By the time he returned to India, his father's business had grown into a major industrial conglomerate. Dhirubhai Ambani, born in Gujarat in 1932, came from a relatively humble background and was forced to drop out of school to work. At the age of 17, he went to Yemen, where he worked at a gas station for a while; after he returned to India, in 1958, he founded Reliance, an export and trading company. In 1966 he opened a textile mill, and in 1977, rather than having to rely on banks for funding, he took the company public—an unprecedented move for all but India's wealthiest entrepreneurs. His action enabled him to expand and greatly diversify Reliance and led to his recognition as a trailblazer in popularizing stock-market investments among India's growing middle class. The firm's enormous subsequent growth and the consistently rising shareholder earnings—it is said that one in every four Indians who own stock has shares in Reliance—catapulted the Ambanis to iconic status in the country and made their name almost synonymous with India's new booming economy.

Seen as part of a new wave of Indian entrepreneurs, the Ambanis have sometimes been criticized for their brashness and brazenness, especially in the political realm. Their favorable treatment from politicians received much negative attention during the so-called economic-liberalization period in the early 1990s, when they were awarded many licenses in areas including telecommunications and energy. In an article for the *Straits Times* (June 6, 2004), Pranay Gupte detailed the Ambanis' generous contributions to political campaigns and their cultivation of connections with policymakers. "The Ambanis are at the apex of an elite group in India known by the cognoscenti as the 'politico-industrial complex' . . . ," Gupte wrote. "While no Indian industrialist will acknowledge it, the contributions—some would say bribes—which these businessmen make to political parties, and to individual politicians and top bureaucrats, are extensive. . . . But, of course, the money is well spent: in exchange, the industrialists pretty much get what they want in terms of governmental concessions and favourable policy terms for their businesses." Gupte wrote that while the demands of a globalized economy and foreign investors were forcing the liberalization of the once insular Indian economy, "the influence of the politico-industrial complex is, if anything, increasing. Why? Because the cost of conducting elections and practising politics is rising dramatically. . . . Only the plutocrats of the politico-industrial complex are in a position to supply the vast wherewithal needed to grease the wheels of democracy." Some observers have linked Anil Ambani's brief foray into parliamentary politics to that phenomenon.

When Anil Ambani returned to India, in 1983, his father offered him advice. "You are entering India," his father said, as paraphrased by Anil in 2004, according to *Business Line* (March 28, 2004). "You need to Indianise your MBA. Learn about income-tax, sales tax and Parliament. If you don't get to know all these things, all your formal education is not going to help you." That year Anil Ambani joined Reliance as co-CEO. Mukesh Ambani, who had studied chemical engineering at the University of Bombay and earned an M.B.A. from Stanford University, in California, had come on board two years earlier; he led the company's expansion into the manufacture of polyester fibers and then into petrochemicals, oil, and natural gas and was given responsibility for large-scale project management. Anil was placed in charge of marketing, media and investor relations, and fund-raising and is credited with developing several financial innovations to raise billions of rupees (Indian currency) in foreign investment. In that respect—having been central to the success, growth, and particularly the diversification and reinvention of their company—the Ambani brothers are unlike many other scions of business and industry, who made or have made only small changes to the companies they inherited. By July 2002, when Dhirubhai Ambani died of a stroke, Reliance was a diversified conglomerate and an industry leader in textiles, petroleum, petrochemicals, power, telecommunications, information technology, and finance.

Because their father had not left a will, the Ambani brothers became joint managing directors of Reliance, with Mukesh taking the role of chairman and Anil that of vice chairman. Almost immediately, tensions between them began to surface, with observers noting that Mukesh, backed by the company's board, was increasingly asserting himself, while Anil was given lesser roles in some of Reliance's biggest projects and was almost completely excluded from its telecommunications arm, Reliance InfoComm. "The synergy between Anil and Mukesh has been the corporation's greatest asset," Dilip Bobb and Malini Bhupta wrote in late 2004. "It would be tragic if Reliance's biggest strength becomes its fatal weakness." In July 2004—the month the Reliance board voted to give ultimate decision-making powers to Mukesh—Anil Ambani, backed by the Samajwadi Party in Uttar Pradesh and with the help of Bollywood bigwigs as well as party leaders who were friends of his, won a nomination to the Indian Parliament's Upper House. His reasons for seeking that position were, perhaps, to regain power and leverage in the operation of Reliance, to win a bid to build a gas power plant in Uttar Pradesh Province (an undertaking that Mukesh vehemently opposed), and to take advantage of, and build on, his celebrity status. Mukesh was apparently incensed by that turn of events, because the regional Samajwadi Party had been critical of the ruling coalition, which included the National Indian Congress Party, led by Sonia Gandhi, which had traditionally supported the Reliance empire and had close ties to Mukesh. Uttar Pradesh is among India's most populous and poorest states (the majority of Samajwadi Party backers are people of low income—members of the lower castes), and during his campaign, which was successful, Anil promised residents that the proposed power plant would become a reality.

By June 2005 the conflict between the brothers had escalated beyond any hope of reconciliation, and Reliance's board had stripped Anil of most of his powers. At that point the brothers' mother, Kokilaben Ambani, stepped in to negotiate a truce. On June 18, 2005 Anil resigned from the Reliance board and was given control of three companies: Reliance Energy, under which he planned to build the gas power plant (the world's biggest) in Uttar Pradesh; Reliance Capital, a banking and financial powerhouse; and Reliance InfoComm, India's biggest telecom and mobile-phone-service provider. Those assets became part of Anil Ambani's new company, the Anil Dhirubhai Ambani Group (ADAG). Mukesh Ambani retained Reliance and took over Reliance Industries, whose oil-related operations have helped to make it India's biggest private-sector company. "Ironically, despite the bitter war, neither brother has got what he probably wanted most," a reporter wrote for *India Abroad* (July 1, 2005). "Anil, who along with Mukesh played an instrumental role in building Reliance Industries to the level it is today, finds himself out of the company. Mukesh, on the other hand, who saw Reliance InfoComm as his baby, was forced to part with it." The article noted that even though Mukesh's petrochemical giant enjoyed a virtual monopoly in India, "most industry observers believe the younger brother has gained more. . . . Investors and industry analysts may feel that he will have restricted cash flows in ADAG companies now that he is no more a part of Reliance Industries, but his capacity to raise capital is almost as legendary as his links with various industrialists, bankers and politicians are strong. Further Anil has a presence in three sectors which show huge promise for growth in years to come. In conclusion, this is not the end of the battle, but the commencement of a healthy rivalry." The Bombay Stock Exchange reacted immediately to news of the split; record levels of trading in the companies' stock produced immense profits for both brothers. According to observers, Anil Ambani's companies "soared": "investors seemed to be voting not only for the more forward-looking businesses that Anil Ambani will receive in the deal, but also for his more brash public persona," Saritha Rai wrote for the *New York Times* (June 21, 2005).

Both brothers began expanding energetically, with Anil overseeing the plans for the new gas plant and acquiring media entities and entertainment conglomerates and Mukesh building oil refineries and diversifying into agriculture. Anil's extensive investments in media and entertainment include his takeover of Adlabs, a Bollywood movie-production and -distribution company, which many regard as a stepping stone to the Hollywood market. Bollywood, the world's largest producer of films, has long been an insular industry, but now, with India emerging as an economic superpower and with the ambition of financiers such as Ambani, the industry is beginning to look abroad to capitalize on Hollywood's revenue potential. In September 2008 Ambani entered into talks to provide between half a billion and a billion U.S. dollars in financing to DreamWorks, which is headed by Steven Spielberg, Jeffrey Katzenberg, and David Geffen, to enable it to separate from Viacom, its parent company since 2006. The deal, including an initial investment of $825 million, was completed in the summer of 2009; Ambani now owns 50 percent of the shares in DreamWorks, which expects to produce half a dozen films a year. Reliance Big Entertainment, the entity overseeing those endeavors, is also in talks with several other Hollywood producers regarding the financing of films. "We see Reliance Big Entertainment [a division of Reliance Entertainment] as a global entertainment company, and Hollywood certainly presents a bigger and wider basket of opportunities," Reliance Entertainment's president, Rajesh Sawhney, told Subramaniam Sharma and Joseph Galante for Bloomberg News (June 18, 2008). Ambani, who has been linked with reports of the possible purchase of several high-profile European soccer clubs, has denied rumors that he may attempt to buy Newcastle United or another soccer team in the English Premier League.

Overall, 2008 was a disastrous year for Ambani, who, according to Luisa Kroll, writing for *Forbes* (December 22, 2008, on-line), lost more money than any other billionaire as a result of the financial crisis that struck most of the world's major economies. "Touted on the cover of our 2008 billionaires issue for having added $24 billion to his fortune in one year, Ambani has dropped $30 billion since then . . . more than anyone in the world. Stock of his telecom company dropped after his estranged brother helped scuttle a deal with African telecom MTN." Mukesh Ambani, too, suffered huge financial losses in 2008. Nevertheless, the brothers remain extremely wealthy.

In 2009 the Ambani brothers' public feud intensified, and Anil Ambani became the victim of what he alleged was an assassination attempt. In the spring of that year, a technician working on Ambani's private helicopter discovered pebbles and gravel in the engine; police investigators suggested that they had been placed there in an attempt at sabotage. Ambani charged that business rivals were trying to kill him. The technician, a key witness in the case, was later found dead amid suspicious circumstances, and the case remains unresolved. In October 2009 Ambani's battle with his brother over an energy deal reached the country's top court. Back in 2005, after the family business was split between them, Anil Ambani had signed a deal with Mukesh that the latter's company would sell to his brother's firm 28 million cubic meters of gas per day at a fixed price for 17 years. In the following years the price of gas rose, and by 2009 the fixed price was 44 percent below the government-set price. The deal was essential to the energy-providing projects Anil Ambani planned with Alliance Natural Resources, and observers predict that whoever loses the dispute will lose billions of dollars. The elder Ambani, backed by the government, pulled out of the agreement, claiming that it was not government-approved. Anil Ambani argued that for a country attempting to attract foreign investment by liberalizing its economy, the sanctity and transparency of contracts—as well as the eradication of government corruption—are essential. Before the Supreme Court hearings on the case, which were set to begin in late October 2009 and continue for several months, Anil Ambani publicly offered to make peace with his brother. Mukesh responded that the matter was a legal one and that his younger brother's public overtures were disingenuous.

Ambani is among his nation's foremost patrons of contemporary Indian art. A fixture in Bollywood glitterati circles, he counts among his closest friends the film superstar Amitabh Bachchan and the politician and Samajwadi Party leader Amar Singh. His wife, Tina Munim, was a famous Bollywood film star in the 1980s; she had mostly retired from acting when she married, in 1991. The couple have two sons, Anmol and Anshul. For many years, despite their feuds, he and his brother lived, along with their mother, wives, and children, in the same 18-story mansion in Mumbai, though on different floors. (Mukesh is currently building a 27-story home.) As a devout Hindu, Ambani is a vegetarian and a teetotaler. He became a self-proclaimed "fitness freak" after an investor allegedly implied in his presence that he was overweight. Since then he has run several marathons in Mumbai, inspiring the nickname "Marathon Man."

Ambani, Mukesh

Apr. 19, 1957– Indian businessman

Address: Reliance Industries, Makers Chambers IV, 222 Nariman Point, Mumbai 400 021, India

India's wealthiest man is Mukesh Ambani, the chairman, managing director, and principal shareholder of the Reliance Group, his country's "biggest company by market value," Santanu Choudhury wrote for the *Wall Street Journal* (February 28, 2009). Ambani is famous for his extravagance—his private residence is a brand-new, 550-foot-high, 400,000-square-foot, 27-story edifice with space for upwards of 150 cars and a staff numbering more than 500—and he "isn't known for his charitable giving," according to Sheelah Kolhatkar, writing for the now-defunct *Portfolio.com* (November 2007). Nevertheless, he "isn't just trying to make money anymore," Nisid Hajari wrote for *Esquire* (October 2008). "He's aiming to remake India." A key part of that endeavor is connected with one of Reliance's dozens of subsidiaries—Reliance Retail, which buys produce directly from Indian farmers, thereby avoiding the centuries-old network of middlemen, who typically earn far more than the farmers. The average monthly income for farm households in India, according to the nation's government, as Tim Arango reported in the *New York Times* (June 29, 2008), is the equivalent of $50—less than the country's legal minimum wage. "A lot of us think the world is flat," Ambani said, as quoted by Sheelah Kolhatkar, referring to the global economy and the level playing field it will presumably offer. "I think the world is spiky . . . because 15 to 20 percent of people in the developing world live in plenty, while 80 percent live in scarcity. We have people who have to survive on $2 a day. . . . We cannot have islands of prosperity surrounded by oceans of poverty." While it remains to be seen whether Ambani's dreams of ending poverty in his native land will become a reality, there is no question that Reliance has helped to raise the standards of living of the many thousands of people whom it has employed. In addition, for most of the last three decades, the company has increased the incomes of its approximately three million stockholders—far more than the number of people who own shares in any other Indian firm. The principal division of the Reliance Group is Reliance Industries, the foremost manufacturer of polyester yarn and fabric and one of the top 10 producers of petrochemicals in the world. Reliance Industries exports commodities to more than 100 countries and in recent years has accounted for at least 3 percent of India's gross domestic product.

Reliance is one year younger than the 52-year-old Ambani. The company was founded in 1958 by his father, Dhirubhai Ambani, a high-school dropout who, with only enough cash to rent office space for two hours a day, began to buy and sell spices, rayon, and nylon. By the time Mukesh Ambani began working full-time for Reliance, the company had grown to include factories that manufactured polyester (a form of plastic), chemicals necessary to produce it, and a line of enormously popular polyester garments. Immediately demonstrating his superlative, hands-on organizational and managerial skills and capacity to keep track of myriad details, the 24-year-old Ambani took charge of the building of a factory, and in the following years, he oversaw the construction of many additional factories and the further diversification of Reliance's products. In the most ambitious of his projects, Mukesh Ambani supervised the construction of the Reliance oil refinery in Jamnagar, in the western Indian state of Gujarat; one of the largest such facilities on Earth, it began operating in 1999. After its massive expansion, completed in 2008, it became the most technologically advanced as well. Earlier, with the help of Ambani's brother, Anil, who is younger by two years and who joined the company in 1983, Reliance had branched successfully into the telecommunications, information technology, media, finance, and entertainment industries. The death of Dhirubhai Ambani, in 2002, without instructions regarding the disposition of his property, sparked a bitter power struggle between Mukesh and Anil Ambani that provided fodder for tabloids for many months. In June 2005, in a deal brokered by their mother, Mukesh was placed in charge of Reliance Industries and its subsidiaries Reliance Petroleum and Reliance Retail, among many others; Anil gained control of Reliance Energy, Reliance Capital, and Reliance Info-Comm. Both brothers continued to prosper; in March 2008, according to *Forbes*, Mukesh's net worth totaled $43 billion, and Anil's, $42 billion. In the recent economic downturn, Mukesh's fortune has dropped to about $19.5 billion, and Anil's to an estimated $10.1 billion; the value of Reliance stock has declined by 40 percent. "All of us, in a sense, struggle continuously all the time, because we never get what we want," Mukesh told Anand Giridharadas for the *New York Times* (June 15, 2008). "The important thing which I've really learned is how do you [sic] not give up, because you never succeed in the first attempt."

The eldest of the four children of Dhirajlal Ambani ("Dhirubhai" is the nickname by which he became known) and his wife, the former Kokilaben Patel, Mukesh Dhirubhai Ambani was born on April 19, 1957 in Aden, Yemen. In addition to his brother, he has two sisters, Nina and Dipti (sometimes spelled "Deepti"). At the time of his birth, his father, then 25, was managing a gas station in Aden. In 1958 Dhirubhai Ambani returned to India with his family and settled in Mumbai, where, with an investment of $400, he launched Reliance Commercial Corp., to trade and export commodities. Mukesh Ambani and his siblings spent their early years in modest surroundings in the Bhuleshwar neighborhood of Mumbai. His family lived in a tiny apartment in a tenement complex whose residents had little privacy and enjoyed few luxuries. During his childhood half of Ambani's left pinky was accidentally severed when a door slammed shut on it.

In 1966 Dhirubhai Ambani, his two brothers, and one of his nephews, Rasikbhai Meswani, opened a textile mill in Naroda, in the western Indian state of Ahmedabad. Dhirubhai Ambani, the mastermind of the operation, adroitly got past the extremely cumbersome licensing requirements overseen by the huge bureaucracy set up as part of the national government's attempts (from 1947 to 1990) to maintain a planned economy. His ability to surmount the nearly endless red tape that stymied many other businessmen proved to be a major factor behind his success. (According to *The Polyester Prince: The Rise of Dhirubhai Ambani*, an unauthorized biography by Hamish McDonald, Dhirubhai sometimes used improper, unethical, ruthless, and even nefarious methods to achieve his goals. The book was banned in India.) Dhirubhai Ambani was also famous for his fierce determination to surpass others in sales and in the quality of his products. When wholesalers long associated with other suppliers refused to buy Reliance textiles, he went directly to retailers and built up a loyal clientele. In another bold business decision, Dhirubhai Ambani acquired from the American chemical company DuPont the technology necessary to begin producing high-quality polyester fabric and clothing, to which he affixed the label Vimal. Franchise retail outlets soon sprouted up throughout India and started selling Vimal textiles and products exclusively. Demand for Vimal items mushroomed, and in many areas they supplanted cotton goods, previously the universal favorite. Reliance now produces over one million tons of polyester each year. In addition to Vimal, its brand names include Harmony, Reance, RueRel, Recron, Relene, Repol, Reon, Relab, Reclair, and Koylene. The Naroda textile mill has grown into a huge, state-of-the-art complex that in 2007 was producing about 25 million yards of fabric sold domestically and internationally.

In the late 1960s, with Reliance growing ever more prosperous, Ambani's family moved into an upper-class Mumbai neighborhood. In interviews with Sucheta Dalal and Debashis Basu for *MoneyLife* magazine (January 17, 2007), as posted on ManagementParadise.com, Mukesh said, "My father never came to our school even once. Nevertheless, he was hugely interested in our all-round development." With that in mind, Dhirubhai Ambani devised a program to help Mukesh (and later his younger children) gain a comprehensive understanding of working-class life. He hired a tutor who came to their home every evening and spent two hours with Mukesh, playing hockey, soccer, and other games and traveling with him on buses and trains to various parts of Mumbai. For two weeks every year, Mukesh and the tutor would camp out in one or another of India's more than half a million villages. Far different from the pampering typically experienced by second-generation heirs, Ambani's on-the-ground education was "one of the best things that happened to me in my life," he told Anand Giridharadas. "We never studied. We went out . . . , and we said, 'This is what life looks like.'" In addition, he told Dalal and Basu, his father "shared with me his passion for business and entrepreneurship from every early on." In the 1970s Ambani attended St. Xavier High School, in Mumbai, and then enrolled at the Mumbai University Institute of Chemical Technology, where he majored in chemical engineering. As an undergraduate he worked every afternoon for his father's company. In 1977, eager to expand Reliance without having to borrow money from banks, Dhirubhai Ambani took Reliance public. The company's initial public offering lured 58,000 investors from all over India, helping to usher in an investment boom among India's middle class. (In some years Reliance had to hold its annual shareholder meetings in stadiums.) In 2008 one in four Indian investors reportedly had a stake in Reliance.

After his graduation from college, in 1979, Mukesh Ambani pursued an MBA at Stanford University, in California. In 1981,with six months left in his program, he returned to India to supervise the building of a huge polyester plant in Patalganga, a rural village; his father, he told Dalal and Basu, wanted to start construction immediately rather than wait for Ambani to earn the master's degree. During the construction Mukesh Ambani slept much of the time in a trailer at the site; he would watch training videos during his morning workout, then attend to every aspect of the project. "He's a guy who likes to get his hands dirty," a close friend of his told Giridharadas. The plant began operating on schedule, thus providing evidence of Ambani's ability to handle complex tasks with little or no help from his father. As his responsibilities at Reliance increased, he directed the creation of dozens of additional world-class facilities for the manufacture of terephthalic acid, monoethylene glycol, and other components of polyesters as well as other plastics, including high-density polyethylene. Meanwhile, in 1983 Anil Ambani had joined the company; his primary jobs included marketing, fund-raising, and media and investor relations.

In 1985 Rasikbhai Meswani, who had directly supervised Mukesh, died suddenly, and five months later, in 1986, Dhirubhai Ambani suffered a stroke that left him partially paralyzed. During their father's six-month recovery, Mukesh and Anil assumed greater control of Reliance's day-to-day operations. "There was no sense of panic," Mukesh told Dalal and Basu. "The whole picture was in my head. That was the strength of the open system." He was referring to an environment, common in the U.S. but unusual at that time in India, in which standard operating conditions and procedures had been recorded in detail. "Everyone was on the same page," Mukesh added, and Reliant was "not dependent on a few individuals."

In the 1990s Reliance continued to build new factories, and its revenues and profits increased apace. Meanwhile, Dhirubhai Ambani was taking steps to enter the petroleum business, which India's government had controlled domestically since the 1970s. During that decade, as a consequence of the Arab oil embargo and skyrocketing prices of fuel, India nationalized its divisions of international petroleum companies and imposed strict regulations on all aspects of the Indian oil industry, ranging from refining to distribution and pricing. The system worked until the early 1990s, when the biggest state-owned company, Oil and Natural Gas Corp. (ONGC), began to run out of money for exploration and the development of new oil fields. In 1997, Christopher Helman and Naazneen Karmali wrote for *Forbes* (May 8, 2006), "the government couldn't even pay ONGC for months of delivered crude [oil], forcing the company to default on loans." That year the Indian government announced that price controls for oil would be phased out by 2002. Anticipating that turn of events, ever ready to make use of loopholes in the law, and ever able to persuade government officials to smooth the way for their company (sometimes with bribes or other shady means, according to various sources), the Ambanis had made their move: in 1993 Reliance had made the largest public offering in India's history, with shares in its new division, Reliance Petroleum. By 1997 Mukesh Ambani was ready to launch one of the most ambitious construction projects in India's history: the building in Jamnagar of a refinery for crude oil that would be twice the size of any other refinery in India. Financing came partly from a $100 million, 100-year bond, sold on the U.S. market. (Reliance is one of only two dozen corporations, and the first in Asia, to be issued a bond of that magnitude in the U.S.) Commenting on Mukesh's philosophy and his refusal to listen to the naysayers who predicted that the Jamnagar project would never materialize, Yogesh Desai, a longtime Reliance executive, told Saritha Rai for the *New York Times* (June 4, 2004), "The approach was: 'There's no road? Let's build a road. There's no power? Let's build a power station. There's no port? Let's build a port.'" Saritha Rai quoted Arun Shourie, a journalist, former government minister, and onetime critic of Reliance, as saying that Dhirubhai Ambani and his sons were "to be thanked not once, but twice over. First, they set up world-class companies and facilities in spite of . . . regulations, and second, by exceeding the limits and restrictions, they created the case for scrapping those regulations. They made a case for reforms."

During construction of the Reliance crude-oil refinery—which was completed in only three years, an industry record—Ambani flew to Jamnagar from Mumbai four times a week to oversee all aspects of the work. A Bloomberg News reporter, in an article posted on *ExpressIndia.com* (April 26, 2005), learned from a Reliance executive that "Jamnagar is one of the few refineries in the world that can process very thick, high-sulfur grades of crude oil into pure, low-polluting gasoline and diesel fuel—the grades sold in California." In addition to the refinery itself (whose construction reportedly required 16 times as much steel as was used to build the Eiffel Tower), the site encompasses such amenities as a 1,600-acre parkland where antelopes and other wild creatures graze; a school; and a hospital for workers and their families. With the recent expansion of the refinery, its capacity rose to 1.24 million barrels a day.

By mid-2002, when Dhirubhai Ambani died of a stroke, Reliance had become an industry leader not only in textiles, petrochemicals, and petroleum, but also telecommunications, information technology, finance, and power. Dhirubhai did not leave a will or otherwise record his wishes for his sons' futures and that of Reliance. After his death the brothers became joint managing directors of Reliance, with Mukesh taking the position of chairman and Anil that of vice chairman. Within six months of their father's demise, "hints of a rift" between the brothers surfaced, according to the Bloomberg News reporter, evidence being the absence of one or the other brother at major Reliance events at which, in the past, both would have appeared. The conflict worsened in July 2004, when Reliance's board of directors voted to give Mukesh the power to make all decisions, including the right to overrule any of Anil's with which he disagreed. Mukesh's aversion toward Anil's increasing involvement in politics and friendships with entertainers widened the breach between them. The brothers' feud and struggle for power became matters of public discussion and daily-tabloid fodder. In June 2005, in a resolution engineered by Kokilaben Ambani, Mukesh and Anil's mother, the Reliance empire was split, with each brother to run different parts of the business independently. Mukesh Ambani gained control of Reliance Industries and its more than 70 subsidiaries, among them Reliance Petroleum, Reliance Jamnagar Infrastructure, Reliance Industrial Investment and Holdings, Reliance Exploration and Production, Reliance International Exploration and Production, Reliance Gas, Reliance Polymers, Reliance Polyolefins, Reliance Aromatics and Petrochemicals, Reliance Digital Media, and Reliance Infrastructure Management Services. Reliance Industries also has a controlling share of Indian Petrochemicals Corp. Ltd., India's second-largest petrochemicals company. The splitting of Reliance left control of Reliance InfoComm, one of Mukesh's pet projects, in Anil's purview. As of October 2009 the brothers were embroiled in a court battle regarding contracts for natural gas from a field in India whose reserves have been valued at more than $38 billion.

Earlier, the year 2006 saw the founding of Reliance Retail, whose subsidiaries include Reliance Fresh, Reliance Dairy Foods, Reliance Hypermart, Reliance Agri Products Distribution, and Reliance Food Processing Solutions. With those businesses Mukesh Ambani is attempting to revolutionize what he has often referred to as the "value chain in the foods business" in India—the way agricultural products are grown, marketed, delivered, and sold, not only to Indian consumers but to consumers globally—and to transform "the relationship between [India's] cities and the countryside," Dean Nelson wrote for the London *Times* (October 8, 2006, on-line). The vast majority of India's farmers do not have refrigerated trucks or facilities to store their produce; middlemen who own such trucks or warehouses buy the produce from farmers for a fraction of what farmers in other countries earn. Poorly maintained or unpaved roads make transport of produce to cities difficult and unreliable. An estimated 40 percent of India's produce rots without being sold, some of it while on its way to markets. According to Dean Nelson, "A network of local markets originally introduced to protect poor farmers from exploitation [are] now controlled by cartels of traders, bureaucrats, and moneylenders." Ambani is spending billions of dollars to construct distribution centers and retail outlets for farm products and other goods and to provide them with necessary sources of power, roads, and other infrastructure. He has bought a fleet of planes to transport produce to other countries. As part of the Indian government's program of special economic zones (SEZs), he is also building two small cities, one outside Mumbai and the other outside New Delhi, the nation's capital, to attract foreign investors and create jobs for some of the millions of young Indians who graduate from college each year without any prospects of finding suitable work. "Both agri-business and SEZs will make a sustainable return in the long run and we have a strong enough balance sheet to sustain these," Ambani told Sucheta Dalal and Debashis Basu. "At the end of the day, it will leave us with the satisfaction of having tried to show the way" — "to blaze a new trail or change the status quo."

"Despite all of his almost absurdly big plans, Ambani is anything but a publicity-seeking social climber," according to Sheelah Kolhatkar. "In fact, he's a semi-recluse: awkward, shy, a traditional Hindu who practices strict vegetarianism and abstains from drinking alcohol. With his mix of hubris, business savvy, and personal eccentricity, he may be a modern-day Howard Hughes." Like his father, he spends Sundays with his family. His wife, the former Nita Dalal, whom he married in 1985, is the president of the Dhirubhai Ambani Foundation and runs the Dhirubhai Ambani International School and the Kokilaben Dhirubhai Ambani Hospital and Medical Research Institute. The Ambanis have two sons, Akash and Anant, and a daughter, Isha. Ambani is the owner of the Mumbai Indians, a cricket team in the Indian Premier League.

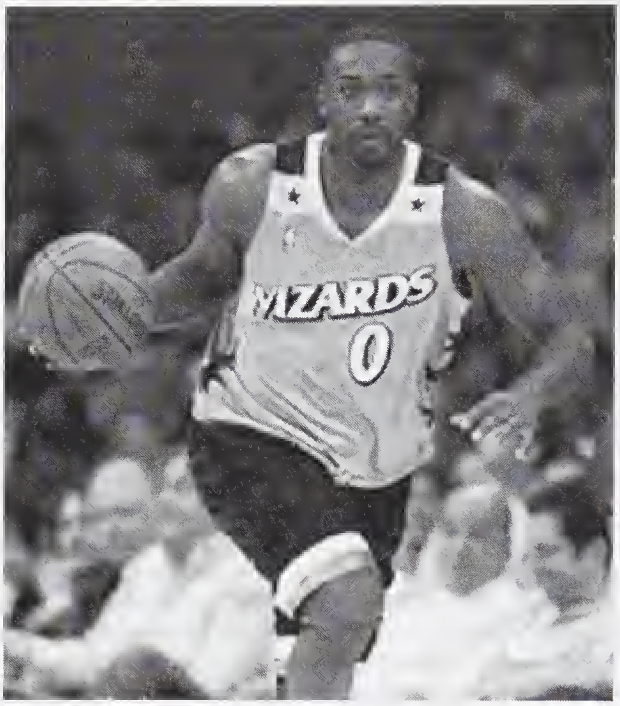
Arenas, Gilbert

(ah-REE-nass)

Jan. 6, 1982– Basketball player

Address: Washington Wizards, 601 F St., N.W.,
Washington, DC 20002

"We are inspired by men who can survive at this level"—that of the National Basketball Association (NBA)—"and still play like kids," Myles Brown wrote for the basketball magazine *Slam* (October 8, 2008). "Men who dare to enjoy themselves amidst pressure that would grind mere mortals to dust.



Gregory Shamus/Getty Images

Gilbert Arenas

Men who remind us that though this may not be for kids, it is still just a game. Men like Gilbert Arenas." Arenas is a guard for the NBA's Washington Wizards. An excellent scorer, among the league's quickest and most difficult players to guard, and a genuine eccentric and comical nonconformist, Arenas surmounted a difficult early childhood and others' pessimism about his future to become one of the most popular players of his generation. "Arenas has three physical skills: quickness, strength, and endurance. He has the quickest first step in basketball. He explodes past any defender," Fred Barnes declared in an article for the *Washingtonian* (November 1, 2006). Similarly, Chuck Klosterman, writing for the *New York Times* sports magazine *Play* (March 4, 2007), noted that Arenas "has evolved into one of the least stoppable humans of the early 21st century. . . . The key is his rare combination of explosiveness and range: Arenas is fundamentally a slasher, but he regularly takes (and makes) shots from well beyond 25 feet. . . . More importantly, he loves shooting at meaningful moments. . . . He is devoid of fear."

A three-time All-Star, Arenas was drafted by the Golden State Warriors in 2001 and moved to Washington, D.C., two years later, after being named the NBA's most improved player. He has often been called a "shoot-first, pass-second" guard—a label that he has rejected, insisting that he is first and foremost a team player. His teammates' scoring statistics and his popularity, as well as his willingness to take a pay cut in order to help his franchise in its quest for a championship, provide strong evidence to back that contention. Arenas has inspired such nicknames as "Agent Zero," because since his undergraduate years he has worn a zero on his jersey, signifying the number of minutes unimpressed coaches told him he would play in college; "Hibachi," the term for a Japanese grill and a word he shouts out when shooting from long range in games—evidently his way of saying that he is "on fire"; and "Black President," a self-chosen moniker he vowed to drop after Barack Obama was elected president of the U.S., in 2008. Arenas is an intensely driven, competitive, and charismatic star whose unusual behavior, both on and off the court, has been called "Gilbertology." "Arenas is allegedly something of a crazy man," Klosterman wrote. "Virtually everything written about him mentions the litany of his mild eccentricities. . . . But Arenas is atypical, and here's why: unlike almost every other consciously nonconformist superstar, Arenas is never polarizing. Nobody hates him for being odd; his behavior has exclusively served to make him more beloved." Barnes wrote, "Arenas is an antidote to the self-centered superstar stereotype," and Mike Wise, in a profile entitled "The Psychic Scars That Shaped an NBA Star," published in the *Washington Post* (October 29, 2006), wrote, "In a league filled with huge personalities and oversize egos, Arenas stands apart." Arenas, in Wise's words, is "one of the league's most enigmatic figures, an idiosyncratic loner, a charmingly candid young man who freely admits he pushes away those who get close to him." For his part, Arenas told Wise, "Basketball is where I put all my pain and let it go. The court became my sanctuary, my outlet."

Gilbert Arenas was born on January 6, 1982 in Tampa, Florida. His father, also named Gilbert Arenas, had been a multi-sport star in high school; according to Wise, he had been known on the basketball courts of West Tampa as "Gil the Thrill." A few months before his girlfriend, Mary Francis Robinson, gave birth to their son, Arenas Sr. enrolled at a college near Miami, Florida, where one of his uncles coached and which had awarded him a scholarship. For several years Robinson, a drug addict, lived with the boy in Tampa in what Arenas Sr. described to Wise as a "rough" housing project. One day when young Gilbert was three, Robinson's mother told the boy's father in a phone call that she had abandoned the child. Gilbert Sr. then arranged to have the boy live with his parents, in Tampa; Fannie Lee Arenas, Gilbert Jr.'s paternal grandmother, served as his primary caregiver for the next few years. When Gilbert Arenas was seven, his father moved with him to Burbank, California, in hope of pursuing a career in acting. After a few nights in a car and several more at a YMCA, Gilbert Sr. got a job as a clerk, and the two moved into a low-to-middle-income apartment complex in nearby Van Nuys, a district of Los Angeles, which remained their home for about nine years. According to Gilbert Sr., his son's engaging personality endeared him to virtual strangers, who invariably wanted to help the two of them in one way or another. To this day father and son remain extremely close. Since childhood Gilbert Jr. has seen his mother only once, when she approached him outside the team bus when Golden State was playing in Miami; according to Wise, "Those who know him best say [that that] encounter with her . . . deeply traumatized him."

Arenas enrolled at Grant High School in Van Nuys and signed up for the junior varsity basketball team. According to Barnes, 10 minutes into his first practice, the team's coach, Howard Levine, pulled him aside and told him that he could make it to the NBA. Arenas went on to be named to the Los Angeles All-City team three years in row. By his senior year he was averaging 33 points per game. Nevertheless, to his dismay, few colleges showed any interest in him. He accepted the offer of the University of Arizona, where he chose the jersey number zero, as a reminder to detractors who told him he would play zero minutes in college and as a motivator for himself. As a freshman, according to Barnes, Arenas became a "gym rat" and a valuable starter on his team, the Wildcats. During his two years in college, he averaged 15.8 points per game, helping the squad reach the National Collegiate Athletic Association (NCAA) Championship finals in 2001. But he was not seen as a valuable prospect when he left college, at age 19, to enter the 2001 NBA draft. The problem, according to various sources, was that scouts could not place Arenas: he seemed to be neither a typical point guard, because of the "shoot first, pass second" label, nor a typical shooting guard, because, at six feet four inches, he is relatively short. Wally Walker, the general manager of the Seattle SuperSonics, who passed on Arenas in the 2001 draft, later told Barnes,"No one was quite sure what his position was. It turned out he didn't need a position. He's just a guard." Similarly, Ernie Grunfeld, the president of the Washington Wizards, told Barnes, "His progress has been phenomenal. He's a modern-day point guard. If you look around the league, point guards are bigger scorers." He was not drafted until the second round, at number 31 overall. That experience reportedly left him in tears and led him to declare, according to Michael Lee in the *Washington Post* (April 24, 2005), "That's the worst mistake the NBA has made. I'm going to the gym right now." At that time, first-round draft picks were forced to sign four-year contracts at rookie salary levels, while second-rounders were exempt from that requirement. Arenas signed a two-year contract with the Golden State Warriors, betting that his value would only rise.

While his first NBA season was marred by injuries—he spent half of it on the disabled list—Arenas showed considerable potential. In his second year, 2002–03, he won the NBA's Most Improved Player Award, starting all 82 games and averaging 35 minutes and 18.3 points per game. After that breakout season Arenas became one of the league's most coveted free agents; he signed a lucrative contract, worth $65 million over six years, with the Washington Wizards. Thus, as Barnes pointed out, his selection in the second round turned out to be a financial coup. "It paid off so handsomely . . . ," Barnes wrote, "that what became known as the 'Arenas rule' allowing second-round picks to freely negotiate a contract was revoked by the NBA." Nevertheless, Arenas would continue to see the draft-day snub as a motivator: he still keeps a list of every player drafted ahead of him in 2001 and checks it periodically to cross off the names of those no longer playing at the top level.

While Arenas upped his scoring average to 19.6 points per game in his first year in Washington (2003–04), he played in only 55 games because of injuries, including a strained abdominal muscle. The following season Arenas averaged 25.5 points per game (the seventh-highest number in the NBA that year), joining his teammate Larry Hughes to give Washington the highest-scoring backcourt in the league and leading the team to its first play-offs since 1997. For his achievements that season, Arenas was selected to play in his first All-Star Game. He continued to improve in the 2005–06 season, putting up his best numbers to date: he posted an average of 29.3 points and just over two steals per game (fourth-highest in the league in both categories that year) while averaging 34 points per game in the play-offs and cementing his reputation for being able to make buzzer-beating shots. Nevertheless, Arenas was not selected for the All-Star Game (but played in it nonetheless, after Jermaine O'Neill dropped out, due to injury) and was passed up for the U.S.A. basketball team in the 2006 World Championships. Arenas has often mentioned those disappointments as having strengthened his determination.

The following season, 2006–07, Arenas averaged 28.4 points per game (third-highest in the NBA) and was voted a starter in the All-Star Game. In December 2006 he scored 60 points in a contest against the Los Angeles Lakers—a personal best and a Washington franchise record. He also began to achieve media-star status, stemming from his undiplomatic and outspoken umbrage at having been perennially underrated, overlooked, and dismissed as erratic and immature, as well as from his antics on and off the court and his hugely popular blog, launched in October 2006 on nba.com. In 2007–08 Arenas played in only a handful of games before being sidelined until the end of the season with a knee injury. Reemerging to help his team in the play-offs, Arenas was clearly suffering pain. During the summer of 2008, he opted out of the last year of his contract and renegotiated another one. He said that he would be willing to accept less money from Washington if doing so would help the franchise acquire the necessary players to win a championship and if the Wizards' executives would re-sign his teammate Antawn Jamison. After Jamison signed, Arenas agreed in July 2008 to a six-year, $111 million contract, roughly $16 million less than the team had originally offered him. The move garnered praise and admiration from observers and peers and endeared him even more to fans.

"I looked at it like this: There is nothing I can do for my family with $127 million that I can't do with $111 million," Arenas explained, as quoted by Ivan Carter in the *Washington Post* (July 4, 2008). "I mean, college is expensive but it ain't that dang expensive. Now, [the Wizards] have room to add a piece. There is a window of opportunity for us. Adding key pieces leads to championships and that's what we all want." Meanwhile, the knee injury that had troubled him several times and had required three surgeries kept him on the disabled list, forcing him to miss all but two games of the 2008–09 season; it caused concern in those who worried about his long-term durability.

After essentially missing two seasons, Arenas spent time working with Tim Grover, Michael Jordan's former trainer. In September 2009 he criticized the Washington Wizards organization for mishandling his rehabilitation. He appeared fully fit and ready for the start of the 2009–10 NBA season. Arenas has said that observers' reduced expectations of him and the criticism leveled at him for failing to live up to the promise reflected in the terms of his contract have served as motivators. "Since I got hurt, I'm back at ground zero. Now I've got to work myself back again," he told Mike Wise for the *Washington Post* (October 17, 2009). "The whole contract thing. Me being injured. It's like anything, the what-have-you-done-for-me-lately theme."

Although known and feared as one of the most dangerous offensive guards in the NBA, Arenas is perhaps just as famous for "Gilbertology," a term the Wizards' head coach, Eddie Jordan, coined to describe Arenas's antics and eccentricities. One site on the World Wide Web (gilbertology.net) is devoted to documenting that phenomenon. Among the many examples of his humorously unorthodox behavior (some of which he has dismissed as exaggerations or myths): while playing for Golden State, he is said to have once showered at halftime with his Golden State uniform and shoes on before scoring 24 points in the second half of a game. Arenas has also been known, after purchasing a new cell phone, to call himself repeatedly from another line in order to fill his voice mailbox, presumably to avoid receiving others' messages. According to gilbertology.net, his messages to himself are along the lines of "It's me," "This is Gilbert," "It's Gilbert." Arenas has a reputation for pulling pranks on teammates. As a rookie, for instance, he was made to bring doughnuts to practice for his veteran teammates—a service often demanded of new players. Taking exception to that demand, he is said on one occasion to have licked glazed doughnuts before presenting them, and on another to have sprinkled baby powder—which appeared to be confectioners' sugar—on the pastries. In one of his more notorious stunts, Arenas bet his teammate DeShawn Stevenson $20,000 that he could make more college-range three-point shots with one hand than Stevenson could make NBA-range three-pointers with two hands (the three-point line in college play is closer to the basket than that in the NBA). Arenas netted 73 of 100 attempts while Stevenson made only 68 of 96, albeit with Arenas apparently doing everything he could to distract Stevenson during the contest. Arenas explained his behavior on his blog: "So what if I cheated? It was mostly for bragging rights. . . . It wasn't that I cheated (of course I cheated). . . . It wasn't for the money. I'm not going to make him pay. . . . It's a moral victory more than anything."

Arenas is said to be fanatical about training; to improve his conditioning, he has installed in his home a hypobaric chamber, which simulates the air pressure at high altitudes. He is also something of a loner, rarely leaving his hotel room when the team is on the road; instead, he watches infomercials on TV and works out. When the team is in Washington, he stays home. "I have so much entertainment going on in my house that I don't need to go out," he told Tom Chiarella for *Esquire* (November 1, 2006). "I don't need to go to the movies if I own all these movies. I don't need to go out to a game because I've got all these video games. I don't have to leave my house to have a conversation because I just hop online and have fun with my friends, talk trash, and do whatever we're gonna do right there." His blog, which draws fans into his quirky world while keeping them at a distance, is the most popular Web log of any athlete in professional sports, according to the NBA. On his November 15, 2008 post, he wrote: "With Obama winning, I just had to blog again. . . . I gave my nickname up for Obama, he's the true black president now. . . . Now I really want to win a championship. When you win a championship you get invited to the White House, and I want to go to Obama's White House. . . . For our age group, it was important because with a black president, now you believe your parents when they were speaking to you saying, 'You can be anything you want to be.' At the time we thought it was crap, but now we believe that." Arenas has implied that his popularity stems in part from his view of himself as a simple entertainer in a field dominated by colossal egos. "Most of the stars, they're not entertainers," Arenas told Liz Robbins for the *New York Times* (January 5, 2007). "When I was growing up, that's what I loved about [Shaquille O'Neal]. I want to be like that, fun-loving. I think everyone takes things too serious. For some reason, I look around, it's like, we're not grateful for what we get and what we are." Klosterman wrote, "The N.B.A., like all sports leagues, thrives on control. Its culture is corporate and clinical. . . . As a business principle, control is what makes the N.B.A. a successful product. But it's those rare moments that cannot be controlled that make the game meaningful, and Arenas creates these moments all the time. He is always slightly beyond control, because it's impossible to control what you cannot understand." Klosterman identified Arenas's honesty as a major attraction for fans in the market-driven world of professional sports. For example, every time Arenas takes a free throw, he, like many other players, performs a specific pre-throw routine; unlike the others, though, he has acknowledged that he designed his gestures for fans to copy. "It's an honest explanation of his motives: he deliberately created a way to be idolized by strangers," Klosterman wrote. "Yet this is the kind of motivation athletes never admit to. Arenas's professional vanity is so straightforward it inevitably comes across as charming and childlike. Everyone in the N.B.A. dreams of playing in the All-Star Game, but very few openly lobby for the opportunity; in the 2003–4 season, Arenas traded two pairs of shoes and a jersey for a box of All-Star ballots and voted for himself 50,000 times."

In 2009 Arenas announced that he would be retiring the names "Hibachi" and "Agent Zero" and ending his blog. He claimed that the media had turned his candor—on the blog and elsewhere—against him. "Win," Arenas told Wise in their October 2009 conversation. "That's it. Win. The entertainer part of me, I gotta get rid of that. Or at least make it take a hiatus. I'm back to being strictly a basketball player now."

After the election of Barack Obama as the 44th president of the U.S., Dan Steinberg reported for the *Washington Post* (November 9, 2008, on-line), Arenas had an abbreviated version of Obama's slogan "Change we can believe in" and the numeral 44 tattooed on the fingers of his left hand. He also has extensive tattoos on his torso. In 2005 Arenas launched the Zer0 Two Her0 Foundation, which, according to its Web site, "helps promote the safety and well being of children by raising funds to support organizations that aid in the preservation of families through foster care, adoption, and child welfare services." Since 2006 he has contributed to Washington schools $100 for every point he scores on the court, and for several years he has held a Christmas party for 300 area children. He became a mentor to a boy named Andre McAllister soon after the youngster lost his family in a fire when he was 10, in 2004. Arenas secured a job for Andre as a Wizards ball-boy and has forged a friendship with him.

Arenas and his longtime girlfriend, Laura Govan, have a daughter, Izela, born in 2005, and a son, Alijah, born in 2007. The birth of their third child was expected in December 2009.

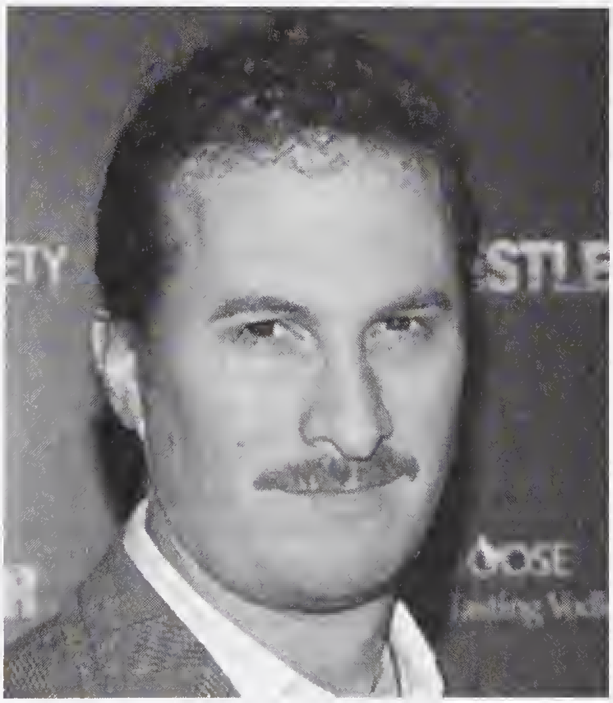
Aronofsky, Darren

Feb. 12, 1969– Filmmaker

Address: Creative Artists Agency, 162 Fifth Ave., Sixth Fl., New York, NY 10010



Stephen Lovekin/Getty Images

Since the release of *Pi* (1998), his first feature film, the director Darren Aronofsky has been compared to such masters of the form as David Lynch and Stanley Kubrick. Initially hailed as a wunderkind and praised for his fast-paced, "in-your-face" visual style and serious themes—drugs, addiction, the meaning of life, and the pursuit of knowledge—Aronofsky also has his fair share of detractors, which seems to be the way he likes it. He told Tasha Robinson for the *Onion* (November 21, 2006, on-line) that all of his films have been very divisive, adding, "I like films that make you feel in a strong way." His goal, from the start of his career, has been to make films that are original, complex, and challenging. Aronofsky gained fame with the release of his second film, *Requiem for a Dream* (2000).

Darren Aronofsky was born on February 12, 1969 in Brooklyn, New York. He grew up in the neighborhood of Manhattan Beach, a few miles from the Brighton Beach boardwalk and Coney Island roller coasters. (In several interviews Aronofsky has said that he wants to make movies that are "roller-coaster rides.") His parents, Abraham and Charlotte, were schoolteachers and still live in the neighborhood where the filmmaker spent his youth. "I was raised as a conservative Jew," he told

Jonathan Romney for the London *Guardian* (January 5, 1999). "I was bar mitzvahed and circumcised. But I was a rowdy skeptic kid who ran around cursing. I have a lot of respect for the Jewish religion, and the heritage and the culture, and I think it's definitely one way to reach spirituality, but there are other roads to get there." As a young boy Aronofsky spent his time taking black-and-white photographs and writing angst-filled prose. Over time, his interests broadened; at about 11 he began sneaking into the family's TV room after midnight to watch the often eerie tales featured on *The Twilight Zone.* As a student at Edward R. Murrow High School, Aronofsky would occasionally cheat or cut class; he told Scott Timberg for the *Dallas Observer* (April 19, 2001) that the only book he remembers reading during those years is Dostoyevsky's novel *Crime and Punishment.* One day during his senior year, he and a friend went to the local mall to see a mainstream Hollywood movie, which was sold out; instead, "I saw a poster with a goofy guy with a Brooklyn hat, went in, and it turned out to be [Spike Lee's independent film] *She's Gotta Have It,*" Aronofsky told Timberg. "And I remember being just blown away. It spoke to me partly because I was from Brooklyn, and I really related to the hip-hop culture, but also the whole aesthetic of it was really refreshing." Lee's "guerrilla filmmaking" opened Aronofsky's eyes to a new kind of storytelling. Aronofsky would also, on occasion, take the subway to Manhattan and sneak into movies such as Kubrick's *A Clockwork Orange* and Lynch's *Eraserhead.* "They were films," he told Timberg, "you weren't supposed to see." Aronofsky has said that the stories on Bill Cosby's comedy albums of the 1960s were another influence on his work.

In 1987 Aronofsky enrolled at Harvard University, in Cambridge, Massachusetts. He initially majored in anthropology, later changing his focus to film. Aronofsky told Robinson about the Harvard film program: "It's mostly a documentary program. They were very, very free when I was down there, and they basically let you do what you wanted. For me, that's a very good environment. They give you the camera and a budget, and they say, 'Go have fun.' To me, that was great, because I was good at sort of putting together my own team and just going for it." At Harvard he met several of his future collaborators, including Sean Gullette, who would cowrite and star in *Pi.* During his senior year at Harvard, Aronofsky became a Student Academy Awards national finalist for his film *Supermarket Sweep.* After graduating from Harvard he attended the American Film Institute, in Hollywood, where he earned an M.F.A. degree. There, as at Harvard, he met some of his future colleagues, including the producer Eric Watson and the director of photography Matthew Libatique. Aronofsky returned to New York in 1995.

Pi was shot in New York in 1996 for $60,000, most of which was raised via donations from Aronofsky's friends and family. A psychological thriller with science-fiction elements, *Pi* follows the life of a mentally unstable math genius, Max Cohen (played by Gullette), who is obsessed with order. Max constantly searches for patterns in the stock market; with the help of his computer, he eventually finds a 216-digit number whose significance, in his mind, ranges from the financial to the spiritual, and he finds himself pursued by both a powerful Wall Street firm and a group of Hasidic Jews who believe that the number sequence could help them decipher the Torah's "code of God." Shot in black and white, the film won the Director Prize at the 1998 Sundance Film Festival and brought praise from critics. "A Kafkaesque semi-science-fiction film without special effects, the work recalls early David Lynch in the impressionistic connections it makes between its assorted bizarre preoccupations—computer parts, ants, a disembodied brain, Orthodox Jews, physical torment, creative mania—as well as Stanley Kubrick in its expressive precision, technical virtuosity, intellectual range and dispassionate bemusement at the spectacle of intense human pursuit," Todd McCarthy wrote for *Variety* (June 22, 1998). "And unlike most American films, it is part of the grand historical tradition of works interested in the pursuit of knowledge and theories of existence." Romney complimented the film's cinematography: "Aronofsky does urban anxiety with rare vigor, in some of the best New York photography of recent years—cinematographer Matthew Libatique creates the old-style grimy, steamy Manhattan inferno that seems to have disappeared from cinema since the city's big clean-up." Speaking to Romney, Aronofsky elaborated on what soon became known as his hip-hop technique: "There have been films about hip-hop, but not many hip-hop techniques used in film—the whole idea of visual sampling, repetition of beats and sounds." Aronofsky's style was also influenced by the *Sin City* comic-book series and the director Shinya Tsukamoto's surreal science-fiction *Tetsuo* films.

Aronofsky wanted *Pi* to be visually unlike anything that had been done before, and most critics felt that he achieved his aim; but some, while crediting Aronofsky for his original techniques and clever story, took issue with the film's aesthetic. "As smart as it is, *Pi* is awfully hard to watch," Stephen Holden wrote for the *New York Times* (April 3, 1998). "Filmed with hand-held cameras in splotchy black-and-white and crudely edited, it has the style and attitude of a no-budget midnight movie. Those very qualities are likely to give it a certain hip cachet among those who like their cinema technically raw and spontaneous. But with its ink-stained cinematography and jarring electronic score by Clint Mansell, *Pi* can be extremely grating." The film earned more than $3 million, which allowed Aronofsky to give his friends and family a return on their investments. He then signed a movie deal with Miramax Films.

Aronofsky's next film, *Requiem for a Dream* (2000), was based on a novel by Hubert Selby Jr. Aronofsky wrote the screenplay with Selby, who was also the author of *Last Exit to Brooklyn*, one of Aronofsky's favorite books. The film, a fast-paced drama, was more complex and mature than its gritty predecessor and had a substantially bigger budget, approximately $5 million. *Requiem* was praised for its visual, aural, and emotional intensity. The film revolves around the addiction-driven lives of Sara (Ellen Bursyn), her son, Harry (Jared Leto), and Harry's girlfriend (Jennifer Connelly) and friend (Marlon Wayans). Sara obsessively watches television while consuming diet pills and dreaming of being on her favorite show; Harry and his friend consume hard-core drugs (heroin and cocaine, among others) and aspire to become successful drug dealers; and the ambition of Harry's girlfriend, also an addict, is to open her own clothing-design store. As the film's title implies, the characters' dreams do not come true. "The filmmaker's effrontery is effectively a personal statement, a brand of dynamism that isn't just technique for its own explosive ends but rather is integral to the storytelling," Elvis Mitchell wrote for the *New York Times* (October 6, 2000). "The book is unremittingly grim, and the flashes of visual wit supplied by Mr. Aronofsky . . . are offputting because he is infatuated with the rot. By the end, he has made the movie bleaker than the original material. People may find it infuriating precisely because it's so intimidating, and it may leave you shaken. Be warned: it's a downer, and a knockout." While drugs play a key role in the film, *Requiem* is not simply a "drug movie" but a nuanced portrait of addiction, hopeless dreams, and ruined lives. "[Aronofsky] doesn't put a gloss on his characters' problems," Mitchell wrote. "Their drug gobbling is highlighted, accompanied by slurps, gulps and other loud noises that infantilize their appetites. For them, it's all sensation-seeking, and to a lesser extent it's the case with the movie as well. Instead of falling back on the cliché of junkies' vegetative states, Mr. Aronofsky races through their buzzes because he wants to show how quickly the time passes when they're high. And it explains why their lives are so empty when they're not consuming, which drug movies haven't made so clear before." The film's visual style, most critics agreed, complemented the story: Aronofsky used fish-eye lenses, quick cuts, split screens, and extreme close-ups, most notably of dilating pupils. The soundtrack, which combines electronic and classical music, was composed by Clint Mansell. In his review Mitchell also observed that Aronofsky "draws astonishing performances from his actors." Most critics agreed that the four principal actors were extremely convincing in their roles, and Burstyn received an Oscar nomination. Speaking about the film to Timberg, Aronofsky said, "I wanted to make a roller coaster ride. One that smashed into a brick wall."

Six years and many struggles preceded the release of Aronofsky's next film, *The Fountain*. The movie was originally budgeted for $70 million, more than 1,000 times what Aronofsky's debut film cost to make. "To convince Warner Bros. to give us the big budget to make this very experimental film, we knew we needed real stars," Ari Handel, a friend of Aronofsky's from Harvard and the co-writer of *The Fountain*, told Steve Silberman for *Wired* (November 2006). Brad Pitt, a fan of *Requiem*, signed on for *The Fountain* after reading the script, and Cate Blanchett was set to co-star in the film. The moviemakers built elaborate sets, assembled a 450-person crew (in Australia, where parts of the film were to be shot), and planned epic battle scenes. Then, in 2002, seven weeks before shooting was scheduled to begin, Pitt pulled out of the project, citing creative differences with Aronofsky (the actor had demanded many script changes); with the film's big star having left, others followed, and the project came to a halt. Stressed out, Aronofsky left for India and China, alone. He returned to the project in 2003. "I could feel that *The Fountain* was not out of my blood," he told Silberman. "And then I remembered: I don't have to write for the studio or Brad Pitt or any other movie star. I decided to start acting like an independent filmmaker again." Aronofsky revised the script and decided to make the film without computer-generated images, usually referred to as CGI. In the end *The Fountain* was made for half of its original budget and starred Hugh Jackman and Rachel Weisz, whom Aronofsky had been dating since 2001.

Released in 2006, *The Fountain* was Aronofsky's most ambitious and divisive film yet. Silberman called it "one of the most visually original and emotionally complex science fiction films in history." The film takes place in three time periods, set several hundred years apart, each with characters played by Jackman and Weisz. In 16th-century Spain, Queen Isabella sends the conquistador Tomas to the Mayan jungle in search of the Tree of Life. In 21st-century America, a research scientist named Tom is also on a mission—to cure his wife's cancer. Five hundred years in the future, Tom travels through space toward a golden nebula where he hopes his wife's soul will be reborn. "*The Fountain* dispenses with everyday assumptions about time, space and causality," A. O. Scott wrote for the *New York Times* (November 22, 2006), "and tries to replace the prose of narrative cinema with a poetic language of rhyming images and visual metaphors. I wish I could say it succeeded." Other reviews were less measured; Dana Stevens, for example, wrote for *Slate* (November 30, 2006), "*The Fountain* is the story of a gifted artist who dared to reach for the stars and paid for his ambition with a really stupid movie." Stevens went on to compare Aronofsky to Max Cohen, the troubled math genius in *Pi*: "With *The Fountain*, Aronofsky has become the hero of *Pi* without the desistance or the humility. He not only wants to ask the big questions, he tries to tie it all up with The Big Answer. And that's worse than bad metaphysics, it's bad filmmaking."

The film had been controversial ever since it was shown at the 2006 Venice International Film Festival. After the first screening, lovers and haters of the film alike voiced their opinions in the theater; two people got into a fistfight over the film and had to be pulled apart. "It's funny," Aronofsky told Michael Idov for *New York* (November 27, 2006), "how the same people who complain that Hollywood never does anything different attack when you do." Not everyone complained. Some critics praised the film, albeit with qualifications. "I'm as touched and charmed by its failures . . . as I am transfixed, at times, by its successful inventiveness and audacity . . . ," Lisa Schwarzbaum wrote for *Entertainment Weekly* (November 21, 2008, on-line). "It's an entirely mood-dependent experience enhanced by identification with romantic/spiritualistic/kabbalistic/journal-or-blog-keeping tendencies of one's own, and ruined by impatience." The film critic Roger Ebert, writing for the *Chicago Sun-Times* (September 13, 2007), admitted that the film is "not a great success" but gave Aronofsky the benefit of the doubt: "When a film telling three stories and spanning thousands of years has a running time of 96 minutes, scenes must have been cut out. There will someday be a Director's Cut of this movie, and that's the cut I want to see."

Aronofsky's latest film is *The Wrestler* (2008), a drama that centers on the life of a retired professional wrestler, Randy "The Ram" Robinson (played by Mickey Rourke), who wants to return to the ring to face a former rival. At the 2008 Venice International Film Festival, the film received the Golden Lion Award, the festival's highest honor. Critics have praised both the film and Rourke's performance, hailing it as a comeback for the actor. *The Wrestler* went into wide release in December 2008. "The movie has the simplicity and confidence of a Johnny Cash song," the film critic Mick LaSalle wrote for the *San Francisco Chronicle* (December 25, 2008)."We recognize all the shopworn elements, and yet the ballad still has the power to take audiences to a real emotional and philosophical place. To call *The Wrestler* a formula movie would be to misunderstand it. This is an homage to formula, a knowing treatment that's loving rather than cynical." A. O. Scott, writing for the *New York Times* (December 17, 2008, on-line), praised the director's technique: "Shooting his battered hero mainly in trudging, hand-held tracking shots, Mr. Aronofsky . . . makes a convincing show of brute realism." Aronofsky is set to direct a remake of *RoboCop*, the futuristic 1987 action film about a crime-fighter who is half-man, half-machine. The film is currently in development. His film *Black Swan*, a psychological thriller about a ballet dancer living in New York City, is currently in preproduction; it will star Natalie Portman and Mila Kunis.

Aronofsky is married to the Oscar-winning English actress Rachel Weisz, with whom he has a son, Henry, born on May 31, 2006. They reside in New York City.

Axelrod, David

Feb. 22, 1955– White House senior adviser; political consultant

Address: The White House, 1600 Pennsylvania Ave., N.W., Washington, DC 20500

Before he became the top political adviser to Barack Obama, during Obama's 2004 bid for the U.S. Senate, David Axelrod was already known as one of the nation's preeminent political strategists and, according to many, the best political consultant in the Midwest. The president of the Chicago, Illinois–based company AKP&D Message and Media (formerly known as Axelrod and Associates), he began his career as a political reporter and columnist with the *Chicago Tribune*; he was then inspired to join the 1984 senatorial campaign of the socially liberal Paul Simon and went on to advise Harold Washington, the first (and, so far, only) African-American mayor of Chicago, during his 1987 reelection campaign. Many have credited his efforts to elect progressive and African-American candidates to public office in Chicago with helping to ease racial tensions in that city's political sphere. In the 1990s and 2000s, Axelrod emerged as a specialist in urban politics and contributed to Democratic victories in mayoral races across the country. In 2006 he was the chief strategist in the historic campaign that led Deval Patrick to become the first black governor of Massachusetts. Axelrod—whose work for candidates has included developing strategy and message, creating television and radio commercials, and dealing with the media—often ran campaigns that centered on office-seekers' biographies rather than specific issues, believing that the power and poignancy of their stories are what win votes. "What [Axelrod] brings to the table," the political strategist Donna Brazile told David Montgomery for the *Washington Post* (February 15, 2007, on-line), "is the ability to help a candidate not only find their voice but also their roots. Their soul. David understands how to push through all the paper to get to the person."

While Axelrod—known as "the Axe" by many of his opponents—is just as aggressive, cut-throat, and willing to use negative advertising as anyone else in his industry, his friends and colleagues have observed that he also possesses an uncommon idealism and sincere belief in the candidates he advises. "He's really sort of an innocent . . . ," Sam Smith, a retired *Chicago Tribune* sportswriter and a longtime friend of Axelrod's, told Robert G. Kaiser for the *Washington Post* (May 2, 2008). "He loves his candidates when he starts; he's usually let down when he finishes [a campaign]." While Axelrod has disputed the claim that he ends up disappointed by his candidates, he has admitted to being inspired by them, particularly Obama, whom he considers "a really special guy" and whose presidential candidacy, he has said, embodied idealism in the way that the 1960s candidacies of John F. and Robert F. Kennedy did. "You never want to compare yourself to an iconic figure like that, and Obama doesn't, but the spirit of possibility in difficult times is a powerful thing," Axelrod told Kaiser. "And I see that again." Following Obama's election to the presidency, Axelrod was tapped to be a White House senior adviser.

David M. Axelrod was born in New York City on February 22, 1955 to politically liberal Jewish parents. In the 1940s his mother, Myril, was a journalist with *PM*, a left-wing newspaper; she later ran focus groups for an advertising firm. His father, Joseph, was a psychologist. Axelrod's parents separated when he was five years old; they reunited but separated again three years later and divorced when he was 13. With his sister, Joan, Axelrod grew up on the Lower East Side of Manhattan, in New York City. In 1960 he witnessed a rally held there to support the presidential bid of John F. Kennedy, then a Democratic U.S. senator from Massachusetts. Axelrod has recalled being hoisted onto a mailbox to watch Kennedy deliver what he recognized even then as an important speech. "The crowd was chanting, and he was speaking, exhorting them," Axelrod told Patrick T. Reardon for the *Chicago Tribune* (June 24, 2007). "There was a sense that people could get together and make history." When he was nine Axelrod handed out leaflets supporting the former U.S. attorney general Robert F. Kennedy's campaign for the U.S. Senate, and at 10 he passed out literature for John V. Lindsay, who was running for mayor of New York as the candidate of both the Republican and Liberal parties. In 1968 Axelrod and a friend set up a card table at the Bronx Zoo to sell "Robert Kennedy for President" buttons and bumper stickers. Axelrod attended Stuyvesant High School, a highly selective public school.

In 1972 Axelrod enrolled at the University of Chicago, where he majored in political science. As a reporter for the daily campus paper, the *Chicago Maroon*, he specialized in the politics of Chicago's South Side, a poor area with a predominantly black population. He wrote a political column for one of the city's weeklies, the *Hyde Park Herald*, and contributed freelance articles to *Time* magazine. In May 1974 his father, while alone in his apartment, committed suicide. Axelrod, who was deeply affected by his father's death, told Reardon that his father "had a great sense of humor. We used to yell puns to each other. I'd like to think I inherited my sense of humor from him." One summer during his undergraduate years, he completed an internship at the *Chicago Tribune*. He so impressed the editors with his knowledge of politics that, upon his graduation from college, with a B.A. degree in 1977, the newspaper hired him as a full-time reporter; his beat encompassed "every manner of disaster, murder and mayhem," as he told Kaiser. "Little by little I got to know the city really well, and I fell in love with it." In 1979 Axelrod married Susan Landau; the two had met as members of a coed basketball league in Hyde Park. Two years later he became the youngest political writer and columnist in the *Tribune*'s history; later, he was named the paper's City Hall bureau chief.

As time went by, Axelrod started to feel the urge to become "one of the few people inside the room shaping the news," as he told Cheryl Lavin for the *Chicago Tribune* (March 25, 1992), "rather than one of the hundred people standing outside, waiting to hear what it was." In 1984, when the Democratic Illinois congressman Paul Simon, whom Axelrod had interviewed several times, asked him to join his campaign for a seat in the U.S. Senate against the three-term Republican incumbent Charles Percy, Axelrod quit his job at the *Tribune* to become Simon's communications director. Within weeks Simon had fired his campaign manager and promoted Axelrod—along with David Wilhelm (who later chaired the Democratic National Committee)—to run his campaign. Working 12- to 15-hour days, Axelrod crafted a message that portrayed Simon as decent and principled and Percy as out of touch with local issues. With his upset victory over Percy, Simon was one of only two Democrats to defeat an incumbent Republican senator that year. Wilhelm told Christopher Hayes for the *Nation* (February 6, 2007, on-line) that the naïveté and idealism he and Axelrod shared at that time contributed to their success. "We were too dumb to quit," Wilhelm said.

In 1984, with Forest Claypool, one of his deputies during Simon's campaign, Axelrod launched a political consulting firm, Axelrod and Associates. Two years later Axelrod was hired to manage the mayoral reelection campaign of Harold Washington. During his first term Washington, a Democrat, had dealt with a city council dominated by members of Chicago's political machine, made up largely of corrupt, nonprogressive Democrats. In what became known as the "council wars," the efforts of council members to undercut Washington's efforts at reform had resulted in racially charged disputes. Axelrod had been inspired by Washington's 1983 mayoral campaign, describing the candidate to Hayes as "the most kinetic campaigner and politician that I've ever met." The mayor was extremely popular among Chicago's African-American residents; Axelrod helped him increase his appeal to the city's liberal whites. In the Democratic primary Washington defeated former mayor Jane Byrne, whom he had unseated four years earlier, and in the general election, held in April 1987, he defeated Edward Vrdolyak, a onetime Democrat who ran on the Illinois Solidarity Party ticket. (Washington died of a heart attack seven months later.)

Many liberal reformers were surprised by some of the other Democratic politicians for whom Axelrod chose to work in his firm's early years. In 1989, for example, he worked on the mayoral campaign of the Democrat Richard M. Daley, the son of Chicago's former mayor Richard J. Daley, the latter of whom had led an extraordinarily powerful—and, according to some, corrupt and undemocratic—political machine in the city in the 1960s and 1970s and maintained an iron grip on party and civic affairs. After Richard M. Daley handily defeated Eugene Sawyer in the Democratic primary, Axelrod used Daley's enormous war chest to create a series of negative television and radio commercials directed at his lesser-funded opponents, Vrdolyak and Timothy Evans. In the general election Daley triumphed; he took office on April 24, 1989 and has been reelected five times, most recently in 2007. Axelrod has advised him on each of his reelection campaigns, and the two are close friends.

In 1992 Axelrod represented a number of incumbents in the national political arena as well as challengers to other incumbents; he therefore had to create campaigns defending the existing policies of some candidates and opposing those of others. He was the political strategist for the 16-term Democratic congressman Dan Rostenkowski, the son of a former Chicago ward boss, Joseph Rostenkowski, and for Al Hofeld, a millionaire personal-injury lawyer who was challenging the incumbent U.S. senator Alan J. Dixon of Illinois in the Democratic primary with a campaign promise to "break the rules" of Washington and fight to institute term limits. Axelrod's campaign for Hofeld was dubbed by Steve Neal, writing for the *Chicago Sun-Times* (March 15, 1992), as "the most vicious, negative, and mean-spirited assault in a statewide Illinois election in more than a decade." Accusing Dixon of being "paid by the taxpayers" but "owned by the special interests," Axelrod issued a series of ads and direct-mail items vividly pointing to Dixon's supposed corruption. One such piece read, as quoted by Neal, "Money-stained fingers smear fine crystal glasses. Fancy colognes mix with the odor of corruption. Expensively dressed diners can hardly control their obscene appetites for wealth and power." At one point Axelrod even remarked to a reporter for the *National Journal* that his former mentor Paul Simon, who had endorsed Dixon, was "an aspiring hack trapped in a reformer's body." Years later Axelrod told Reardon that that comment about Simon, who died in 2003, was the thing he regretted most in his political life. Ultimately Rostenkowski won his reelection bid, but Hofeld finished in third place behind Dixon and the winner, Carol Moseley-Braun.

Axelrod has defended his use of negative advertising. "Look, voters don't go into the voting booth saying, 'I love all these folks—who do I love the most?'" he told Lavin. "You have to draw distinctions between them. Negative advertising can be very effective." Axelrod has also been accused of being hypocritical, billing himself as a representative of the progressive wing of the Democratic Party while working for wealthy candidates who are considered part of the Democratic establishment. "In a primary, you fight to define your party. But I'm partisan; in a general election I support the Democratic candidate," he told Lavin. "And just because I work with a candidate doesn't mean I belong to them for life. If someone disappoints me, I move on."

Despite the criticism he has received, Axelrod earned a positive reputation among progressives for working successfully on the campaigns of Democratic African-American politicians, particularly mayors. He helped elect African-American mayors Michael R. White of Cleveland, Ohio, in 1990; Dennis Archer of Detroit, Michigan, in 1992; Anthony A. Williams of Washington, D.C., in 1998; Lee P. Brown of Houston, Texas, in 1998; and John F. Street of Philadelphia, Pennsylvania, in 2000 and 2004. "He understands the African American community must see themselves in the candidate," Brazile told Montgomery, "not just their successes, but also their struggle."

Axelrod created issue ads for Hillary Clinton during her successful 2000 campaign to become a U.S. senator from New York. In 2002 he worked as a media adviser for Rahm Emanuel, a former official in the administration of President Bill Clinton, in his campaign for a seat in the House of Representatives from Illinois. In 2004 Axelrod was a media consultant for the reelection campaign of Connecticut senator Christopher Dodd and for the presidential campaign of John Edwards, a former senator from North Carolina. Although many of the national candidates for whom he worked, including Bill Clinton, offered Axelrod staff positions after being elected, Axelrod declined the offers, preferring to remain with his family in Chicago—where, as he quipped to Montgomery, "at least they stab you in the front."

In 2002 Barack Obama, then an Illinois state senator, asked Axelrod for his advice about running for the U.S. Senate. The two had met in the early 1990s, when Obama, then a recent Harvard Law School graduate, was working as a civil rights attorney and coordinating voter-registration drives in Chicago's South Side neighborhoods. Though Axelrod had been asked to work for another candidate who was campaigning for the same Illinois Senate seat, he signed on to work with Obama. Impressed with what he saw as Obama's optimism and dynamism, Axelrod charged Obama only a small fee for his services, given that the state senator had very little money at the time. "My involvement was a leap of faith," Axelrod told Obama's biographer David Mendell, as quoted by Kaiser. "I thought that if I could help Barack Obama get to Washington, then I would have accomplished something great in my life." In Obama's 2004 campaign Axelrod highlighted the candidate's public service. He also ran an endorsement by the daughter of Paul Simon and an ad that linked Obama to the city's late, beloved mayor Harold Washington. Obama defeated six other Democratic candidates in the primary election, held in March 2004, earning over 50 percent of the vote. Obama's opponent in the general election, the Republican Jack Ryan, dropped out shortly after the primary, following a disclosure about his mistreatment of his ex-wife; Ryan was replaced by the black Republican Alan Keyes. In November 2004 Obama defeated Keyes, winning 70 percent of the vote.

In 2006 Axelrod oversaw the Democratic Congressional Campaign Committee's independent-expenditure media program, helping Democrats gain their first majorities in the Senate and House of Representatives since 1994. That year Axelrod was also the political strategist for Deval Patrick in his campaign for the governorship of Massachusetts. Patrick, an African-American who had worked as assistant U.S. attorney general for the Justice Department's civil rights division in the Clinton administration, was widely considered an underdog in the race. In a campaign that would become the model for Obama's 2008 presidential run, Axelrod projected an optimistic message of reform and pragmatism; Patrick's candidacy used a slogan that Axelrod would later adopt for Obama: "Yes. We. Can!" Patrick's campaign also focused on his inspiring life story—of having been born to a poor family on Chicago's South Side and worked his way up to attend Harvard University. After winning the Democratic nomination, in September 2006, Patrick won 56 percent of the vote in that November's four-way general election, becoming Massachusetts's first black governor and the second African-American elected governor in U.S. history.

Before Obama asked him, in the fall of 2006, to be the political strategist for his 2008 presidential campaign, Axelrod had been planning to take some time off, in part because a number of politicians for whom he had once worked were planning to run for president—including Hillary Clinton, Edwards, Dodd, and the former Iowa governor Tom Vilsack—and he was reluctant to campaign against a former client. Three weeks before Obama officially announced his candidacy, in a speech on February 10, 2007, Axelrod released on the Internet a five-minute video of footage related to Obama's unusual life story; the son of a Kenyan father and a white mother from Oklahoma, he was raised by his white grandparents in Hawaii, gave up a corporate job to work for years as a community organizer on the South Side of Chicago, then attended Harvard Law School, where he became the first black editor of the *Harvard Law Review*. Entering a Democratic primary race in which the well-connected and well-funded New York senator Hillary Clinton was the presumed winner almost from the outset, Obama criticized the "divisive" and unproductive politics that he said had come to dominate Washington; he adopted messages of "hope" and "change," of which Obama himself—as the potential first black president—became a symbol. Many have cited Axelrod's influence regarding some of Obama's most memorable speeches, including his response to an accusation made by Hillary Clinton during one debate that Obama had raised false hopes in the American electorate with his idealistic speeches. In a January 2008 speech, as quoted by Maria L. La Ganga in the *Baltimore Sun* (February 21, 2008), Obama responded to Clinton's statement by asking: "What does that mean, false hopes? How have we made progress in this country? Did John F. Kennedy look at the moon and say, 'Ah, thought so, too far. Reality check. Can't do it'?"

Axelrod used the Internet to organize a nationwide grassroots coalition, which raised an unprecedented amount of money, most of which came in donations of less than $100. In contrast to the strategy used by Clinton, who campaigned mainly in states that had a lot of delegates, Axelrod focused on those with lower delegate counts, among them Alaska, Idaho, Kansas, and North Dakota. After winning a surprising, decisive victory in the first contest, the Iowa caucuses, held on January 3, 2008, then losing to Clinton in the New Hampshire primary, on January 9, Obama won 11 contests in a row, gaining 200 delegates. Though Obama earned only slightly more delegates than Clinton in the 24 primary elections or caucuses held on February 5, 2008, also known as "Super Tuesday," it soon became clear that he had collected so many delegates that it was nearly impossible for Clinton to catch up, even after her March victories in the so-called "big states," Ohio, Texas, and Pennsylvania. After what became one of the lengthiest and most contentious presidential primary elections in history, Clinton conceded the contest to Obama on June 7, 2008, shortly after Obama secured the requisite 2,025 delegates. Obama's campaign has been called one of the best-organized and best-run in U.S. history. "Axelrod . . . seems to have a profound understanding of people's yearning for a politics that is somehow less petty and rancorous," Hayes wrote. "Together [he and Obama] have crafted a potent message that speaks to this." Axelrod insisted that if Obama were elected president the following November, he would not accept a position in the Obama White House; those who knew Axelrod well, however, questioned whether he would be able to resist being a part of such a historic administration.

In the general election Obama faced the Republican senator John McCain of Arizona, who, as a military veteran who had spent more than five years as a prisoner of war in North Vietnam, had a life story as compelling as Obama's. Obama's general-election campaign, which began months before his official nomination, in August 2008, was notable for its lack of negativity as well as its discipline and consistent message. In the summer of 2008, as McCain's approval ratings improved—especially in the weeks following his selection of the conservative Alaska governor Sarah Palin as his running mate, in late August—some Democrats called for Obama to step up his attacks on McCain. While Obama himself typically dismissed McCain's negative attacks, which became increasingly frequent and biting, Axelrod and Obama's communications director, Robert Gibbs, occasionally challenged them. On July 30, 2008 Axelrod criticized a particularly sensational McCain ad that compared Obama to such international celebrities as Britney Spears and Paris Hilton in terms of both his popularity and (the ad implied) his lack of substance and understanding of the American people. Axelrod told Andrea Mitchell for MSNBC: "The thing that is sad about [the ads] is that Senator McCain entered this campaign as someone who was going to elevate the debate and talk about the future, and that is the reputation he had. And instead, we get some very familiar tactics. And it makes you wonder who is running the campaign and who is making the decisions, who is behind all this."

Obama opted to forgo public campaign financing, which allowed him to raise a record-setting amount of money through his grassroots network of supporters. On November 4, 2008 he was elected the 44th president of the United States, with 365 electoral votes to McCain's 173. Obama named Axelrod his senior adviser on November 19, 2008. Since his inauguration, on January 20, 2009, the new president has moved quickly to fulfill a number of major campaign promises, among the most urgent the proposal for a stimulus package to help revitalize the nation's ailing economy; voting along party lines, the House approved the measure, which called for spending totaling $819 billion, on January 28, and the Senate followed suit on February 10.

In subsequent months Obama embarked on an ambitious agenda, which included reevaluating the country's strategies in Afghanistan and Iraq, establishing a new regulatory system for the banking industry, and overhauling the nation's health-care system. Regarding health-care reform in particular, Congress has become increasingly polarized, and Obama's approval rating has dropped. Many have already identified health-care reform as the most crucial issue of Obama's presidency. "To govern is to make choices, and to make choices is to make some unhappy," Axelrod said in an interview with Peter Baker for the *New York Times* (September 7, 2009, on-line). "[Obama] made some very tough decisions that pulled us away [from a long-term economic depression]. But he had to expend some political capital to do that. He's expending some capital to do something that's very important, which is to bring security and health care to people who don't have it."

Over the course of his career, Axelrod has tailored messages for more than 150 successful campaigns at the local, state, and national levels. Axelrod ran AKP&D with three partners, John Kupper, David Plouffe, and John Del Cecato; in addition, along with Kupper and Eric Sedler, he headed ASK Public Strategies, which works on behalf of companies and organizations to mount ad campaigns relating to specific issues. Axelrod no longer runs either company and is not listed as a partner on either of the groups' official Web sites. He has served as an adjunct professor of communications studies at Northwestern University and lectured on the subject of political media at Harvard University, the University of Chicago, and the University of Pennsylvania. He has often been a guest political analyst on network television programs as well as on National Public Radio.

Owing to his droopy mustache, comb-over, and often rumpled attire, Axelrod's appearance has been compared—by his own mother—to that of "an unmade bed." Axelrod and his wife, Susan, have three children—Lauren, Michael, and Ethan—who are now grown. Lauren, the couple's oldest child, has developmental disabilities associated with the chronic epileptic seizures from which she suffered throughout her childhood. In 1998 Susan Axelrod joined two other mothers to form Citizens United for Research in Epilepsy (CURE), a group that lobbies for increased funding to find a cure for the disease; according to the AKP&D Web Site, CURE has raised $9 million to date. Axelrod has brought many of his former clients, including Bill Clinton, Obama, and Edwards, to speak at the group's annual fund-raising events.

Ayers, William

Dec. 26, 1944– Educator; writer; activist

Address: University of Illinois, 1040 W. Harrison, M/C 147, Chicago, IL 60607

In 2008 William Ayers, who holds the title of distinguished professor of education at the University of Illinois at Chicago, found himself the subject of fierce debate among the principal players in the race for the U.S. presidency. Ayers was a founding member of the Weather Underground, which in the early 1970s claimed responsibility for dozens of nonfatal bombings—including those at the Pentagon and U.S. Capitol—meant to protest the U.S. war in Vietnam. After years as a fugitive, he turned himself in to authorities and later earned a doctorate in education; he has since focused on a career as a teacher, writer, and education reformer in the Chicago, Illinois, area. It was there that he became acquainted with Barack Obama, who would become the 2008 Democratic presidential nominee, when both served on the boards of philanthropic and education-reform groups. The campaign of the Republican nominee, John McCain, emphasized the Obama-Ayers link and implied that Obama thus had ties to terrorists, in an effort to sow doubts about the Democratic candidate's patriotism and commitment to American values.

In an interview with Terry Gross for the National Public Radio program *Fresh Air* (November 18, 2008), Ayers insisted that there were no hidden aspects of his relationship with Obama. He also sought to explain the Weather Underground's motivation for its actions of decades past: "The question facing us was, in a situation where the American people have come out against the war, the people of the world have been against the war for much longer, what do you do when 2,000 people a week are being murdered? How do you respond to that? And the question was answered in a variety of ways. Some people went into the Democratic Party and tried to build a peace wing. Some people left for Europe and Africa and said they had to leave the madness. Some people organized communes and alternative communities. Some people went into factories and organized the industrial working class. And we decided that we would try to create an organization that could survive what we thought of as kind of impending American fascism and take the war to the warmakers." Ayers told Gross that in his 2001 memoir, *Fugitive Days*, he described "two groups of young Americans, one group [the Weather Underground] despairing, a little bit off the tracks, also hopeful that things can change, entering into the Pentagon, finding a way to penetrate the Pentagon to put a small explosive device kind of in a restroom. . . . And then I describe another group of Americans [U.S. soldiers] also despairing, also a bit off the tracks, marching into a Vietnamese village and murdering everyone who is alive and everything that's alive—every animal, all the livestock—and then burning the buildings to the ground, destroying the village. And I raise the question, what is terrorism?"

William Charles Ayers was born on December 26, 1944 in Oak Park, Illinois. He grew up in Glen Ellyn, a wealthy suburb of Chicago, with three brothers, John, Richard (Rick), and Thomas Jr., and a sister, Catherine. Their mother, Mary (Andrew) Ayers, was a homemaker; their father, Thomas G. Ayers, was a businessman who later served as president, chief executive officer, and chairman of Commonwealth Edison Co., the largest electric utility in Illinois. (It is now a unit of the Chicago-based Exelon Corp.) William Ayers has often credited his father, who promoted racial equality and once acted as a mediator between Chicago mayor Richard J. Daley and the civil rights leader Martin Luther King Jr., for sparking his interest in social activism. A smart and lively child, Ayers attended public schools until his sophomore year of high school, when he transferred to the Lake Forest, Illinois, prep school Lake Forest Academy. There, he played football and was the school's lone member of the Young Socialists Association. After graduating, in 1963, he enrolled at the University of Michigan (UM) at Ann Arbor. During those years Ayers was a member of the Merchant Marine. Learning about the U.S. war in Vietnam, and having read the novelist Norman Mailer's accounts of combat, he had romantic ideas about armed conflict and considered enlisting to fight overseas. But then, as he recalled to Terry Gross, "I came back to Ann Arbor, and as luck would have it, I found myself drawn to a group of anti-war people." He joined Students for a Democratic Society (SDS), which staged nonviolent protests to try to achieve its main objectives: ending racial inequality and U.S. involvement in the Vietnam War. By the late 1960s SDS boasted a membership of more than 80,000 young people. Though some sources claim that Ayers dropped out of college to focus his attention on SDS, his résumé on the University of Illinois Web site indicates that he earned a B.A. degree in American studies from UM in 1968.

Ayers became increasingly involved in SDS and began organizing for the group. He burned his draft card and was arrested in 1965 during a sit-in at a draft-board facility. Shortly afterward he got his first teaching job, at Children's Community, a small alternative school in Ann Arbor. Part of the free-school movement, the school emphasized cooperation over competition in its educational approach, and his work there opened his eyes to what would later become his passion. "I found out I'm at my best with kids," he later said of the experience to Jon Anderson for the *Chicago Tribune* (July 8, 1993). Ayers soon became the director of the school, where he met Diana Oughton. The two began dating and attended SDS meetings together.

In 1967 Ayers met Bernardine Dohrn, a 25-year-old activist with a law degree from the University of Chicago. A charismatic speaker, Dohrn became an SDS spokesperson. Ayers became the leader of the Midwest faction of SDS and was elected national education secretary at SDS's last national convention, in June 1969. During that convention SDS began to splinter. One faction, including Ayers, Oughton, and Dohrn, called for the formation of a militant group called the Weathermen. (The name was inspired by the Bob Dylan song "Subterranean Homesick Blues": "You don't need a weatherman / to know which way the wind blows.") They believed peaceful protests were not effective and issued a call to "bring the war home" through violence. "We wanted the people in the government waging the war to feel a sense of fear, a sense of consequences," Ayers told Don Terry for the *Chicago Tribune Magazine* (September 16, 2001). "Not personal fear, but fear that they were unleashing something that could rise up and overwhelm them." The Weathermen caused a schism within SDS, which disbanded in 1970.

Meanwhile, the Weathermen's first public protest had occurred in October 1969. Outraged by the trial of eight men accused of plotting to disrupt the 1968 Democratic National Convention, the group organized hundreds to riot in Chicago over the course of three days that became known as the Days of Rage. Wearing helmets and leather gloves, the rioters charged through the city, smashing car and building windows and destroying police cars. Unlike many other members, Ayers was not arrested during the riots. In March 1970 three Weathermen members, including Oughton and Ayers's close friend Terry Robbins, died when a bomb they were making in a New York City townhouse accidentally detonated. Soon afterward about two dozen Weathermen, including Ayers and Dohrn, went into hiding. They moved constantly, to locations in 15 states, and frequently changed their identities. Ayers held a series of odd jobs, working as a baker or as a teacher at a day-care center, and began a romantic relationship with Dohrn.

Still passionate in their political beliefs, Ayers and his colleagues went on to form the Weather Underground. Between 1970 and 1974 the group was responsible for a series of bombings, including that of the New York City police headquarters in 1970, the U.S. Capitol in 1971, and a Pentagon bathroom in 1972. Ayers has said that the bombs were intended only to destroy property and that group members set off blasts late at night, after checking to make sure no one was around, to ensure that no one would be hurt. "There were tens of thousands of [acts of] vandalism and bombings and arsons at government targets, and the Weather Underground took credit for something like two dozen," Ayers told Terry Gross. "You know, it crossed certain lines of legality, of proprieties, maybe even of common sense. But it was not terror. It never targeted people, it never meant to hurt or injure anyone, and thank God it never did hurt or injure anyone." Others, however, dispute Ayers's claims. Todd Gitlin, a professor at New York University and former SDS member, told Don Terry that the Weather Underground members "wanted to be terrorists. They planned on being terrorists. Then their bomb blew up and killed several of them and they thought better of it. They were failed terrorists."

In the mid-1970s the Weather Underground disbanded when one faction wanted to join the Black Liberation Army and another, which included Ayers and Dohrn, wanted to turn themselves in to the authorities. Dohrn, by that time, had been placed on the FBI's Ten Most Wanted List. Ayers and Dohrn, now settled in New York but still in hiding, abandoned their militant activism and had two sons: Zayd, named in honor of the Black Panther leader Zayd Shakur, in 1977 and Malik, named in honor of the black nationalist Malcolm X, who named himself El-Hajj Malik El-Shabazz, in 1980. Realizing that their children would have a difficult life if they remained in hiding, the couple decided to turn themselves. Shortly after Malik's birth they negotiated their surrender with New York authorities. Charges related to their Weather Underground activities had been dropped in January 1974 due to government misconduct in the case. (Investigators had wiretapped phones without a court order.) Dohrn, however, still faced charges stemming from the Days of Rage riots for inciting mob action, fleeing prosecution, and kicking a police officer; she was fined $1,500 and placed on three years' probation. The next year she was sent to jail for seven months after refusing to cooperate with a grand jury investigating a bank robbery that had involved two former Weather Underground members, Kathy Boudin and David Gilbert, and had left three people dead. (Dohrn was not directly involved in the robbery but refused on principle to cooperate with authorities.) Ayers and Dohrn married that same year, while Dohrn was on furlough from prison, and together they adopted Chesa Boudin, the infant son of Boudin and Gilbert, both of whom had been sentenced for their involvement in the robbery. (Boudin was released in 2003. Gilbert is serving a sentence of 75 years to life.) When he was no longer a fugitive, Ayers resumed his close relationship with his family. "It's funny," he told Jon Anderson for the *Chicago Tribune* (July 8, 1993), "when we came out of hiding, the first thing my father said was, 'Your hair's a bit long.'" Ayers said to Jo Napolitano for the *Tribune* (June 12, 2007), "It was as if we were in the middle of a conversation and nothing much had changed."

In 1984 Ayers enrolled at Columbia University's Teachers College, in New York City. While there he was inspired by a course that introduced him to critical pedagogy, an approach to teaching that emphasizes the importance of social justice. Education reform soon became a passion for Ayers. He went on to receive two master's degrees in early-childhood education: the first in 1984 from Bank Street College, also in New York City, and the second from Columbia, in 1987, the year he also earned an Ed.D. degree in curriculum and instruction from that school. Shortly afterward Ayers and his family moved to Chicago; there, he became a professor of education at the University of Illinois, wrote, co-wrote, or edited books on education, and worked to reform the crowded, failing Chicago-area public schools. With Anne C. Hallett, then the executive director of the Cross City Campaign for Urban School Reform, he drafted a proposal on ways to improve the school system. They won funding from the Annenberg Foundation to form the Chicago Annenberg Challenge, a $49 million initiative aimed at having smaller class sizes and increased community involvement with schools. The Annenberg challenge funded projects in more than 210 area schools between 1995 and 2001.

In 1991, through the University of Illinois at Chicago (UIC), Ayers and Michael Klonsky founded the Small Schools Workshop, an organization that works to create small, innovative learning communities within public schools. Eight years later Ayers founded the Center for Youth and Society, which worked to improve the educational environments of young urban students of color. In 1997, in recognition of his efforts toward education reform, Ayers won Chicago's Citizen of the Year Award. Also in 1997 UIC named Ayers a senior university scholar, and in 1999 he became a distinguished professor of education. Praised by many for his work, Ayers has also attracted critics who dismiss his educational philosophy as a guise for left-wing radicalism. "Now, instead of planting bombs in bathrooms, he has been planting the seeds of resistance and rebellion in America's future teachers, who will then pass on the lessons to the students in their classrooms," Sol Stern, a senior fellow with the conservative Manhattan Institute, wrote for the urban-policy magazine *City Journal* (Summer 2006). "Teaching has always been, for me, linked to issues of social justice," Ayers explained to Marcia Froelke Coburn for *Chicago Magazine* (August 2001, on-line). "I've never considered it a neutral or passive profession." One of Ayers's colleagues at UIC, Pamela Quiroz, told the Associated Press (October 17, 2008, on-line) that Ayers "gives of himself greatly to his students. He gives of his time, his energies, his commitment. He is just a superb individual."

Ayers wrote a first-hand account of his activities with both the Weathermen and the Weather Underground in his memoir *Fugitive Days*. In what was certainly among the more unfortunately timed book releases in history, *Fugitive Days* was published in September 2001. Even more unfortunate was, as the *New Criterion* (October 2001) described it, a "long and flattering profile" of Ayers published on the front of the *New York Times*'s E section on the morning of the September 11 terrorist attacks. The feature, written by Dinitia Smith, began with a quote from Ayers: "I don't regret setting bombs. I feel we didn't do enough." (The September 16 edition of the *New York Times Magazine*, which had been sent to print before the attacks, featured yet another profile of Ayers.) The backlash from the article began immediately. The favorable reviews Ayers had received before the attacks (David Farber wrote for the *Chicago Tribune* [August 26, 2001] about the book, "For anyone who wants to think hard about the social conflagration the Vietnam War produced in the U.S., and more generally about a citizen's obligations in troubled times, Ayers' powerful, morally charged account of a life and a society in the political balance is provocative reading") gave way to scornful critiques that lambasted Ayers's unrepentant attitude toward his past. "I know that you can never control the timing of your appearances. But justifying violence on the most violent day in American history cannot be written off as Ayers's mere bad luck," Alan Wolfe wrote for the *Chronicle of Higher Education* (October 12, 2001). "On any day, his comments would have been remarkably insensitive to the victims of violent acts. On that particular day, they seemed like poetic justice, as if the gods had somehow conspired to remind Ayers of what any good weatherman could have predicted: When turbulence hits the atmosphere, there are no easy ways to control it." Beacon Press, the publisher of *Fugitive Days*, immediately canceled Ayers's promotional tour for the book. Ayers wrote a letter to the *New York Times*, published on September 16, which read in part, "I'm filled with horror and grief for those murdered and harmed [during the September 11 attacks], for their families and for all affected forever. *Fugitive Days*, the memoir I've written about my participation in the Weather Underground and the antiwar movement and the events of 30 years ago, is now receiving attention in a radically changed context. My book is a condemnation of terrorism in all its forms. We are witnessing crimes against humanity. The intent of my book was and is to understand, to tell the truth and to heal." Ayers's letter seemed only to fuel his critics' outrage. *Fugitive Days* was reprinted in 2003 with a new foreword and reissued in November 2008 following President Obama's election.

Ayers once again found himself in the national news when, during the 2008 presidential campaign season, his past connection to the Democratic candidate Barack Obama came to light. Another Democrat, Hillary Clinton, had raised the issue during the primaries, before Obama became his party's nominee; later, during a campaign event in Englewood, Colorado, on October 4, 2008, the Republican vice-presidential nominee, Sarah Palin, accused Obama of "palling around with terrorists." Obama and Ayers, who lived in the same Chicago neighborhood, had served together in two Chicago-based philanthropic groups and an education-reform group. (Obama chaired the Chicago Annenberg Challenge from 1995 to 1999.) Ayers had also held an event at his home to introduce Obama to community members during the politician's first run for public office, in the mid-1990s. According to both men, that was the extent of their relationship. The McCain-Palin ticket, however, tried to use Obama's connection with Ayers to tarnish his reputation and insinuate that the Democratic candidate secretly held radical if not anti-American beliefs. Ayers, who has said that he began receiving death threats shortly after his name was publicly linked to Obama's in that fashion, refused to be interviewed and made no public statements during the campaign. He said to Terry Gross, "I felt like . . . how does one enter into that discussion when the premises are so . . . profoundly dishonest that I didn't know where to get a purchase on the question? Just jumping into the conversation is jumping into a dishonesty that I didn't want to promote. So I decided that when they thrust microphones at me I would turn away, and I did." Following Obama's election, however, Ayers decried the GOP's use of his name to attack Obama. In an op-ed piece for the *New York Times* (December 6, 2008, on-line), Ayers wrote, "Now that the election is over, I want to say as plainly as I can that the character invented to serve this drama wasn't me, not even close. . . . For the past 40 years, I've been teaching and writing about the unique value and potential of every human life, and the need to realize that potential through education. I have regrets, of course—including mistakes of excess and failures of imagination, posturing and posing, inflated and heated rhetoric, blind sectarianism and a lot else. No one can reach my age with their eyes even partly open and not have hundreds of regrets. The responsibility for the risks we posed to others in some of our most extreme actions in those underground years never leaves my thoughts for long. . . . [Obama and I] didn't pal around, and I had nothing to do with his positions. I knew him as well as thousands of others did, and like millions of others, I wish I knew him better."

In addition to his memoir, Ayers is the author, co-author, or editor of several dozen books on education, including *The Good Preschool Teacher: Six Teachers Reflect on Their Lives* (1989), *To Become a Teacher: Making a Difference in Children's Lives* (1995), and *Zero Tolerance: Resisting the Drive for Punishment in Our Schools* (edited with Dohrn and Rick Ayers, 2001). In 1997 Ayers, along with his mentor, the educational philosopher Maxine Greene, persuaded Teachers College Press to publish a series of books on teaching social justice. As of October 2009 16 books in that series were in print; Ayers wrote, edited, or contributed to several of them. He also co-authored, with Dohrn, *Race Course: Against White Supremacy* (2009).

Ayers is currently a professor of curriculum and instruction at the University of Illinois. He is vice president of curriculum studies for the American Educational Research Association, a Washington, D.C.–based organization that seeks to advance educational research and its application. His wife, Bernardine Dohrn, is the director of, as well as an associate professor with, Northwestern University's Children and Family Justice Center. The couple reside in the Hyde Park neighborhood of Chicago. As for his radical past, while Ayers has never apologized for his actions, he told David Remnick for the *New Yorker* (November 4, 2008, on-line), "I wish I had been wiser. I wish I had been more effective, I wish I'd been more unifying, I wish I'd been more principled." He said to Terry Gross, "The fact is that [Weather Underground] didn't do enough, and we didn't do it well enough. . . . The proof of that is that the American war in Vietnam went on for a decade. Three million people or so were murdered needlessly, and the end came when the Vietnamese threw the Americans out." He added, "We were issuing a screaming response to murder and to terror. . . . I don't think everything that we did was brilliant. . . . But I don't think [our actions] can be conflated with terrorism nor should they be, and I think that I don't feel any real regret for taking action against this war."

Baker, Mitchell

June 7, 1957– Internet-company executive; lawyer

Address: Mozilla Corp., 1981 K Landings Dr., Mountain View, CA 94943-0801

"Meeting the needs of Web users worldwide" is the mission of the Mozilla Foundation, its chairwoman, Mitchell Baker, said in an interview with *Business Wire* (December 4, 2006). Mozilla is the nonprofit organization responsible for Firefox, the world's second-most-popular Internet browser. "By creating a choice in how people access and experience the Web, we have spurred a revival in the browser market and changed the way people interact with the Web for the better," Baker told the *Business Wire* interviewer. Since its introduction, in 2004, Firefox—an "open-source" program whose software code has been updated by some 200,000 unpaid volunteers around the world—has gained more than 15 percent of the Web-browsing market. While it runs a distant second to the industry leader, Microsoft's Internet Explorer, Firefox boasts what many users consider to be superior security protections and browsing capabilities.

Consisting of a nonprofit foundation and a for-profit subsidiary branch, Mozilla grew out of Netscape Communications, which, in 1994, introduced one of the world's first commercial Web browsers. Baker, who studied law, not computer science, joined Netscape that year as associate general counsel. In that capacity she wrote the Netscape and Mozilla Public Licenses, documents that made it possible for Mozilla products to blur the line between proprietary and open-source software. In 1999 Baker was named the head—or "chief lizard wrangler," the title she chose for herself—of the Mozilla project, an initiative aimed at creating an open-source Web browser to rival Internet Explorer and end Microsoft's domination of the field. (Under the terms of the licenses, Mozilla is allowed to trademark Firefox and retain ownership of certain sections of the software code.) "Baker and Mozilla are wrestling with new questions about the boundaries between communities and the corporation," Siobhan O'Mahony, a Harvard Business School assistant professor, told David H. Freedman for *Inc.* (February 2007, on-line). "She's creating a new management model based on engaging a business ecosystem." In 2003 Baker became president of the Mozilla Foundation, which was created after Mozilla's parent company, AOL, decided to leave the project. From 2005 to 2008 Baker served as chief executive officer of the for-profit Mozilla Corp., which uses its earnings—most of which come from incorporating search engines, such as Google, into the Firefox interface—to fund its nonprofit initiatives. Explaining Mozilla's "public-benefit mission," Baker told Roland Tellzen for the *Australian* (May 29, 2007), "The return on investment we are looking for is to move the needle on the quality of the Internet and individual life. We are not looking for financial return on investment."

"It would be easy to assume that leadership is less important in this sort of community-driven organization" than in a traditional business, David Freedman wrote. But in reality it is more important, according to Sandeep Krishnamurthy, an associate professor in the business-administration program at the University of Washington, who has studied Mozilla. "Someone has to take the lead and reach out to this large group of people to provide feedback and motivate them," Krishnamurthy told Freedman. He also said, "Just because it's open source doesn't mean it's open door. To get anywhere, you have to win the respect of an elite group of people who develop code." Mitchell's success in winning that respect, in Freedman's view, is especially noteworthy because, as he wrote, "it's estimated that less than 2 percent of the open-source community is female. Meanwhile, the percentage of respected open-source leaders who didn't get to their positions via daring feats of coding is probably just as small. To do that entirely through nontechnical management skills would be nearly unprecedented, to do it as a woman all the more so."

Siobhan O'Mahony told Freedman that Baker "listens, she debates, she changes her mind, she adapts, she allows herself to be convinced by outsiders"—and she does so in public, on her blog. In an entry posted on June 1, 2005, Baker wrote that most entrepreneurs have a "sense of possibilities" that drives them and that they want to make those possibilities a reality by "maintain[ing] control over all significant aspects of the project of the company." "My case is very much the opposite," she continued. "The actual technical direction is not my space." Nevertheless, she wrote, "there is of course a piece of the Mozilla project where I have a very strong sense of the possibilities and a determination to see things proceed in a way that makes sense to me. That area is the organizational structure of the project. How do we integrate the various constituencies? How do we organize ourselves? How do we provide enough structure to build top quality products and still provide room for individual initiative and serendipity? . . . How do we generate funds and remain true to our mission? How do we create an asset of great value, keep it vital and maintain it? These questions are only a part of the Mozilla project, and yet they provide *plenty* of challenges."

Winifred Mitchell Baker was born on June 7, 1957 in Berkeley, California. Little information about her early years is readily available to the public. She grew up in or near Berkeley and attended a public high school in Oakland. Along with 30 other students and one teacher in what she labeled on her blog, blog.lizardwrangler.com, an "experiment in educational alternatives amidst the general decline of Oakland public schools," she spent her senior year at the Oakland Zoo as an "escape route" to "avoid the last year of regular high school." (The Web site lizardwrangler.com is devoted solely to a report on the Mozilla project dated March 2002. Mozilla's Web sites are mozilla.org and mozillafoundation.org.) As an undergraduate at the University of California (UC) at Berkeley, Baker—who is fluent in Mandarin, the principal language spoken in mainland China—studied for one year at Peking University (now known as Beijing University), in Communist China. She graduated from UC–Berkeley, with an A.B. degree in Asian studies, in 1979. In the 1980s she entered the School of Law at UC–Berkeley, commonly referred to as Boalt Hall; she earned a J.D. degree in 1987.

On her blog Baker revealed that she started work at her first place of employment—a law firm—a week late, in order to "finish anti-rabies treatment in Katmandu," in Nepal, "after being bitten by a dog in Samye, Tibet." In 1990 she became an associate at Fenwick & West, a national law firm with offices in California, Washington State, and Idaho that specialized in technology and the life sciences. Baker remained with that practice until 1993, when she left to become an associate general counsel for the technology giant Sun Microsystems, based in Santa Clara, California. In 1994 she changed jobs again, to become associate general counsel for Netscape Communications. (Her starting date was moved back five weeks, so that she could recover from a case of malaria, contracted during a trip to some small Indonesian islands.) Netscape had created the Netscape Navigator, one of the first commercial Web browsers. Its browser dominated the market until Microsoft began bundling its browser, Internet Explorer, with its widely used Windows operating system. Netscape accused Microsoft of "illegal, monopolistic behavior," as Baker told Quentin Hardy in an interview for *Forbes* (October 29, 2007), and even though, in 1993, the U.S. Department of Justice deemed Microsoft's tactics illegal, the ruling was not enough to keep Netscape from losing market share and influence in the Web-browsing field. In 1998 Netscape made public its software code, hoping that an open-source browser—one designed with the help of unpaid experts—might be able to compete with Internet Explorer. The effort was called the Mozilla project. (According to some sources, the inspiration for its name was Netscape's Godzilla-like mascot; David H. Freedman reported that the name "supposedly was derived from" Mosaic killer, "Mosaic having been the first browser".)

Within a few years of her arrival at Netscape, Baker had decided that she wanted to change the course of her career. While she lacked a programming background, she had grown familiar with the process of software engineering. Indeed, the Netscape and Mozilla Public Licenses that she drew up provided evidence of her understanding and insights. "She had proved so adept at finding common ground in the often intensely conflicting needs and styles of her corporate employer, the tech-obsessed and sometimes militant open-source community, and the world of users," as David H. Freedman wrote, that in 1998 Netscape's chief executive officer, James Barksdale, suggested that she head the Mozilla project. "I went and talked to some of the key engineers, and they said, yes, we know you, we trust you, we think you know enough about the project to be a decent leader, and let's give it a try," she told Charlie Rose in an interview for *The Charlie Rose Show* (April 21, 2005). Baker accepted the offer, dubbing herself "chief lizard wrangler," a title that "captured the idea that there was some leadership in there and some general management, but that it wasn't at all like an employment setting," she told Rose.

In 1999 AOL purchased Netscape. About two years later Baker was one of roughly 1,200 AOL employees to be laid off. "I remain committed to the Mozilla project and to contributing in whatever ways I can," she wrote in a widely distributed online message, according to Client Server News (September 10, 2001). Baker continued to work for Netscape, but as a volunteer, and Mozilla pressed ahead. In 2002 she began drawing a paycheck again (though at a smaller salary than before), thanks to a grant from the Open Source Applications Foundation. By April of that year, more than 200,000 Internet users had downloaded a trial version of the Mozilla browser, which was largely created by two young programmers, Blake Ross and David Hyatt. Among the browser's special features was "tabbed browsing," which enabled users to view multiple Web pages in a single window. The Mozilla browser was also far more secure than Internet Explorer, whose users were grappling with irritating pop-up windows and crippling viruses. In late 2002 Mozilla released its new browser, christened Phoenix.

The following year AOL formally severed its ties with Mozilla and created the nonprofit Mozilla Foundation. (The company also donated $2 million and key portions of its software code.) Baker became head of the foundation, overseeing a staff of about 10 employees. As Mozilla readied the formal release of its browser that year, some experts doubted whether it would be possible to challenge Internet Explorer, which then controlled 95.4 percent of the market. "It's very unlikely that Mozilla is going to make any inroads at this point," Michael Gartenberg, a research director at Jupiter Research, told Matt Hicks for *eWeek* (October 13, 2003). In February 2004 Mozilla officially changed the name of its browser from Firebird, a name that was also being used by an open-source database project, to Firefox. ("Firefox" is an informal name for the red panda, a stylized image of which appears on the Mozilla Firefox logo.) On November 9, 2004, following a two-month preview in which more than eight million Internet users downloaded the free browser, Mozilla made Firefox version 1.0 available to the public. In addition to introducing tabbed browsing, the program blocked pop-up advertisements and offered "live bookmarks"—"a set of things you would want in a browser if you sat down and really thought about it," Baker explained to Hicks for *eWeek* (November 9, 2004). Baker told Hicks that Mozilla's goal was to have a 10 percent market share by 2005. Achieving that benchmark, she said, would force major companies to make their Web sites compatible with Firefox, effectively ending Microsoft's monopoly. "That's a large number of people and a large enough number of people that if you're running a Web site, you don't want to be turning away that number of people," she noted.

By November 25, 2004 Firefox had been downloaded by more than six million on-line users. By January 12, 2005 the browser had come to control 4.6 percent of the market, while Internet Explorer's share had fallen to 90.6 percent. "We're not out to get Microsoft," Baker told Steve Hamm for *BusinessWeek* (January 24, 2005), dismissing the idea that Mozilla's persistence was fueled by revenge. "Our goal is to offer people a better experience so the Web remains open and people actually have a choice." In August 2005 the Mozilla Foundation announced the creation of the for-profit Mozilla Corp., an entity designed to comply with federal tax laws and give the organization more opportunities to earn money. Mozilla had already been accepting money from Google Inc., which paid to have its search page programmed as Firefox's default homepage. "The Mozilla Corp. is not a typical commercial entity," Baker, who was named president of the corporation, told Matthew Fordahl for the Associated Press Financial Wire (August 3, 2005). "Rather it is dedicated to the public benefit goal at the heart of the Mozilla project, which is to keep the Internet open and available to everyone."

In December 2005, a week after Mozilla unveiled Firefox version 1.5, the *San Jose (California) Mercury News* reported that that browser's market share had risen to between 10 and 12 percent. In an interview with the *Economist* (December 17, 2005), Baker said that Mozilla was responsible for reinvigorating a form of technology that, during years of Microsoft dominance, had experienced little innovation. "The browser matters; it's the piece [of the Internet] that touches human beings," she said. "This area shouldn't be stagnant; it should be exciting." In March 2006 it was reported that Microsoft's forthcoming Internet Explorer 7 (IE 7) would include many of the features introduced by Firefox. "I think IE 7 represents a significant success for the Mozilla project in its own right," Baker told Kim Clark for *USNews.com* (March 6, 2006). "The fact that IE users will have the benefit of [those] things is part of our goal of making the Web better." In the same interview Baker explained that, unlike Wikipedia, the popular open-source Internet encyclopedia, Mozilla did not accept contributions from volunteers blindly. "It is a lot more disciplined than people think," she said. "We can tell you for any piece of code that is checked in, who checked it in, when it was checked in, what problem they thought they were solving, who looked at that piece of code and thought it was OK, how many revisions it had been through." She added that at least one paid staff member looked at each piece of code before it was checked in. In December 2006 the World Economic Forum placed Mozilla on its annual list of "Technical Pioneers."

In an interview with Noam Cohen for the *International Herald Tribune* (May 22, 2007), Baker estimated that between 75 million and 100 million people were using the browser. "That is 75 million decisions, somewhere around the world to put this piece of software on someone's machine," she said. Estimates placed Firefox's market share at 15 percent, and the Mozilla corporation posted revenues of more than $50 million in both 2005 and 2006. (Most of the money came from Google.) In the November 12, 2007 interview with Cohen, Baker called her $500,000 annual salary, which included an unspecified amount for benefits, "yet another example of Mozilla as a hybrid," referring to the way the company had succeeded in turning open-source software into a moneymaking product. Cohen wrote that, despite Mozilla's claim that it would use earnings to fund other open-source initiatives, the foundation had, in 2006, given less than $100,000 in grants. (Mozilla claimed it had awarded $287,000.) In January 2008 Baker stepped down as CEO of the Mozilla Corp., handing the reins to John Lilly, who had previously served as the firm's chief operating officer. At the time of Baker's departure, the Web-survey firm XiTiMonitor reported that Firefox enjoyed a 27.7 percent share of the European market and about 17 percent in the U.S. More than 1,000 volunteers had been instrumental in creating the latest version of Firefox, which was available in 37 languages. Baker stayed on as chairwoman and vowed to continue upholding Mozilla's core beliefs. "We could not operate without our community," she told John Markoff for the *International Herald Tribune* (January 9, 2008). "More money doesn't give you more opportunity." In February 2008 the Electronic Frontier Foundation presented Baker and Mozilla with one of its three annual Pioneer Awards.

On June 18, 2008 eight million users around the world downloaded Firefox3, a new version of the browser touted as being twice as fast as its predecessor. "We definitely knew that it would be millions, probably about 5 million," Baker told Cho Jin-seo in an interview for *Korea Times* (June 19, 2008). "We didn't think it could be this much." By the following day the total download count had increased to 10.7 million. While Firefox's popularity continued to grow, Baker contended that Mozilla was wary of becoming far bigger in the marketplace. "I think if you tossed a number like 80 percent around even inside Mozilla, some people would start to worry, because if we behaved poorly, it would affect the industry in bad ways," she told Jack Schofield in an interview for the London *Guardian* (February 28, 2008). "We want to show why having openness is useful, so the market share enables us to move the industry towards a better place. As a project we have values, and there's a core for whom Mozilla acting as a tyrant is no better or only slightly better than somebody else acting as a tyrant."

In a recent entry on her blog (February 6, 2009), Mitchell quoted a preliminary report in which the European Commission (E.C.) concluded that "Microsoft's tying of Internet Explorer to the Windows operating system harms competition between web browsers, undermines product innovation and ultimately reduces consumer choice." "I'll be paying close attention to the EC's activities, both personally and on behalf of Mozilla," she wrote. "Mozilla has enormous expertise in this area. . . . I'd like to offer Mozilla's expertise as a resource to the EC as it considers what an effective remedy would entail." She then invited the public to send her their ideas on the matter.

According to David H. Freedman, Baker "seems to have two different haircuts that face off on opposite sides of her head, unified only partially by a dose of red dye." In on-line discussions that are open to the public, Freedman wrote, Baker is "fond of tossing out what seem like contradictory ideas in quick succession." She is a skilled amateur trapeze artist. She is married to Casey Dunn, an open-source software developer. The couple live in Belmont, California, with their young son, Jarett.

Banksy

July 28, 1973(?)– British graffiti artist

Address: Lazarides Gallery, 8 Greek St., London
W1D 4DG, England

The street artist who calls himself Banksy became famous in the United Kingdom for his highly distinctive graffiti—stenciled spray-paintings that appeared with increasing frequency in the late 1990s and early 2000s on walls and the sides of buildings in Bristol and other British cities. Banksy's images and messages tend to be irreverent, antiestablishment commentaries on contemporary society and politics; they have been described as provocative, witty, comical, satirical, mischievous, and easily understandable. In a conversation with Ciar Byrne for the London *Independent* (November 1, 2007), Gareth Williams, the head of the Urban Art Department at the British auction house Bonhams, connected the appeal of Banksy's work to "the whole phenomenon that surrounds him—a relatively unknown graffiti artist from Bristol who has taken the art world by storm, but has done it on his own terms. Also because his images are so accessible, iconic, democratic and humorous, his work reaches people on a simple level." "He catches the feeling that something is wrong with modern life," James Button wrote for the Melbourne, Australia, *Age* (July 16, 2007). Among the most common of Banksy's subjects are rats, which are ubiquitous in cities and almost universally despised. "If you are dirty, insignificant and unloved then rats are the ultimate role model," Banksy wrote in his book *Wall and Piece* (2005). Technology, in particular the Internet, has contributed to Banksy's popularity: as of late February 2009, there were about 2,260,000 entries about him on Google, many accompanied by photographs of his graffiti and other paintings. Dubbed a "guerrilla artist" as well as a "people's artist," he has boosted his celebrity through public stunts—for example, affixing his works to the walls of major museums in London, New York, and Paris; stenciling the words "We're bored of fish" in the London Zoo's penguin enclosure; putting the words "Designated riot area" on the pedestal of the statue of Admiral Nelson in London's Trafalgar Square; stenciling "Mind the crap" on a step leading up to that city's Tate Gal-

lery; and, on the Palestinian side of the highly controversial Israeli-built wall in the West Bank, painting "holes" through which bucolic scenes are visible.

In *Wall and Piece* Banksy wrote: "Graffiti is not the lowest form of art. Despite having to creep about at night and lie to your mum it's actually the most honest artform available. There is no elitism or hype, it exhibits on some of the best walls a town has to offer, and nobody is put off by the price of admission. . . . The people who run our cities don't understand graffiti because they think nothing has the right to exist unless it makes a profit. But if you just value money then your opinion is worthless. . . . The people who truly deface our neighbourhoods are the companies that scrawl their giant slogans across buildings and buses trying to make us feel inadequate unless we buy their stuff. They expect to be able to shout their message in your face from every available surface but you're never allowed to answer back. Well, they started this fight and the wall is the weapon of choice to hit them back." The outlaw and performative elements of graffiti are also important to Banksy. He told Rick Hewett for the London *Evening Standard* (October 23, 2003), "The adrenaline of the whole operation . . . well, what a buzz. Where's the excitement of sitting in a field painting horses and flowers? Art should have your pulse racing, your palms clammy with nerves and the excitement of creating something truly original in a dangerous environment."

Banksy's refusal to reveal his real name or any other information about himself, and his absence from exhibitions of his work, have drawn much attention in the media and helped to increase his prominence in the art world. Along with mainstream recognition, his paintings—occasionally removed from their original sites but more often created on paper or canvas in a studio—have commanded high prices in galleries and auction houses. In October 2006, for example, Banksy's cover art for the British band Blur's album *Think Tank* (2003)—a painting of an embracing couple wearing divers' helmets—sold at Bonhams for £62,400 ($105,905 at that time); in February 2007 an acrylic and spray-painted canvas called *Bombing Middle England*, which shows three elderly women bowling outdoors with spherical bombs ("bombing" is also a synonym for graffitiing), sold for £102,000 ($199,800) at Sotheby's; and two months later, also at Sotheby's, a self-portrait, in which Banksy's head was that of a chimpanzee, brought £198,000 ($393,604). "Before he became a cultural icon, these paintings were removed quickly" from public places, Clementine Ford wrote for the South Australia *Sunday Mail* (July 20, 2008). "Now they're featured in private collections, a statement in itself about how our society seeks to commodify everything of popularity, even if its central manifesto is anathema to it. . . . And herein lies the rub. Banksy has reached such phenomenal levels of fame and cultural value he has become a brand himself." Banksy's agent, and public face, is the London gallery owner Steve Lazarides, who specializes in what he calls "outsider art." In May 2009 several sources reported that an entity called Pest Control will authenticate works attributed to Banksy.

During an interview for an undated issue of *Swindle Magazine* (Issue 08), the artist Shepard Fairey asked Banksy how long he intended to remain anonymous. Banksy answered, "I have no interest in ever coming out. I figure there are enough self-opinionated [expletives] trying to get their ugly little faces in front of you as it is. You ask a lot of kids today what they want to be when they grow up, and they say, 'I want to be famous.' You ask them for what reason and they don't know or care. . . . I'm just trying to make the pictures look good; I'm not into trying to make myself look good. I'm not into fashion. The pictures generally look better than I do when we're out on the street together. Plus, I obviously have issues with the cops. And besides, it's a pretty safe bet that the reality of me would be a crushing disappointment to a couple of 15-year-old kids out there."

After a year-long investigation, Claudia Joseph reported in the London *Mail on Sunday* (July 13, 2008) that Banksy was born Robin Gunningham in Bristol on July 28, 1973 to Peter Gordon Gunningham, a contracts manager, and Pamela Ann Dawkin-Jones, a secretary. (Neither his parents nor his agent or anyone else has confirmed the accuracy of that identification.) According to Joseph, Banksy's father and mother (who are now separated or divorced) raised him and his older sister, Sarah, in a middle-class suburb of that city. According to Joseph, in the mid-1980s Banksy attended the Bristol Cathedral School, an exclusive private school. Former classmates of his told Joseph that they remembered him as having unusual artistic talent.

The practice of writing on walls in cities began thousands of years ago. The spray paintings we commonly refer to as modern graffiti originated in Philadelphia, Pennsylvania, in the 1960s, first in connection with territorial gang culture and then as a form of artistic expression. By the late 1970s and early 1980s, it had become a cultural phenomenon, inextricably linked to hip-hop culture. In 1983 the New York hip-hop group the Rock Steady Crew performed in London, England, and Paris, France, with graffiti artists in tow; they are said to have inspired a generation of European artists, including those in Bristol's vibrant underground. When Banksy was about 10, the 18-year-old Bristol-born artist and musician Robert del Naja (later, as a member of the band Massive Attack, known as 3D) began spray-painting graffiti on Bristol walls and streets. "I grew up seeing spray paint on the streets way before I ever saw it in a magazine or on a computer . . . ," Banksy told Shepard Fairey. "Graffiti was the thing we all loved at school—we all did it on the bus on the way home from school. Everyone was doing it." Banksy is said to have left school at 16 and immersed himself in Bristol's graffiti subculture. He has been quoted as saying that he was not adept at spray-painting freehand and worked very slowly, which increased his risks of getting caught in the act by police officers. (By his own account, he was arrested at least once, before he adopted the moniker Banksy.) His lack of skill and speed led him to develop his stenciling technique. He has named among his influences the groundbreaking French stencil artist Blek le Rat (whose real name is Xavier Prou); Gary Larson, the creator of *The Far Side* cartoons; and the magician and escapologist Harry Houdini.

In the latter half of the 1990s, Banksy honed his technique and developed a recognizable style; he also attracted a growing number of fans. He sold illustrated T-shirts and posters to concertgoers, especially aficionados of Britpop, an alternate form of rock popular in Great Britain during that decade. In 1998, for a "graffiti event" held in Bristol's Harbourside area, he painted an image of an operating room in which the "patient" was a twisted, bubble-lettered piece of calligraphy. His first formal show was held at a Bristol restaurant in 2000. The next year he began exhibiting his art at what was dubbed Santa's Ghetto, set up in a London art store. With a show called Turf War, which he set up in a London warehouse in July 2003, he drew the attention of people linked to the art-world establishment. The exhibit included live pigs and cows bearing spray-paintings on their bodies and a now-famous painting of a crowned, jewelry-laden monarch, her face that of a chimpanzee, set against an image of the Union Jack—a satirical portrait of Queen Elizabeth II, according to many sources.

That autumn Banksy painted a landscape in the style of the British artist John Constable (1776–1837) that included criss-crossing white and blue "Do not cross" police tape across the bottom; then, using a strong adhesive, he affixed his painting to a wall in the Tate Gallery, along with a small sign reading "Crimewatch UK has ruined the countryside for all of us." The signage continued, "This new acquisition is a beautiful example of the neo post-idiotic style. . . . It can be argued that defacing such an idyllic scene reflects the way our nation has been vandalised by its obsession with crime and paedophilia, where any visit to a secluded beauty spot now feels like it may result in being molested or finding discarded body parts." Banksy's painting was soon removed; later, the Tate bought it for its permanent collection. "This is how a lot of people see the world these days," Banksy said of that picture to Rick Hewett. "People don't see Constable's hay and rivers any more."

Many more such takeoffs of famous oil paintings comprised Banksy's exhibit Crude Oils—"a gallery of re-mixed masterpieces, vandalism and vermin," mounted in 2005 at 100 Westbourne Grove, a London venue. Dozens of brown rats roamed freely or lay dead within the exhibition space, having been deposited there as part of the show; visitors to the exhibition were permitted to view the paintings for only a few minutes, and each was required to sign a statement absolving the gallery of responsibility if he or she happened to slip on the rat droppings and sustain injury. The show included Banksy's rendition of Claude Monet's painting *Water Lily Pond and Japanese Bridge* in which two supermarket shopping carts lie upended in the water. In a variation on Edward Hopper's *Nighthawks*, three customers and a worker in a brightly lit urban diner stare at an overweight, barefoot man who stands defiantly outside, wearing nothing but undershorts bearing a Union Jack design; the man has thrown a chair and broken one of the diner's wraparound windows, which now has a jagged hole surrounded by cracks. Two of Banksy's paintings showed a haloed madonna and child; in one, the mother is listening through earpieces to an iPod, and in the other, the Christ child has explosives strapped around his chest.

In 2004 Banksy smuggled into the Natural History Museum of London and glued onto a wall a shadow box that contained a stuffed rat outfitted with sunglasses, a backpack, a flashlight, a microphone, and a miniature can of spray paint; the words "Our time will come" appeared behind it. Below, a sign stated that "an increase in junk food waste, ambient radiation and hardcore urban rap music" had led to the evolution of the species Banksus Militus Vandalus at an "unprecedented rate." "They are impervious to all modern methods of pest control and mark their territory with a series of elaborate signs," the text continued. "Professor B. Langford of University College London states 'You can laugh now . . . but one day they may be in charge.'" In New York in 2005, in a similar action, Banksy affixed works of his to walls in the Museum of Modern Art, the Metropolitan Museum of Art, the Brooklyn Museum of Art, and the Museum of Natural History. The piece that appeared in the last-named place, also in a shadow box, was a dead harlequin beetle to which Banksy had affixed tiny wings with American insignia and miniature missiles. In *Walls and Pieces*, Banksy wrote that the warrior beetle remained in place for 12 days. Also in 2005 Banksy traveled to the West Bank and stenciled nine paintings on the Palestinian side of the West Bank barrier—known as the "apartheid wall" among Palestinians and as the "security fence" among Israelis—that Israel has been constructing since 2002. "As a graffiti writer you have to make a pilgrimage to the biggest wall on earth at some point," he told a reporter for the European magazine *Zoo*, as quoted by Paul Valley in the London *Independent* (September 23, 2006). The West Bank wall, he added, is "the most politically unjust structure in the world today."

What has become one of Banksy's most famous paintings appeared in June 2006 on the wall of a birth-control and sexual-health clinic that stands opposite the offices of the Bristol city council. The trompe-l'oeil painting shows an open window that closely resembles real ones nearby. A man wearing a suit and tie is leaning out of the window, peering intently at the street; hovering behind him is a woman clad only in bra and panties, and outside, hanging from the window ledge by the fingertips of one hand, is a naked man. The city council placed the fate of the painting in the hands of the public, and 93 percent of approximately 1,000 voters requested that it remain in place. Also in 2006, in several British cities, Banksy and a few of his cohorts doctored the album covers on hundreds of copies of the debut CD by the celebrity Paris Hilton. Hilton was shown topless on some and with a dog's head on others; alongside her image were the song titles "Why Am I Famous?," "What Have I Done?," and "What Am I For?" Reportedly, the songs were recorded for a CD that Banksy substituted for the original disk, and, because the bar code on the cover was reproduced precisely, the hoax was not immediately detected. In September 2006 in the U.S., Banksy sneaked into Disneyland a blow-up doll dressed in the orange clothes and black hood of a Guantánamo Bay prisoner, and in Los Angeles he mounted a show entitled Barely Legal, at which several Hollywood stars bought some of his works. A live elephant in a cordoned-off part of the Barely Legal exhibit space, according to leaflets distributed at the show, represented global poverty—"the elephant in the room."

Back in the United Kingdom, Banksy was becoming what Ciar Byrne called "the darling of the collectors." His reputation increased considerably when the artist Damien Hirst included some of Banksy's pieces in an exhibit of his personal collection. "Everybody loves a maverick. The fact that Banksy was taken up so whole-heartedly by Damien Hirst has upped his market currency immeasurably," Louisa Buck, a reporter for *Art Newspaper*, told Ciar Byrne. In December 2007 Banksy returned to the West Bank, along with several other artists; during that visit he painted not on the Israeli-created wall but on the exteriors of small buildings. One picture showed a small girl in a pink dress frisking a soldier for weapons. In another a dove bearing an olive branch in its beak wears a bulletproof vest; a red target of the sort visible through a rifle sight appears over its heart.

One night in April 2008, in response to the installation in Great Britain of hundreds of thousands of closed-circuit television (CCTV) cameras for purposes of surveillance (as a means of catching lawbreakers, according to the government), Banksy scaled an iron fence, erected scaffolding opposite a CCTV camera, and painted a three-story-high image on the side of a building. In it a security guard watches a boy who, while perched atop a tall ladder, has painted the words "One Nation Under CCTV." Somehow Banksy completed the work without interference. In May 2008 Banksy hosted the Cans Festival, a celebration of graffiti in which dozens of artists painted on the walls of a London tunnel. During the three-day event, some 28,000 people came to view the paintings—considerably more than the number who visited a concurrent exhibition at the nearby Tate Modern (a division of the Tate Gallery).

In August 2008 Banksy produced a series of murals in New Orleans, Louisiana, to mark the third anniversary of Hurricane Katrina, which devastated a large portion of that city and other areas along the American Gulf Coast. Painted on walls of buildings abandoned in New Orleans after the storm and the flooding it caused, Banksy's pieces were said to be partly critiques aimed at the inadequate government response to the disaster and partly tributes to the resilience of many New Orleanians. Most of the pieces were quickly painted over. In October 2008 Banksy unveiled an exhibit in New York City, entitled the Village Pet Store and Charcoal Grill, featuring animatronic pets. In one piece a mother hen watched over her children—chicken nuggets—as they ate from a pack of barbeque sauce; in another, fish fingers swam in a water-filled tank. Those two works and about 100 others were on exhibit for three weeks beginning in June 2009 in Bristol's City Museum and Art Gallery. Called Banksy Versus the Bristol Museum, it was Banksy's biggest exhibition to date. The works included replicas, with various changes, of items in the museum's collection along with never-before-seen Banksy pieces. In an example of the former, a copy of Jean-Francois Millet's *The Gleaners*, one of the three women has stepped out of the painting and is seen sitting on the frame, smoking a cigarette. In an example of the latter, two starving children stand in a wasteland; one carries a bucket and wears a T-shirt bearing the words "I hate Mondays." In one animated sculpture, what looked from one side like a cheetah lounging in a tree was revealed on the other side as a fur coat; in another, a rabbit (a member of a species long used to test the properties of mascara and other eye makeup) files its nails while standing in front of a mirrored vanity crowded with containers of rouge and nail polish. "This is the first show I've ever done where taxpayers' money is being used to hang my pictures up rather than scrape them off," Banksy remarked, according to the *Bristol Evening Post* (June 13, 2009). In actuality, the *Post* reported, Banksy himself had funded the project, which he said was a tribute to his hometown. Free of charge, the show attracted huge crowds.

Although Banksy has consistently turned down lucrative work in commercial advertising, his financial success has drawn accusations that he has abandoned his principles. "Wait a minute. This guy is supposed to be an anarchist, a man of the street, an urban guerrilla—and he has a dealer? An agent? A spokesperson?" Richard Dorment complained in the London *Daily Telegraph* (May 6, 2008). Charlotte Higgins wrote for the London *Guardian* (November 2, 2007), "The work is so mainstream that there is actually a guidebook to it," and also in the *Daily Telegraph* (March 19, 2007), William Langley wondered about the "the state of [Banksy's] street cred": "Penury and failure are central to the whole business of outlaw artistry." An editorial in the Bristol *Evening Post* (November 9, 2007) maintained that countercultural icons are not supposed to be celebrated or encouraged by the establishment: "It's like the parent of an angry, rebellious teenager shouting through a slammed bedroom door 'turn that music up louder, love—I like it.'" For his part, Banksy confessed in an e-mail interview with Lauren Collins for the *New Yorker* (May 14, 2007) that he felt uncomfortable with all the success and attention; he also said, "I love the way capitalism finds a place—even for its enemies. It's definitely boom time in the discontent industry." Banksy's detractors include art critics who refuse to recognize what he produces as art and antigraffiti campaigners who condemn him as a vandal. In an article for the *Guardian* (July 15, 2006), the graffitist Edward Hammond argued that most of Banksy's work "is not even graffiti in the real sense, other than in the shared clothing of illegality. Banksy's black and white daubing is an art form in its own right, and although it falls under the umbrella of street art, it is actually a closer relative of stickering, fly posting and billboard advertising than of graffiti-writing. Unfortunately this is probably the least addressed issue arising from his work, partly because it suits Banksy to present himself as a graffiti writer to the liberal intelligentsia, whose favourite he is. His popularity, ironically, is due not to the intelligence and thoughtfulness of his work but to its contained simplicity, which contrasts so strongly with the often indecipherable writings adorning the streets and railways."

Reproductions of works by Banksy, accompanied by his texts, appear in the books *Banging Your Head Against a Brick Wall* (2001), *Existencilism* (2002), and *Cut It Out* (2004) as well as *Wall and Piece.* Banksy and his work are the subjects of Martin Bull's *Banksy Locations and Tours: A Collection of Graffiti Locations and Photographs in London* and Steve Wright's *Banksy's Bristol: Home Sweet Home*, both published in 2007.

Barlow, Maude

May 24, 1947– Environmental activist; writer

Address: Council of Canadians, 251 Laurier Ave.
W., Ottawa, Ontario K1P 5J6, Canada

"Water is the new oil . . . ," Maude Barlow told Katherine Monk for the *Montreal (Canada) Gazette* (January 25, 2008), adding, "The global water shortage means it is fast becoming a commodity . . . and one that corporate interests are realizing a profit on. Water has become a huge business, and it's increasingly being controlled by a very small number of corporations." Often referred to as "Canada's Ralph Nader," Barlow, a Canadian writer and political activist, has authored or co-authored 16 books on public policy and on issues involving the environment. Since the late 1990s she has been known particularly for her effort to achieve universal access to clean water, a mission summed up in her best-selling, widely translated 2002 book, *Blue Gold: The Fight to Stop the Corporate Theft of the World's Water*, written with Tony Clarke. One of her central arguments is that such access should be viewed as a basic human right rather than a commodity. Barlow explained to Monk, "In the years I've been traveling the world, water is where people draw the line. When people are denied water, they will put their lives on the line because they know without water, they are being sentenced to a slow and miserable death anyway." She followed up *Blue Gold* with *Blue Covenant: The Global Water Crisis and the Coming Battle for the Right to Water* (2008), and her work is a main focus of *Flow:*

Pam Woolridge, courtesy of the Council of Canadians
Maude Barlow

For Love of Water (2008), a documentary by the French filmmaker Irena Salina. Barlow is a founding board member and national chairperson of the Council of Canadians, Canada's largest public-advocacy organization, and the co-founder of the Blue Planet Project, a global initiative that works against the privatization and commodification of the world's water.

Maude Victoria Barlow was born on May 24, 1947 in Toronto, Ontario, Canada. Her mother, Flora, was a homemaker. Her father, William, who was a criminologist, perhaps created a model for Maude Barlow's own activism. According to the Web site of *Life and Times*, a television program of the Canadian Broadcasting Corp. (CBC), William Barlow—a "witness to wartime atrocities"—returned from military service determined to make a positive contribution to society and became a voice for prison reform in Canada. In the late 1960s Maude Barlow enrolled at Carleton University, in Ottawa, receiving her bachelor's degree in 1972. Later in the decade, according to the *Life and Times* Web site, she "was a nice middle-class" woman "who got caught up in the Canadian women's movement." As posted on the Web site of the publication *Canadian Geographic*, Barlow noted, "That work gave me a global perspective. I learned the responsibilities women had and how shortages of basic resources, like water, affected their lives." In 1980, after a five-year stint as vice president of the Ottawa-based Women Associates Consulting Inc., she began running the City of Ottawa's Office of Equal Opportunity for Women. In 1983 Canadian prime minister Pierre Trudeau asked her to work as a senior adviser for federal programs geared toward women's-equality issues.

In 1988 Barlow made a bid for political office, when she sought to represent the Ottawa Centre district in the Canadian House of Commons, but she lost to the Ottawa alderman Mac Harb. Barlow instead began heading the Council of Canadians, a citizens' advocacy group devoted to policy change on a number of issues, namely fair trade, public health care, and the right to water. That year saw the signing of the Canada–United States Free Trade Agreement, aimed at increasing trade between the two countries; Barlow emerged as one of its most outspoken critics, arguing that the agreement amounted to a form of political annexation by the U.S. that compromised Canada's sovereignty. In 1990 she published *Parcel of Rogues: How Free Trade Is Failing Canada*, which set out to explain why maintaining a nationalist government was preferable to placing trust in multinational corporations. She collaborated with Bruce Campbell on two more books on the subject, *Take Back the Nation* (1991) and *Take Back the Nation 2* (1993).

In 1994 Barlow tackled the Canadian education system in the controversial, best-selling book *Class Warfare: The Assault on Canada's Schools*. The book's premise is that business, political, and religious leaders had attacked the effectiveness of Canada's education system as a way to determine its agenda for their own ends. Co-authored with Heather-Jane Robertson, then the director of professional development services for the Canadian Teachers Federation, the book received generally favorable reviews. Alan Haskvitz, writing for *Canadian Social Studies* (Winter 1997), called *Class Warfare* "a study in applied propaganda" in which "there is little attempt to offer a balanced view"; he nonetheless judged it to be "an excellent book" that "can be used by student teachers, university instructors, and the general public." In 1995 Barlow collaborated with Bruce Campbell again for *Straight Through the Heart: How the Liberals Abandoned the Just Society*, which blamed the Canadian liberal government for contributing to the rise in poverty in Canada through its capitulation to the business sector. Barlow has written other books critiquing both Canadian and U.S. public policy, including *MAI: The Multilateral Agreement on Investment and the Threat to Canadian Sovereignty* (1997), co-authored with Tony Clarke.

As quoted on the *Canadian Geographic* Web site, Barlow explained, "The environment has always been a lens for understanding the issues that affect Canadians. It was natural to find common ground with environmentalists." In 2000 Barlow teamed up with one of Canada's most prominent environmentalists, Elizabeth May, for *Frederick Street: Life and Death on Canada's Love Canal*. The book chronicled the history of a steel plant in Sydney, Nova Scotia, which, since its opening, in 1899, had been responsible for widespread environmental destruction in local areas and caused health hazards to local residents. Parker Barss Donham commented for *Canadian Geographic* (May/June 2000) that "Barlow and May delineate the intricacies of steel-making and the insidious impact of polycyclic aromatic hydrocarbons with admirable clarity. They undertake some original, often touching social history of Whitney Pier's eclectic residents. They deftly skewer provincial health bureaucrats who did backflips to explain away epidemiological evidence of the plan's harm. . . . But they avert their critical gaze from the environmentalist side of the fight, glossing over the venomous bullying of eco-activist Bruno Marcocchio, reciting litanies of illness as if every conceivable ailment could be traced to the plant, and mocking suggestions that Sydney's high smoking rates and poor dietary habits might contribute to residents' health problems. The handful of federal and provincial officials who made sincere efforts to clean up the plant get short shrift. . . . As a result, *Frederick Street* fails to grapple with the tough problem at the heart of the Sydney Steel debacle: how to overcome Canada's entrenched habit of letting jobs trump public health and the environment."

Barlow next collaborated with Tony Clarke on two books: *Global Showdown: How the New Activists Are Fighting Global Corporate Rule* (2001) and *Blue Gold: The Fight to Stop the Corporate Theft of the World's Water* (2002). The latter, which has been printed in 16 languages and 47 countries around the world, earned widespread praise and is often referred to as Barlow's finest work. In researching the topic, she traveled around the world to gain a perspective on the importance of water. During one visit to a small Mexican town north of Tijuana, which was without running water and relied for survival on biweekly water deliveries, she was urged by one of her guides to gauge the level of local water pollution by dipping a pencil into the town's single stream. When she pulled the pencil out, all of its paint had been stripped away by the mix of raw sewage and chemical waste that had come from a local factory. She commented, as posted on the *Canadian Geographic* Web site, that "not a drop was wasted" from the clean-water deliveries. "They used it first for food, then washing and laundry, then for watering the animals and the garden. I live in an average Canadian house, and there are seven water outlets. It's something we all take for granted." Barlow and Clarke's main argument is that since the need for water supersedes many other human needs, access to clean water should be considered a basic right, and water should not be subject to privatization. Matthew Behrens, in a review for *Quill & Quire* (March 2002), called the book "a strong manifesto to save the planet's most precious resource—water—from becoming unusable in the next few decades." As posted on Amazon.com, a contributor for *Publishers Weekly* noted, "The authors cogently argue that water, a basic necessity, should be treated differently from other commodities and not placed into private hands. In the end, their argument becomes a screed against the power that multinationals wield in our economically liberalizing world: in free trade treaties, they argue, governments effectively yield control over water rights to corporations, with harmful consequences for both economic parity and nature. The authors are vague about what the average person can do to help stave off this crisis, but those concerned about the environment and about the costs of economic globalization will find much to get riled up about in this book."

Barlow followed up *Blue Gold* with two more critiques on public policy: *Profit Is Not the Cure: A Citizen's Guide to Saving Medicare* (2002) and *Too Close for Comfort: Canada's Future Within Fortress North America* (2005). In a review of the former, Rachel Rafelman wrote for *Quill & Quire* (November 2002), "While Barlow has produced a well-researched and clearly written study of a complicated issue, it's also entirely one-sided. It isn't that Barlow's numerous warnings about the continuing erosion of medical care and potential dangers of for-profit facilities are wrong. But we've heard most of them many times, along with the horror stories and the tales of hardhearted, greedy American HMOs. What we need now is a fresh practical perspective, some creative new ideas, and an open mind to all possible reforms." Barlow's latest work, *Blue Covenant: The Global Water Crisis and the Coming Battle for the Right to Water* (2007), picks up where *Blue Gold* left off in its call for clean water for all. The book also portrays the global water crisis as being closely linked to global warming. While noting that Barlow "covers familiar territory," Daniel Aldana Cohen wrote for the *Walrus* (December 2007), "*Blue Covenant*'s key contribution is its proposed solution: the eponymous three-part covenant of conservation, justice in North-South trade deals, and water democracy. To ensure the last, Barlow echoes calls for a UN treaty proclaiming water a human right, while asserting public needs over commercial interests. Her program flies in the face of free-market orthodoxy but is not without hope. One of her proposals is replacing private sector involvement in developing countries with a massive expansion of public enterprises. In the world of politics, Barlow notes, expertise is flowing north, but activists in the global South are forging idiosyncratic institutions at the municipal level, incorporating community participation and oversight. They could be on to something: figuring out how to keep common resources public without handing them over to the state." Cohen listed among the book's "shockers" that "one-tenth of the world's irrigated crops are watered with sewage, mostly untreated, that spews out of city pipes into adjacent fields."

Barlow is one of the central figures in the French filmmaker Irena Salina's documentary *Flow: For Love of Water* (2008), which opened at the Sundance Film Festival to rave reviews and focuses on many of the issues Barlow has long addressed. As did *An Inconvenient Truth* (2006), the Academy Award–winning documentary about Al Gore's fight to make global warming and its potentially calamitous effects a problem recognized throughout the world, *Flow* met with some skepticism. Dismissing the charge that she is creating fear needlessly, Barlow said to Monica Trauzzi in an interview for E&E-TV's program *OnPoint* (March 4, 2008, on-line), "We're going to add 3 billion people, at a modest estimate, to this planet by 2050 and many of those are in countries where they're developing and so their consumer patterns are dramatically rising. There's going to be a demand, and this is a U.N. statistic, for an 80% increase, just for food production, in water to feed those people. Nobody has any idea where it's going to come from."

Barlow has been married since July 1983 to Andrew Davis. The couple have two sons, Charles and William. Barlow is the recipient of six honorary doctorates from Canadian universities and won the 2005/2006 Lannan Cultural Freedom Fellowship Award and the 2005 Right Livelihood Award, often referred to as the "Alternative Nobel," for her work. In addition to her longstanding chairmanship of the Council of Canadians, she is a director of the International Forum on Globalization, a San Francisco, California–based think tank geared toward fighting economic globalization; a board member of Food & Water Watch, a Washington, D.C.–based consumer-rights group that fights for corporate and government accountability with regard to the production of safe, healthful food and public control of water sources; and a founding member of the European-based World Future Council, which works toward achieving environmentally and socially sustainable conditions worldwide. In 2007 Barlow was honored with a Lifetime Achievement Award at the Canadian Environment Awards ceremony, for her 25 years of advocacy for Canadian rights and sovereignty.

Bechdel, Alison

(BECK-dull)

Sep. 10, 1960– Cartoonist; graphic novelist

Address: c/o Houghton Mifflin Co., Trade
Division, Adult Editorial, Eighth Fl., 222 Berkeley
St., Boston, MA 02116

Since it debuted, in 1983, Alison Bechdel's comic strip, *Dykes to Watch Out For*—known casually as *DTWOF*—has become a cultural institution within the lesbian community. Syndicated in some 50 gay and alternative publications in the U.S., the strip examines the lives of several lesbian, bisexual, and transsexual characters. Louise Gray wrote for the London *Independent on Sunday* (October 19, 2003), "The sad fact remains: unless you're a lesbian . . . it's unlikely that you have heard of Bechdel. In which case, you are missing out on one of the most subtle comedies of modern manners to come along in the last two decades." While Gray's sentiments held true in 2003, in 2006 Bechdel's popularity began to expand far outside the gay and lesbian community, with the publication of her graphic memoir *Fun Home: A Family Tragicomic.* The memoir was a finalist for a National Book Critics Circle Award and the winner of an Eisner Award for best reality-based work. (The latter prize is named after the legendary cartoonist and graphic novelist Will Eisner.)

"I became a cartoonist somewhat by default because it was a medium that my hyper-artistic parents didn't know anything about. It was a way I could express myself creatively under their radar," Bechdel told Dave Weich in an interview posted on Powells.com (June 15, 2006). Bechdel's parents were high-school English teachers, and both were "into poetry and literature," she told Weich; in addition, her mother was a trained actress, and her father's avocations included interior design. For Alison, cartooning was a "way to do my own thing. . . . I don't perform well under a spotlight." Bechdel had an unusual childhood, at the center of which was her father—a part-time mortician who, as she later learned, had engaged in illicit affairs with teenage boys. Though Bechdel bonded to a degree with her father over literature, he remained emotionally detached from others throughout his

Courtesy of Alison Bechdel

Alison Bechdel

life, which ended in 1980 when he was hit by a truck. Though his death was ruled an accident, Bechdel has always suspected that he jumped in front of the truck intentionally.

Following college Bechdel began writing and drawing *DTWOF.* Often described as a lesbian soap opera, the comic strip showcases the lives of a group of characters from a range of racial, cultural, political, and economic backgrounds. The main character, Mo, is a radically liberal bookstore-clerk-turned-librarian. Other characters include Mo's partner, a college professor named Sydney; Clarice, an environmental lawyer, and her partner, Toni, an accountant; Clarice and Toni's son, Raffi; Lois, who dresses as a man; New Age practitioner Sparrow and her partner, Stuart; Janis, a transsexual adolescent formerly known as Jonas; and a right-wing conservative named Cynthia. *DTWOF* deals with the everyday events of their lives—romances, heartbreak, births, and deaths—as well as such topics as adoption, "coming out" to family members, sex and gender, and women's health issues. The left-leaning Bechdel often incorporates current events and political satire into the strips.

Some 20 years after her father's death, Bechdel decided to write a memoir. She chose the graphic-novel format because, as she said in an interview for Houghton Mifflin's press release for *Fun Home*, "You can do things in graphic storytelling that you can't do with words alone. . . . I can say two or three things at once, like following the main story and a footnote at the same time. I can use the words and pictures in unison, to say the same thing, or in counterpoint, harmonizing the two separate strands into a third level of meaning. And if I hit a wall with the text, the visuals would bail me out by presenting an unusual association or segue." *Fun Home* is a detailed, often humorous account of Bechdel's youth, chronicling such events as her first menstrual period and her first lesbian relationship. At its center is her relationship with her father. "In some ways I actually think of this book as a longitudinal, sociological study of two generations of gay people. . . . My dad came of age a decade before the Stonewall riots, that watershed moment of modern gay history. And I came of age a decade after. And it was extremely different," Bechdel told Liane Hansen for the National Public Radio program *Weekend Edition* (July 2, 2006). "It was extremely easy for me to [come out as a homosexual], when there was a whole movement out there. But for my dad it just wasn't possible. And so part of what I investigate in the book is, how much of that was his historical circumstances, how much of it was his character? If I had been born 25 years [earlier], would I have made similar decisions?" The critical attention *Fun Home* has received, while appreciated by the author, has been a surprise to her. "I have this devoted but rather circumscribed audience [for *DTWOF*]," Bechdel told Tom Beer for *Newsday* (July 2, 2006). "I didn't think a lot of people would see *Fun Home.* That's what enabled me to reveal such intimate information. But if I had known at the outset that it would get a review in the *New York Times Book Review* or that I'd be in *People* magazine, I wonder if I would have been so forthcoming. My obscurity was an asset."

Alison Bechdel was born to Bruce Allen Bechdel and the former Helen Fontana on September 10, 1960 in Lock Haven, Pennsylvania. Along with her two younger brothers, Christian and John, she grew up in Beech Creek, Pennsylvania, a small borough with a population of about 800 people, not far from Lock Haven, where her father was born and raised. In 1963, following the death of Alison Bechdel's paternal grandfather, Claude H. Bechdel, her father became the part-time director of, and mortician at, the Bechdel Funeral Home. Alison Bechdel's grandmother lived in private quarters at the funeral home, while Bechdel and her family lived in a nearby 4,000-square-foot, seven-bedroom Victorian house built in the 1880s. Bruce Bechdel was passionate about antiques and decorating, and he meticulously restored the house to its original condition, with custom-made reproduction wallpaper, gas chandeliers, and antiques. As a father, Bruce was distant, prone to fits of rage, and, Bechdel wrote in *Fun Home*, "treated his furniture like children, and his children like furniture."

In a house filled with literature and music (her mother played piano), Bechdel and her brothers were encouraged to explore creative pursuits. "I think I was drawn to cartooning because of the absence of color," she told Ginia Bellafante for the *New York Times* (August 3, 2006). "It was such a rejection of the environment I grew up in, and my father had no aesthetic criteria for judging it."

Throughout her childhood Bechdel was very much a tomboy and enjoyed dressing in her father's old clothing. That put her at odds with her father, who encouraged her to be more feminine. Bechdel has said that she first pondered her sexuality at age 13, after she stumbled across the word "lesbian" in a dictionary. It was not until her junior year of college, however, that she fully acknowledged her homosexuality. For two years Bechdel attended Simon's Rock College (now known as Bard College at Simon's Rock), in Great Barrington, Massachusetts. (Simon's Rock students typically enter the academically rigorous institution at age 15 or 16.) In 1979 she transferred to Oberlin College, in Ohio, where she studied art and art history. During her first year at Oberlin, Bechdel was browsing through a local bookstore when she discovered *Word Is Out: Stories of Some of Our Lives*, a 1978 book of interviews with gay and lesbian individuals. (The book was a companion volume to the landmark 1977 documentary of the same name.) After reading those interviews, Bechdel has said, she fully realized that she was a lesbian.

After earning her bachelor's degree, in 1981, Bechdel moved to New York City. She applied to various art schools for graduate study but was rejected by all of them. To make ends meet Bechdel worked at office jobs around the city. She wrote letters to a friend and began including in them small drawings, the first of which she titled "Marianne, dissatisfied with the morning brew: Dykes to Watch Out For, Plate No. 27." "I put a silly drawing of a lesbian in the margin [of the letter], a crazy naked woman about to throw a pot of coffee," Bechdel told Ng Yi-Sheng for the gay-interest Web site fridae.com (November 13, 2008). "I don't know where [the cartoon] came from, or why I titled [it] 'Dykes to Watch Out For, Plate No. 27.' But it seemed to beg for at least 26 more dykes, so I set about drawing the rest of them and never stopped."

Friends encouraged Bechdel to send her drawings to *WomaNews*, a now-defunct New York City–based feminist monthly. *WomaNews* published her first comic strip in 1983, and it was soon appearing in every issue. In its earliest incarnation, *DTWOF* did not feature recurring characters or a continuous plotline. Instead, it consisted of single self-contained anecdotes. In one of the most popular, a 1985 strip titled "The Rule," a woman explains her criteria for watching a film. "I only go to a movie if it satisfies three basic requirements," the character says to a friend. "One, it has to have at least two women in it. Who, two, talk to each other about, three, something besides a man."

DTWOF was syndicated in 1985 and was picked up by a small number of alternative newspapers with gay and lesbian readerships. At about that time Nancy K. Bereano, the founder of the lesbian/feminist independent publisher Firebrand Books, approached Bechdel about publishing a collection of her strips. The first collection, *Dykes to Watch Out For*, appeared in 1986. That same year, Bechdel and her girlfriend moved to Minneapolis, Minnesota, where Bechdel worked as a production manager at *Equal Time*, a now-defunct gay and lesbian newspaper. Bechdel began producing *DTWOF* strips biweekly, and in 1987 she began to write a continuous storyline, introducing Mo and the rest of the strip's regular characters. The rising popularity of *DTWOF* led Bechdel to quit her job at the newspaper in 1990 and dedicate herself to the comic strip full-time. (Later in the decade Universal Press Syndicate, the largest independent newspaper syndicate in the world, offered to carry *DTWOF*, on the condition that Bechdel alter the content and title to appeal to a more conservative audience. She declined.) Firebrand Books published several more collections of her strips, and three of them, *New, Improved! Dykes to Watch Out For* (1990), *Dykes to Watch Out For: The Sequel* (1992), and *Spawn of Dykes to Watch Out For* (1993), won the Lambda Literary Award for humor from the Lambda Literary Foundation, an organization for lesbian, gay, bisexual, and transgender (LGBT) writers and readers in the U.S.

In 1991 Bechdel moved to Vermont. Though her work was largely unnoticed outside the lesbian and gay communities, she won praise from fellow comic writers and critics. Harvey Pekar, best known for writing the autobiographical comic series *American Splendor* (which was made into a film in 2003), told Hillary Chute for the *Village Voice* (July 12, 2006), "As soon as I became aware of *Dykes to Watch Out For* in the mid '80s, I just thought Alison was head and shoulders above most people even in alternative comics." Lisa London, then the associate publisher of the Feminist Press at the City University of New York, wrote for the *Women's Review of Books* (December 2003), "Panel by panel, person by person, in chronicling the lives and loves of a group of friends, Bechdel has charted, and in some cases, propelled cultural and political shifts. [When I was] growing up, *Dykes to Watch Out For* was a vital cultural thread of lesbian subculture woven into my life, and helped to shape my identity as a third-wave feminist."

Bechdel continued to win Lambda Literary Awards for her work. Her 1998 illustrated memoir, *The Indelible Alison Bechdel: Confessions, Comix, and Miscellaneous Dykes to Watch Out For*, which chronicled her progression as a cartoonist, from her early childhood drawings to the development of *DTWOF*, won that year's Lambda Award in the lesbian biography/autobiography category. In 2003 her collection *Dykes and Sundry Other Carbon-Based Life-Forms to Watch Out For*, published by the LGBT publisher Alyson Books, won her another Lambda Award for humor.

After years of considering the idea of writing about her father and his sudden death, Bechdel began working on *Fun Home* in 1999. "I've wanted to tell this story since I was about 20," she told Margot Harrison for the Burlington, Vermont, newspaper *Seven Days* (May 31–June 7, 2006), "as soon as I had enough perspective on my father's death to see what a really excellent story it was. For a long time I thought I couldn't reveal this family secret. But something changed along the way . . . history changed, the cultural climate changed, and eventually it didn't seem like that earthshaking a thing to reveal, even for my family." The growing popularity of graphic novels also factored into her decision. "When I was 20, there wasn't such a thing as a graphic novel," she told Harrison. "So that was part of the evolution, too, finding a form for the story to take."

Bechdel's father died on July 2, 1980, when he was struck by a truck while standing along a highway. Bechdel believes that her father may well have jumped in front of the truck, committing suicide. In the months leading up to the incident, Bechdel had sent a letter to her parents proclaiming her lesbianism. Afterward, her father alluded to his own homosexuality, and her mother divulged to Bechdel that he had carried out affairs with various young men around town. "[My father] couldn't deny things anymore; he'd been holding everything in place until that moment. It was something I felt pretty immediately," Bechdel told Ginia Bellafante. She added that she thought it would be "ridiculous" and narcissistic to think that he committed suicide solely because she had revealed her lesbianism. Bechdel also cites her mother's request for a divorce weeks prior to her father's death as a possible factor.

Bechdel spent nearly seven years working on *Fun Home.* (The title refers to the abbreviated name her siblings gave the family's funeral home.) She researched diligently, combing through her childhood diaries, family photographs, public records, and her father's letters. Her mother, upon discovering that her daughter was working on the book, ceased talking about her late husband. Bechdel told Hillary Chute, "[My mother] felt quite betrayed. And justifiably so. Essentially I used information she had given me in confidence over the years." Although her mother has been unsettled by the publication of personal information about the family, Bechdel told Chute, "[My mother] also understands writing and the imperative of storytelling, and there's a way that she respects the project, despite her discomfort."

Literature was a major part of Bechdel's childhood, and *Fun Home* contains many literary references. Writings of Albert Camus, James Joyce, Marcel Proust, F. Scott Fitzgerald, and Colette, as well as the lives of the authors themselves, are referenced throughout the memoir. In an effort to make sense of her relationship with her father, Bechdel employed her father's favorite book, Joyce's *Ulysses*, as well as the tale of the mythological figures Icarus and Daedalus. (In the Greek myth, Daedalus builds wings for himself and his son, Icarus, so that they may escape Crete. Ignoring his father's advice, Icarus flies too close to the sun. His wings melt, and he drowns in the sea below. In her memoir Bechdel cast herself as Daedalus and her father as Icarus.) "Books were our bond, the one point where we connected," Bechdel told Tom Beer. "It was a substitute for intimate personal contact. Just the fact that I resort to describing my parents as fictional characters is an indication of how remote we all were. My dad to me is Jay Gatsby [from F. Scott Fitzgerald's *The Great Gatsby*], and my mother Isabel Archer from [Henry James's] *The Portrait of a Lady.*"

Houghton Mifflin published *Fun Home*, its first graphic novel, in June 2006. The book received rave reviews. "More than the witty art, more than the mordant prose, it is . . . openness that distinguishes Bechdel's generous and intelligent work," Jennifer Reese wrote for *Entertainment Weekly* (June 2, 2006), which later named *Fun Home* the best nonfiction book of the year. "While *Fun Home* takes only a couple of hours to read, it has a depth and sweetness few can match at five times the length." "*Fun Home* must be the most ingeniously compact, hyper-verbose example of autobiography to have been produced," Sean Wilsey wrote for the *New York Times* (June 18, 2006). "It is a pioneering work, pushing two genres (comics and memoir) in multiple new directions, with panels that combine the detail and technical proficiency of [celebrated underground cartoonist] R. Crumb with a seriousness, emotional complexity and innovation completely its own." In a review for *Salon* (December 12, 2006, on-line), Laura Miller and Hillary Frey wrote, "*Fun Home* shimmers with regret, compassion, annoyance, frustration, pity and love—usually all at the same time and never without a pervasive, deeply literary irony about the near-impossible task of staying true to yourself, and to the people who made you who you are."

Fun Home became a best-seller and was named among the best books of the year by the London *Times*, Amazon.com, *Time*, *New York* magazine, *People*, the *New York Times*, and *Publishers Weekly*. In 2007 it won the Eisner Award for best reality-based work, the Gay & Lesbian Alliance Against Defamation (GLAAD) Media Award for outstanding comic book, the Stonewall Book Award for nonfiction, the Publishing Triangle's Judy Grahn Nonfiction Award, and the Lambda Literary Award for best lesbian memoir/biography. It was also a finalist for a National Book Critics Circle Award in the memoir/autobiography category. The Tony Award nominees Lisa Kron and Jeanine Tesori recently penned an as-yet unproduced musical based on *Fun Home.*

On May 10, 2008 Bechdel announced on her blog that she would begin an official sabbatical from *Dykes to Watch Out For* with the publication of strip number 527, on May 14. The decision was made for financial reasons—in the post Bechdel acknowledged that income from the strip's publication had fallen over the past few years—as well as time constraints; she is currently working on her third graphic memoir, tentatively titled "Love Life: A Case Study." It will focus on her past romantic relationships, including her brief marriage to her longtime partner, Amy Rubin, in 2004. (The wedding took place in California before the state reversed its ruling on same-sex marriages.) Bechdel's relationship with Rubin later ended.

In November 2008, to commemorate the 25th anniversary of *DTWOF*, Houghton Mifflin published *The Essentiol Dykes to Watch Out For*, a collection that contains 390 of the series' 527 strips.

Bechdel lives in Bolton, Vermont, with her partner, Holly Rae Taylor. Taylor is the founder of Waste Free Living Inc., a Web-based business that promotes composting and sells environmentally friendly products. The couple have a cat named Dr. Winnicott.

Beiser, Maya

Dec. 31, 1963– Cellist

Address: c/o Koch Entertoinment, 740 Broadwoy, #7, New York, NY 10003

Maya Beiser is a classically trained cellist, but nobody with even a slight acquaintance with classical music would ever mistake her performance for a traditional one. Beiser attacks the cello the way Jimi Hendrix, Kurt Kobain, and Jimmy Page attacked the guitar—with attitude, playfulness, and rock-and-roll showmanship. Since an early age the Israeli-born cellist has sought in part to re-create pieces from the classical repertoire rather than reproduce them note-for-note to conform to traditional ideas of how they should sound. For the most part, though, she performs works by contemporary composers. Her concerts often include video projections, spoken-word poetry, prerecorded cello music, and elements of rock, electronica, minimalism, and Middle Eastern music. After receiving a master's degree in music in the United States, Beiser joined the avant-garde, New York City–based group Bang on a Can All-Stars, in 1992. A decade later, eager to become more involved in the creative process and gain more control in the projects in which she engaged, she embarked on a solo career. She has released four solo albums in addition to several in which she played with the All-Stars or others, and she has contributed to the soundtracks of three major motion pictures: Edward Zwick's *Blood Diomond* (2006), Denzel Washington's *The Great Deboters* (2007), and M. Night Shyamalan's *The Hoppening* (2008). Composers including Steve Reich, David Lang, Louis Andriessen, and Eve Beglarian have written pieces especially for her. In the last few years, in a consciously crosscultural approach, she has collaborated with composers, instrumentalists, and other artists from the Middle East, Europe, and the United States. She has perfomed with the Brooklyn Philharmonic, the Montreal Philharmonic, the St. Paul Chamber Orchestra, the Sydney Symphony, the China Philharmonic, and other ensembles and in countries including Japan, China, France, Taiwan, Spain, and Australia as well as the U.S. "I feel that my role right now is to do something big for the cello," she told an interviewer for the *Idoho Mountoin Express* (February 16, 2005, on-line). "I want to change the image of the cello as this somber classical music instrument. And I've been doing it quite successfully."

The oldest of the four daughters of an Argentinean father and a French mother, Maya Beiser was born on December 31, 1963 in Gazit, a kibbutz in the Galilee region of northern Israel—"the most beautiful place, very close to the Jordan River," as she described it to *Current Biography,* the source of quotes for this article, unless otherwise indicated. Designed to be a sort of socialist utopia in which the individual is secondary to the group, a kibbutz is a settlement where up to a few hundred families live communally. The residents eat their meals together, share certain tasks, and support themselves through agriculture and other kibbutz-based endeavors, such as small factories. In Gazit, whose residents were mostly Jewish immigrants from Argentina, Beiser's father was in charge of a herd of cattle. Beiser considers the guiding philosophy of the kibbutz movement "a really beautiful idea," and she has fond memories of her childhood, but she has also recalled feeling socially and emotionally suffocated.

The kibbutz was very arts-oriented; from an early age children studied music, visual arts, and art history, and they were encouraged to be creative. When Beiser was six years old, her teachers discovered that she has perfect pitch—the ability to hear one note (played by itself) and identify it (as a B or a C, for example). Her father, who also had perfect pitch, loved music. For his first daughter, he played recordings of tangos, Argentinean folk music, and classical compositions, especially Haydn's two cello concertos, written in the 18th century. Her mother played recordings made by French musicians, among them the chanteuse Edith Piaf. The kibbutz was close to several Arab villages, and Beiser would hear the singing of the adhan (the Islamic call to prayer) five times a day.

When, at age eight, Beiser was offered her choice of string instruments to study, she picked the cello. "There was something about the *sound* of the cello," she has said. "I was drawn to it." She also said, "There was something about the 'everybody together' community in the kibbutz that just didn't fit my personality. I needed—and this is my analysis today—I needed something that would distinguish me and give me a really strong identity. I had all these things that were bursting to come out of me and I just needed that. There was something about the fact that the cello was big that attracted me, and the fact that nobody else played it. Everybody else played the violin."

At the age of 11, Beiser was noticed by a representative from the America-Israel Cultural Foundation, one of whose missions is to nurture talented Israeli children through adolescence. About a year later the organization's founder, the famed violinist Isaac Stern, became Beiser's mentor. He would give her lessons a few times a year and, most important, would offer advice. Beiser's parents did not push her to be a virtuoso; she was self-driven. "When I was twelve," she told Michael Ajzenstadt for the *Jerusalem Post* (June 9, 1997), "I knew that the cello would take me out of the kibbutz and would open doors for me worldwide." During those formative years Beiser displayed her desire to be distinctive not only by playing the cello but also by the way she played it. Her cello teacher would often tell her to tone down her personality in her playing and to imagine instead what the composer would have wanted. "The idea that there was just one truth never agreed with me," she said. When, at the age of 15, she was asked to perform one of Haydn's cello concertos at a major hall in Tel Aviv, Israel's second-largest city, it was expected that she would wear a proper evening dress. To Beiser that was an example of "the stiffness that exists in the classical music world." Although she wanted to wear pants and a shirt, her mother insisted that she wear a formal dress, and Beiser agreed to do so out of respect for her mother, who was very supportive of her music career. But she later realized that "all those codes about how you're supposed to look and how you're supposed to be" extend to how one is supposed to play. Such restrictions, she said, were "totally opposite to my personality."

After she completed her junior year of high school, Beiser left the kibbutz to serve in the Israeli army, as is required of all Israeli citizens, women as well as men. She did not face combat. Earlier, she had learned that the army's string quartet had an opening for a cellist. She auditioned for that position and was accepted into the quartet, whose members up to that time had all been men. During her two years in the army, she also attended Tel Aviv University, in Israel, where she studied music and took classes in literature, film, and philosophy. She graduated with a bachelor's degree in music in the spring of 1985.

By that fall Beiser had moved to the United States to continue her education, at the Yale School of Music, in New Haven, Connecticut. She studied there with several renowned musicians, among them the Brazilian-born cellist Aldo Parisot. After about a year she moved to New York City and commuted to Yale. Her desire to express herself more freely and make her playing more personal intensified. (Even before she came to the States, her musical interests and experiences outside concert halls were very diverse: She liked contemporary rock bands, including Nirvana and Nine Inch Nails, and such classic rock bands and musicians as Led Zeppelin and Jimi Hendrix; she also listened to Middle Eastern music.) Meanwhile, Beiser was becoming increasingly impatient with the expectations of classical-music concertgoers, who, she believes, have a fixed idea of what they want to hear: compositions of Bach must be played like this, those of Beethoven like that. She did not want to be an "interpreter"; rather, she wanted to be a "creator."

At Yale Beiser met the Dutch post-minimalist composer Louis Andriessen, who offered Beiser a musical challenge: to tackle his piece *La Voce,* which calls for the performer to recite a text by the Italian poet Cesare Pavese while playing the cello. "It just changed my life," Beiser recalled. "The idea that I can sing and play and that it's okay to do that. I discovered this whole other sound that I can do. After I started to work on that piece I realized that's what I want to do. I want to stop playing classical music altogether, move to New York, start collaborating with composers. I didn't know exactly where it was going to lead, but I knew I wanted to do more stuff in the nontraditional genres and the rock world." Isaac Stern and some of her teachers did not approve of her plans to incorporate nonclassical elements into her music. Speaking to Paul de Barros for the *Seattle Times* (November 17, 2006), Beiser explained, "The idea of using electronics, amplifying the cello, manipulating the cello sound with anything other than your own bow was not acceptable."

While at Yale Beiser also met the composers Julia Wolfe, David Lang, and Michael Gordon, who guided her further along an experimental path. In 1987 Wolfe, Lang, and Gordon founded Bang on a Can, a music collective and festival that debuted with a 12-hour music marathon at an art gallery in the SoHo district of New York City. "The founders saw that among young composers and all around the world there were powerful musical ideas, just starting to flow freely between categories, between minimalism and rock, between written and improvised music, between world music and noise, between live performance and electronica," the group's Web site explained in 2009. "Restlessly inventive musicians everywhere were pulling the barriers down—there needed to be a place where all the uncategorizable music could find a home." Beiser soon began to perform with Bang on a Can musicians. In 1992 Beiser and a few others among the festival's regulars formed a group, the Bang on a Can All-Stars, which performed and made recordings with an unusual combination of instruments: cello, electric guitar, double bass, clarinet, piano, and percussion. Also in 1992 Beiser gave her New York debut recital, at the 92nd Street YM-YWHA. With piano accompaniment, she performed pieces by Dmitri Shostakovich, David Lang, Witold Lutoslawski, Joaquín Nin, Leoš Janáček, and Claude Debussy. In a review for the *New York Times* (May 30, 1992), Bernard Holland wrote that Beiser seemed to have "aimed at touching just about every cello style in 20th century music."

In 1995 the Bang on a Can All-Stars released *Industry*, their first studio album. Wolfe, Lang, and Gordon each wrote a piece for the recording, and Louis Andriessen wrote two. The music showed pop and rock influences while also indicating that the band members still valued traditional composition techniques. The title track is a solo cello piece Gordon wrote for Beiser, in which the cello's sound is modified by a "tube screemer," for an effect like that of a wailing electric guitar. Writing for allmusic.com, Steward Mason described the album as "a piece of contemporary classical music that is neither pretentiously inaccessible nor a blatant attempt at reaching a mainstream audience." With time the All-Stars established an identity separate from that of the organization that had spawned their band. The members—Beiser, Robert Black, Lisa Moore, Steven Schick, Mark Stewart, and Evan Ziporyn—collaborated regularly and received a series of commissions from notable contemporary composers. In 1996 the group released their sophomore album, *Cheating, Lying, and Stealing*, which, like its predecessor, was marked by innovation and self-expression. The All-Stars' live shows were similarly diverse: in addition to original compositions by others, the All-Stars performed their own versions of songs by such groups or artists as Nirvana and the Brazilian jazz composer Hermeto Pascoal. In a conversation with the *San Francisco Chronicle* (October 20, 1998) music critic Joshua Kosman, Gordon expressed the view that the All-Stars were successful for two reasons: open-mindedness and outstanding musical abilities. "Speaking as a composer and not as artistic director of Bang on a Can," Gordon said, "I have to say that these are the six greatest musicians I've ever worked with." After almost a decade with the All-Stars, Beiser left the group. "There is a particular aesthetic" associated with them, she told Allan Kozinn for the *New York Times* (October 26, 2003). "At a certain point I felt too defined by what people heard me play with the group. Also, it's an electric ensemble, and I was frustrated with the way the cello sounded in it."

Meanwhile, Beiser had released two solo albums, *Oblivion* (1999) and *Kinship* (2000). Her next, *World to Come*, came out in 2003. On tour Beiser performed the third disk's 25-minute title piece, composed by David Lang after the September 11, 2001 terrorist attacks on New York, with the accompaniment of jumpy, buzzing, prerecorded cello tracks; projected on a screen behind her were black-and-white images of water, the sky, and abstract shapes. Another work she presented on stage, Steve Reich's *Cello Counterpoint*, included seven of her prerecorded cello tracks. In New York City on October 30, 2003, the cellist gave a sold-out concert as part of the inaugural season of Zankel Hall, Carnegie Hall's new auditorium. Her performance, Anthony Tommasini wrote for the *New York Times* (November 1, 2003), was "mesmerizing," and at the end of the concert, he reported, Beiser was "vigorously cheered by the packed house." By contrast, John Allison, a London *Times* (September 9, 2004) critic, found Beiser's performance at the 2004 Vale of Glamorgan Festival to be a disappointing mixture of "blandly amplified cello musings with navel-gazing video installations." For the most part, Allison wrote, the pieces were "all interchangeable, which suggests either that Beiser has become a one-trick player or that the composers are writing to order rather than from inspiration. Possibly both." But most reviewers have praised Beiser's performances as demonstrations of virtuosity and a powerful presence.

In 2006 Beiser released the three-track *Almost Human*. The album includes the 39-minute piece "I Am Writing to You from a Far-Off Country," whose title is that of a poem by the Belgian writer Henri Michaux. The poem, which consists of 12 letters in which a woman describes to an unidentified recipient the mysterious land in which she is traveling, had deeply impressed Beiser during her teenage years. Two decades later, on a commission from the Kennedy Center and the Washington Performing Arts Society, both in the nation's capital, she recruited the composer Eve Beglarian to create a score for an English translation of the poem (originally written in French) and the filmmaker Shirin Neshat to make a video to accompany both the words and the music. When "I Am Writing" is performed in concert, Beiser plays the cello while reciting the poem; she is accompanied by both recorded music and a mezzo-soprano singing a vocalise (a wordless melody), while images of desert and sea, videotaped in Israel, are projected.

Beiser has said that although she was not trying to make a political statement with the piece, her collaboration with Beglarian, a Christian of Armenian descent, and Neshat, a Muslim from Iran, clearly demonstrated the power of music to bring people from very different cultures together. Neshat told Kathryn Shattuck for the *New York Times* (March 9, 2006) that she had never collaborated with anyone from Israel before and was initially "wary" of working with Beiser. "We have in Iran in many ways been brainwashed since childhood about certain cultures and religions," Neshat said. "But. . . . These days more than ever, I feel that culture can be a tool of peace and mediation and negotiation and understanding." What Neshat learned from the hours she spent with Beiser was precisely what Beiser had hoped to convey to audiences: "We are connected to where we come from and that's important," Beiser told Shattuck, "but in the end we all transcend that if we let ourselves go into a deeper kind of place." Some critics completely dismissed "I Am Writing." A reviewer for the *Washington Post* (October 23, 2006), for example, who characterized Beiser as a "hot young cello diva of the avant-garde," found the music "self-important and drab" and the images "excruciatingly dull." Most critics, however, responded more positively. "Despite Beiser's lavish use of video, sampled and live voices, and electronic multitracks," Hedy Weiss wrote for the *Chicago Sun-Times* (December 4, 2006), "she never loses touch with the all-important human element of live music."

In 2008 Beiser created *Provenance*, a concert piece commissioned by Carnegie Hall and the New Haven–based International Festival of Arts & Ideas. For *Provenance* she recruited composers from Israel, Iran, Morocco, Palestine, Armenia, and the United States, with the goal of making a "social statement: we are all human beings." She added, "To me, music is the ultimate human expression." Together the musicians created 10 pieces, all of which feature a cellist and various guest musicians on percussion, electronic instruments, and such Middle Eastern instruments as the ney and the oud, which are similar to a flute and a lute, respectively. Beiser's theme was the existence from the ninth to the 15th centuries on the Iberian Peninsula (modern-day Spain and Portugal) of "the greatest peaceful agglomeration of cultures ever known in the post-literate world," according to her Web site. "The cultural richness of this time was so remarkable that historians speak of it as the 'Golden Age.' Even more remarkable than the flowering of art itself, was the confluence of cultures that produced it: under the rule of Islam, Moslems, Jews and Christians lived and worked together in relative harmony." Beiser's collaborative work embraces coexistence "not as an abstract ideal but as a creative necessity."

In addition to those already mentioned, Beiser has worked with composers, conductors, or instrumentalists including Brian Eno, Philip Glass, Tan Dun, Mark O'Connor, Anthony de Mare, Astor Piazzolla, and James Newton Howard. She hopes to add Tom Waits, Jimmy Page, and Radiohead's Johnny Greenwood to that list. Beiser reads voraciously, maintains a vegetarian diet, and practices yoga. She and her husband, a psychiatrist, live in New York City with their two children—Dorian and Aurielle.

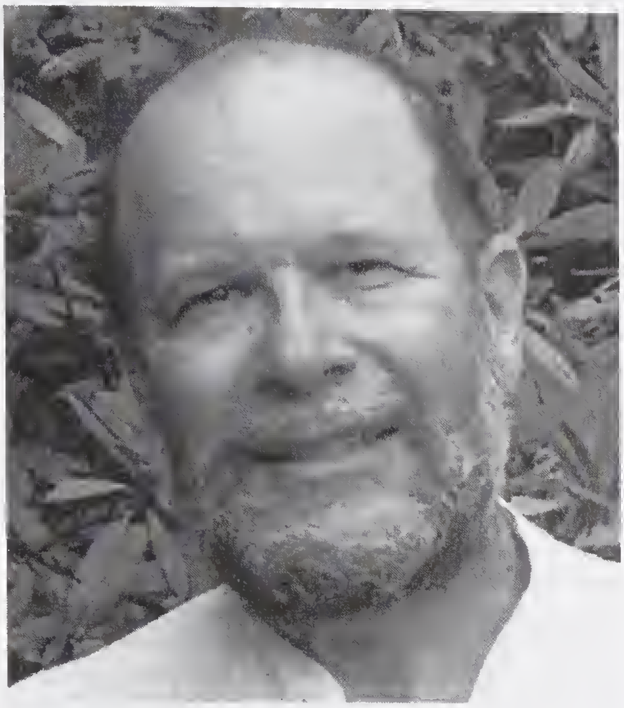
Bernstein, William J.

July 29, 1948– Financial theorist; historian; writer

Address: Efficient Frontier Advisors LLC, P.O. Box 237, Eastford, CT 06242

For thousands of years people have traded gold, silver, tin, and copper; grain, silk, wine, and horses; cloves, nutmeg, cinnamon, and pepper; cotton, incense, and opium; coffee, tea, and sugar; and much more. In his highly praised book *A Splendid Exchange: How Trade Shaped the World* (2008), William J. Bernstein, a financial expert (and neurologist by training), provided a detailed history of how trade has shaped and been shaped by the worlds of politics, religion, science, and social interaction. Starting with the trade of grain for



Courtesy of William Bernstein

William J. Bernstein

metals in Mesopotamia five thousand years ago, he went on to tell stories of the trade of Rome's gold and silver for the Middle East's myrrh and frankincense as well as the rise and spread of Islam and its various influences on trade—not only in the Middle East but also in Europe, Asia, and Africa. Bernstein also shared tales of trade and conquest revolving around Europe's desire for such rare and expensive spices as nutmeg, mace, and cloves in the first half of the second millennium; of how traders unintentionally helped spread the plague—by transporting rats that carried germ-ridden fleas—in the sixth century and again in the 14th, when the plague wiped out at least one-third of Europe's population; and of the dangerous missions of explorers such as Vasco da Gama of Portugal, whose expert navigational skills were matched only by his feelings of religious and ethnic superiority and his extreme cruelty. Bernstein dismissed many myths, such as the notion that colonists at the Boston Tea Party dumped tea in the harbor because they were protesting "taxation without representation": in fact, Boston tea dealers were protesting an act of the British Parliament that allowed the East India Co. to sell tea directly to North America, because, Bernstein wrote, they simply did not want to face competition in the tea trade. Bernstein also told the tale of the slave trade from Africa to the Americas, of the technological innovations of the 19th century, and of the increasing trade protectionism of the 20th century. A review in the *Economist* (July 19, 2008) concluded that the book is "a timely and readable reminder that the desire to trade is not only one of the oldest human instincts but also the cause of the most important developments in our shared history." In addition to *A Splendid Exchange*, Bernstein is the author of *The Birth of Plenty: How the Prosperity of the Modern World Was Created* (2004), as well as successful books on investment: *The Intelligent Asset Allocator* (2000) and *The Four Pillars of Investing* (2002). His most recent book is *The Investor's Manifesto: Preparing for Prosperity, Armageddon, and Everything in Between* (2009).

The second child of an attorney and a homemaker, William James Bernstein was born on July 29, 1948 and grew up in a modestly prosperous suburb of Philadelphia, Pennsylvania. He has said that he received an excellent education in high school, where he was interested in science, especially chemistry; he pursued that subject in college and graduate school, receiving a bachelor's degree from La Salle College, in Philadelphia, in 1969 and a Ph.D. from the University of California at Berkeley in 1972. But even before he earned his Ph.D., he changed his mind about his choice of career. "The physical sciences seemed a bit dry to me," he told *Current Biography*, the source of quotes for this article unless otherwise noted. "I wanted more human contact, I suppose. I didn't want to spend the rest of my life in the laboratory. I think I enjoyed the messier, more human side of medicine." Bernstein stayed in the Bay Area to study medicine at the University of California at San Francisco, where he received his M.D. in 1976. After a four-year residency in neurology at the University of California at Los Angeles, he moved to Coos Bay, Oregon, where, for the next 15 years or so, he was the only practicing neurologist.

Bernstein had chosen Coos Bay because he had always wanted to live in a small town, as well as in a place where his services would truly be needed—a desire he attributed to "misplaced, or perhaps well-placed, '60s idealism." He opened a private practice and treated neurological ailments, including seizures, headaches, Parkinson's disease, multiple sclerosis, and pinched nerves in the neck and back. As probably the only neurologist on the Oregon coast, he had fulfilled his goal of being needed, which put a great demand on his time: he was working with patients between 60 and 70 hours per week—"a full-and-a-half-time job," as he called it. After a decade he hired an associate and cut his hours to around 40 a week, so that he would have more time to spend with his family and pursue his other interests—namely, economics and finance.

Bernstein's quest to understand those subjects began with his desire to save money for retirement. Setting out to educate himself, in the early 1990s he collected financial data, created spreadsheets, and developed a methodology that other investors could also use. He included his findings in his first book, *The Intelligent Asset Allocator*. Despite the soundness of his advice—which was to invest not only in individual stocks and bonds but in a variety of markets—he could not interest publishers in a book about investing by a neurologist from a small town in Oregon. So in 1996 Bernstein posted the content of the book on his new Web site, efficientfrontier.com. After getting more and more readers—mostly economists, financial consultants, and business journalists—he was approached by McGraw-Hill, which published his book in 2000. It went on to sell an impressive 70,000 copies. With *The Intelligent Asset Allocator*, Bernstein had tried to write a book for the average investor; what he "actually didn't understand," he recalled, was that his book was better suited "for engineers and finance people. People really good at math."

Bernstein next set out to write an investment book more accessible to the general public. The result, *The Four Pillars of Investing*, sold well—around 90,000 English-language copies—and was translated into languages including Chinese and Japanese. The "four pillars" of investment offered by Bernstein were theory, history, psychology, and business. Bernstein's theory of investing is that it is important to mix assets in an investment portfolio, thereby minimizing risk. He gave the following analogy: A cake is made of sugar, flour, eggs, salt, and shortening but does not taste like any of those ingredients. Similarly, portfolios should not focus on one particular stock or another but should contain a mix of government bonds, big-name stocks, technology stocks, foreign stocks, and others. Secondly, Bernstein wrote, it is important to know the history of finance. The study of that history is not a "hard" science like physics or chemistry (in which the same conditions will always produce the same results), because the past rarely repeats itself; but we can still learn from it. With regard to psychology, Bernstein wrote that human instincts are usually counterproductive in investing, so it is important to identify and control them. People who own stocks, for example, tend to become overconfident and make irrational trades regularly. Finally, about the "pillar" of business, Bernstein wrote that stockbrokers and mutual-fund companies operate at "a level of educational, moral, and ethical imperatives that would be inconceivable in any other profession." For example, lawyers, bankers, doctors, and accountants have a legal responsibility toward their clients. Stockbrokers do not. That forthrightness on Bernstein's part led to his being quoted with increasing frequency in such publications as *Forbes* and the *Wall Street Journal*.

Bernstein's next book, *The Birth of Plenty: How the Prosperity of the Modern World Was Created*, marked a departure for him, in that it was a work of economic history. The idea for the book came about after Bernstein's wife brought home a copy of P. J. O'Rourke's *Eat the Rich* (1999), a mostly jocular book about the economic history of the world that nonetheless included well-researched passages. One in particular grabbed Bernstein's attention: O'Rourke, as Bernstein wrote in the preface to *The Birth of Plenty*, cited the work of an obscure Scottish economist, Angus Maddison, who argued that world economic growth started around the year 1820. "It took me a while to rustle up a copy of Maddison's summary work, *Monitoring the World Economy, 1820–1992*," Bernstein wrote. "The bound edition looks as dull and as daunting as the densest legal brief, but inside, Maddison's dry data lay out the greatest story ever told: the economic birth of the modern world." Bernstein soon became obsessed with the year 1820. "Why," he wrote in the preface, "did world economic growth, and the technologic progress underlying it, suddenly explode *when* it did?" To be sure, there were people who got rich before the early 19th century—mostly nobles, kings, aristocrats, and the occasional explorer—but there was not any consistent, systematic increase in wealth on a per capita basis. So, Bernstein wondered, what happened? In *The Birth of Plenty*, he attempted to uncover the cultural and economic factors that contributed to the spread of wealth: property rights, scientific rationalism, capital markets, and transportation and communication. The absence of those factors, he argued, is a recipe for stagnant growth, both economic and cultural. While various economists and financial experts praised the book, *The Birth of Plenty* was not reviewed by any influential U.S. or British publication.

That would not be true of Bernstein's next book, *A Splendid Exchange: How Trade Shaped the World*. In 2004, when Bernstein was contacted by an editor at Grove/Atlantic Press about writing a book on the history of world trade, he was initially reluctant to take on that project. "In the first place, I'm not interested," he told the editor. "In the second place, you got the wrong Bernstein. You want Peter Bernstein"—a famous economic historian. The editor replied that, in fact, he had approached Peter Bernstein, who was busy working on another project and had told the editor, "There is another Bernstein you should call who I think can do the job." William Bernstein said that he would think about the offer. He then went to talk to his wife about it. When he mentioned Grove/Atlantic Press, she asked, "Do you know who Grove/Atlantic Press is?" After Bernstein said that he did not, she explained that the house—then Grove Press—had published such important avant-garde works as Samuel Beckett's play *Waiting for Godot* and Henry Miller's novel *Tropic of Cancer*. The *Atlantic*, she continued, is the excellent monthly magazine that covers foreign affairs, politics, ideas, and culture. "That's Grove/Atlantic Press," she said. "If they want you to write a cookbook, you'll write a cookbook." Laughing as he recalled that conversation, Bernstein said, "Suddenly a history of world trade didn't sound so bad compared to a cookbook."

It took Bernstein three and a half years to write the book. One of the things he found most challenging and exciting about the project, and one of the reasons it became a critical success, was that to his knowledge no one had ever before written a history of world trade that spanned thousands of years, from the dawn of history to the modern era. *A Splendid Exchange* contains many historical facts, maps, and insights, but the book's most prominent feature is its many narratives of the lives and adventures of traders, merchants, businessmen, and explorers. One of Bernstein's favorite stories is that of Christopher Columbus, who knew that the world is round—as did most educated people at the end of the 15th century—but wanted it to be smaller than it actually is. The world is about 25,000 miles in circumference, and to one who knew that, the journey Columbus planned—from Spain to India—would have seemed impossible at the time. So Columbus accepted an estimate of the world's circumference, 17,000 miles, that was in line with his goal; his obstinacy and willful ignorance gave him the courage to sail west. He returned from his first trip with minerals he thought were gold (actually iron pyrite, or "fool's gold"), a substance he thought was cinnamon (in reality a different bark), and people he thought were Indians (Native Americans he and his crew had captured). Only by his third trip did it occur to him that perhaps the land he had visited was not the Indian subcontinent. In *A Splendid Exchange* Columbus is just one of many characters who set out to trade, buy, capture, enslave, and explore. The historian John Steele Gordon wrote for the *New York Times* (April 30, 2008) that Bernstein "makes clear in his entertaining and greatly enlightening book" that trade "has been a major force in driving the whole history of humankind."

The publication of Bernstein's book was followed months later by the worldwide economic crisis. "I had spent a large part of my reading life reading about events like this," Bernstein said, "and to see that kind of event play out in front of my eyes was just absolutely fascinating." He attributed the crisis to three causes: "People did not understand the credit market; in other words, they didn't understand how expandable the money supply was. The second thing that happened: financial innovation completely outran our ability to regulate it. Third thing: the libertarian right got control of our financial system: this concept that the market always gets things right and never makes mistakes and the government always makes mistakes." Watching the failure of banks and investment companies and the accompanying panic, uncertainty, and speculation, Bernstein said, he felt like "a geologist who studies volcanos—to have one blow up in your backyard is both horrifying and fascinating."

In addition to writing books, Bernstein operates the money-management firm Efficient Frontier Advisors, which he co-founded in 1998. According to Bernstein's Web site, efficientfrontier.com, the firm now handles approximately $140 million in investments. Bernstein said that his fifth book, *The Investor's Manifesto*, is an investment guide for a general readership, with even less math than *The Four Pillars of Investing*—almost none, in fact; the book was due to come out in November 2009. Another of his books, scheduled for publication in 2012, will be about the way communication technology has shaped the social and political world order throughout history—from the production of papyrus to the ubiquity of the Internet.

Bernstein lives with his wife, Jane, in Coos Bay.

Biden, Joseph R.

NOTE: An earlier article about Joseph R. Biden appeared in *Current Biography* in 1987.

Nov. 20, 1942– Vice president of the United States; former U.S. senator from Delaware (Democrat)

Address: The White House, 1600 Pennsylvania Ave., N.W., Washington, DC 20500

In 1973 Joseph R. Biden, a 30-year-old lawyer from Delaware, became one of the youngest U.S. senators in history. More than 30 years later—after several Senate terms and two unsuccessful presidential bids—Biden again made history, when he was elected vice president under Barack Obama, the first African-American to win the nation's highest office. As the longest-serving U.S. senator in Delaware's history and a member of both the Judiciary Committee and Foreign Relations Committee, Biden is one of the most experienced and knowledgeable politicians in the country, with a hand in some of the most important national and international affairs of the past three decades. He has been involved in campaign-finance reform, arms negotiations with leaders of the former Soviet Union, crime and civil rights legislation, hearings on controversial U.S. Supreme Court appointees, and debate over the war in Iraq. According to the 1992 edition of *Congressional Quarterly*'s *Politics in America*, "From the time Biden arrived in the Senate, he struck observers as a man destined for big things, with the talent and charisma to be an influential Democrat for decades to come. He is legend for his ability to move audiences with his powerful oration. Intelligent and perceptive, he can quickly grasp and convey the essence of complex issues. Personable and conciliatory, he can be adept at legislative negotiations."

Biden's age and impressive political résumé were key factors in his being chosen to run on the Democratic ticket with Obama, whose youth and lack of foreign-policy experience were seen by some as strikes against him. Biden's Irish-Catholic roots in the working-class cities of Scranton, Pennsylvania, and Wilmington, Delaware; his pro-choice stance and support for women's rights; and his struggle to overcome the deaths of his first wife and baby daughter in a car crash struck chords with large segments of the public. "Mostly, I think what attracted [Senator] Obama was Biden's wisdom," David Axelrod, a senior Obama campaign strategist and now senior White House adviser, said on ABC's *This Week*, as quoted by Jill Lawrence and Martha T. Moore for *USA Today* (August 24, 2008, on-line). "And not the kind of wisdom you get in Washington, D.C., but the kind of wisdom you get when you overcome adversity, tragedy in your life as he has; the kind of wisdom you get in the working-class communities of Scranton and Wilmington."

Biden's success has come despite his propensity for speaking his mind without first considering the ramifications, a trait that has sometimes led to controversy. One infamous example is when he referred to President George W. Bush as "brain dead." When met with an outcry by Republicans, Biden countered by reminding them that he had, on occasion, called his fellow Democrat Bill Clinton brain dead as well. Pennsylvania governor Edward Rendell told Lawrence and Moore, "It's pretty easy to fall in love with Joe Biden. Even his mistakes, you have a tendency to shake your head and say, 'But that's Joe.'"

Of largely Irish descent, Joseph Robinette Biden Jr. was born on November 20, 1942 in Scranton, Pennsylvania, one of the four children of Joseph Robinette and Jean (Finnegan) Biden. When Biden was 10 years old, the family moved to a working-class suburb of Wilmington, where his father managed a Chevrolet dealership. Biden attended St. Helena's Roman Catholic parochial school and Archmere Academy. His grandfather often discussed politics at family gatherings, sparking in Biden an interest in pursuing a political career. As a teenager he had a stutter. In his 2007 autobiography, *Promises to Keep: On Life and Politics*, he wrote, "Truth was, I didn't let the stutter get in the way of things that really mattered to me. . . . As much as I lacked confidence in my ability to communicate verbally, I always had confidence in my athletic ability. Sports was as natural to me as speaking was unnatural. And sports turned out to be my ticket to acceptance—and more." Biden, who was the leading scorer on the football team during his senior year in high school, worked hard to overcome his stutter, spending time reciting passages from books in front of a mirror. "I prayed that I would grow out of the stutter, but I wasn't going to leave this to chance," he wrote. "I was going to beat the stutter. And I went at it the only way I knew how: I worked like hell." By the time of Biden's high-school graduation, he had become a skilled-enough speaker to give the commencement address.

Biden attended the University of Delaware, in Newark, initially earning a B-minus grade-point average. At his father's urging Biden left the university's football team and began to apply himself to his studies. After graduating from the University of Delaware in 1965 with a B.A. degree in history and political science, Biden enrolled in law school at Syracuse University, in New York, an institution that he chose partly because his future wife, Neilia Hunter of Skaneateles, New York, whom he had met in the Bahamas during a spring break, was a student there. Biden told Howard Kurtz for the *Washington Post* (July 28, 1986) that he found law school to be "the biggest bore in the world" and recalled that he "almost flunked out" but that, thanks to "doing all-nighters all the time," he managed to earn his J.D. degree in 1968. He married Hunter in 1966, and the couple's first son, Joseph R. "Beau" Biden III, was born in 1969. Their daughter, Naomi, was born in 1970, and their son Robert Hunter in 1971.

After his admission to the Delaware bar, in 1968, Biden joined the firm Prickett, Ward, Burt & Sanders. The firm represented large insurance, railroad, construction, and oil companies, and many of the people Biden worked with were Republicans. In his autobiography he wrote, "I didn't tell them that I could never join a party that was headed by Richard Nixon or that I wasn't comfortable representing the firm's bread-and-butter clients, which were big corporations." Biden left to become a public defender in 1969, and, because that position was not full-time, he also worked at a firm known as Arensen & Balick. There, he learned criminal-defense law from the respected attorney Sid Balick, who also introduced Biden to the Democratic Forum, an organization that was trying to reform Delaware's Democratic Party. Biden became active in that group's meetings, later recalling in his autobiography, "I was practicing law I believed in, and I was getting involved in politics. I was right where I wanted to be." When a senior member of the forum asked Biden to run for New Castle County Council, he agreed. In 1970 Biden was elected to the council after campaigning door-to-door in a primarily Republican district. His easy victory surprised many, since Biden, who had taken part in antisegregation sit-ins at Wilmington's Towne Theatre during high school, had run on a liberal platform that included support for public housing in the suburbs.

Biden had long aspired to become a United States senator, and as a new councilman he began to make plans for seeking that office during the 1972 election. Despite his inexperience and youth, he encountered little resistance within his own party, since no other Democrat was eager to challenge the popular Republican incumbent, J. Caleb Boggs, whose two terms as senator had followed three terms as Delaware's at-large member of the House of Representatives and two as its governor. Biden's Senate campaign was a low-budget, family-centered operation. His sister, Valerie, acted as his campaign manager, her husband was budget director, and Biden's mother organized the many coffee hours that her son attended each week to increase his name recognition. Biden's younger brother, James, raised money, and teenage volunteers distributed campaign literature by hand in order to save the cost of postage. Biden received some financial assistance from the American Federation of Labor and Congress of Industrial Organizations (AFL-CIO) and the national Democratic Party.

Biden's campaign theme was summed up in brief radio spots that stressed public distrust of officeholders and candidates. "Politicians have done such a job on the people that the people don't believe them anymore, and I'd like a shot at changing that," he asserted in one message, quoted in a transcript of the National Public Radio (NPR) show *Day to Day* (October 8, 2007). He argued that for trust to be restored, politicians had to become more accountable, and he called for an end to the war in Vietnam, more equitable taxation, legislation on behalf of consumers and the environment, and greater expenditures for mass transit and health care. Biden trailed Boggs 47 percent to 19 percent in polls conducted early in August, but the two men were neck and neck by late October. On Election Day Biden won some 4,000 votes more than his opponent. That narrow victory made him the second-youngest person at that time voted into the Upper House of Congress; indeed, he did not reach the minimum age prescribed by the U.S. Constitution for service in the Senate—30—until several weeks after the election.

Shortly before Christmas in 1972, a personal tragedy almost ended Biden's public career. On December 18, in Hockessin, Delaware, the car in which his wife and children were bringing home a Christmas tree for the holiday celebration crashed into a tractor-trailer. Biden's wife and daughter were killed instantly, and his two sons, ages three and four, were critically injured. While his sons recovered in a Wilmington hospital, Biden, struggling to deal with his loss, forgot about politics and his upcoming role in the Senate. In his autobiography he wrote, "I began to understand how despair led people to just cash it in; how suicide wasn't just an option but a *rational* option. But I'd look at Beau and Hunter asleep and wonder what new terrors their own dreams held, and wonder who would explain to my sons my being gone, too. And I knew I had no choice but to fight to stay alive." During the weeks following the accident, Biden considered surrendering his newly won seat, but Senator Mike Mansfield of Montana, the Democratic leader, persuaded him to accept his duties. Biden agreed and took his oath of office from the hospital where his sons were recovering.

Biden, not wanting to uproot his sons once they were released from the hospital, decided to keep his home in Wilmington. His sister and brother-in-law moved into the house in order to help with their care, and Biden commuted back and forth to Washington, D.C. every day—almost two hours in each direction—so that he could be with them at night. (He continued to commute throughout his tenure in the Senate.) Unsure when he took office that he would be able to be both an effective senator and father, Biden believed that he might quit after six months. "They can always get another senator," but the children "can't get another father," Biden once said, as quoted in an on-line transcript of *CNN Presents* (October 18, 2008). Biden's fears proved to be unfounded; he not only finished his first term but went on to win six more.

Among the issues Biden first tackled as a senator was campaign-finance reform; he supported the passage of legislation in 1974 that provided full federal subsidies for federal general-election campaigns and placed a ceiling on campaign contributions and spending. In 1975 Biden shocked some observers when, despite his identification with the cause of civil rights, he broke from liberal ranks on the issue of school busing. In September of that year, Biden won Senate endorsement of an amendment that forbade the Department of Health, Education, and Welfare (now the Department of Health and Human Services) to require busing aimed at school desegregation except in compliance with a specific court order. In his autobiography Biden argued that "the actual effect of busing seemed diametrically opposed to its intent." He noted that desegregation had led to "white flight" and to schools with a disproportionate number of students of a single race. He wrote, "Busing was a liberal train wreck, and it was tearing people apart. The quality of the schools in and around Wilmington was already suffering, and they would never be the same. Teachers were going to be transferred without consultation to new school districts. In some instances they would be forced to take a pay cut. New Castle County had about two-thirds of the school age population of the state, and now every one of those children was going to be assigned to a new school on the basis of racial balance." Biden's stance was unpopular with his party, but it won the support of Republicans, and he beat James H. Baxter, a poultry farmer, to retain his seat in 1978.

A year earlier Biden had married Jill Tracy Jacobs, his current wife. Jacobs has a background in education; before Biden was elected vice president, she was a professor of English at Delaware Technical and Community College. The couple's daughter, Ashley, was born in 1981.

In 1979 Biden was chosen by President Jimmy Carter to lead a delegation of senators to Moscow, to engage in discussions with Soviet Union leaders over the second Strategic Arms Limitation Treaty (SALT II). Biden was able to persuade the Soviet premier, Aleksei Kosygin, to agree to modifications in the treaty, although it was never formally ratified by the U.S.

Biden's stance on abortion generated controversy during his second term when he said that he was opposed to federal funding for the procedure but supported the right of a woman to undergo it. In 1983 he voted against Senate endorsement of a constitutional amendment that would have allowed individual states to ban abortion. "It's the only consistent position intellectually, which is that if you say government should be out, then government should be out," he told Kurtz.

In 1984 Biden served as the Democratic floor manager for the passage of the Comprehensive Crime Control Act, which overhauled federal sentencing procedures and reduced disparities in punishments for those convicted of similar crimes. In that year's election Biden achieved an almost 50,000-vote victory over John M. Burris, a businessman and former Republican leader of the Delaware House of Representatives.

Biden emerged as one of the most visible critics of President Ronald Reagan. He opposed Reagan's efforts to reduce various benefits under the Social Security system, and he became the chief opponent of several administration appointees while serving on the Senate Judiciary Committee. (In 1981 Biden had become the ranking Democrat on the committee, a post he held until 1987, when he became chairman. He remained chairman until 1995, and then served again as ranking Democrat from 1995 to 1997.) In 1985, for example, Biden vehemently—though unsuccessfully—opposed the confirmation of Edwin Meese III as attorney general, asserting that Meese's conduct was "beneath the office," as quoted by Larry Margasak for the Associated Press (June 6, 1987). In the summer of 1985, Biden led the effort to block a promotion for William Bradford Reynolds, who had very narrowly interpreted his responsibilities as civil rights chief at the Justice Department, and in 1986 Biden was floor manager of the Democrats' almost successful effort to keep Daniel Manion, another controversial Reagan nominee, from being named a federal appellate judge. In July 1986 Biden (unsuccessfully) opposed the confirmation of Associate Justice William H. Rehnquist as chief justice of the United States Supreme Court. His questioning of Rehnquist—who had been a young Supreme Court clerk during the *Brown v. Board of Education* case, in which the Supreme Court struck down the legal rationale for segregation—was considered especially severe, as Biden pressed the nominee about how he would have ruled had he been a justice at the time. In 1987 Biden presided over the confirmation hearings of Reagan's nomination to the Supreme Court of Judge Robert H. Bork, who was eventually rejected by the Senate. Although he had been opposed to Bork's confirmation from the outset, Biden won praise for the fairness with which he conducted the proceedings. According to the 1992 edition of *Politics in America*, "He ably grilled Bork about the judge's controversial contention that the Constitution was silent about privacy rights, zeroing in for political effect on Bork's criticism of a 1965 case in which the court had cited privacy rights to strike down a state law making it a crime for married couples to use contraceptives."

Biden's most publicized clash with the Reagan administration took place in July 1986, after the president refused to support extensive economic sanctions against South Africa as a way to encourage that country's government to end the system of racial segregation known as apartheid. During testimony by Secretary of State George P. Shultz before the Foreign Relations Committee, Biden chided the administration for lacking "moral backbone," according to an Associated Press (July 23, 1986) transcript of the event.

In June 1987 Biden announced his candidacy for the 1988 Democratic presidential nomination. Appealing to the "baby boom" generation that grew up after World War II, he stressed a social agenda that addressed child welfare, the alleviation of poverty, and the battle against illegal drugs. He also supported a trade policy that would be neither protectionist nor completely free and opposed Reagan's so-called Star Wars missile-defense system. His campaign did not go smoothly; he increasingly came under fire following revelations that in a speech at the Iowa State Fair in August 1987, he had lifted a significant passage from a campaign advertisement by the British Labour Party leader Neil Kinnock. He was later criticized for using words from a speech made two decades earlier by Senator Robert F. Kennedy. It was also revealed that as a first-year law student he had once been disciplined for failing to properly cite a source in a paper, an omission perceived by some as plagiarism, and that in an appearance in New Hampshire in April 1987, he had greatly overstated his academic achievements. In his autobiography Biden explained that he had quoted Kinnock several times in previous speeches, and that he had simply forgotten to attribute the quote during his speech in Iowa. Nonetheless, he wrote that although he had never intentionally plagiarized, he took responsibility for his actions: "When I stopped trying to explain to everybody and thought it through, the blame totally fell on me. Maybe the reporters traveling with me had seen me credit Kinnock over and over, but it was Joe Biden who forgot to credit Kinnock at the State Fair Debate. . . . I was the one who thought it was good enough to just get by in law school. . . . What I said about my academic achievements was just faulty memory or lack of knowledge."

In September Biden announced his withdrawal from the presidential race. A few months later, on the night of the 1988 New Hampshire primary, he suffered a life-threatening aneurysm. He was rushed to the emergency room and eventually made a full recovery. Although his Senate seat was seen as vulnerable after the plagiarism stories broke, Biden's subsequent triumph over his medical difficulties helped rekindle support for him, and he defeated his Republican challenger, M. Jane Brady, with 63 percent of the vote in 1990. In 1991 he began teaching constitutional law as an adjunct professor at Widener University Law School, in Delaware.

Aside from his ardent opposition to Bork, Biden's leadership on the Judiciary Committee is best remembered for his handling of the hearings on the appointment of the conservative African-American Supreme Court justice Clarence Thomas, who was picked by President George H. W. Bush in 1991. When information was leaked alleging that Thomas had sexually harassed a former staff member, Anita Hill, Biden was criticized by Democrats and women's groups for failing to properly use that information to block Thomas's confirmation. Biden had, in fact, shared the information with his committee, but because Hill was initially reluctant to testify, it was decided that using the information against Thomas was unfair. While Biden opposed Thomas as a nominee, the judge was later confirmed, and today many accuse Biden of being intimidated by the racially charged nature of the hearings and of not being equal to the task. Susan Deller Ross, a Georgetown University law professor and expert in sex discrimination, told Kate Phillips for the *New York Times* (August 23, 2008, on-line), "I don't think he did well and he bears responsibility for Mr. Thomas being on the court." By contrast, in an op-ed essay for the *New York Times* (August 27, 2008), Jeffrey Rosen, a George Washington University law professor, wrote in defense of Biden that in the Thomas hearings, as in those for Bork, Biden had done "everything in his power to resist the collapse of boundaries between nominees' public and private lives." (Biden was also on the Judiciary Committee in 2005 and 2006 during the failed efforts to block the conservative judges John Roberts and Samuel Alito from sitting on the Supreme Court.)

While Biden's reputation had suffered with feminist observers during the Thomas matter, those detractors largely joined a chorus of others in praising him for authoring and pushing for the eventual passage of the Violence Against Women Act (VAWA), which was aimed at preventing violent crimes against women. Among other provisions, it defined certain cases of violence against women as hate crimes and, therefore, violations of civil rights. Although Biden and his staff had formulated the legislation in 1991, it was not signed into law until 1994 due to controversy over the ambiguity of the civil rights provision. The bill became law when it was made part of the Violent Crime Control and Law Enforcement Act (VCCLEA), which Biden sponsored and which became known as the "Biden Crime Bill." In his autobiography Biden wrote, "We decided that the VAWA would have a civil rights component . . . which permitted women to seek civil damages against their attackers in a federal court and gave them a purchase of power in the system. . . . Acknowledging that a woman's right to be safe from a gender-based attack was a 'civil right,' I believed, was critically important in changing the American consciousness." The VCCLEA, the largest crime bill in U.S. history, provided for 100,000 new police officers, more than $9 billion in prison funding, and about $6 billion in funding for crime-prevention programs. The bill also expanded the reach of the federal death penalty and increased penalties for drug trafficking, gang-related crime, the smuggling of illegal aliens, and other crimes.

In the mid-1990s Biden became one of the most vocal senators on the issue of violence in what had been the Federal Republic of Yugoslavia, where well-armed Serbs in Bosnia, with the support of neighboring Serbia, were routinely imprisoning, torturing, and killing Bosnian Muslims in a campaign of "ethnic cleansing." Biden repeatedly pushed for intervention by the U.S. government and grew increasingly frustrated when he found most of his colleagues unwilling to take action. In a poignant speech he gave in the Senate, quoted in his autobiography, he said, "In the twenty-three years I have been here, there is not another issue that has more upset me, frustrated me, and occasionally made me feel a sense of shame about what the West, what the democratic powers of the world are allowing to happen. . . . We have stood by—we, the world—and watched in the twilight moments of the twentieth century, something that no one thought would ever happen again in Europe." In 1995 the Dayton Peace Agreement forced Serbian military forces to withdraw from Bosnia, but Slobodan Milosevic, the president of Serbia, was left in charge. When Milosevic ordered the invasion of neighboring Kosovo in 1999, Biden, who had retained his seat by a comfortable margin in the 1996 election, pressed for action, introducing a bill that authorized President Bill Clinton to use any means necessary to stop Milosevic. That resulted in a North Atlantic Treaty Organization

(NATO) air-strike campaign that led to Milosevic's eventual surrender. Biden became the ranking Democrat on the Foreign Relations Committee in 1997 and chairman in 2001 and again in 2007. He has called for caution in dealing with Iran and supports unilateral negotiations with nuclear-armed North Korea. In 2006 Biden supported a controversial nuclear agreement with India that opponents argued would undermine nonproliferation efforts.

In addition to his advances in the area of foreign relations, Biden has earned recognition for his stance against harmful and illegal drugs. In 2003 he sponsored the Reducing Americans' Vulnerability to Ecstasy (RAVE) Act, which allowed for prison terms of up to nine years for club owners who host events at which the recreational drug known as ecstasy is used. The next year he successfully encouraged the Senate to pass a bill that criminalized steroid precursors including androstenedione, and he later threatened legislation to regulate drug use in professional baseball if the major-league teams did not take further action against offending players. As chairman of the Senate International Narcotics Control Caucus, he is credited with writing the legislation that created a national "drug czar," a position with oversight of U.S. drug policy.

After the September 11, 2001 terrorist attacks, which toppled the twin towers of the World Trade Center and destroyed a section of the Pentagon building, killing nearly 3,000 people, Biden supported the Bush administration's military campaign in Afghanistan, which was intended to dismantle the terrorist network Al Qaeda, the group linked to the attacks, and drive out the Taliban government, which had harbored the terrorists. Following initial success in Afghanistan, the administration began to push for similar action in Iraq, arguing that the country's leader, Saddam Hussein, had chemical and biological weapons and links to terrorists. When Bush asked the United Nations to fulfill its obligation to force Hussein to disarm—as per a resolution made after the Persian Gulf War in 1991—Biden publicly supported the president. In his autobiography he wrote, "If international law was to mean anything, then it was time for the United Nations to enforce the ten-year-old resolution that called for Iraq to disarm in a way that could be verified by U.N. inspectors." Biden did not support military action, however, unless Hussein refused to disarm. He called for hearings to explore the consequences of military action and, with the Republican senator Richard Lugar, drafted a resolution that would allow the president to resort to force only if Hussein did not cooperate. When the bill failed to make it out of the Foreign Relations Committee, Biden opted to vote for the 2002 resolution authorizing the war. After the U.S. invasion failed to uncover any so-called weapons of mass destruction, and the war in Iraq later resulted in an insurgency, the death of thousands of U.S. troops, and sectarian violence, Biden became a vocal critic of the conflict and the Bush administration. In his autobiography he argued that Bush "took us to war essentially alone, before it was necessary, on the heels of the biggest and most lopsided tax cut in history, with half the troops needed to succeed." Biden later opposed Bush's troop surge, in 2007.

In 2004 Biden campaigned for his friend John Kerry, a U.S. senator from Massachusetts and presidential hopeful, and was often mentioned in the news as a possible pick for secretary of state if Kerry won the presidency. When Kerry lost to George W. Bush, Biden decided he would run in 2008. In 2006 he began campaigning, with trips to New Hampshire and Iowa. His platform included opposition to the war in Iraq and the Bush administration's fiscal policies. However, his inclination for verbal gaffes brought him damaging criticism, especially after he was heard to remark, according to the 2008 *Almanac of American Politics*, "You cannot go to a 7-Eleven or a Dunkin' Donuts franchise unless you have a slight Indian accent." (He claimed that his remarks had been taken out of context.) After officially launching his presidential run in February 2007, he stirred up further controversy when he said of Obama, according to Massimo Calabresi in *Time* (August 23, 2008, on-line), "I mean, you got the first mainstream African-American who is articulate and bright and clean and a nice-looking guy." Calabresi wrote that Biden was "apparently oblivious to his implied slur of previous African-American politicians," and that although Obama did not take personal offense at the comment, "other prominent African-Americans and much of the Washington political class came down hard on Biden." Biden later apologized, and the furor died down.

Biden has a reputation for sometimes being overly analytical and long-winded. In defense of his style, he told Cris Barrish, Nicole Gaudino, and Ginger Gibson for the *Delaware News Journal* (August 23, 2008, on-line), "One of the reasons we're in trouble is [that in] the last eight to 12 years, both political parties have concluded you've got to be able to get your whole platform down to a bumper sticker. But things are much more complicated and serious than that. I'm going to treat the American people with respect. I'm going to give them my rationale. I'm not going to assume they can't understand it."

Despite praise for Biden from fellow senators and his lengthy credentials, he came in fifth in the Iowa primary and decided to drop his bid for the White House. In August 2008, after months of media speculation and a two-month search, Obama, by then the Democratic presidential nominee, announced that he had selected Biden as his running mate. The first official announcement came to supporters via a cell-phone text message issued by the campaign, and a rally was held that same day. According to Calabresi, "In the end, Obama picked him for the simplest of reasons: The six-term Senator from Delaware is strongest in areas where the freshman from Illinois is weakest. Biden's tenure in the Senate, his foreign policy expertise, his religion [Roman Catholic], and his suburban middle-class background, all fill gaps in Obama's own presidential profile." Other key factors were Biden's sway with white, blue-collar voters; his pro-union and moderate-to-liberal record; his Irish-American roots; and his potential influence on Pennsylvania voters as a former resident of the swing state. His penchant for passionate speech was also considered; Calabresi wrote, "Biden's biggest edge in the homestretch may have come, paradoxically, from his greatest liability: his personality. Obama is charismatic, but in tough political confrontations he can be cautious and reserved. A running mate who can add passion to the coming battles, Biden has a fire-in-the-belly quality Obama lacks."

At the Democratic National Convention in Denver, Colorado, Biden displayed his sense of humor, saying in his acceptance speech: "Let me make this pledge to you right here and now. For every American who is trying to do the right thing, for all those people in government who are honoring their pledge to uphold the law and respect our Constitution, no longer will the eight most dreaded words in the English language be: 'The vice president's office is on the phone.'" The quip, while seemingly lighthearted, was indicative of Biden's feelings about Dick Cheney, Bush's powerful vice president. "In some respects, Biden is the anti-Cheney," Michael Hirsh wrote for *Newsweek* (August 27, 2008, on-line). "He's a garrulous glad-hander while Cheney is reticent and secretive; he's a sunny champion of diplomatic engagement while the vice president is known for his dark, Hobbesian view of the world. Though he is not averse to the use of force—Biden was one of the first Dems to urge Bill Clinton to intervene in the Balkans in the early '90s—he could not be more different from Cheney in personality or global outlook."

During the months leading up to the general election, Biden was largely overshadowed by McCain's running mate, the Alaska governor, Sarah Palin—a new face in national politics—whose enthusiastic speeches and potential future role as the first female vice president generated major media coverage. On October 2, 2008 Biden faced Palin in the campaign's one vice-presidential debate, held at Washington University, in St. Louis, Missouri. During the debate Biden compared the policies of McCain to those of Bush, reinforcing a familiar-yet-effective motif of the Obama campaign. Palin, in turn, criticized Obama for not having a serious agenda for change and argued that his willingness to meet with rogue leaders without preconditions was dangerous. Biden argued that the various deregulation policies McCain had supported in the Senate were part of the cause of the ongoing financial crisis. At one point, discussing the death of his first wife and daughter, Biden's voice cracked and his eyes filled with tears. Palin did not acknowledge the emotional moment, continuing instead to press her talking points, and many observers opined that their behavior humanized Biden in the public's mind, while making Palin appear callous and robotic.

On November 4, 2008, in a historic victory, Obama was elected president and Biden vice president. The Obama-Biden ticket had secured 365 Electoral College votes over McCain-Palin's 173. It also had won 53 percent of the nation's popular vote to the Republicans' 46 percent.

While campaigning as the Democratic vice-presidential candidate, Biden also sought reelection to his Senate seat against the Republican Christine O'Donnell, a conservative activist and media pundit; he won with 65 percent of the vote. (Ruth Miner, Delaware's governor, named Edward "Ted" Kaufman, who had been Biden's chief of staff from 1973 to 1994, as Biden's successor.)

Biden and Obama were sworn in on January 20, 2009. The new administration has had to contend with several pressing issues. The U.S. is still engaged in war in Afghanistan and in the unpopular occupation of Iraq; the threat of terrorist attacks is still present; and the worst financial crisis since the Great Depression has made the economy the national issue of most concern to American citizens. Biden chose Ron Klain to be his vice-presidential chief of staff, a post Klain held under former vice president Al Gore. Biden also selected Jay Carney, the *Time* Washington bureau chief, to be his director of communications.

According to Mark Leibovich, writing for the *New York Times* (March 29, 2009, on-line), within the first few months of the new administration, Biden became a key source of advice for the president and "a useful contrarian in the course of decision-making." Obama told Leibovich, "There's, I think, an institutional barrier sometimes to truth-telling in front of the president. Joe is very good about sometimes articulating what's on other people's minds, or things that they've said in private conversations that people have been less willing to say in public. Joe, in that sense, can help stir the pot." Leibovich noted that Biden, while agreeing to be Obama's running mate, expressed his unwillingness to serve in a ceremonial rather than an active role as vice president. "I think he's playing the role as 'adviser in chief' that he has foreseen," Secretary of State Hillary Clinton told Leibovich, adding that Biden was "involved in the whole agenda of the president."

One of Biden's major assignments has been overseeing the distribution of the 2009 $787 billion economic stimulus package. Toward that end he has engaged in weekly conference calls with governors and mayors to get progress reports on how the money is being used. His Senate connections have benefited Obama: Biden was credited with helping obtain the final votes for the president's stimulus and budget bills and for helping to persuade Pennsylvania's senior senator, Arlen Specter, to switch his party affiliation to Democratic. Biden has traveled to Afghanistan and Iraq several times to discuss with local leaders the fragile security situations in both nations. In October

2009, after military officials urged the president to send more troops to Afghanistan, Biden argued against doing so and said that he favored maintaining the current number of troops—a stance also taken by many congressional Democrats. Biden has also been instrumental in garnering support for Obama's health-care reform bill among his former Senate colleagues, particularly those on the Finance Committee, who were drafting a bill for consideration by the full Senate.

As many predicted, in his new post Biden has made several remarks that have been labeled gaffes. In April 2009, with concern about the spread of the H1N1 flu virus mounting, Biden said on NBC's *Today Show* that he would tell his family not to fly on commercial airplanes or ride subways so as to avoid possible infection. Biden's alarmist statement contrasted with the Obama's administration's suggestions to avoid travel only with regard to Mexico (where dozens had fallen ill), and it angered the airline industry. The White House issued an apology and noted that Biden had not intended to make people fearful. In another instance, on July 25, 2009, during a meeting with reporters, Biden—who had returned days earlier from a visit to the nations of Georgia and Ukraine—made remarks about Russia that triggered angry responses from Russian spokespeople. "I think we vastly underestimate the hand that we hold" with regard to Russia, Biden said, as widely quoted on the Internet. "Russia has to make some very difficult, calculated decisions. They have a shrinking population base, they have a withering economy, they have a banking sector and structure that is not likely to be able to withstand the next 15 years, they're in a situation where the world is changing before them and they're clinging to something in the past that is not sustainable." The following day, on the NBC program *Meet the Press*, Secretary of State Clinton made an attempt to soften Biden's words, saying that Biden had not meant that the U.S. now had an upper hand in its relations with Russia. She also said that Russia was a "great power" and that, although the U.S. questioned some of Russia's policies, the Obama administration wants "a strong, peaceful and prosperous Russia." During a press conference held on July 27, the White House press secretary, Robert Gibbs, in response to a question about Biden's remarks, said, "I think the President and his team are enormously helped by the Vice President. . . . I think he's an enormous asset to the administration."

Upon taking office, Biden moved with his family into the official vice-presidential residence, in Washington, D.C. His wife, who has a doctoral degree in education, is an adjunct professor of English at Northern Virginia Community College. "I think it's very important she have and maintain her own life, her own identity," Biden said on ABC's *This Week* (December 20, 2008, on-line). His son Robert Hunter Biden is a lawyer and lobbyist in the nation's capital. His daughter, Ashley Biden, is a social worker with the Delaware Department of Children, Youth, and Families. His son Joseph Robinette "Beau" Biden III is Delaware's attorney general; a member of the Delaware National Guard, he served for one year in Iraq (October 2008–September 2009). He is widely expected to run for his father's Senate seat in a special election to be held in 2010. The vice president and his wife have five grandchildren.

Blankenbuehler, Andy

Mar. 7, 1970– Choreographer; former dancer

Address: c/o Barlow Hartman Public Relations,
1560 Broadway, Suite 909, New York, NY 10036

When the choreographer Andy Blankenbuehler stood up to receive a Tony Award for his work on the successful hip-hop-salsa musical *In the Heights*, in 2008, he had $400 in his bank account and a hole in his sock. After the awards ceremony his schedule—and bank account—filled up quickly. Blankenbuehler started dancing on Broadway in 1992 in the musical *Guys and Dolls*; as a dancer he is most proud of his work in the musical *Fosse*, which ran from 1999 to 2001. After that show he began to focus on choreography full-time. His first Broadway show as a choreographer, *The Apple Tree*, opened in the winter of 2006 and closed a few months later. Around that time *In the Heights* opened Off-Broadway, moving a year later to Broadway, where it brought him the theater world's highest honor. "I have to try not to be cocky, but I had great confidence that I was going to win the Tony," Blankenbuehler told *Current Biography*, the source of quotes for this article, unless otherwise indicated. "And that's for several reasons: one, the show is vastly different than shows that have been out there for the longest time; and also I felt that if you can't win a Tony with *In the Heights*, how could you ever win a Tony? It provides opportunities that are just rare." He said on the subject of his career, "When I started dancing I didn't think of myself as an artist. I thought choreographers wore scarves around their necks and wore high boots and they were artistic and crazy. I'm not that way. I'm just a normal guy who likes to dance. But what I've realized since I started choreographing full-time is that the possibilities are literally limitless."

Andy Blankenbuehler was born on March 7, 1970 in Cincinnati, Ohio. His father worked in a bank and, in his spare time, acted and directed shows for the community theater. Blankenbuehler's mother put her teaching career aside to raise the couple's children—Andy and his two older sisters. The whole family was artistic. "We wouldn't necessarily go to the water park on Saturday," Blankenbuehler said. "We would go to an art museum." Blankenbuehler began taking dance classes at the age of three; his sisters were already taking classes at the same studio, which offered lessons in tap, ballet, and jazz dancing. Blankenbuehler was the only boy in the class and would be for the next 15 years. By his own admission, he was no prodigy—"When I was very young," he said, "I was a horrible dancer"—and much preferred soccer to dance. "When I started playing soccer, I had this enjoyment, I wanted to play soccer, I practiced after school," he said. "I don't remember feeling that way about dancing." As with his guitar lessons and art classes, he participated in dance but did not think about it very much.

By the time Blankenbuehler was 12, though, he had started to think more about dance, asking himself: Do I enjoy this? Am I good at it? Why am I the only boy here? That self-examination led to what Blankenbuehler called an "awkward stage of noncommitment" on his part. It also took place in a different era of dance in America, before teens idolized the dancers on contemporary reality-television shows such as *So You Think You Can Dance*; although the young Blankenbuehler admired the legendary American dancers Gene Kelly, Fred Astaire, and Gregory Hines and loved Michael Jackson's dance-heavy music videos, he recalled, "I didn't really have idols." "If I could have been a professional soccer player, I would have quit dancing," he continued. "But I've always had a realistic side in my head, and I knew I wasn't ever going to be a professional soccer player."

Over time Blankenbuehler realized that he was not only beginning to enjoy dancing but that he had the potential to be very good at it. And he decided to use to his advantage the fact that he was the only boy in his class. "I knew I could get the teacher's attention and improve more rapidly," he said. During his freshman year of high school, Blankenbuehler attended his school's production of the musical *Bye Bye Birdie*, a satirical look at 1950s America with an Elvis Presley–like main character. Up to that point Blankenbuehler had had no idea that he might be interested in such a show—but he loved it. The next time his high school put on a musical, *Godspell*, he was in the cast. "From that moment on," he recalled, "all I wanted to do was dance and theater."

Though he was smitten with dance, Blankenbuehler did not know what it would mean to pursue dancing as a career. Of the 1,200 boys in the school, Blankenbuehler was the only aspiring dancer; the school's career counselor had never given advice to anyone interested in that field. "I had this strange idea," Blankenbuehler said, "that I would go to school for architecture for six years and then dance after that." By the middle of his senior year of high school, he had scrapped his plans to study architecture, a decision that displeased his parents, and found a college—Southern Methodist University, in Dallas, Texas—with a jazz-dance department willing to take him on short notice. After completing his freshman year, he found a well-paying summer job at Walt Disney World, in Orlando, Florida: along with other youths, he danced in front of the castle in the Magic Kingdom. "We had these red costumes with Mickey Mouse on the front and the show was all about the characters—Mickey Mouse, Peter Pan—it was totally cheese-whiz fun. It was crazy, we would dance on the stage and there would be literally 10,000 people watching us." That summer Blankenbuehler accepted an offer to dance at Disneyland in Tokyo, Japan.

After eight months in Tokyo, Blankenbuehler moved back to the States. Instead of returning to college, he moved to New York City; then 20 years old, he realized that he no longer wanted to be in a liberal-arts college. "All I wanted to do was dance," he said. "All I wanted to do was train." Blankenbuehler had no personal or professional contacts in New York. "My first few months here I auditioned for everything that was there, I took three dance classes a day, I went home at night and stretched. I had no life. I had no friends. I didn't go out." Having earned a lot of money in Japan, he was able to live in New York for over six months without working a regular job, putting all of his time and energy into dancing. "So many dancers move to New York City, and they never get a cog in the wheel," he explained, "because as soon as they move here they're waiting tables all day, they're missing auditions, they're not taking dance classes—and their career goes by." Blankenbuehler's first break came with a production of the musical *A Chorus Line* at a dinner theater just north of New York City. The musical was directed and choreographed by Rob Marshall, who would go on to direct the film version of the musical *Chicago* in 2002. For years afterward Blankenbuehler continued his professional relationship with Marshall, which provided him with many business contacts—dancers, producers, and directors. To make money on the side, Blankenbuehler taught dance classes, in New York and elsewhere.

At the age of 21, while Blankenbuehler was in a production of *West Side Story*—which he considers "the greatest musical ever"—at the Paper Mill Playhouse, in New Jersey, he went to Manhattan to audition for the Broadway musical *The Most Happy Fella*. Even though he missed the audition because he was late, the choreographer let the young dancer audition privately. He got the part, but the *West Side Story* producers would not let him out of his contract. A week later he injured his knee while working on *West Side Story* and suddenly was out of two jobs. "That became a sort of a recurring theme for me in my career," he recalled. He received physical therapy for his knee and was unable to dance for the next four months. (Blankenbuehler has had several knee and back injuries since then.)

After recovering fully Blankenbuehler auditioned for the Broadway musical *Guys and Dolls*, a process he found memorable: 500 male dancers auditioned for the show in a single day, making for a scene unlike anything he had ever experienced. While Blankenbuehler did not pass that audition, he joined *Guys and Dolls* on its national tour six months later; he remained with it for a year and a half. After that the show's choreographer moved him to the Broadway production—his first. Then Blankenbuehler was injured again: five months into the run of the show, he damaged two disks in his spine. Eight months later he tried to dance as well as teach, which aggravated his injury. It took him a year and a half to recover.

In 1997, at the age of 27, Blankenbuehler returned to Broadway to dance in the musical *Steel Pier*. "The biggest event in my dancing career" up to that point, as he put it, came in 1999, when he danced in *Fosse*, a musical revue showcasing the choreography of the multiple Tony Award–winner Bob Fosse. "The things I was able to do on stage," Blankenbuehler said, "they were totally golden. And if my career ended there it would have been an amazing career. I felt like Superman. That's the thing about dancers, when you're on stage dancing you feel like nothing can touch you." In addition to giving him personal satisfaction, the show presented him with a professional opportunity. "It took me out of the chorus," Blankenbuehler, who had a few dance solos in the show, said. "People would see the show and they would get to know me as an individual." Ben Brantley, a theater critic for the *New York Times* (January 15, 1999), wrote that a dance sequence featuring Blankenbuehler in *Fosse* was "vibrantly performed."

Such recognition was important for Blankenbuehler for several reasons, one being that he had just started his choreography career. After performing in a few more musicals, including *Saturday Night Fever* and *Man of La Mancha*, Blankenbuehler became a full-time choreographer, less because of the injuries he had suffered as a dancer than out of dissatisfaction with the way dance was being used on Broadway: "The dance should touch people's lives," he said, "but a lot of times in Broadway theater the dance is just the sugar on top. I wanted to portray more important emotions [through dance], like the pain of losing somebody you love or the joy of having a child. Those kinds of things are hardly ever expressed through dance. What's expressed through dance is having the girl at the high school prom say 'Yes' or, you know, getting fired. So that made me feel, one, I want to change that, and two, I'm going to be bored if I go to work and do that every night." Although Blankenbuehler was at a high point of his career as a Broadway dancer, he was at the bottom as a choreographer. For years he had trouble making money, and his savings slowly dwindled; to supplement his income he taught dance classes. (His wife, who is not in show business, had a steady income.)

Then came an opportunity that would, within two years, bring him recognition and fame. In 2006, recovering from knee surgery and still struggling as a choreographer, Blankenbuehler began work on *In the Heights*, a new musical that mixed modern music—R&B, hip-hop, and Latin rhythms—with an old-fashioned story about the mostly Hispanic New York City neighborhood of Washington Heights. On finding out about the musical, Blankenbuehler wanted very much to choreograph it. One obstacle—that he knew nearly nothing about hip-hip or salsa dancing—surfaced during his first phone interview with one of the show's producers, who asked him directly: You don't do hip-hop or salsa, so why should we hire you? "I can tell the story," Blankenbuehler assured him. "Let me learn how to tell the story." While Blankenbuehler is primarily a jazz and tap dancer, he insisted that "my musicality was not dissimilar to hip-hop. It all makes sense to me. I wanted it to look like 2008. I didn't want it to look like 1998. I needed to be specific to the [latest] hip-hop vocabulary, so I needed to figure out what that was." He spent months studying hip-hip and salsa, watching videos, listening to music, visualizing dance steps, taking hip-hop dance classes, and trying out his choreography on himself and others. Meanwhile, he was also choreographing the Broadway show *The Apple Tree*, and his wife was pregnant with their first child.

Blankenbuehler has said that he is his own toughest critic. "The only thing I've been happy with" as a choreographer thus far, he said, "is *In the Heights*." Blankenbuehler was not alone in liking *In the Heights*: most theater critics, too, expressed their enthusiasm for the show. "Coffee, light and sweet, is the fuel that keeps a busy world in motion in the new musical *In the Heights*, a singing mural of Latin-American life that often has the inspiriting flavor of a morning pick-me-up on a warm summer day," Charles Isherwood wrote for the *New York Times* (February 9, 2007). "Light and sweet are actually just the words to describe this amiable show, which boasts an infectious, bouncy Latin-pop score by a gifted young composer, Lin-Manuel Miranda, an unfortunately underspiced book by Quiara Alegria Hudes, and a stage full of energized, energetic performers you can't take your eyes off and won't want to." Calling Blankenbuehler's choreography "joyous," Isherwood wrote that it "synthesizes street styles and Broadway athleticism. showcasing the fabulously elastic bodies of the ensemble." The show had a five-month run and won several Off-Broadway honors, including the Lucille Lortel Award for Outstanding Musical (tying with *Spring Awakening*) and the Drama Desk Award for outstanding ensemble performance. Blankenbuehler won three honors for his choreography: the Lucille Lortel Award, the Outer Critics Circle Award, and the Drama Desk Award.

In early spring 2008 *In the Heights* opened at the 1,500-seat Richard Rodgers Theatre on Broadway. Once again the critics were enthralled, as were audiences. (The average audience for *In the Heights* was more diverse in age and ethnicity than that of almost any other show on Broadway at the time.) "What makes *In the Heights* so unique . . . is that despite the driving pulse of its Latin-American rhythms, blending hip-hop, rap, jazz, pop, salsa and merengue, this buoyant musical also nods reverently to the traditions of the show tune," David Rooney wrote for *Variety* (March 9, 2008). "From its catchy opening number, which tosses in references to Cole Porter and Billy Strayhorn while swiftly introducing a large gallery of key characters and placing them within a vividly drawn community, the musical's plucky marriage of youthful freshness and lovingly old-fashioned craft is hard to resist."

In its move from Off-Broadway to Broadway, the show literally grew, with the stage, set, cast, and orchestra all getting bigger; the music, direction, and choreography were all re-polished. "Director Thomas Kail and choreographer Andy Blankenbuehler take full advantage of the playing space," Rooney wrote, "smoothly weaving the action and dancing in and out of doorways, up and down stairs, and into every cubby hole, giving the show a vitality that seems more spontaneous than studied." That apparent spontaneity resulted from a lot of thought and planning: Blankenbuehler wanted his dancers, when they were on the stage, to look like "normal" people rather than dancers.

In May 2008 *In the Heights* was nominated for 13 Tony Awards, more than any other show that year. The following month it received four Tony Awards, most notably for best musical, best original score, and best choreography.

Since then Blankenbuehler has become an in-demand choreographer, with projects lined up until 2011. After *In the Heights* he worked on *9 to 5*, a musical written by Dolly Parton, which opened on Broadway in April 2009 and closed the following September. The musical was not a critical success. (The day before Blankenbuehler spoke to *Current Biography*, Parton dropped by his dance studio in Manhattan and signed the back of his piano: "I will always love you, Dolly Parton.") As of mid-October 2009, *In the Heights* was still on Broadway; a national tour of the show started in the fall of 2009.

Blankenbuehler lives with his wife, Elly, and son, Luca, on Manhattan's Upper West Side.

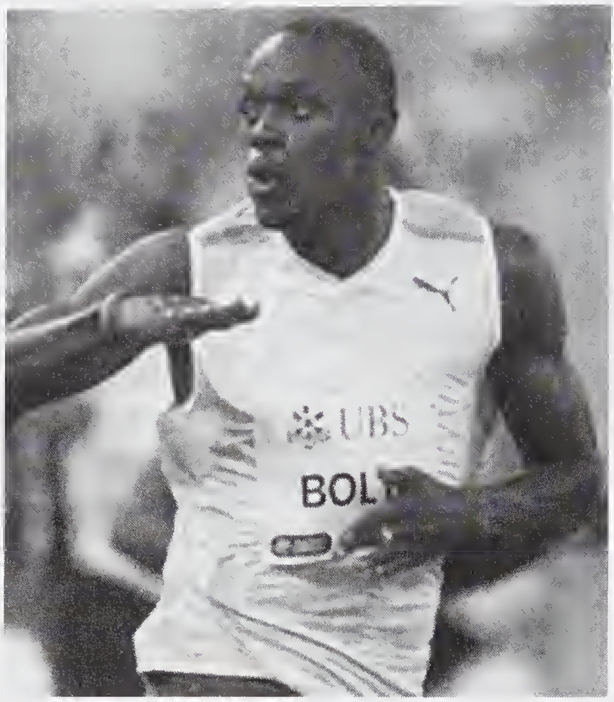
Bolt, Usain

(OO-sane)

Aug. 21, 1986– Runner

Address: c/o Pace Sports Management, 6 The Causeway, Teddington, Middlesex TW11 0HE, England

The world's fastest man is the Jamaican sprinter Usain Bolt, who on August 16, 2008, at the Summer Olympic Games, held in Beijing, China, set a record of 9.69 seconds in the 100-meter dash—a race considered to be the purest measure of athletic prowess among runners. Four days later, with a time of 19.30 seconds, Bolt set a world record in the 200-meter race, thus becoming the first person to break both the 100-meter and the 200-meter records at the same Olympics. Bolt's finishes in those races were remarkable in other ways as well: in the final stretch of the former, when he realized that he was far enough ahead to clinch the gold, he slowed down to express his excitement by spreading his arms and then thumping his chest with one hand, in what became an iconic image of that summer's Games. In the 200-meter contest, he crossed the finish line yards ahead of, and .66 seconds faster than, his nearest competitor—the biggest margin of



Jamie McDonald/Getty Images

Usain Bolt

victory in that race in Olympic history. Bolt earned a third gold medal at the 2008 Summer Games in the 400-meter (4 x 100-meter) relay, which he and his Jamaican teammates completed in 37.10 seconds, another world record. In August 2009 Bolt broke his own records again at the 2009 World Championships in Berlin, Germany, completing the 100-meter run in 9.58 seconds and the 200-meter race in 19.19 seconds. "In statistical terms alone, the impact made by Usain Bolt over the past two years is not only stunning but also unprecedented," Simon Turnbull wrote for the London *Independent* (October 7, 2009). "Since the start of the 2008 track season, the 23-year-old Jamaican has lowered the 100m world record from 9.74sec to 9.58sec and the 200m world record from 19.32sec to 19.19sec. In the sprinting game, where the margins are measured in hundredths of a second, these have been quantum leaps the like of which have never been seen before." Bolt, at six feet five inches, is the tallest man ever to reach the top level in sprinting. As analyses of his performances have shown, his comparatively slow starts are offset by the advantages of his stride, which is longer and more rapid than others'.

Bolt's joyfulness and exuberance at the finish line in Beijing in 2008 delighted Jamaicans and most others who watched him there; according to Jenny McAsey, writing for the *Australian* (August 22, 2008), Bolt "has the happy knack of being a showman without tipping over to show-off." "Bolt is, one fervently hopes, exactly what he appears—all wrong for short-track, physically lean and long where most are stubby and muscular; delightfully vain in a self-mocking way that makes it amusing rather than annoying . . . ," Rosie DiManno wrote for the *Toronto (Ontario, Canada) Star* (August 21, 2008. "[He] eschews all the finicky self-consciousness of elite athletes." In Jamaica Bolt is a national hero and has had songs written in his honor, not only because of his gold medals but also because he earned them as a representative of the island; lured with large scholarships or other financial incentives, many other Jamaican champions have represented other countries. Bolt is also revered because he has rejected the use of performance-enhancing drugs in a sport that has been marred by drug-related scandals for years. A world-champion runner since the age of 15, Bolt celebrated his 22d birthday at the 2008 Olympics. "I wouldn't say I'm a phenomenon," he said at a press conference held in Beijing on August 24, 2008, as Andrew Longmore reported for the London *Sunday Times* (August 24, 2008, on-line). "I'm probably just a great athlete."

Usain Bolt was born on August 21, 1986 in Trelawny, a rural Jamaican parish, to Jennifer and Wellesley Bolt, who ran a local grocery store. His mother told Dave Sheinin for the *Washington Post* (August 1, 2008) that she decided on her son's unusual name after a boy touched her pregnant belly and said that if the child was a boy, she should name him Usain. The Bolt family, which included Usain's brother and sister, lived in Sherwood Content, a "poor farming community," according to Bolt's aunt Lillian Bolt-Smith, as quoted in the *Jamaica Gleaner* (July 28, 2002). As a child Bolt enjoyed playing cricket and dreamed of becoming a cricketer. His unusual swiftness as a runner was apparent by the time he was 10, and by 12 he would regularly beat older children in races at his school, Waldensia Primary School. He apparently ran barefoot on grass tracks at the time, and another year passed before he got his first pair of running shoes.

Jamaica, whose population in 2008 was estimated to be 2.8 million, has produced a disproportionately large number of the world's best sprinters, both male and female. Of the several dozen gold medals Jamaicans have won at the Olympics through the years, nearly all have been in track and field. For more than a generation, the country's schools have focused on developing running skills in Jamaican youngsters. At William Knibb Memorial High School, in Trelawney, Bolt came under the tutelage of two coaches, Dwight Barnett and the former Olympic runner Pablo McNeil, who convinced him that his natural talent was for running rather than cricket. Bolt's abilities in the 100-, 200-, and 400-meter races amazed the men; in his first "proper" 100-meter run, Barnett told Owen Slot for the *Weekend Australian* (September 13, 2008), his time was "around 10.50 seconds. I actually think he could easily [have been] as good at 400 metres as the 100 metres, but he did not like the 400 metres. I seriously think he was afraid of working hard." McNeil told Daraine Luton for the *Jamaica Gleaner* (August 18, 2008) that "he was running some phenomenal times before he was even 15."

Bolt made his first major mark in 2002, when he became the youngest athlete to win the World Junior Championships, with a 200-meter run of 20.61 seconds. (The men's world-record holder then, the American Michael Johnson, was 20 when he began clocking such times). Meanwhile, Bolt was gaining a reputation for not taking himself too seriously; he routinely joked around and showed a lack of discipline in training, and he often played basketball, socialized in clubs, and ate fast food. His excellent performances in domestic and international competitions earned him the IAAF (International Association of Athletics Federations) Rising Star Award in 2002 and 2003.

Over the years Jamaica had lost many future track-and-field superstars to schools in the United States, Canada, and the United Kingdom. American universities offered Bolt, too, incentives to matriculate, but he turned them down. Eager to ensure that Bolt would remain in Jamaica, P. J. Patterson, who was then the nation's prime minister, arranged for him to receive the best possible training in high-quality facilities. With the help of the Jamaica Amateur Athletics Association and the High Performance Centre at the University of Technology, in Kingston, Jamaica's capital and largest city, Bolt was brought to Kingston to live and train. The long hours he devoted to his recreational activities began to frustrate some of his coaches, who thought he was relying too heavily on his natural talent during training, but many observers empathized with Bolt. Elton Tucker, the sports editor of the *Gleaner*, explained to Anna Kessel, writing for the London *Observer* (August 24, 2008), that Bolt was a "country boy." "When Bolt moved to Kingston he was looking at the bright lights—where he came from there were no street lights. Suddenly there was Burger King and KFC," Tucker said.

In 2004, guided by a new coach, Fitz Coleman, Bolt turned professional. In that year's Carifta Games (the Caribbean regional championships), held in Bermuda in April, he broke the 200-meter record with a time of 19.93 seconds. Later that year and the next, he was hampered by injuries; the most serious, involving a hamstring, led to his first-round exit at the 2004 Summer Olympics, in Athens, Greece. In 2005 Bolt again changed coaches, and it is widely recognized—and acknowledged by Bolt himself—that he has flourished under the strict guidance of Glen Mills, who had coached two Caribbean sprinting champions, Don Quarrie and Kim Collins. "I worried a little bit after two years of injuries," Bolt said, as quoted by the *China Daily* (August 22, 2008). "However, things changed dramatically when I joined up with Glen. He is like a father figure to me. He has never done me any wrong and he has always made the right decisions." In the final race of the 2005 World Championships in Athletics, held in Helsinki, Finland, Bolt suffered another injury and finished in last place.

Mills pushed Bolt to develop a strict work ethic. He told Bolt to begin training for the 400-meter race, which he felt was more appropriate for such a tall runner. Bolt's insistence on focusing on the 100- and 200-meter races led some to accuse him of being too lazy for the more grueling event. In time Mills and Bolt reached an agreement: if Bolt broke Quarrie's 36-year-old Jamaican national record (19.8 seconds) in the 200-meter, Mills would approve his running the flashier 100. At the Jamaican Championships in 2007, Bolt succeeded, completing the 200-meter race in 19.75 seconds. In July of that year, he ran his first professional 100-meter race, finishing in 10.03 seconds—an astonishingly good time. (The so-called 10-second barrier was not broken until 1968, when the American Jim Hines ran 100 meters in 9.9 seconds—a record that stood for 15 years. The fastest recorded time as of mid-2007 was 9.85 seconds, achieved by Olusoji Fasuba of Nigeria in 2006.)

Bolt spent the following winter training for the 100-meter race. In particular, he strived to increase the speed with which he left the starting block. Taller racers are naturally less explosive in their starts than their stockier peers, and Bolt strived to get bigger and stronger through weight training to reduce that handicap. On May 3, 2008, at the Jamaica Invitational in Kingston, he ran the 100-meters in 9.76 seconds, a personal best that was just .02 second slower than the world record, held by his compatriot Asafa Powell. On May 31, at the Reebok Grand Prix, on Randall's Island, in New York City, in only his fifth men's 100-meter race, Bolt broke the world record with a 9.72 run and claimed the title of world's fastest man. After the race he downplayed the significance of that record, telling reporters that only an Olympic gold medal or a world championship would constitute a lasting achievement.

With the Summer Olympics fast approaching, Mills and Bolt needed to develop a strategy as well as declare which races Bolt would compete in. "In Mills's eyes, if there was a double to be had, it would be the 200m and 400m, not the standard sprint combination of 100m and 200m," Andrew Longmore wrote for the London *Sunday Times* (August 24, 2008). "Mills was against Bolt's double until that night in Randall's Island when the world record was smashed. The profit motive dictated the future then, but the old threat remained. 'If you don't win the gold tonight,' Mills told Bolt before the 100m, 'I'll get you running the 400m.'" Bolt devoted some time to training for the 400-meter.

Shortly before the start of the Olympic Games, Bolt announced that he would be running in the 100-meter and 200-meter races. Scheduled to include the three fastest men ever known—Bolt, Powell, and the American world champion Tyson Gay—the 100-meter event was being touted as the biggest showdown in Olympic history. In the preliminary heats Bolt seemingly never ran at his maximum speed. Gay and Powell were still recovering from serious injuries, and in the final race, held on

August 16, 2008, Bolt crossed the finish line in 9.69 seconds, breaking the record he had set less than three months earlier. (During the Olympic trials Gay had had a 9.68-second run, but he was aided by a tail wind that measured twice the speed accepted for record-setting purposes.) "It was not [Bolt's record-setting] time, but the manner in which it was achieved, which astonished . . . ," Doug Gillon wrote for the Glasgow, Scotland, *Herald* (August 18, 2008). "Bolt's long levers are hard to unwind, and he was second [to] last out of the blocks, with a reaction time of 0.165. But by 30 metres he was up with everyone. Then at 50 metres, something even more extraordinary happened. He seemed to find a supercharger, and just ran away from the field. Finally something even more remarkable occurred. He stopped running at 82 metres and, lowering his hands and spreading his arms wide, he waved both arms up and down in unison. He seemed to be jogging the final seven strides, one shoe lace flapping as he slapped his heart with his right hand." Bolt won the 100-meter race by the largest margin—0.2 seconds—since Carl Lewis's victory in 1984. Although Jacques Rogge, the president of the International Olympic Committee, and some journalists criticized Bolt for what they viewed as unsportsmanlike showboating, virtually all racers and fans who expressed an opinion publicly found no fault with what they viewed as Bolt's genuinely playful reaction. "I'm just enjoying myself, that's pretty much it," Bolt declared, according to Andrew Longmore. "I think it makes the fans happy too because I'm showing my personality. People enjoy watching me so I'll stay the way I am." Bolt told reporters that on the morning of the race he had not eaten breakfast. "I woke up at 11 o'clock, sat around and watched TV, then had some chicken nuggets, slept for two hours, then went back and got some more nuggets," he said, as quoted by Rick Broadbent in the London *Times* (August 18, 2008). He also said that his hard work in improving his technique in the first 20 meters had paid off; at the Olympics, "I executed it right." Similarly, Paul Hallam, the Australian Commonwealth Games sprint coach, told Scott Gullan for the Australian *Herald Sun* (September 11, 2008, on-line) that, given his height, Bolt's "ability to get to 30m as fast as he can is just extraordinary. . . . That is probably the most impressive component of it all." Scientists at the University of Oslo, in Norway, estimated that had Bolt not slowed down to celebrate, he might have completed the race in 9.55 seconds, taking almost 0.2 seconds off the record.

At the 1996 Olympics the American sprinter Michael Johnson ran the 200-meter race in 19.32 seconds, a record that remained unbroken for 12 years. A few hours before the start of the 200-meter race in Beijing, on August 20, 2008, Johnson told George Vecsey for the *New York Times* (August 21, 2008), "I don't think [Bolt] will break it here, although I wouldn't be shocked at anything he did." In what Johnson, after the race, described to Vecsey as "the most impressive athletic performance I have ever seen in my life," Bolt, making an all-out effort, set a new world record of 19.30 seconds, despite the presence of a slight headwind. The next day the Jamaican 400-meter-relay team—Nesta Carter, Michael Frater, Asafa Powell, and Bolt (running the third leg of the race)—won that competition with another world record: 37.10 seconds, 0.3 seconds faster than the previous world record.

Bolt's victories gave the lie to the belief that, in general, a top racer must be short and stocky, with a low center of gravity. Analyses of his performances at the Games showed that he had averaged 41 strides over 100 meters—about four fewer than the five-foot 11-inch Tyson Gay's average. Using a nickname of Bolt's, Rosie DiManno offered the following explanation: "The Lightning Bolt is anything but, out of the blocks, with the seventh slowest reaction time in the 100 [at the Summer Games]. The high knee lift is also unusual for a sprinter. But he has extraordinary baseline velocity through the middle 40 of the race and an astonishing 'turnover rate'—one foot coming down, one foot going up, barely finishing one stride before starting the other, so that he's actually suspended in air for a nanosecond." A study done at the Kingston University of Technology, Neil Wilson wrote for the London *Daily Mail* (August 6, 2008), suggested that the "fast-twitch muscles" of 70 percent of Jamaicans contain a protein called Actinen A, which aids sprinters. Bolt's father told a reporter for Reuters (August 16, 2008) that his son's abilities stem from his consumption of the yams that are a staple in Trelawny and other parts of Jamaica.

Bolt's extraordinary abilities, persona, and rejection of lucrative offers from abroad from countries that wanted him to run under their flags have endeared him to his countrymen. That is one reason why Jamaican officials and many members of the public reacted with outrage to accusations that Bolt must have used performance-enhancing drugs at the Summer Games. The American athlete Carl Lewis, who won a total of nine Olympic gold medals between 1984 and 1996, told Arash Markazi for *Sports Illustrated* (September 11, 2008, on-line), "When people ask me about Bolt I say he could be the greatest athlete of all time. But for someone to run 10.03 one year and 9.69 the next, if you don't question that in a sport that has the reputation it has right now, you're a fool. Period." (Lewis failed several drugs tests during his track-and-field career but was never penalized.) The Jamaican team doctor Herb Lewis responded angrily to Carl Lewis's comment, describing it to Broadbent as "condescending crap." "[Americans] still think we don't know anything down in Jamaica," he said. Jeré Longman reported in the *New York Times* (April 11, 2009) that Teddy McCook, the general secretary of the Jamaican Olympic Committee, dismissed Carl Lewis as "an idiot." Bolt has never failed any of the dozens of drug tests he has undergone, and in his own defense, he has pointed to his consistently superior track record, with his times at 21 years of age only slightly better than those he posted at 15.

In April 2009 Bolt suffered minor injuries when he crashed his car while driving on the highway that connects Kingston to Montego Bay, Jamaica. The following month he set another world record, running the 150-meter street race at the Manchester Great City Games in 14.35 seconds. On August 16, 2009, exactly one year after his world-record performance in Beijing, Bolt broke his 100-meter record at the World Championships in Berlin, clocking a time of 9.58 seconds. More than a 10th of a second faster than the previous record, it was also the largest margin of improvement ever recorded in that race. A few days later Bolt broke his 200-meter record by a similarly impressive margin, finishing with a time of 19.19 seconds. Bolt later said that he had been working on improving his starting times and reaction times and said that those improvements were the main reasons for his faster runs. He also won a third gold medal in the 4x100-meter relay event with his Jamaican teammates. Observers pointed out the historical significance of Bolt's most recent achievements: he broke the records in the same Berlin stadium where, in 1936, in the face of Nazi propaganda about the racial superiority of whites, the African-American athlete Jesse Owens became a legend by winning four gold medals. At the end of the championship competition, the mayor of Berlin presented Bolt with a section of the demolished Berlin Wall and said, as quoted by an Associated Press (August 24, 2009) reporter, that the runner had demonstrated that "one can tear down walls that had been considered as insurmountable."

Bolt was a co-winner of the IAAF Athlete of the Year Award in 2008. In 2009 he became the youngest person to receive the Order of Jamaica, one of his country's highest honors. According to Longman and other sources, his goals include increasing the popularity of running among athletes and the public and earning $10 million a year through commercial endorsements, payments for promotional appearances at races and other events, and prize money. At present he represents the sporting-goods company Puma, Gatorade, and Digicel, a mobile-phone company. Before he left Beijing in 2008, Bolt donated $50,000 to aid children affected by the massive earthquake that devastated Sichuan Province the previous May. He has also donated generously to improve conditions for Jamaicans: after his Olympic triumph tap water and other amenities became available in Sherwood Content for the first time. Bolt loves his country's dancehall music and after some races has celebrated on the track by dancing the Gully Creeper. During his interview with Longman and other reporters from around the world, he said, "My main goal is to be a legend in my sport." Bolt lives in Kingston.

Boras, Scott

Nov. 2, 1952– Baseball agent

Address: Boras Corp., 18 Corporate Plaza Dr.,
Newport Beach, CA 92660

"The one thing I learned about my role in this business is that I am the person that must take the heat for what is perceived to be a negative influence on baseball," Scott Boras, a prominent and highly influential agent for Major League Baseball (MLB) players, told Bob Nightengale for the *Los Angeles Times* (February 22, 1993). "My job is to represent individuals and advise them, and fans on the whole do not have much empathy or care for someone who is responsible for making an athlete a multimillionaire." Boras, who specializes in contract negotiations for draftees and free agents, had brief careers as a minor-league player and then as a lawyer before he became an agent. In a highly unusual transaction in his maiden effort, in 1983, he gained the upper hand in bargaining with the New

York Yankees to secure for the pitcher Tim Belcher what was then an extraordinarily lucrative deal. According to Nightengale, Boras is "solely responsible for changing the fate of the amateur draft, and challenges the arbitration process more than any agent." Boras—whose fee is 5 percent of every contract's worth—has repeatedly raised the ante in what professional players are paid. In 2000 he negotiated Alex Rodriguez's record-breaking 10-year, $252 million contract with the Texas Rangers—about one-eighth of the total of approximately $2 billion in contracts he has won to date. Many baseball aficionados have denounced him as injurious to the sport, particularly to teams with relatively small budgets. Agents have accused him of stealing their clients, and team managers have complained that he exploits loopholes and claims during negotiations to have competing offers for his clients when none exist. "My only responsibility is to make sure my players play and play well, to provide them with the support they need to do that, and to make sure they receive whatever the market is, whether it's good or bad, up or down," he told Ross Newhan for the *Los Angeles Times* (April 8, 2001). "My job is to read and define the market, not create it, and if I'm considered to be someone who's destroying the game, then I pat myself on the back because I assume I'm also involved enough to take credit for the fact that the majority of franchises are doing very well." The Boras Corp., based in Newport Beach, California, has some 75 employees, including former major-league players, who—as Boras himself did for years—scout for potential new talent and compile extensive statistical and other information on clients, along with comparisons and predictions that cast them in the best possible light. Boras currently represents around 65 major-league players and an equal number of minor-league contenders.

Scott Dean Boras was born on November 2, 1952 in California and was raised in Elk Grove, near Sacramento, the state capital, on an 800-acre farm owned by his parents. While growing up he shared in the work of the farm, where his family raised dairy cattle and grew alfalfa and oat hay. At 5:00 a.m. he would milk cows; after school and during summers, while driving a tractor in the fields, he would listen to radio broadcasts of baseball games. "My whole day was motivated around making sure I got done at a quarter to five, so I could make that glorious ride to the ballpark," he told James C. McKinley Jr. for the *New York Times* (December 14, 2000).

On his high-school baseball team, Boras played center field. When he was a senior, in 1970, his skills as a hitter earned him a baseball scholarship to the University of the Pacific (known as Pacific), in Stockton, California, where he majored in chemistry. By his junior year he had been accepted into Pacific's graduate program in industrial pharmacology, and he began to work toward a doctorate while pursuing his undergraduate degree. He earned a B.A. in 1974 and a Ph.D. two years later. (He did not write a dissertation; instead, he took oral examinations about research he conducted on an antacid of his own formulation.) Meanwhile, he had served as the captain of the university's baseball team and harbored hopes of becoming a major-league baseball player. A collision with another player left him with ripped tendons in his knee only two weeks before the MLB draft. Nonetheless, in 1974 the St. Louis Cardinals signed him to play as an amateur free agent in its minor-league division. To fulfill his obligations to St. Louis, he would leave Pacific several weeks before the spring term ended and take his final exams under the supervision of the Cardinals' coaches Ken Boyer and Jack Krol. "I'd buy 'em two six-packs of beer and they would proctor my exams," he told Ben McGrath for the *New Yorker* (October 29, 2007). Boras also told McGrath that during that period, he felt uncomfortable when he studied in view of his teammates. "It was difficult, because you didn't want to be held out to be a college boy—that was not a good thing then," he recalled. "And so when I studied on the bus I'd cover up my neuropharmacology book in a men's magazine so that no one knew."

After he achieved the highest batting average among members of the Class A St. Petersburg Cardinals, Boras succeeded in negotiating a pay raise, by persuading Cardinals officials that he should earn more than the next-best hitter. He again emerged victorious in salary negotiations after he was traded to the Chicago Cubs, in 1977. "I told them, 'I'm going to have to consider leaving, because I can go out in the real world and make ten times what I can make playing baseball,'" he told McGrath. (According to baseball-almanac.com, the minimum starting salary for an MLB player in 1977 was $19,000, and the average salary was $76,066.) By Boras's own account, his weakened knee prevented him from playing a single game in 1978, and he gave up playing baseball. After his four seasons with the St. Louis and Chicago Cubs farm systems, during which he played mostly as an infielder, his batting average was .283 (or .274, according to some sources).

Boras next enrolled at the McGeorge School of Law at Pacific. In 1982 he earned a J.D. degree and joined Rooks, Pitts & Poust, a Chicago-based firm that specialized in cases of alleged medical malpractice. Boras and another attorney in the firm won one case when they convinced a jury that the misuse of medication by a doctor during a baby's delivery had damaged the brain of the child, who suffered from cerebral palsy. The child's parents received $3.8 million in damages, one-third of which was split between Boras and his colleague. The prospect of earning additional large sums as a medical-malpractice specialist held little appeal for Boras, however. He still felt strongly drawn to the world of baseball, and when he learned that baseball revenues had increased and salaries for amatuer draftees had not, he began to contemplate becoming an agent. In the summer of 1983, when

Boras found out that the Minnesota Twins had offered a $100,000 signing bonus to their first draft pick of the year, the pitcher Tim Belcher, a student at Mount Vernon Nazarene College, in Ohio, he told Belcher to reject it. That winter, in the 1984 supplemental draft, the New York Yankees signed Belcher for over $150,000. "In one swift stroke," Bryan Curtis wrote for *Slate* (May 9, 2001, on-line), "baseball's amateur draft went from the owners' cheapest and most reliable way to hoard talent to a system heavily tilted toward the players." According to Thomas Stinson, writing for the *Atlanta Journal-Constitution* (October 21, 2007), "signing bonuses rose 21 percent in 1984, and teams have ever since had to weigh Boras into the equation when figuring a draft pick's signability."

Boras was still working for Rooks, Pitts & Poust when, in 1985, his friend Mike Fischlin, who was then playing with the Cleveland Indians, recruited him to help represent the Oakland Athletics' relief pitcher Bill Caudill in negotiations with the Toronto Blue Jays. Boras won a five-year, $7.5 million contract for Caudill, the second-highest amount for a reliever at that time. The deal earned Boras a mention in *Sports Illustrated*, and soon afterward, with other players having asked him to represent them, Boras stopped practicing law.

By 1986 Boras had negotiated the first of many record-breaking deals for draftees—$210,000 from the Texas Rangers for Kevin Brown. He secured $235,000 for Andy Benes from the San Diego Padres in 1988; $1.01 million for Ben McDonald from the Baltimore Orioles in 1989; $1.2 million for Todd Van Poppel from the Oakland Athletics in 1990; and $1.55 million for Brien Taylor from the New York Yankees in 1991. By then Boras had become known for his unswayable resolve and hardline negotiation tactics. Echoing complaints about him that were being bandied about, Chris Jenkins wrote for the *San Diego Union Tribune* (April 1, 1992) that Boras had become "the Lord of Leverage. . . . Denied playing time in the bigs, he's now playing hardball at the negotiating table, and he plays it so hard that it's been suggested he's taking out his vengeance on baseball." "I've heard people say that," Boras told Jenkins. "It's not true. I love the game." In December 1992 *Sporting News* named Boris the 26th-most-powerful figure in sports.

Criticism of Boras's tactics increased steadily. In 1993 Nightengale wrote, "According to an informal survey of general managers, he has surpassed everyone in his profession as the most hated player-agent in the business." Antipathy toward him mounted that winter, when the California Angels, unable or unwilling to agree to the figure that Boras demanded for Jim Abbott, felt compelled to trade that pitcher; the same thing happened to the Chicago Cubs, who lost the pitcher Greg Maddux to the free-agent market. Nightengale wrote, "Never in one winter has an agent drawn the wrath of so many in baseball"; he quoted the Angels' manager, Buck Rodgers, as saying, "I think Jim Abbott wanted to sign with us all along, and I hate to think we had to coddle up to his agent. . . . I don't want to be vindictive, but it's hard not to be vindictive." Boras told Nightengale that, in his opinion, the Angels' mistake was to try to deny Abbott what he deserved to earn. "I know baseball is a business, but what troubles me is that I still clearly believe the Angels would have been much better served economically and for the best interests for their club if they signed Jim Abbott," he said. "The best business decision was to pay Jim Abbott what he's worth."

In 1996 Boras, whom some have dubbed "Lord of the Loophole," exploited a provision (widely viewed as a loophole) in the amateur-draft rules that granted free agency to four of the top first-round draft picks. When the teams that had drafted the four failed to come up with contracts within 15 days, as required by MLB rules, Boras offered his services to the players—Matt White, Travis Lee, John Patterson, and Bobby Seay—and acquired million-dollar contracts with other teams for all of them. The next year Boras filed a petition with the MLB commissioner's office in an attempt to free J. D. Drew from the Philadelphia Phillies, again citing the Phillies' failure to adhere to the 15-day requirement. Boras threatened to pull Drew from the team if he was not given a $10 million (some sources say $11 million) contract. The Phillies drew the line at $3 million, and following Boras's advice, Drew played for the duration of the season with a team from the independent Northern League. The next season Drew reentered the draft and was signed for $8 million to the St. Louis Cardinals, a record for a draft player. The Phillies' general manager, Ed Wade, questioned Boras's tactics, telling Ross Newhan, "One of the principles we live by is you play by the rules or you work to exact change in the rules, but you don't spend your time trying to circumvent them or find loopholes. Scott uses any ammunition at his disposal to get his client what he wants and where he wants to be, and I think he went into the Drew negotiations with a hidden agenda. There was no way we could have signed him, no matter what we offered."

Among other notable achievements, in August 1997 Boras secured a five-year contract for $11.5 million a year with the Atlanta Braves for Greg Maddux, who became the highest-paid player in baseball at the time. In 1998 Boras persuaded the New York Yankees to give the center-fielder Bernie Williams $12.5 million a year for seven years, a total of $87.5 million. Not long afterward he negotiated a contract with the Los Angeles Dodgers for pitcher Kevin Brown for $15 million a year for seven years, $105 million in total.

In 2000 Boras negotiated the then-highest salary for a player in baseball history, when he won from the Texas Rangers a 10-year, $252 million contract for the shortstop Alex Rodriguez. "When Alex Rodriguez signed his contract," Boras told Newhan, "I'm praying that every mother tells her son, 'Get out that bat and ball.' I know fans are puzzled by that kind of money, but I also think people recognize that it's a healthy industry overall. A majority of people have said to me, 'If they're going to pay it, they must have it.'" Rodriguez's tenure with the Rangers ended in 2004, when the team traded him to the New York Yankees. Boras oversaw the terms of the trade, in which the Rangers agreed to pay $67 million of the $179 million left on Rodriguez's contract, with the Yankees picking up the remainder.

In a reportedly unique deal executed in 2005, Boras and the Cleveland Indians included clauses in the contract of Kevin Millwood according to which Millwood's salary would be reduced if he missed games due to injury. In the same year Boras engineered Johnny Damon's departure from the Boston Red Sox to the Yankees, with whom Damon signed a $52 million, four-year contract. Damon had been well-liked among Boston fans, and many expressed dismay when his move to the Yankees was announced. Damon and Boras maintained that the $27 million that Boston had offered was inadequate; Boras told Ronald Blum for the Associated Press Online (December 23, 2005) that the amount "was something that really changed [Damon's] feelings about Boston."

In 2007 Boras was dealt a blow when Rodriguez negotiated a new contract with the Yankees without him. After the team rejected as exhorbitant the $350 million over 10 years that Boras had asked for, Rodriguez, acting on his own behalf, settled for $275 million, also for 10 years. "What happened here was that [Boras's] bravado got the better of him," Andrew Zimbalist, a Smith College economics professor, told Bill Shaikin for the *Los Angeles Times* (November 15, 2007). "Instead of pushing the envelope, he jumped zip codes. That was out of all sense of proportion, out of the grasp of the reality of the underlying economics." For his part Rodriguez explained to the media that Boras, without his permission, had announced during Game Four of the World Series that Rodriguez would opt out of the final three years of the Rangers/Yankees trade deal to become a free agent. The ESPN Web site (December 17, 2007) quoted Rodriguez as having said in an interview for the television news show *60 Minutes*, "When I realized things were going haywire, at that point I said, 'Wait a minute, I've got to be accountable for my own life. This is not going the way I wanted it to go.' So I got behind the wheel." Boras did not comment on the matter in public. In *Variety* (December 17, 2007) Phil Gallo reported that Rodriguez had fired Boras and hired the former record-company executive Gus Oseary to replace him.

In October 2008 Boras won a $550,000 decision against a former client, Gary Sheffield of the Detroit Tigers. An arbitrator determined that Sheffield should have paid Boras that sum for work that enabled the player to become a free agent in 2004. In the 2008–09 off-season, Boras brokered 12 MLB deals. They included an eight-year, $180 million contract for the Yankees' first-baseman Mark Teixeira, a four-year, $60 million contract for the Braves' pitcher Derek Lowe, and a two-year, $60 million contract for the Dodgers' left-fielder Manny Ramirez.

In June 2009 Boras publicly criticized the Detroit Tigers manager, Jim Leyland, for indefinitely benching one of his clients, Magglio Ordonez, to give him time to improve his flagging skills. Boras argued that Ordonez's batting average and RBI numbers, although down somewhat, were close to what they had been in past years. Leyland told the press, according to Chris Iott in the *Jackson (Michigan) Citizen Patriot* (June 21, 2009), "Scott Boras might be better off if he lets Magglio and myself handle this instead of him." In August 2009 Boras won a four-year, $15.67 million contract for the pitcher Stephen Strasburg of the Washington Nationals.

Boras lives in Newport Beach with his wife, Jeanette, and their children, Natalie, Shane, and Trent.

Bublé, Michael

(boo-BLAY)

Sep. 9, 1975– Singer

Address: c/o Reprise Records, 3300 Warner Blvd., Burbank, CA 91505

"These guys were triple threats," the Canadian singer Michael Bublé told Gioia Patton for *Today's Woman* (March 2008), describing the show-business legends he counts as his greatest influences: Bobby Darin, Dean Martin, Elvis Presley, Ray Charles, and Frank Sinatra, the artist to whom he is most often compared. "They could sing, dance and act. They were entertainers, and I believe that's a lost art now." Bublé has not only revived that art but turned it into big business, selling 15 million records since he released his self-titled major-label debut album, in 2003. Best known for his crooning style, affinity for jazz standards, and suave "Rat Pack" persona—qualities that have made him especially popular among women—he has also recorded swinging versions of contemporary rock and pop songs and written some of his own material. "It's okay to borrow things, to be influenced," he told Jonathon Gatehouse for *Maclean's* (August 27, 2007). "But just to rip it off, just to repeat it? I think I have a responsibility to move the music forward."

Michael Bublé

Despite a lack of radio airplay, *Michael Bublé* reached number 47 on the *Billboard* 200 album chart—a remarkable achievement for a jazz album—and the singer's next two studio albums, *It's Time* (2005) and *Call Me Irresponsible* (2007), fared even better, climbing to number seven and number one, respectively. His success came as something of a surprise to executives at his label, Warner Bros. Records, who were unsure if audiences would embrace his throwback style. Even David Foster, the producer and record executive who discovered the singer, was skeptical about Bublé's chances for success—but no longer. "Michael's going to have a 30-year career," Foster told Michael Posner for the Toronto, Canada, *Globe and Mail* (September 22, 2007). "Or longer. A lot of other singers have turned to this material because their careers were in trouble. But Michael has always been here. He's lived this music. For my taste, he's the greatest singer alive, if you want that sound." In October 2009 Bublé released his fourth studio album, *Crazy Love*, which debuted at number one on the *Billboard* 200 album chart.

Michael Steven Bublé was born on September 9, 1975 in Burnaby, a town just east of Vancouver, in the Canadian province of British Columbia. His mother, Amber, is a homemaker; his father, Lewis, is a salmon fisherman. He has two sisters, Crystal and Brandee. While Bublé grew up listening mostly to contemporary pop artists, such as Michael Jackson, from an early age he found himself drawn to jazz and swing music. "It's really weird. The first time I really heard anything in that genre was Bing Crosby's *White Christmas* album," he told Roger Bull for the *Florida Times-Union* (February 22, 2008). "Maybe because I really love that time of year, it really made some kind of connection with me and all the good feelings associated with it. And I loved the musicality of it." Over time he became even more enamored of the music of the 1940s and '50s, as his maternal grandfather, Mitch Santaga, would play him records by such artists as Sinatra, Darin, Vic Damone, Mel Tormé, and the Mills Brothers. "Grandpa got a real kick out of the fact that I liked the music so much," an article in the Ontario, Canada, *Orillia Packet & Times* (March 11, 2003) quoted him as saying. "We'd start singing at the dinner table together, like 'Everybody Loves Somebody Sometime.'" Perhaps because many of Bublé's family members also enjoyed singing, it was not until he was a teenager that his parents recognized his talent.

By the time he was 16, Bublé had begun performing in Vancouver-area nightclubs. Santaga, a plumber, would sometimes do work for club owners in exchange for bookings. "I think the most beautiful thing is I got the chance to fail over and over again and to learn my craft. I played for audiences that didn't necessarily come to see me," Bublé told Malcolm X Abram for the *Akron (Ohio) Beacon Journal* (April 16, 2008), recalling the years he spent singing in hotel bars, strip clubs, and even shopping malls. He added, "At some point when I was confident enough to take an audience like that and put them in my hand, I knew I was going to be good enough to have success at the next level." When he was 18 Bublé won a local talent contest, though he was disqualified when the organizer, Beverly Delich, discovered that he was underage. Delich did, however, sign Bublé up for the Canadian Youth Talent Search—which he won—and agreed to become his manager. Delich guided his career for seven years, as Bublé struggled to make a name for himself. "Bev was Michael's ticket out of Burnaby," the jazz musician and composer Gabriel Mark Hasselbach, a friend of Bublé's, told Posner. "She took that boy by the collar and dragged him to fame." Confident and ambitious, Bublé spent the latter half of the 1990s performing in nightclubs, playing Elvis Presley in the 1950s-themed stage musical *Red Rock Diner*, and singing in a revue called *Forever Swing*. During that period he released *BaBalu*, a CD he recorded at the Vancouver lounge of the same name.

Bublé's big break came in 2000, when Michael McSweeney, an assistant to former Canadian prime minister Brian Mulroney, saw him perform in Toronto. McSweeney was impressed and persuaded Mulroney—a music lover and amateur crooner—to hire Bublé to sing at his daughter Caroline's upcoming wedding. Bublé agreed to perform for free, since David Foster, the Warner Bros. producer known for his work with Barbra Streisand, Céline Dion, and Whitney Houston, was to be among the invited guests. Mulroney urged Foster to pay close attention to the singer. "Brian told me, 'You're not going to believe this kid,'" Foster told Kerry Gold for the *Pembroke (Ontario) Observer* (October 29, 2002). "And I'm thinking, 'This is the last thing I want to do at a wedding, is see some singer—a wedding singer.' But we were kind of transfixed." Though he was quick to recognize Bublé's talent, Foster was reluctant to offer the singer a recording contract. "His wedding performance was incredible," he told Posner. "But I just didn't know how you'd market that music." Delich next pitched Bublé to Bruce Allen, the Canadian manager behind superstars including Bryan Adams and Martina McBride, but he, too, hesitated to sign the performer. "I don't know what I'd do with him," Allen said.

Bublé and Delich refused to give up, and after moving to Los Angeles, California, they persuaded Foster to produce a demo recording. (Mulroney, still a champion of Bublé's singing, was also instrumental in changing Foster's mind.) While Foster told Delich that she would have to raise roughly $500,000 for the session, he eventually covered the expense himself. He played the finished recording for his fellow Warner Bros. executives, and soon afterward Bublé had a meeting with Tom Whalley, the chairman of Warner Music. As Delich recalled to Posner, Whalley asked Bublé, "Why should we do this? People will compare you to Sinatra and you're not Sinatra." Bublé's response was, "I don't want to be Sinatra. I'm not Sinatra. I've never wanted to be Sinatra. I want to be Michael Bublé." In less than a week he had secured a recording deal, and before long Allen took over as his manager. Out of gratitude for Delich's early support, Bublé has continued to pay her a "trailing royalty."

In February 2003 Foster's own label, 143 Records, a subsidiary of the Warner imprint Reprise, released Bublé's self-titled debut. Produced by Foster and executive-produced by the legendary Canadian singer Paul Anka, the album included standards, such as "Come Fly with Me," a song made popular by Frank Sinatra, as well as more contemporary fare, such as "Crazy Little Thing Called Love," by the rock band Queen. The album peaked at a comparatively high number 47 on the *Billboard* 200 chart, which pleased the label's executives, who had not expected sales of *Michael Bublé* to exceed 100,000 copies. In a review for the All Music Guide Web site, Aaron Latham called Bublé "someone who has learned the art of popular song and is creating his own colorful music from shades of the past." He added, "He sounds absolutely thrilled to be singing these songs, and that goes a long way in making *Michael Bublé* an exciting debut." Bublé promoted the collection by appearing on several TV programs, including *The Today Show* and *Live with Regis and Kelly*, and concertizing. While the album established him as a major star, Bublé has since dismissed it, echoing the criticisms made by the New York radio deejay Jonathan Schwartz. "It was a dopey mistake to bring Sinatra songs into the fold and mimic them," Schwartz told Craig Offman for *Time International* (June 2, 2003). "It doesn't really advance the story."

In 2003 the label DRG released *Totally Bublé*, containing songs performed by Bublé in the 2001 film *Totally Blonde*, in which he had played a nightclub singer. That November Bublé released an EP of Christmas music, *Let It Snow*, and in 2004 he released a live CD/DVD set, *Come Fly with Me*. That same year he won a Juno Award—the Canadian equivalent of a Grammy Award—for best new artist. By that time Bublé's success had taken him all over the world, and the constant touring took its toll on his relationship with his then-fiancée, Debbie Timuss. Bublé's romantic troubles factored heavily into the recording of his sophomore album, *It's Time*, which reached stores in February 2005. "The CD is intensely personal and more unfettered than the tightly controlled, super-slick stylings of his first CD," Ken MacQueen wrote for *Maclean's* (February 7, 2005). In terms of song selection, Bublé again supplemented standards with more modern material, including swinging versions of songs such as the Beatles' "Can't Buy Me Love." The album also featured "Home"—an "aching, lonely lament," according to MacQueen—which Bublé cowrote. "A few of those songs, I just stuck her outside the studio," Bublé told MacQueen, referring to Timuss, "and I sang to her." (The couple broke up in 2005, and that same year Bublé began dating the British actress Emily Blunt.) In a review for All Music Guide, Latham credited *It's Time* with proving that Bublé "is much more than a flavor-of-the-month celebrity. Like his debut, *It's Time* mines the rich history of pop music as Bublé applies his own technique to classic standards and incorporates his Rat Pack sound into modern pop songs." Latham added, "He sounds pure of voice and pure of heart. Those are rare commodities in the recorded world and they, along with Bublé's talent and vision, help to make *It's Time* a wonderful listening experience." The album reached number one on the *Billboard* Top Jazz Albums chart and number seven on the *Billboard* 200; it topped the charts in Italy, Japan, Canada, and Australia. While the album represented an artistic step forward, Bublé was not satisfied with every aspect of it; during the recording sessions he butted heads with Foster and grudgingly agreed to use the arrangement of "I've Got You Under My Skin" made famous by Sinatra.

In November 2005 Bublé released another live CD/DVD, *Caught in the Act*. In 2006 he won Juno Awards for pop album of the year, album of the year, artist of the year, and single of the year, the last of which he received for "Home." *It's Time* also earned a Grammy Award nomination for best traditional pop-vocal album; it lost to Tony Bennett's *The Art of Romance*. The following year Bublé earned a Grammy nomination for *Caught in the Act*. Prior to the February 2007 ceremony, he told the Canadian Press (January 31, 2007) that he would not attend, since "I'll lose. . . . They might as well have already scratched Tony Bennett's name into the damn thing." Bublé's remarks were reprinted around the world, and the singer later apologized, insisting that his attempt at humor had been misinterpreted. "That was horrible," he told Tiffany Bakker for the Perth, Australia, *Sunday Magazine* (May 6, 2007). "I think it's a lesson in stupidity for me, to realise that some people don't get that I was joking." In the end Bublé's statement proved prophetic, as Bennett's *Duets: An American Classic* won the Grammy.

On May 1, 2007 Bublé released his third album, *Call Me Irresponsible.* The collection once again included songs associated with Sinatra, but with the new arrangements for which Bublé had lobbied. "I've Got the World on a String" became "breezy" and "Sylvester-the-cat sibilant," according to Gatehouse, while "That's Life" was transformed into a gospel-rock number. The album also featured songs by artists as diverse as Eric Clapton, Leonard Cohen, and Willie Nelson. On his version of "Me and Mrs. Jones," a 1972 R&B hit for Billy Paul, Bublé sang a duet with Blunt. He said that the idea behind *Call Me Irresponsible* was "growth without alienation," as Foster and Allen realized that fans would likely be expecting another album of neo-swing tunes. After debuting at number two on the *Billboard* 200 chart, the album reached number one in its second week. The sales may have been bolstered by Bublé's high-profile appearances on *The Oprah Winfrey Show* and *American Idol.* "Michael Bublé's third studio album is the Big One, in which the Canadian singer and upscale heartthrob emerges as a thoroughly contemporary pop traditionalist," Stephen Holden wrote in a review for the *New York Times* (May 14, 2007). He added, "This time Mr. Bublé, an endearingly cocky performer who likes to play the clown onstage, slaps on the after-shave, straightens his tie and shines his shoes for a heavy date, perhaps a marriage proposal. . . . If purists object to Mr. Bublé's cottony vocals, imperfect enunciation and sometimes casual phrasing, this is how it's done nowadays. The prerock tradition has acquired so many layers of cultural implication that singers who take it too seriously tend to sound more like curators than entertainers. In this night at the museum, the fossils come alive."

Call Me Irresponsible earned Bublé his first Grammy Award, for best traditional pop vocal album. (He was also nominated for best male vocal performance, for the song "Everything.") Bublé has reportedly written dozens of songs, and his desire to record his own material has led to disagreements with Foster. "It's testy," Bublé told Posner, describing his relationship with Foster. "But it's wonderful. I have the greatest producer in the world. We're both very passionate. I know what I want a song to sound like, and he's the same, and sometimes those visions clash. But I wouldn't be able to make these songs as good without him." Bublé has also said that he would like to be known as more than just a retro jazz singer, and he acknowledges that many critics have dismissed his music as schmaltzy. "I was born in '75, not '25 or '35," he told Bernard Perusse for the *Montreal Gazette* (April 18, 2007, on-line). So "pop music has naturally influenced me. One of the big fights that my manager and I have had is, 'Stop putting me on the jazz shelf.' Put me on the pop shelf. I'm a pop singer. I sing pop standards."

Bublé has been accused of not having a "filter"; his comments about Tony Bennett and the Grammys were not the first to cause controversy. He has also been described as fiercely ambitious—but also as one who cares more about professional success than about material wealth. As of September 2007 he did not own a car, preferring to get around Vancouver on a Vespa motor scooter. (He and Blunt shared a home in Vancouver before splitting up, in July 2008.) He is generous with his family; in 2006 he gave his parents $1 million for Christmas. His sisters each received $50,000. "Why not?" he told Posner. "They helped me out for years when I was struggling." In the fall of 2008, Bublé embarked on a 12-city tour of the U.S.; signed on as an ambassador for Campaign for BC Children, run by Canada's BC Children's Hospital Foundation; and became a minority owner of a hockey team—the Vancouver Giants of the Western Hockey League.

In 2009 Bublé released his third live CD/DVD, *Michael Bublé Meets Madison Square Garden.* That October he released his fourth studio album, *Crazy Love*, whose title is the name of a 1970 song by Van Morrison. The album, which debuted at number one on the *Billboard* 200 album chart after selling upwards of 130,000 copies within its first week of release, featured a cover version of that song, as well as contemporary takes on other classics, among them Arthur Hamilton's "Cry Me a River," Arthur Freed's "All I Do Is Dream of You," and Hoagy Carmichael's "Stardust."

Buergenthal, Thomas

May 11, 1934– Judge on the International Court of Justice

Address: International Court of Justice, Peace Palace, Carnegieplein 2, 2517 KJ The Hague, The Netherlands

Thomas Buergenthal, a judge on the International Court of Justice, the primary judicial body of the United Nations, is a preeminent expert in international human-rights law, a field that emerged to address some of the most horrific events of the 20th century. A survivor of the Nazi Holocaust, he holds a noteworthy dual perspective—as both a sufferer and a protector. "My Holocaust experience has had a very substantial impact on the human being I have become, on my life as an international law professor, human rights lawyer and international judge," he wrote in his memoir, *Ein Glückskind* (published in English translation in 2009 as *A Lucky Child*). "It might seem obvious that my past would draw me to human rights and to international law, whether or not I knew it at the time. In any event, it equipped me to be a better human rights lawyer, if only because I understood, not only intellectually but also emotionally, what it is like to be a victim of human rights violations. I could, after all, feel it in my bones."

Buergenthal has thus devoted his career to ensuring justice for the victims of human-rights abuses as well as to setting firm precedents intended to deter future perpetrators. Nonetheless, "I am no Mother Teresa. I am a lawyer," he told Tracy Thompson for the *Washington Post* (April 7, 1993). "In this kind of work, the worst thing you can do is show your emotions. You achieve so much more if you view this almost as a doctor dealing with a diagnosis."

Thomas Buergenthal was born on May 11, 1934 in Lubochna, Czechoslovakia. (Lubochna is in the central portion of what is today Slovakia.) His father, Mundek, who had worked as a banker in Germany, had moved his wife, Gerda, and the rest of the family to that Czechoslovakian village soon after the Nazi Party came to power, in 1933. Mundek bought a small hotel to run, and the family enjoyed relative security until 1938, when Slovak soldiers who had sided with Adolf Hitler commandeered the hotel. Buergenthal recalled in an interview posted on the Web site of the United States Holocaust Memorial Museum (USHMM), "We fled to Zilina, a nearby city, and lived there until after I turned 5. Then, my father took us across the border into Poland. On September 1, 1939, we boarded a train heading for a boat that would take us to England. But the German army invaded Poland that day, and our train was bombed. We joined other refugees, and walked north to [the central Polish city of] Kielce." A Jewish ghetto was established in Kielce in early 1941, and when it was liquidated, in August 1942, the Buergenthal family was sent to a labor camp. When young Thomas saw workers separating children from their parents, he approached the camp's commander in desperation. "They had us lined up on the field [and] the German commander of the camp was standing in the middle making the decision who was going to live and who was going to die," he told the USHMM interviewer. "[I] went up to [him], and I said, in German . . . to let me live, because I could work. And . . . what I saw happen in camps a number of times was that they were somehow shocked to find that somebody who looked very much like their own children, who spoke the same language the way their own children would speak, was there. They had, I think they believed a lot of their own propaganda. And he looked at me and said in German, 'Well, let's see,' and let me go. The whole thing may have lasted two seconds. And that's how I stayed." Buergenthal was made the commander's errand boy. "Basically, my job consisted of sitting outside his door and doing chores that he needed to have done," he said in the USHMM interview. "The job had great advantages, because I could hear what was going on and could report back, and I could also alert people to his coming . . . because if people were seen not working, they would be beaten very badly."

In 1944 Buergenthal and his parents were moved to the notorious concentration camp in Auschwitz, Poland. By early 1945 the advancing Soviet army had forced the German forces in Auschwitz to flee, and Buergenthal was sent on the infamous death march from the camp. He ended up, without his parents, at the Sachsenhausen camp, in Germany. Buergenthal, one of the few children to survive the ordeal, recalled to the USHMM interviewer: "We were marched out—

children at the front. Day one was a 10-hour march and tiring; we began to lag. Stragglers were shot, so two boys and I devised a way to rest as we walked: We'd run to the front of the column, then walk slowly or stop until the rear of the column reached us. Then, we'd run ahead again." Buergenthal had two frostbitten toes amputated once he reached Sachsenhausen.

In April 1945, as the German army was nearing total defeat, the camp at Sachsenhausen was evacuated, and Buergenthal was left in the infirmary with the rest of the prisoners who could no longer walk without assistance. He told the museum interviewer, "Finally, I went out [on my crutch] to look, because [of] all this silence. . . . And the Germans had left. Eventually the gates swung open, and Russian troops came in. And they began ringing the camp bell to say that we were free." He continued, "I didn't have any sense of the tremendous joy that other people must have experienced. I was alone in many ways. I think if my parents had been there it would have been different."

Mistakenly thinking that Buergenthal was a Polish Christian child, because of the language skills he had picked up in Kielce, a group of Polish soldiers (then under Soviet command) took him in. They gave him clothing, a pony, and—to his extreme gratitude—adequate food for the first time in years. (So malnourished was Buergenthal during the war that for years afterward, he made it a habit to eat before any major event or undertaking, unable to assure himself that another meal would be forthcoming.) Eventually, one of the soldiers, himself Jewish, discovered Buergenthal's religious and cultural heritage and arranged for him to be taken to a Jewish orphanage in Poland. There, a counselor was arranging for children to be sent to Palestine, and Buergenthal added himself to the list. He was not sent immediately, however, because as a Holocaust survivor he was needed for radio and newsreel interviews about the camps. While he waited at the orphanage, his mother, who had survived the camps in Auschwitz, Ravensbrueck, and Dachau, was in the British Zone in Germany, frantically looking for him. (His father had been executed just three days before the end of the war.) With the help of her brother in the U.S., Buergenthal's mother learned of his whereabouts via the Jewish Agency for Palestine, and in December 1946 he made the arduous journey from Poland to the British Zone, where he was reunited with her at a railway station near her hometown of Goettingen, Germany.

The two settled in Goettingen, where Buergenthal attended school and began to the overcome the trauma of the war. "I saw the fact that I survived as a victory, that we had won over them," he told the museum interviewer. He felt a sense of justice when some of the Nazi war criminals were tried and sentenced at Nuremberg, during the latter half of the 1940s. "The first . . . English words that I remember [were] 'by hanging.' I remember listening to the radio when they announced the sentences. And we were . . . listening to that and with sort of . . . joy." Buergenthal confessed to Tracy Thompson that initially, he sometimes fantasized about mounting a machine gun on his apartment balcony and shooting the German people who walked by, but said that over time he rose above those impulses: "The sense of detachment I have is forced. It's not that I don't feel the emotions. . . . But I came to the conclusion early in life—when I was 17 or 18, I suppose—that the only way to prevent another outbreak, to break this cycle of violence, was to stop hating." He has steadfastly maintained that detachment, telling the USHMM interviewer, "I haven't read any books about the camps. I can't. I can't go to movies that show it. I never could."

On December 4, 1951, at the behest of his mother, who remained in Germany, Buergenthal, then 17 years old, embarked on a 10-day ocean voyage to New York City. When the captain of the USS *General Greely*, the troop ship on which he was traveling, needed someone to make announcements in various languages, Buergenthal volunteered for that duty. Although Buergenthal meant to stay in the U.S. for just a year, to study and broaden his horizons, he never returned to live in Germany. (His mother ultimately settled in Italy, and he remained close to her until her death, in 1991.)

One of Buergenthal's uncles had immigrated, penniless, to the U.S. during the Great Depression and was still struggling to get by, but he welcomed his nephew to his home in Paterson, New Jersey. Buergenthal quickly distinguished himself in his studies and won a scholarship to Bethany College, in West Virginia. He earned a bachelor's degree in 1957, the same year he received his American citizenship. He went on to New York University Law School, earning his J.D. degree in 1960, and then to Harvard Law School, in Cambridge, Massachusetts, where he earned an LL.M.(master's of law) degree in 1961 and an S.J.D. (doctor of juridical science) degree in 1968, specializing in international law. In 1962, while earning his doctoral degree, Buergenthal began teaching at the State University of New York (SUNY) School of Law, in Buffalo, remaining in that post until 1975. Beginning that year he taught international law at the University of Texas School of Law; in 1980 he moved on to become a dean and professor of international law at the American University College of Law, in Washington, D.C.

In 1985 Buergenthal became the director of the Human Rights Program at the Carter Center, founded by former U.S. president Jimmy Carter and his wife, Rosalynn. Buergenthal stayed at the Atlanta-based center—a humanitarian organization focused on resolving world conflicts, preventing disease, eradicating hunger, and alleviating human suffering—until 1989, when he assumed the directorship of the International Rule of Law Center at George Washington University Law School, in Washington, D.C. During Buergenthal's academic career, he authored several seminal texts on international human-rights law and served on numerous editorial boards, including those of the *American Journal of International Law*, the *Encyclopedia of Public International Law*, and the *Human Rights Law Journal.*

Beginning in the early 1970s, Buergenthal was also affiliated with a variety of international groups, including the United Nations Educational, Scientific and Cultural Organization (UNESCO), created by the U.N. in 1945 to build peace through education and collaboration and to promote respect for human rights and the rule of international law. (In 1978 Buergenthal received the UNESCO Human Rights Prize.) One of the most noteworthy positions he assumed was on the Inter-American Court of Human Rights, on which he served from 1979 until 1991. (In the mid-1980s he was its president.) The court, established to interpret and enforce the American Convention on Human Rights, provided several landmark rulings, such as when it awarded compensation to families of those "forcibly disappeared" in Honduras. The court's unprecedented decisions held dictators, governments, armies, and police forces accountable for their actions. "You had the feeling that you were laying the foundations and mechanism for dealing with violations of human rights," Buergenthal told Marilyn Henry for the *Jerusalem Post* (June 15, 1999). "It was something that had [previously] seemed impossible."

In 1992, along with former Colombian president Belisario Betancur and former Venezuelan foreign minister Reinaldo Figueredo, Buergenthal was appointed to the U.N. Truth Commission for El Salvador, investigating and documenting abuses that had occurred during that country's 12-year civil war, which raged from 1980 to 1992 and claimed an estimated 75,000 lives. After conducting more than 2,000 interviews within six months, the panel released its report in March 1993, concluding that while leftist rebels from the Farabundo Marti National Liberation Front had been responsible for the assassination of government officials and the killing of innocent civilians, the U.S.-backed right-wing government had been largely responsible for the carnage, including some outright massacres. In 1981, for example, in El Mozote, hundreds of peasants had been slaughtered by U.S.-trained forces. The commission also documented the targeted killing of government critics, outspoken advocates of democracy, union organizers, and priests. It was revealed that the administrations of Jimmy Carter, Ronald Reagan, and George H. W. Bush had provided more than a billion dollars in military assistance to the El Salvadoran government, with the violence reaching its peak under the Reagan administration, whose officials repeatedly covered up war crimes and discredited those who tried to expose them.

The commission, which recommended a 10-year ban on government positions for implicated El Salvadoran officials as well as the payment of reparations, was guided by two principles, Buergenthal explained to Tracy Thompson: "That without a credible accounting of the truth, national reconciliation is impossible [and that] individuals, even those caught up in the fury of civil war and the orders of superiors, are responsible for their actions." Buergenthal continued, "The response to our report by the [El Salvadoran] high command was not that we were wrong. They called us 'insolent.' There's something wonderful in that word. We were insolent because we dared to tell them what they had done."

During his USHMM interview, Buergenthal discussed the importance of truth commissions, which are investigative and documentary bodies rather than criminal tribunals. "You simply cannot try people for 40,000 rapes, for example," he said. "So the truth commission to me is critical for the . . . peaceful evolution of a country that has gone through terrible things like El Salvador and Guatemala or South Africa have gone through."

In 1996 U.S. president Bill Clinton appointed Buergenthal to the U.S. Holocaust Memorial Council, which oversees the USHMM. (Buergenthal had previously been appointed to the council by Jimmy Carter but had stepped down after a year to work on the Inter-American Court of Justice.) Buergenthal was also a member of the council's Committee on Conscience, a think tank dedicated to the study and prevention of genocide. He chaired the committee from 1997 to 1999. During his museum interview he said, "The Committee on Conscience was something that was very close to my heart. Because I feel very strongly that the Museum shouldn't be just a cemetery. The Museum has to be a living organism that tries to make sure that these things don't happen again. And that means also speaking out . . . where other crimes against humanity and genocide are being committed."

During the latter part of the 1990s, a group of Holocaust survivors and heirs of the victims launched a case against Swiss banks, which they claimed had hidden behind the country's financial-secrecy laws to withhold the assets that European Jews, fearing for their futures, had deposited in the 1930s and 1940s. After a long and bitter battle, the Swiss banks agreed to pay $1.25 billion. In 1999 Buergenthal was charged with heading a tribunal to arbitrate the claims and match claimants to accounts. Although it was a painstaking process, Buergenthal, aware of the larger human-rights implications of his work, told Marilyn Henry, "It might have an impact on how people react in the future in similar cases—in Kosovo, Bosnia [for instance]. They could realize that they might get you even 30 years from now, in one way or the other. It shows that these crimes, offenses, violations, debts are something that come to haunt those who committed them. At least that is my hope." Buergenthal told Henry that the tribunal sounded "a 'built-in warning' that there is no statute of limitations on human-rights violations."

In 2000 Buergenthal was elected by the U.N. General Assembly and the Security Council to serve as one of 15 judges on the International Court of Justice (ICJ), also known as the World Court, based in the Hague. ICJ judges are elected for nine-year terms and may serve a total of three terms. Buergenthal originally filled another judge's unexpired term; in 2006 he began a term that will end in 2015. Because the court can have only one judge at a time from any given country, no other U.S. national will sit on the court during his tenure. The court's mandate is to handle disputes between member states, as well as to render advisory opinions on legal issues brought by international organizations. "For an international lawyer like me, this is a dream court and a dream come true," Buergenthal said during his museum interview. "It's like being on the Supreme Court of the United States. This is the court that determines what is and what is not international law. [For] those of us who believe in international law and practice international law, this is the Mecca to which you look."

When Buergenthal began his work there, the ICJ was dealing with issues relating to the North Atlantic Treaty Organization (NATO) bombings of Kosovo and to claims by the Democratic Republic of Congo that neighboring countries were aiding insurgents in the country. In 2003 he was part of a unanimous ruling that the U.S. had violated an international treaty by not notifying some 50 Mexican citizens held on death row in American prisons that they had the right to seek legal help from their own government. While President George W. Bush was reportedly aggrieved by that ICJ ruling, he ordered state courts to comply with it. (In 2008 the U.S. Supreme Court decided that Bush had exceeded his executive authority in doing so, however, and ruled that international treaty did not supersede individual state law.)

In 2004 the ICJ dealt with a high-profile claim by Palestinians against Israel's building of a massive wall in the West Bank. Buergenthal was the only dissenting judge in a ruling that concluded that the structure—which is called a "security fence" by Israel and its supporters and an "apartheid wall" by others—is illegal. Although the ruling represented an important victory for the Palestinians, the Israelis had asserted from the outset that since the court's decision would be non-binding and that they could count on the U.S.'s veto power if needed in the Security Council, they would continue building the wall whatever the outcome.

Buergenthal agreed with the court's major conclusions in the case of the wall and said that, Israeli and American wishes notwithstanding, international law is, in fact, applicable to the Occupied Palestinian Territories. However, he insisted that the court had not adequately taken into account Israel's need for security against Palestinian attacks. His dissent disappointed many observers. Ian Williams wrote for the *Washington Report on Middle East Affairs* (September 2004), for example, "The opinion is indeed a triumphant vindication of the Palestinian use of international law to maintain their position. It should put the U.S. administration on the spot: is international law something that only applies to others, or does it apply across the board?" Buergenthal has himself pointed out that there is an interesting distinction between the way the U.S. views international justice and the ways that other nations do. Whereas those from other countries tend to believe that international entities are the best mechanism by which to address such large-scale crimes as war and genocide and often do not trust their own nations' institutions to carry out fair trials, Americans tend to support the opposite view.

Buergenthal believes that international human-rights law has evolved since the Nuremberg trials, citing that at Nuremberg, the judges were from the victor states, whereas recent tribunals on Rwanda and Kosovo, among other places, were established by the U.N. Security Council and consisted of judges selected internationally. "That's progress," he told the USHMM interviewer, "and in a sense it shows that it's not only one group of the international community but the entire international community which has an interest in [justice] and has a part in it."

Buergenthal has won dozens of legal and human-rights awards, including the Pro-Humanitas Prize from the Federal Republic of Germany (1978), a first-place book award from the Inter-American Bar Association for his volume *Protecting Human Rights in the Americas: Selected Problems* (1982), a Distinguished Service in Legal Education Award (1987), a Wolfgang G. Friedmann Memorial Award for Outstanding Achievement in International Law from Columbia University Law School (1989), a Harry Leroy Jones Award for Outstanding Achievements in Foreign and International Law from the Washington Foreign Law Society (1990), a Human Rights Prize from the Jacob Blaustein Institute for the Advancement of Human Rights (1997), a Goler T. Butcher Medal for Excellence in Human Rights (1997), a Manley O. Hudson Medal (2002) from the American Society of International Law, an Alumni Achievement Award from New York University Law School (2005), a Louis B. Sohn Award from the International Law Section of the American Bar Association (2006), an International Humanitarian Award for Advancing Global Justice from Case Western Reserve University Law School (2006), and a Justice Award from the Peter and Patricia Gruber Foundation (2008).

Now a grandfather, Buergenthal married his first wife, the former Dorothy Coleman, a fellow Bethany College student, while he was in law school. They had three sons: Robert, John, and Alan. That marriage ended in 1981, and two years later he married the former Peggy Bell, a translator of Peruvian-British descent whom he met while working in Costa Rica.

Burris, Roland

Aug. 3, 1937– U.S. senator from Illinois (Democrat)

Address: 523 Dirksen Senate Office Bldg., Washington, DC 20510

A longtime presence in Illinois politics, Roland Burris, a former state comptroller (1979–91) and Illinois attorney general (1991–95), campaigned repeatedly for public office after he last held a government position—nearly 14 years ago. He made a bid for the U.S. Senate, ran for Chicago mayor, and campaigned three times to become governor, but he was unsuccessful in each race's Democratic primary. On January 15, 2009 the wait ended: Burris was sworn in as the junior U.S. senator from Illinois, following a contentious battle over the seat vacated by President Barack Obama.

When Obama became president-elect, in November 2008, the responsibility to fill the vacated U.S. Senate seat fell to Illinois's governor, Rod Blagojevich, who allegedly tried in effect to put the position up for sale. The two-term governor was indicted for criminal misconduct for that act and was ultimately impeached by the Illinois legislature. Nonetheless, three weeks after his arrest, the indomitable Blagojevich appointed Burris to the open post. That Burris would accept a position from the accused governor, particularly after he had failed several times to gain elective office on his own, triggered outrage from Illinois citizens, and Senate Democrats initially refused to acknowledge the appointment.

Burris's predecessor in the Senate—who went on to become the first black U.S. president—has been hailed as a progressive, cohesive figure "who could transcend race and focus instead on more universal issues of economic disparities and class," as Peter Wallsten put it for the *Los Angeles Times* (January 6, 2009, on-line). By contrast, Burris has often openly blamed Illinois's racial tensions for his not being elected to more government posts. While Burris, until recently, had a relatively clean record, he has not been hailed as an exceptional public servant. "His service as comptroller and later as attorney general was viewed as competent but unspectacular," Perry Bacon Jr. wrote for the *Washington Post* (January 7, 2009, on-line). Bacon paraphrased Don Rose, a Chicago political consultant and an acquaintance of Burris's since the 1960s, as saying that Burris "struggled in elections because of a flat speaking style and lack of charisma that prevented him not only from connecting with white voters but also from garnering the kind of support among African-Americans that he needed to win statewide, even though many black politicians have backed his campaigns, including Obama and the Rev. Jesse L. Jackson." A fierce champion of civil rights early in his career, driven by his firsthand experiences with racism as a child and as a student at Southern Illinois University in the 1950s, Burris (who often refers to himself in the third person) has since taken moderate stances on such issues as government spending and taxes. As quoted by Gilbert Cruz in *Time* (December 31, 2008, on-line), Jackson called Burris "a sturdy, non-flash bridge-builder."

The youngest of three children, Roland Wallace Burris was born on August 3, 1937 to Earl L. Burris and Emma M. Burris in Centralia, Illinois, where he grew up. In the early 1950s Earl Burris took part in a campaign to racially integrate a local pool, and on Memorial Day in 1953, Roland Burris was one of the first African-Americans to swim there. He has often cited that episode as a formative experience that led to his career in public service. Burris graduated from Centralia High School and then enrolled on a scholarship at Southern Illinois University at Carbondale, where he played football and received his bachelor's degree in political science in 1959. He then studied for a year at the University of Hamburg, in Germany, before entering law school at Howard University, in Washington, D.C.

After receiving his J.D. degree and passing the bar exam, in 1963, Burris became a national bank examiner for the U.S. Treasury Department's Office of the Comptroller of the Currency—the first African-American ever to do so. For nine years beginning in 1964, Burris was a vice president of the Continental Illinois National Bank.

In 1973 Illinois's governor, Daniel Walker—who was later convicted of fraud, perjury, and misapplication of funds—appointed Burris as director of the state Department of Central Management Services. (It was in that post, in which he served until 1977, that Burris first worked with the future governor Neil Hartigan.) Burris made a failed 1976 run for state comptroller, in which he was defeated by the former state superintendent of education Michael Bakalis (who won 72 percent of the vote to Burris's 28 percent). Then, in 1977, he became the national executive director of Operation PUSH (People United to Serve Humanity), an organization founded in the early 1970s by Jesse Jackson in order to increase employment among Chicago's African-Americans. The following year, when Bakalis gave up his seat to make a gubernatorial bid, Burris successfully ran for state comptroller, defeating the Republican John Castle and becoming the first African-American to hold a statewide position in Illinois. He was reelected in 1982 and 1986. During that time, in 1984, he made an unsuccessful bid for the Democratic nomination for a U.S. Senate seat, coming in a strong second behind Paul Simon (who ultimately won the seat) in a four-way Democratic primary.

During his tenure as comptroller, Illinois's chief fiscal officer, Burris created monthly "Burris Reports," receiving credit from politicians of all stripes for improving the state's method of financial reporting. For his work in keeping taxpayers informed about how their money was spent, in 1986 he was one of only three to be named an outstanding financial officer in the U.S. by *Crain's Chicago Business* magazine. Meanwhile, Burris became increasingly critical of the Republican governor James R. Thompson's fiscal policies, accusing him of spending too much on prisons and not enough on education. In 1990 Burris himself announced a bid for Illinois governor. He had said to Rob Karwath and Thomas Hardy, writing for the *Chicago Tribune* (January 6, 1989), "We have to put someone into office who really understands state finances. Illinois in 1990 will need a strong fiscal individual to run this state and try to straighten it out after 14 years of fiscal disaster with Gov. Thompson." Only 11 hours after proclaiming his intention to run, Burris withdrew from the gubernatorial race and ran instead for attorney general. Burris cited as the reason for his withdrawal the decision by the incumbent attorney general, Neil Hartigan, to run for the governorship. "There was a higher-ranking Democrat with a shot at it," Burris said, as quoted by Thomas Hardy, writing for the *Chicago Tribune* (November 25, 1992, on-line). "I did not want to create a divisive primary, and I put the party above my own ambition." Burris was elected attorney general, but Hartigan lost to the former Illinois secretary of state Jim Edgar. As attorney general Burris was responsible for all legal matters pertaining to the state and for supervising more than 500 lawyers.

In his last year as attorney general, in 1994, Burris ran for governor of Illinois, an office that had been claimed by Republican candidates for the previous 16 years. Burris was criticized in the primary for not pressing a 1990 case against the Democratic U.S. senator Carol Moseley-Braun, the Senate's first black female, who was accused of not paying state taxes on a monetary gift from her mother, who had inherited the money while living in a nursing home and receiving Medicaid. Burris began the race for the Democratic nomination with slightly more campaign funds than the ultimate victor in the primary, Comptroller Dawn Clark Netsch, but Netsch was able to double her funds through donations from her husband. (She lost the race to the incumbent, Edgar.)

Burris was next urged by black activists to run an aggressive campaign against the incumbent Chicago mayor, Richard M. Daley. Entering the mayoral race in 1995 as an Independent, Burris accused the mayor of corruption and of indifference toward Chicagoans. While Burris was a passionate candidate, his campaign was severely underfunded, a recurring problem in his attempts to win public office. He dismissed the disparity between his campaign war chest and Daley's, claiming that supportive constituents would guarantee his victory. "This is not an ordinary election," he said, as quoted by Al Podgorski and John H. White, writing for the *Chicago Sun-Times* (March 26, 1995). "When you have a crusade, you don't need money." Podgorski and White wrote, "Known for a more low-key style of campaigning during his successful runs for state comptroller and attorney general, Burris has sparred with Daley like a street fighter and delivered speeches like a Southern preacher." Still, Burris lost the election, with 38 percent of the vote.

While Burris faulted "downstate whites" for not supporting his campaign for mayor, he received more than half of his support from white voters in his 1998 bid for the Democratic gubernatorial nomination—his second attempt to become governor. He lacked sufficient funds for television ads, which his rivals ran continually. To his further detriment Burris ignited controversy in February, when he was seen on videotape giving a speech in which he referred to his opponents in the Democratic primary—Congressman Glenn Poshard, former U.S. associate attorney general John Schmidt, and former federal prosecutor Jim Burns—as "nonqualified white boys." Burris later apologized, saying that he had made the comment after someone suggested he pull out of the race to make the Democratic ticket more racially balanced. (At that time whites made up about 70 percent of Democratic voters.) Some Democratic Party leaders criticized Burris for disloyalty. "His running for mayor in 1995 very shortly after losing the primary for governor, running as an independent, that has cost him a lot in terms of friends and financial support," the chairman of the Illinois Democratic Party, Gary LaPaille, told Pam Belluck for the *New York Times* (March 13, 1998). Burris lost the primary to Poshard.

When Burris made his third and final run for governor, in 2002, some predicted that he would be more successful than in either of his previous runs. Ample exposure in Illinois state politics (his campaign motto was "A name you know, a name you trust") had afforded him name recognition, and, perhaps more importantly, a $1 million campaign donation—26 times the amount of funding he had in 1998—bought Burris necessary television exposure. In the primary he faced U.S. representative Rod Blagojevich of Illinois; the former Illinois comptroller Michael Bakalis, to whom Burris had lost in his first run for that office; and the former Chicago Public Schools CEO Paul Vallas. As in his previous runs for governor, Burris's platform consisted largely of promises to revive the state's education system, by lowering school property taxes and replacing the revenue with state funds, without raising taxes in general. Some decried his plans as being too vague. Burris lost the primary to Blagojevich, then endorsed his candidacy in the general election, in which Blagojevich defeated Jim Ryan.

In 2002 Burris founded Burris & Lebed Consulting, LLC, which concentrated on government representation, public relations, and political and corporate strategies; he served as chairman and chief executive officer until the company dissolved, in 2008. Burris has served as counsel to Gonzalez, Saggio & Harlan as well as the Peters Law Firm. He has also served on the Board of Inland Real Estate Corp.

Following his election as president, on November 4, 2008, Barack Obama resigned from his post as Illinois's junior senator. A day later Burris began openly campaigning for that seat. "I'd say if there hadn't been a Roland Burris, there would not have been a Carol Braun or a Barack Obama," Burris had told the Associated Press earlier in 2008, according to Perry Bacon Jr. "I had to lay the groundwork . . . to perform in a high, statewide office." The person responsible for choosing Obama's successor, Governor Blagojevich, came under attack for allegedly trying to sell the appointment in exchange for bribes and promises of important positions for him and his wife; he was later brought up on federal corruption charges. Thus when Blagojevich appointed Burris to fill Obama's seat, most saw the appointment as tainted—particularly since Burris, through personal donations through his consulting firm, had given more than $20,000 to Blagojevich's campaign fund, and Burris's business received about $300,000 in state contracts while Blagojevich was in office. Many were unable to fathom why Burris still wanted the appointment, which other candidates had shied away from after the governor was arrested. Senate Democrats signed a statement vowing not to seat anyone appointed by Blagojevich, whose choice of an African-American senator was seen as a cynical move: many thought Blagojevich sought to win favor among African-Americans and thus save his political career, while making Senate Democrats reluctant to reject the appointment.

On January 6, 2009, exactly two weeks before the presidential inauguration, the 71-year-old Burris appeared on Capitol Hill, prepared to fill Obama's shoes. He was turned away by the Senate's highest-ranking members, Majority Leader Harry Reid of Nevada and Assistant Majority Leader Dick Durbin of Illinois, who argued that Blagojevich's appointment was not valid unless the Illinois secretary of state, Jesse White, signed his appointment document; on December 30 White had refused to do so. Initially, Obama, who had supported Burris in his primary run for governor in 2002, agreed with the Senate's decision. According to Roger Simon, writing for the *Chicago Sun-Times* (January 11, 2009), Obama said, "Roland Burris is a good man and a fine public servant, but the Senate Democrats made it clear weeks ago that they cannot accept an appointment made by a governor who is accused of selling this very Senate seat. I agree with their decision." The day before he went to Washington, on January 5, Burris—in an attempt to persuade officials that he was fit to be seated—had filed an affidavit to the special Illinois House panel investigating Blagojevich. Burris claimed that he had first mentioned filling the Senate-seat vacancy during a December 26, 2008 meeting with Blagojevich's attorney Sam Adam Jr., who asked Burris if he was interested in the position. Then, on January 8, Burris appeared again before the Illinois House impeachment panel; this time he testified that while he had not offered Blagojevich anything in exchange for the Senate seat, he had suggested himself for the position months earlier to one of Blagojevich's advisers, Lon Monk, and that he had also asked whether Monk had clients he could refer to Burris's consulting and lobbying firm. Burris declared that he had not received business from Monk and did not know whether Monk had disclosed his interest in the Senate seat to Blagojevich. (When Burris was asked if he spoke with Blagojevich's brother, Robert, or other close associates of Blagojevich's, Burris acknowledged only talking to Monk.) Burris and his lawyers petitioned the Illinois Supreme Court to order White to sign the document; the court ruled on January 9—the day after the Illinois House voted to impeach Blagojevich—that White's signature was not needed to seat Burris. Instead, White produced a form certifying that the appointment document was valid. In a decision attributed to pressure from the incoming presidential administration, which argued that the conflict over the Senate seat would deflect attention from more important issues and that no legal basis existed for preventing Burris's appointment, Burris was sworn in on January 15. Like Obama before him, he is currently the only black person serving in the U.S. Senate.

After less than a month in office, on February 5, Burris quietly submitted another affidavit. In it, he gave details about funding requests that Robert Blagojevich had made to Burris on behalf of the ex-governor's campaign. Burris said that Robert had called him three times about fund-raising and that Burris had then mentioned his interest in the Senate seat. Burris also wrote in his statement, as quoted by John Chase and Rick Pearson in the *Chicago Tribune* (February 14, 2009, on-line). He continued: "I was asked to raise money by the governor's brother and made it unequivocally clear to him that it would be inappropriate and pose a major conflict because I was interested in the Senate vacancy. I did not donate or help raise a single dollar for the governor from those conversations and would never consider making a donation through a third party." The U.S. Senate is conducting an ethics probe, and the Sangamon County state attorney John Schmidt is investigating Burris for "vague and contradictory information he provided under oath to an Illinois House panel that put together the impeachment case that resulted in the ouster of [governor] Rod Blagojevich," Dave McKinney and Chris Fusco wrote for the *Chicago Sun-Times* (April 18, 2009, on-line). In a phone conversation between Robert Blagojevich and Burris that came to light in May 2009, Burris voiced his concern about appearances and the need for discretion, promised to donate to Rod Blagojevich, and asked for consideration in connection with the Senate appointment. In July 2009, perhaps in a bid to placate the Senate ethics panel then investigating him, Burris, who had in January declared his intention to run for reelection in 2010, announced that he would leave Congress after his current term. Nevertheless, the ethics committee continued to investigate him.

Burris sits on several Senate committees, including Veterans' Affairs, Armed Services, and Homeland Security and Governmental Affairs. He supports abortion rights, Obama's economic stimulus plan, the removal of U.S. combat troops from Iraq, and an increase in U.S. military personnel in Afghanistan.

Burris's record of memberships and awards reflects his long run in Illinois politics. For 17 consecutive years (1979–95) he was named among the 100 Most Influential Black Americans by *Ebony*; he was named one of the Top Three Government and Financial Officers in the Nation (1989) by *City and State* magazine; and he was cited as being among the Ten Most Distinguished Alumni (1997) of Southern Illinois University, Carbondale, where he has served as an adjunct professor in the Master of Public Administration Program. He holds honorary doctors of law degrees from the National Louis University, in Evanston, Illinois, and Tougaloo College, in Mississippi, and he has been a member or chair of organizations devoted to business, arts, gaming, mental health, and civil rights, among other concerns.

Burris and his wife, Berlean (Miller) Burris, a former university administrator, live in Chicago. The couple, who married in 1961, have two grown children, Rolanda and Roland II, and a grandson, Roland. In his free time Burris enjoys barbequing, shooting pool, playing tennis, and dancing. He had a granite mausoleum built for himself and his family in Chicago's Oak Woods Cemetery. Inscribed on one wall is a long list of his accomplishments, etched below the heading "Trail Blazer."

TIGERS

Otto Greule Jr./Getty Images

Cabrera, Miguel

Apr. 18, 1983– Baseball player

Address: Detroit Tigers, Comerica Park, 2100 Woodward Ave., Detroit, MI 48201

On July 20, 2003 20-year-old Miguel Cabrera had a memorable major-league debut, hitting a game-winning home run for the Florida Marlins against the Tampa Bay Devil Rays (now called the Tampa Bay Rays) in the bottom of the 11th inning. During the rest of the 2003 regular season, Cabrera's .268 batting average, 12 home runs, and 62 runs batted in (RBIs) helped the Marlins clinch a National League (NL) wildcard play-off berth. He was also instrumental in his team's postseason success, batting .333 with three home runs and six runs batted in, helping his team defeat the Chicago Cubs in the NL Championship Series and advance to the 2003 World Series, in which the Marlins pulled off a stunning six-game upset victory against the New York Yankees. Following his impressive rookie season, Cabrera was highly touted as one of baseball's top young prospects, for his offensive ability and his uncommon poise. Since then he has exceeded expectations, compiling impressive offensive numbers during his relatively short tenure in the major leagues and establishing himself as one of the sport's best hitters. Cabrera is the fourth player in Major League Baseball (MLB) history—behind Hank Greenberg, Alex Rodriguez, and Albert Pujols—to have 50 doubles and 25 home runs before turning 24 and is currently the sixth-youngest player ever to hit 100 home runs. He is also the third-youngest since 1920 to have three consecutive 100-RBI seasons. (Mel Ott and Ted Williams are the first two.) Cabrera has also been voted to the National League All-Star team four times (2004–07). After the 2007 season Cabrera made headlines when he was traded to the Detroit Tigers of the American League (AL). In his first season with the Tigers, he led the league in home runs.

Jose Miguel Torres Cabrera was born on April 18, 1983 in Maracay, a city about 50 miles west of Caracas, Venezuela. He hails from a family with a long baseball tradition. His parents met on the baseball field. His mother, Gregoria (Torres) Cabrera, is a former starting shortstop for Venezuela's national softball squad. His father, Miguel Cabrera, was an amateur player for the Venezuelan team; the team also included the future legendary Cincinnati Reds player Dave Concepcion as well as several of Cabrera's uncles, one of whom (David Torres) was a minor-league prospect for the St. Louis Cardinals who managed a baseball academy in Venezuela. As young as age three, Cabrera developed a passion for the game, often accompanying his mother to softball practice, and honed his batting skills by swinging broomsticks at bottle caps. As a five-year-old he would often climb over his backyard fence to watch games at the adjacent baseball field, Maracay Stadium (later renamed after his uncle). When Cabrera was four, his parents enrolled him at his uncle's baseball academy. The boy displayed a natural ability from the start. "From the time he was little you could see certain qualities. All you had to do was correct him. It was like he was born with a glove on his hand," his mother told Juan C. Rodriguez for the Fort Lauderdale, Florida, *Sun-Sentinel* (February 22, 2004). By age 10 Cabrera was playing in a national youth league, and he expressed to his father a desire to pursue a career in baseball. Although his parents were supportive, they insisted that he remain in school. "I told him, 'For every 100 kids who want to play baseball, three or four make it,'" Cabrera's father recalled to Kevin Baxter for the *Miami Herald* (April 4, 2004). "'And I don't want you to be one of those who has no future. In case something goes wrong, at least you can fall back on your studies.'"

Following his uncle's death, from a heart attack, the 15-year-old Cabrera was trained by his father. During that period Cabrera began attracting the attention of international scouts from several major-league teams, including the New York Yankees, the Minnesota Twins, and the Florida Marlins. However, MLB rules prohibited scouts from signing players younger than 16. On July 2, 1999, after turning 16, Cabrera—whose family had developed a good relationship with the scouts Al Avila and Louie Eljaua of the Marlins—signed as a shortstop with the team for $1.8 million, a record amount for a Venezuelan-born player. A month prior to the signing, Cabrera had married his high-school girlfriend, Rosangel.

After spending the summer with the Aragua Tigers in Venezuela's Professional Baseball League, Cabrera, who played shortstop, appeared in 57 games with the Gulf Coast League Marlins, hitting .260 and driving in 22 runs. Toward the end of the season, the Marlins promoted him to the Utica Blue Sox, the Marlins' single-A, minor-league club in the New York Penn League; in eight games with that team, he hit .250 and had six RBIs. Cabrera spent the 2001 season with the Kane County Cougars, the Marlins' single-A team in the Midwest League. In 110 games with the Cougars, Cabrera had a .268 batting average and 66 RBIs while also committing 32 fielding errors. On the strength of his offense, Cabrera was voted to the All-Star Futures Game, an exhibition game showcasing top minor-league prospects from the U.S. and around the world. Cabrera, who served as the designated hitter for the international team, was hitless in his two plate appearances. In 2002, following another summer playing for the Aragua Tigers, Cabrera was promoted to the Jupiter Hammerheads, the Marlins' advanced Class-A team in the Florida State League. Despite his superior ball-handling ability, Cabrera showed limited range at the shortshop position, due largely to his increasing weight and lack of physical conditioning. As a result he was moved to third base. Learning a new position did not slow Cabrera down offensively. In 124 games with the Hammerheads, he batted .274 with 75 RBIs and also committed fewer errors (17) in the field. Also that year, he made his second consecutive appearance at the Futures Games, during which he hit a pair of singles.

Cabrera started the 2003 season with the Carolina Mudcats, a double-A team in the Carolina League, before being called up to join the struggling major-league club in late June of that year. At the time Cabrera was hitting .365, with 10 home runs and 59 RBIs. Cabrera made his major-league debut on June 30, during an interleague game against the Tampa Bay Devil Rays. After failing to reach base in his first four at-bats, Cabrera launched a three-run, game-winning home run in the bottom of the 11th inning. Cabrera was the third-youngest MLB player since 1900 to hit a walk-off home run in his debut appearance. (Billy Parker of the Los Angeles Angels and Josh Bard of the Cleveland Indians are the first two.) In August Cabrera replaced starting third baseman Mike Lowell, who was sidelined with a broken left hand for the remainder of the regular season. Cabrera established himself as one of the Marlins' most lethal offensive weapons. In 55 regular-season games, he hit .268, with 12 home runs and 62 RBIs, helping the Marlins clinch the NL wild-card spot and advance to the NL Division Series (NLDS), in which Florida defeated the San Francisco Giants in four games. Cabrera hit .286 in the series and also drove in three runs. In the National League Championship Series against the Chicago Cubs, Cabrera continued his torrid hitting, posting a .333 batting average and driving in six runs. His offensive output helped propel the Marlins past the Cubs in six games. Playing in their first World Series since 1997, the Marlins faced the New York Yankees, the heavy favorites. Baseball observers praised Cabrera for the poise he demonstrated in the fourth game of the series, in which he belted a first-inning home run immediately following a knockdown pitch by Roger Clemens. Although Cabrera only hit .167 in the series, he managed to drive in three runs for his club, which went on to win the series in six games. Months later Cabrera and the Aragua Tigers were crowned champions of the Venezuelan Professional Baseball League; it was the team's first title in 28 years.

With the return of Lowell, Cabrera was moved to the outfield during the 2004 season. Despite another position change, Cabrera played well in his first full major-league season, hitting .294 in 160 games, and ended the season ranked among the top 10 in the National League in RBIs (112) and home runs (33). Cabrera, who also had 31 doubles and scored 101 runs, also made his first All-Star Game appearance. The Marlins, who finished the season with an 83–79 record, were third-place finishers in the NL East division and did not advance to the postseason. Cabrera had better success with the Aragua Tigers, who captured their second consecutive title that year. Cabrera posted similar offensive numbers during the 2005 season. In 158 games he had 33 runs, 116 RBIs, and 106 runs scored while batting .323 and committing only seven errors for the Marlins, who again finished third in their division. For the second straight year, Cabrera finished in the NL's top 10 in batting average and home runs. He was voted to his second consecutive All-Star Game and also won a Silver Slugger Award, as one of the NL's top offensive outfielders.

Despite another impressive season, Cabrera's attitude and work ethic came into question following a series of incidents during the final week of the 2005 season. He was benched for one game after failing to show up on time for a medical appointment. Less than a week later he received another one-game suspension after he was late to a game against the Atlanta Braves. Cabrera's teammates held a closed-door clubhouse meeting to address his behavior. Following the meeting Cabrera told a reporter that he had nothing to learn from the Marlins' veteran players.

Prior to the 2006 season, the Marlins decided not to re-sign several of the veterans, including Derrek Lee and Hee Seop Choi, in an effort to reduce their payroll. After two seasons in the outfield, Cabrera was named the team's starting third baseman and continued to thrive offensively, batting .339 (a club record) with 26 home runs, 50 doubles (another franchise record), and 114 RBIs. He made his third consecutive All-Star appearance and won a second consecutive Silver Slugger Award, as the top offensive third baseman. However, Cabrera continued to clash with his teammates. In July 2006 he and Scott Olsen were involved in a physical altercation. Olsen yelled at Cabrera for not making an easy fielding play, and the two traded punches in the dugout before being pulled apart by their teammates. In February 2007, after earning $472,000 in 2006, Cabrera won an arbitration hearing against the Marlins and was awarded $7.4 million for the 2007 season. The amount was $700,000 more than Marlins executives had offered. "You're talking about a guy who's up in the top of his class, and rightfully so compared himself to players who are right there as well," the Marlins' manager, Larry Beinfest, told Rodriguez for the *Sun-Sentinel* (February 18, 2007). "We felt our filing number was indicative of that. Obviously, the arbitrators thought otherwise. It was a lot of money either way for a great player." During most of the 2007 season, Cabrera was among MLB's leading players in the categories of batting average, home runs, and runs batted in—known in the major leagues as the Triple Crown. He ultimately failed to finish first in any of those categories, although his offensive numbers were impressive. He ended the season batting .320, with 34 home runs, 188 hits, 79 walks, 119 RBIs, and 91 runs scored in 157 games for the Marlins, who finished fifth in the division, while also making his fourth straight All-Star appearance. During the 2007 season Cabrera became the third-youngest player to drive in 500 career runs. His 119 RBIs also made him the third-youngest player to drive in at least 100 runs in four consecutive seasons.

Months after the season ended, Cabrera became the subject of trade rumors, and in December 2007 he and Willis were dealt to the Detroit Tigers in exchange for a pitcher, outfielder, backup catcher, and three minor-league pitching prospects. Cabrera signed an eight-year contract for $152.3 million. At the time of the trade, he was the franchise's second all-time leader in home runs (138) and third all-time leader in RBIs (523). Following the trade many baseball observers instantly regarded the Tigers—whose lineup also included Cabrera's fellow power hitters Magglio Ordonez, Placido Polanco, Curtis Granderson, Gary Sheffield, and Ivan Rodriguez—as being among the favorite teams to win the World Series. "Make no mistake, the Tigers are going for it all, and if you want to do that in the American League, you have to be willing to gamble," Tony DeMarco wrote for MSNBC.com (December 5, 2007). In 2008, his first season in a new league, with a new team, and at a new position—first base—Cabrera showed up for spring training in better shape. "It's just too hard to ignore when just four years ago, he was a svelte 20-year-old nicknamed H-O-F because he was so obviously Hall of Fame material, and this season he's more fit for the H-F-O acronym as a Heavy Former Outfielder," Israel Gutierrez had written for the *Miami Herald* (June 17, 2007). As the Tigers' cleanup hitter, Cabrera thrived in his new environment, hitting .292, with 36 doubles, 127 RBIs, 180 hits, and 85 runs scored. He also led the league in home runs, with 37—a career high. The Tigers finished second in their division, with an 88–74 record, but did not advance to the postseason.

Before the start of his second season with the Tigers, Cabrera played for the Venezuelan team in the World Baseball Classic. During the 2009 season he again proved to be the Tigers' most prolific slugger, batting .324 with 34 home runs and 103 RBIs—fourth-, sixth-, and eighth-best in the league, respectively. In August of that year, Cabrera reached a career milestone when he hit his 200th career home run in his 1,000th career game, becoming the fifth Venezuelan player in Major League Baseball history to do so. (Tony Armas, Bobby Abreu, Magglio Ordonez, and Andres Galarraga are the other four.) Though the Tigers led the AL Central Division for nearly the entire year and seemed almost certain to advance to the postseason, they lost 15 of their final 26 games and blew a three-game lead in the division with four games to play. As a result, the Tigers were forced to engage in a do-or-die tie-breaker game with the Minnesota Twins to determine the division winner. Cabrera hit a double and a two-run homer during the game, which the Tigers lost, 6–5, after 12 innings. Earlier, during the final weekend of the regular season, Cabrera was arrested in connection with an alcohol-related altercation with his wife. A day before the tie-breaker game against the Twins, he issued a public apology for his behavior, addressed to the Tigers organization, his teammates, and fans.

Cabrera lives in Birmingham, Michigan, with his wife, Rosangel, with whom he has a daughter, also named Rosangel. He is said to practice Catholicism and Santeria, an Afro-Cuban religion. He is known for his sense of humor; during his stint with the Marlins, Cabrera's teammates often referred to him by the nickname "Blue," a reference to a character in the film *Old School* (2003), one of Cabrera's favorite comedies.

Cao, Anh "Joseph"

(gow)

Mar. 13, 1967– U.S. representative from Louisiana (Republican)

Address: 2113 Rayburn House Office Bldg.,
Washington, DC 20515

On December 6, 2008, in an election in Louisiana that had been postponed because of a hurricane named Gustav, Anh "Joseph" Cao became the first Vietnamese-American to win a seat in the United States Congress. The victory of Cao, a Republican, surprised Republicans and Democrats alike, because the area he represents, Louisiana's Second Congressional District—which encompasses nearly all of the city of New Orleans and several of its suburbs—has a greater percentage of registered Democrats than all but 28 of the nation's other 434 congressional districts. In fact, Cao is the first Republican to serve the residents of Louisiana's Second Congressional District in the U.S. House of Representatives since 1891. The 42-year-old Cao, who came to the U.S. when he was eight, emerged from relative obscurity in New Orleans in 2005, when he played a major role in helping many of the Vietnamese-Americans whose lives were severely disrupted by Hurricane Katrina. His principal opponent in the 2008 election was the incumbent, the Democrat William Jefferson, an African-American, who had completed nearly nine terms in the House. Jefferson had won reelection in 2006 despite the public disclosure that he was the target of an FBI investigation and that FBI agents had found in his freezer $90,000 in marked bills; he won the

2008 Democratic primary despite his indictment by a grand jury the previous year on charges of bribery and corruption. His popularity among African-Americans notwithstanding, only about 12 percent of registered black voters went to the polls on December 6; they were outnumbered by white voters who, partly to express their disapproval of Jefferson's alleged illegal activities, cast their ballots for Cao and provided him with a margin of victory of 2.7 percent. Cao is one of only four nonwhite Republicans in the 435-member House, which represents a nation that is about one-quarter nonwhite. During the two decades before he entered Congress, Cao was a Jesuit seminarian and missionary, a professor of philosophy, a community activist, and an immigration lawyer. Within the Republican Party he is considered a moderate. He is against abortion and believes that the health-care system should remain market-driven, but his views on other social and economic issues, which developed in part out of his work in grassroots advocacy on behalf of poor and immigrant communities, set him apart from the right-wing core of the Republican Party. "I can be conservative on some issues and liberal on others," he told David Freddoso for the *National Review* (December 5, 2008).

The fifth of eight children, Anh Cao was born on March 13, 1967 in Saigon (now Ho Chi Minh City), in what was then South Vietnam. He added "Joseph" to his name because of his feelings of kinship with the humble carpenter whom the Bible identifies as Jesus's earthly father. "I'm a worker; I'm a hard-working worker," Cao told Jonathan Tilove for the New Orleans *Times-Picayune* (December 11, 2008). The first eight years of Cao's life coincided with what many regard as the worst years of the Vietnam War. According to his official on-line campaign biography, Cao "can vividly remember bombs exploding next to his elementary school." His father was an officer in the army of South Vietnam, the U.S.'s ally in the war. In 1975, as Saigon was being taken over by North Vietnamese forces, his mother secured a place for the eight-year-old Cao and two of his siblings on a military transport plane ultimately bound for the U.S. "She shoved me along with a bunch of relatives," Cao told Adam Nossiter for the *New York Times* (December 8, 2008). In the newly reunited Vietnam, his father spent years in prison, while his mother raised her remaining children. The whole family was reunited in 1991 in the U.S. Meanwhile, Cao and two of his siblings lived for several years in the care of an uncle, moving from Indiana to Arkansas to Mississippi before settling in Houston, Texas, where Cao went to Jersey Village High School. Liz Halloran reported on National Public Radio (December 10, 2008) that Cao was deeply affected by a letter he received as a nine-year-old refugee in Goshen, Indiana, in which his father wrote, "Son, you have to study hard, work hard and give back to your community and your country."

Cao earned a B.S. in physics at Baylor University, a Baptist institution in Waco, Texas, in 1990. Cao is Roman Catholic, and after his graduation he became a Jesuit seminarian and missionary. Fluent in French and Spanish as well as Vietnamese and English, he ministered to the poor in Tijuana, Mexico, and in Vietnamese refugee camps in Hong Kong (then a British territory and now part of the People's Republic of China). "I saw extreme poverty and the need for social change," he told Halloran. "At that time, I saw the fastest way to achieve that change was through political activity." That realization, along with his desire to have a family of his own, led to his decision against taking vows for the priesthood. In the early 1990s he studied theology in New Orleans and philosophy at Fordham University, in New York City, where he earned a master's degree in 1995. He has said that he was particularly inspired by the theological and philosophical ideas of the 19th-century Russian writer Fyodor Dostoyevsky and the existentialist philosophy of the 20th-century French writer Albert Camus. In 1997 he joined the faculty of Loyola University, in New Orleans, and taught courses in philosophy and ethics. He earned a J.D. degree from Loyola in 2000 and then became a legal associate with the firm Waltzer and Associates, specializing in cases involving immigration law. Earlier, while teaching in the mid-1990s, Cao had volunteered with Boat People SOS (BPSOS), an organization that helped Vietnamese-Americans with a range of legal, social, and poverty-related problems; he served on the group's board of directors from 1996 to 2002. After a brief period at Waltzer and Associates, he joined BPSOS as in-house counsel and opened a BPSOS office in New Orleans to assist the estimated 20,000 Vietnamese-Americans living in the New Orleans metropolitan area. The first immigrants to come there from Vietnam had supported themselves in their native land as fishermen; the local Catholic parish in New Orleans, Mary Queen of Vietnam, had sponsored them in the U.S. and had steered them to inexpensive housing in the largely African-American eastern part of New Orleans and nearby suburbs. The Vietnamese immigrants and their descendants became "a largely invisible minority in a city dominated by the racial politics of black and white," Ylan Q. Mui wrote for the *Washington Post* (December 14, 2008). Concurrently, in 2002, Cao opened his own law office, which continues to operate.

Along with hundreds of thousands of others, Cao and his family fled New Orleans after Hurricane Katrina hit the Gulf Coast, in late August 2005. When the Caos returned, in September, they found that their East New Orleans home and Cao's law office had been destroyed. The next month Cao began rebuilding his house and office, a task that took a year and a half to complete. Unlike a significant number of African-Americans, who could not or would not return to New Orleans after the hurricane, an estimated 90 percent of Vietnamese-

Americans came back within two years. Many of them rebuilt their homes and reopened their businesses despite getting little or no help from government agencies. Cao emerged as a leader in dealing with bureaucrats on behalf of his community. "Before the storm, I guess you could call us libertarians," Vien Nguyen, the pastor of Mary Queen of Vietnam church, told Eric Tang for the *Huffington Post* (December 10, 2008, on-line). "Our attitude toward government was, 'you don't bother us, we won't bother you.' But Katrina changed all that. We had a responsibility to speak out." Both the church and Cao's law office became hubs of community activism, with Cao pushing for the restoration of telephone service and other utilities, preventing the dumping of hazardous Katrina-generated waste in a neighborhood landfill, and providing legal assistance to people whose insurance companies had turned down their claims or had not responded to messages. The church launched a rebuilding and development project, and Cao was named to the board that oversaw it. (Despite such efforts, East New Orleans's recovery from the devastation caused by Hurricane Katrina is still far from complete.) During that period Cao's name recognition in his community greatly increased.

In 2007 Cao—impelled partly by a sense of duty that he has attributed to his religious beliefs—ran as an Independent for a seat in the Louisiana State House of Representatives. Although he failed in that bid, he decided to enter the race for the seat in the U.S. House of Representatives for Louisiana's Second District, which had been held since 1991 by William Jefferson, a Democrat. In 2005 the FBI had begun to investigate charges that Jefferson had accepted bribes to help a high-tech American company get clients in Africa; in 2006 the House of Representatives voted to remove him from the Ways and Means Committee (he voluntarily stepped down from the only other committee on which he sat), and in June 2007 a grand jury indicted him on 16 counts of bribery and corruption. Although Jefferson maintained his innocence and retained the support of many of his constituents, Cao believed that because of the congressman's mounting legal troubles, his winning a 10th term could no longer be regarded as a foregone conclusion. Republican Party leaders considered Cao a long shot at best, however, and they did almost nothing to support his candidacy. No other Republicans threw their hats into the ring for Jefferson's seat, so there was no need for a Republican primary election. On the Democratic side, five people in addition to Jefferson were to be on the ballot on primary day, which was scheduled for September 6, 2008.

In his December 2008 conversation with David Freddoso, Cao spelled out his platform: "Reform—reform of the image of Louisiana, good government, and accountability. Also, I've campaigned on coastal restoration after the hurricanes, and health care. . . . The whole question of conservative and liberal is really not that relevant in this race. For me, the emphasis, again, is in the rebuilding, the progress in the second district, and that's what I've been emphasizing." Cao also expressed his desire to be a progressive voice in his party, particularly regarding immigration, an issue on which the GOP has generally emphasized the importance of making U.S. borders impregnable, supported the immediate deportation of illegal aliens without hearings, opposed measures that would enable illegal aliens to gain legal status, and remained silent on the difficulties that drove such people from their native lands or those that they endure in the U.S. "When minorities like me hear that negative message, we really have to think what's going through these people's minds," Cao told Liz Halloran for NPR. "Even though we need to have security and prevent illegal immigration, we don't have to express it negatively."

Meanwhile, because of Hurricane Gustav, the Democratic primary had been moved back, to October 4. In that election Jefferson won a plurality rather than a majority of the votes cast, which made necessary a runoff election in which Jefferson faced the second-place winner, Helena Moreno, a former TV newscaster. That contest took place on November 4, the national Election Day. On that day Jefferson was victorious, despite his indictment and the confiscation by FBI agents of $90,000 in marked bills stashed in his freezer; he was apparently aided by the larger-than-usual turnout of blacks in his district, some 75 percent of whom came to the polls to vote for Barack Obama, the Democratic presidential nominee. During the weeks before the December 6 election, Jefferson condemned Cao as an "opportunist"; he told Frank Donze for the *Times-Picayune* (December 2, 2008) that Republican Party "operatives are reaching out to individual Republicans to give money to this man who they don't even know. . . . Where [Cao] can get the money is where he runs, and that's what is happening now." For his part, Cao described Jefferson as a compromised candidate whose legal troubles were hurting his constituents. In addition to his losing his committee assignments, Cao told Freddoso, "he's been a very poor representative. For the last three and a half years, nothing has been done by him. He has put through exactly one bill in the last three and a half years, and it was a bill to change the name of a post office. If you're talking about effective representation—well, no. There has effectively been no representation of this district at all for three and a half years now." On the day of the election, fewer than 67,000 voters came to the polls (about 100,000 fewer than in November) to choose from among Jefferson, Cao, the Green Party candidate, Malik Rahim, and the Libertarian Party candidate, Gregory Kahn. With 49.54 percent of the vote to Jefferson's 46.83 percent, Cao was victorious. "If not for Gustav, we would have been swamped by African-American voters on Election Day [November 4], and I would still be ignored," Cao admitted to Halloran.

Almost immediately the Republican establishment in Washington, reeling from their losses of the White House and the Senate and their failure to regain a majority in the House, hailed Cao's improbable victory as a hopeful sign for the GOP. The House Republican leader, John Boehner of Ohio, released a memo entitled "The Future is Cao" (December 7, 2008, on-line), in which—notwithstanding his silence during Cao's campaign—he wrote, "The Cao victory is a symbol of what can be achieved when we think big, present a positive alternative, and work aggressively to earn the trust of the American people. . . . The Cao victory is a symbol of our future." In his talk with Halloran four days after the election, however, Cao said, "I'm a little bit mad at the Republican Party because they, like everybody else, ignored us until the very end—until they saw that we might actually win. The message was, Why waste our time?" He has also said, as quoted by Benjamin Sarlin in the *Daily Beast* (September 16, 2009, online), "I would hope that . . . if the future truly is Cao, then we have to be approachable to minorities. We have to be approachable to the average American family. We have to be approachable to the average American. Unfortunately, I don't believe our message has been that. It's been somewhat anti-immigrant, it's been oftentimes too pro-business and anti-family."

On his campaign Web site, Cao had listed as his priorities ethics reform; recovery from Hurricane Katrina; coastal restoration, in part for purposes of protection during hurricanes; redevelopment of the port of New Orleans; economic recovery, including job creation; health-care reform; education reform; preservation of wetlands; and reduction of wasteful spending by the federal government. Cao was assigned to the Transportation and Infrastructure Committee and the Committee on Homeland Security, and later in his first year, he was appointed in addition to the Oversight and Government Reform Committee. The primary task of the last-named committee is to oversee and investigate federal programs. "This Committee has been the driving force behind Congress' investigation into what went wrong at all levels of government during Hurricane Katrina," Cao said, as quoted in Congressional Documents and Publications (October 8, 2009). Very soon after his arrival in Washington, Cao began focusing on getting funds secured for the redevelopment of his district in New Orleans; he also continued to speak out against the government agencies that had failed his constituents after the storm. In a move that was unpopular with his heavily Democratic district, he opposed president Obama's economic stimulus package, arguing that it would provide too little help for his district. On the other hand, to date Cao has been called one of Obama's few reliable Republican supporters in the House. Despite being pressured by the increasingly partisan Republican leadership to vote against the president's policies, Cao has cited Obama's attention to the problems in New Orleans and his pledge to help rebuild it as the main reasons for his support for the White House on several key votes and issues. "In the last eight months, for example, we have been able to channel out over $1 billion in recovery money to help to rebuild schools, fire stations, hospitals and so on," he told Alex Witt on MSNBC (October 15, 2009, on-line). "So there has been tremendous movement in the district in regards to recovery and we are very gracious to the president." Skeptics, however, suggested that Cao's backing of Obama stemmed mostly from his weaknesses as a Republican representative of a Democratic district. "Cao's willingness to play ball with the White House has a lot to do with his status as the most vulnerable incumbent of any party in 2010," Sarlin wrote. Sarlin also noted that Cao, perhaps hoping to impress his African-American constituents, sought membership in the Congressional Black Caucus. (As of late October 2009, he had not been invited to join.) While some observers have written Cao off, predicting that he will not be reelected, he has surprised many with his fundraising prowess, having raised $365,000 in the second quarter of 2009 alone.

Cao's wife, Hieu Phuong "Kate" Hoang, worked as a pharmacist at a Walgreens branch until her husband's election to Congress. The couple have two daughters, Sophia and Betsy.

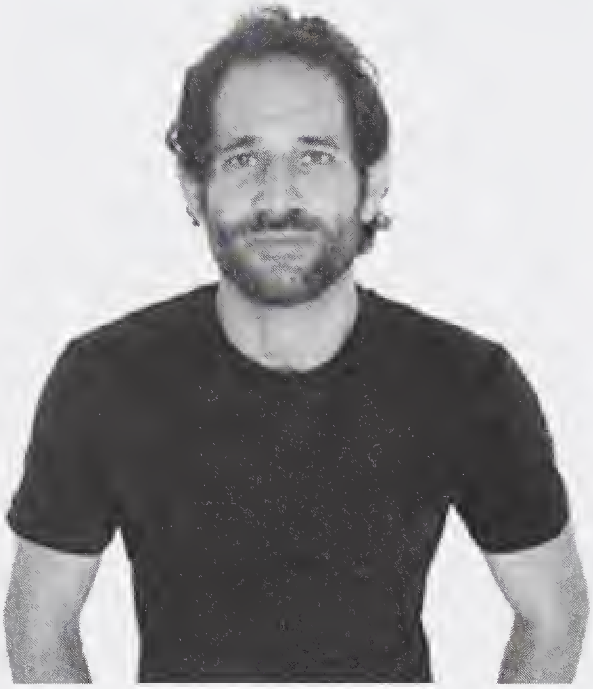
Charney, Dov

(dohv)

Jan. 31, 1969– Founder and chief executive officer of American Apparel Inc.

Address: American Apparel, 747 Warehouse St.,
Los Angeles, CA 90021

"America doesn't need another faceless, institutional apparel company," Dov Charney once said, as quoted on the Web site Young Entrepreneur (March 11, 2008). "They need an apparel company that gets it and does it right." Charney is the founder, president, and chief executive officer of American Apparel, which makes and sells T-shirts and other products and operates the largest clothing factory in the United States. All of American Apparel's operations, from design to manufacturing to marketing and distribution, take place in Los Angeles, California—making the company highly unusual at a time when an estimated 95 percent of the



American Apparel via Getty Images

Dov Charney

clothing sold in the United States is made in other countries. Founded by Charney in 1998, American Apparel is also very unusual because its sewing-machine operators earn, on average, $12 an hour, or about $25,000 per year—$10,000 more per year than the newly established federal minimum wage and far more than is earned by the vast majority of people who sew in factories, not only overseas but in the U.S. as well. Moreover, American Apparel sewers earn additional pay for working more quickly than their peers in the company. In contrast to the lack of employee benefits and the inhumane conditions that have led many clothing factories the world over to be condemned as sweatshops, American Apparel provides clean, well-lit, well-ventilated work areas and a host of employee benefits: company-subsidized medical and dental insurance; paid vacation time; English- and Spanish-language classes; citizenship-preparation classes; and much more. Charney has worked for the reform of U.S. laws regarding immigration and has given his employees, most of whom are Mexican immigrants, time off to participate in marches calling for such reform. He has also tried to keep American Apparel's environmental footprint as small as possible—for example, by using a rooftop solar-energy-generating system to cut down on fossil-fuel consumption, buying increasing quantities of yarn made from organically grown cotton, and recycling fabric scraps. Unlike nearly all other clothing companies, which rely on professional models for their advertisements, American Apparel uses as clothing models company employees and men and women Charney happens to meet on the street or elsewhere, and he himself often photographs them for the firm's ads. "Most importantly," according to the American Apparel Web site, "we guarantee job security and full-time employment; this is an anomaly in the garment industry, which has historically been dominated by seasonal work."

Charney has said that while his decent treatment of workers, use of high-quality yarn and innovative knitting techniques, and rejection of outsourcing make American Apparel products more costly than comparable items sold elsewhere, his company's rapid growth and profits demonstrate the excellence of his business model. (American Apparel is the nation's third-largest manufacturer of T-shirts, after Hanes and Fruit of the Loom.) Total wholesale, retail, and on-line sales increased from $132 million in 2004 to $545 million in 2008. In the latter year about 80 additional American Apparel stores opened, bringing the total number of stores, since the opening of the first one, in 2003, to 129 in the U.S., 34 in Canada, and 64 in other countries. In 2008 retail sales brought in $341 million, an increase of 62 percent over the previous year; retail sales in the first quarter of 2009 were bigger than in the same quarter in 2008, but those in the third quarter were 15 percent smaller than in the third quarter of the previous year. Nevertheless, the current economic downturn has affected American Apparel's retail sales less than those of many other businesses, largely because the firm's customers are mainly young people whose buying power has remained more or less unchanged, since few of them own stocks, houses, or cars and few are parents. "They're willing to pay a little bit more for higher-quality nonsweatshop products," Todd Slater, an analyst with Lazard Capital Markets in New York, told Maya Meinert for the *Los Angeles Business Journal* (January 5, 2009, on-line). "The prices aren't egregious. What you lose on price you more than gain in cachet, quality and speed." By "speed," Slater was referring to the time lapse between the concept for and design of a garment and its arrival in stores: one week for an American Apparel product, thanks to vertical integration (a system in which all facets of the business are under the direct control of a firm's top management), in an industry in which the average is three months. Speed has enabled American Apparel to respond rapidly to changing trends in fashion and to offer garments that reflect current tastes yet are "basic enough [that] they don't quickly go out of style," in Meinert's words. Except on the label, none of the items in American Apparel's line display the company logo.

In December 2006 American Apparel announced its forthcoming merger with the investment company Endeavor Acquisition, in a deal that brought Charney $382.5 million; the agreement was completed a year later, and American Apparel went public. Since then its stock price has dropped more than 85 percent, in part because of the firm's large debt load and to some extent because of several controversies that have swirled around the firm for several years. Those controversies are related to its print ads, which have been described as bordering on the pornographic and as demeaning to women; the presence of illegal aliens in the company's workforce; allegedly unrealistic production goals and the stressful conditions that have resulted; and charges of antiunion activity by management. Charney's sexually provocative dress, speech, and behavior in the workplace have also been called into question; four of his former female employees have sued him, on the grounds that he sexually harassed them and created an atmosphere in which they felt unsafe. One of the four lawsuits was dismissed and two have been settled out of court; the fourth remains active. In May 2009 the company paid $5 million to the filmmaker and actor Woody Allen to settle a suit involving American Apparel billboard ads that used a still photo of Allen from one of his films (*Annie Hall*) without his permission.

Such difficulties notwithstanding, Charney was named the man of the year by *GQ* magazine in 2003 and by the Los Angeles Apparel Industry, Fashion Industries Guild in 2004. Also in 2004 he won the Grand All-Star Award from *Apparel* magazine and the Ernst & Young Entrepreneur of the Year Award. He earned the 2008 Michael Award as retailer of the year, joining such past recipients as Calvin Klein, Oscar de la Renta, and Tommy Hilfiger. In surveys conducted in 2007 by Outlaw Consulting and in 2008 by Brand Keys Inc. and the Intelligence Group, respectively, American Apparel was ranked second among trendsetting brands, second among the top retail apparel stores, and eighth among the most trusted retail brands in the U.S.

A self-described "Jewish hustler," Dov Charney was born on January 31, 1969 in Montreal, Quebec, Canada. He has one sister and one half-sister. Charney's mother, Sylvia Safdie, whose parents were descended from Syrian Jews, was born in Lebanon and lived in Israel before immigrating to Canada; she is a painter and sculptor whose work is included in dozens of public, private, and corporate collections in Canada and overseas. Charney's father, Morris Charney (whose given name is misspelled as "Maurice" in many sources), is a native of Canada and a self-employed architect. Charney's maternal uncle Moshe Safdie is also an architect; he has been celebrated worldwide since Habitat 67, a housing complex that he designed, was built in Montreal in conjunction with the 1967 World's Fair.

Charney grew up in Westmount, a Montreal suburb. He attended an alternative elementary school, the Fine Arts Core Education School, which, on his Web site, he described as "fantastic." One of his teachers, Jim Stiller, he wrote, "had a profound influence on me. It was from him that I shaped a lot of my thoughts about discrimination and why it has a negative force on humanity." The hyperactive Charney suffered from a severe learning disability and, by his own account, was "functionally illiterate" when he graduated from sixth grade. Nevertheless, at age 10 he began to publish his own newspaper, called *What's Up*; containing stories by friends and classmates and photos that he shot himself, it appeared sporadically, with paid advertising that Charney solicited, and sold for 20 cents. Within a year it had several hundred subscribers. Its contents, Rebecca Rosenberg wrote for the *Canadian Jewish News* (June 5, 1980), included articles about such "grownup" issues as child molestation and inflation. According to Rosenberg, at 11 Charney was already "an avid news devotee, reading the newspaper daily and delaying the family's supper until he [had] viewed the televised evening news." His mother often expressed her views about world events; she used to tell her son that the two most serious threats to humankind were nationalism and religion.

For five years starting in seventh grade, Charney attended St. George's School, in Montreal. There, Rodney Walker, an English teacher, tutored him daily until he mastered reading and writing; another teacher, Hyacinth Young, awakened in him an awareness of "alternative thinking about race and politics," in his words. He earned a diploma from St. George's after he completed 11th grade and then spent a year at Choate Rosemary Hall, a prestigious boarding school in Wallingford, Connecticut. After his Choate graduation, in 1987, he enrolled at Tufts University, in Boston, Massachusetts. His major was American studies.

As a child Charney had come to love aspects of the U.S. and some of its products. During visits to his grandmother in Florida, he would buy items not available where he lived—certain brands of sunglasses, for example—and then he would sell them to his classmates. One year he became obsessed with American-brand T-shirts, particularly the Hanes Beefy. "Those Hanes T-shirts made me feel like the man I wanted to be," he told Josh Sims for *easyJet Inflight* (May 2004). While in high school Charney began buying T-shirts in the U.S. and reselling them in Canada. At Tufts he and a dormitory mate, Eric Ribner, launched their own business, with $2,000 of Ribner's savings; they would buy T-shirts that were on sale at K-Mart and elsewhere, screen-print them, and sell them out of their room. Within weeks, according to Charney, they had made a substantial profit.

So enthralled was he with the business that in 1991, after his junior year at Tufts, Charney dropped out of college and, with a $10,000 loan from his father, moved to Columbia, South Carolina, to set up a T-shirt manufacturing company. He would buy yarn in lots of thousands of pounds and have it knitted into fabric, dyed, cut, and sewn. His label bore the words "American Heavy." On his Web site Charney wrote that several South Carolina businessmen generously shared their knowledge of the design and manufacture of T-shirts with him. "Without a doubt, it was in South Carolina that I became a T-shirt expert," he wrote, "and I think today I am one of the most well-educated T-shirt men in the country." Despite what he learned, American Heavy went bankrupt in 1995.

Charney spent the next couple of years traveling in the U.S., scrutinizing people's T-shirts and thinking about the T-shirt business.

In 1997 Charney settled in Los Angeles. Short of funds, for months he lived in a friend's apartment, sleeping on a couch. During that time he began networking with people in the fabric-knitting and -dyeing businesses and with sewing contractors, most of whom were Korean immigrants. With two Koreans, Sam Lim and Sam Kim, he launched American Apparel in 1998. Even before they became partners, he recalled on his Web site, "the Korean garment community was vigorously supportive of my work. . . . Many suppliers extended me credit even after I bounced so many checks on them and continuously failed to pay them on time." American Apparel began as a strictly wholesale operation, manufacturing T-shirts that sold for between $3 and $4 per shirt—about double the cost of competitors' shirts. The higher price was connected to the quality of the fabric Charney used—softer and with greater stretch, and therefore more expensive, than others' fabrics—and a new knitting technique. Charney was determined to make a T-shirt that would be more form-fitting than the boxy-looking T-shirts being made at that time. Instead of hiring professional models for fittings, he would ask women who worked at a nearby strip club to try on American Apparel shirts. Charney told a reporter for *Bobbin* (May 2001), "We're focused on quality. We want to be the Starbucks—the gourmet T-shirt maker. Not everybody needs Starbucks. . . . Some people just want the sixty-cents cup. But some people want the best coffee, and will pay $3, $4, $5 for it. We're looking for those people who want a better T-shirt."

Initially, Charney had some of his products manufactured in Mexico, but his conscience—and problems with quality and communication—ended that brief experiment with outsourcing. "It wasn't feel-good and it wasn't viable," he told Linda Baker for the *New York Times* (December 14, 2003). "You think it makes you proud to pay someone $40 a week to make shirts all day? I spend $40 on a drink." Since then all American Apparel products have been manufactured in Charney's Los Angeles factory; indeed, all of the activities associated with his business take place there or nearby in a process known as vertical integration, which Charney believes is more efficient as well as more ethical than the practice of outsourcing. When David Greenberg interviewed him for the *Los Angeles Business Journal* (May 31, 2004), Charney said that the cost of producing a T-shirt in his factory was about 55 cents. "You take [production] to China and maybe you can cut that down to five cents," he said. "However, being in China—the elongated supply chain, the different time zone, the language barrier, the fact that you can't supervise production in a way you ordinarily could, the extra time it takes to react to different impulses of demand, the fact that you can't do shorter runs—all of those things involve a cost. I believe that my intangible costs are lower than [those of] my competition."

In 2002, having concluded that his business needed better organization, Charney hired Martin Bailey, an apparel-industry veteran, as American Apparel's vice president of operations. Among his first innovations, Bailey divided cutters and sewers into groups, each of which became responsible for producing a single type of clothing; each group competed with other groups to meet self-determined production goals and thereby augment their members' incomes. Within a few months the number of garments manufactured each day had grown from 30,000 to 90,000, with salary increases reflecting that rise in productivity. Since 2007 Bailey has served as the chief manufacturing officer.

In 2003 the Union of Needlework, Industrial and Textile Employees (UNITE) attempted to unionize American Apparel. At that time the competition among sewers in the company's 800,000-square-foot, pink-brick factory in downtown Los Angeles, and the resulting pressured, stressful atmosphere, as well as what Christopher Palmeri, writing for *BusinessWeek* (June 27, 2005), described as the "sexually charged culture" that Charney allegedly encouraged there, became targets of attack. During a six-month investigation conducted for Know-More.org (August 22, 2006), Bernard Dolan, a co-founder of that site, heard contradictory accounts from Charney and UNITE representatives about the conflict that ensued. Charney, for his part, contended that UNITE, as a way of forcing him to sign a contract that would have imposed a union on the workers, had threatened to arrange agreements whereby suppliers and buyers would refuse to do business with his firm unless it was unionized. He argued that because of the well-documented corruption that had plagued the union, the requirement that members pay union dues, and the exemplary working conditions that already existed at American Apparel, a union would do his employees more harm than good. On the other side, UNITE representatives complained to Dolan that American Apparel personnel had repeatedly obstructed their efforts to communicate with workers about the benefits of unionization and that a memo to employees from Charney had contained a veiled threat that unionization might cause the firm to go bankrupt. In November 2003 UNITE filed a complaint against American Apparel with the National Labor Relations Board. The following January the firm reached a no-fault settlement with the board, and in May 2004, after the company posted notices in the factory regarding workers' rights to join a union and Charney's "neutrality" concerning unionization, the case was dismissed.

According to Andrew Ross Sorkin and Michael Barbaro, writing for the *New York Times* (December 18, 2006), Charney "has gained a reputation as the Hugh Hefner of retailing." He has become famous, or notorious, for working among employees in American Apparel briefs at times, talking about sex in language that is generally considered obscene, and engaging in consensual sexual relationships with many of his female workers. The four former employees who sued Charney for sexual harassment constitute a tiny percentage of American Apparel's workforce, which now numbers 10,000, and Charney has described them as "disgruntled" and as having been dismissed for poor performance. Nevertheless, newly hired men and women must sign a statement that reads, as quoted by Jamie Wolf in the *New York Times Magazine* (April 23, 2006), "American Apparel is in the business of designing and manufacturing sexually charged T-shirts and intimate apparel, and uses sexually charged visual and oral communications in its marketing and sales activities. Employees working in the design, sales, marketing and other creative areas of the company will come into contact with sexually charged language and visual images. This is a part of the job for employees working in these areas." Regarding the charges that American Apparel ads feature underage girls and soft-core pornography, Charney has insisted that none of the women pictured have been underage, that sexual innuendos have driven clothing ads since the 19th century, and that American Apparel ads are no more provocative than countless ads that run in mainstream periodicals. As to the accusation that many of his workers are illegal aliens, Charney has pointed out that every person he hires must present papers documenting his or her legal status. He has acknowledged, though, that forged documents are not difficult to obtain. He has spent thousands of dollars of his own money in attempts to obtain green cards for some of his workers. In the fall of 2009, however, American Apparel announced that 1,800 employees—roughly one-fourth of its workforce—would be let go, because a federal investigation had found problems with the identity documentation of those workers. Among the general public, some praised the federal government for exposing apparently illegal workers, while others maintained that the government should focus instead on the exploitation of illegal immigrants by their employers.

Writing for *Inc.* (September 2005), Josh Dean described Charney as "a tightly wound dervish of energy." Charney has told interviewers that he does not believe in monogamy or marriage. He lives in Los Angeles and maintains a corporate apartment in New York City.

Chestnut, Cyrus

Jan. 17, 1963– Jazz pianist

Address: c/o Avenue Management Group, Suite 407, 250 W. 57th St., New York, NY 10019

The pianist Cyrus Chestnut has distinguished himself as a prolific, versatile, and in some ways iconoclastic musician, happily and fearlessly integrating several genres and influences. He is known particularly for his ability to play soulful, gospel-infused music, which he traces to his childhood performances in the Baptist church his parents attended; listeners have frequently said that Chestnut "takes the people to church" when he plays. Before becoming a jazz star in his own right, Chestnut worked as a sideman in groups led by Jon Hendricks, Terence Blanchard, Donald Harrison, Wynton Marsalis, and Betty Carter; he has referred to his tenure with Carter's group, in the early 1990s, as his most formative period. In leading his own groups, Chestnut has won the most praise for his work as part of a trio, backed by a bassist and drummer. "As a leader, Chestnut has . . . almost single-handedly in a jazz generation dominated by horn players, raised the profile of the jazz trio . . . ," Tim Blangger wrote for the Allentown, Pennsylvania, *Morning Call* (October 4, 1997). "He's got the full sound of one of the old stride piano players, that fullness of tone," the legendary vocalist Hendricks told Nia Ngina Meeks for the Norfolk *Virginian-Pilot* (May 16, 1998). The music professor and jazz historian Mark C. Gridley said to Meeks that Chestnut "has a pretty solid rhythmic feeling. If you closed your eyes and didn't know it, you'd be fairly convinced you were sitting in an inner city tavern in the late '50s. '60s." While Chestnut, for all of his varied influences, is seen primarily as a player of traditional jazz, he has claimed not to feel limited by any rules of the genre and has called his music "kaleidoscopic." He said on the TV program *Tavis Smiley* (March 29, 2007, on-line), "I've always liked to stretch the type of music, 'cause being a quote, unquote jazz musician, you're supposed to do just certain things. And honestly, to keep the true tradition—great jazz musicians such as Miles [Davis], he pushed the envelope." Nate Chinen wrote for the *New York Times* (July 8, 2006): "Chestnut is one of jazz's most convincing anachronisms. His brand of crisp articulation and blues-inflected harmony evokes another era. . . . But unlike the typical nostalgist, who pines for the past partly because of a queasy discomfort with the present, Mr. Chestnut appears comfortable with his placement in time."

Cyrus Chestnut

Cyrus Chestnut was born on January 17, 1963 in Baltimore, Maryland, the son of McDonald Chestnut, a retired postal worker, and Flossie Chestnut, a city social-services worker. He grew up in Baltimore's Govans neighborhood. When Chestnut was a small child, his father played the piano to try to lull his son to sleep; Chestnut became enamored of the instrument's sound, and soon he was trying to play the piano himself. While banging on the keys, as he told Bob Young for the *Boston Herald* (November 16, 1994), "I'd just scream and holler. After a while my parents realized that I wasn't going to stop. They said, 'Let's teach him a bit and maybe his banging will be a little more pleasant to the ear.'" When he was five his father began teaching him to play, and he later took lessons from others. At six Chestnut started playing piano at the Mount Calvary Star Baptist Church, where his father was the organist and his mother the choir director. He has said that his skill at improvising and integrating jazz and gospel grew out of his having to accompany spontaneous passages in music. "It was my job to figure out what they were doing, and to follow them [musically] no matter where they went. I had to play behind them," he told Blangger. At nine Chestnut began studying classical music at the Peabody Institute, in Baltimore. In addition to the gospel music that filled his home and church, Chestnut was exposed to the popular music played on the radio, by groups including the Jackson Five, Parliament, the Spinners, and the Four Tops. He also discovered jazz. "When I was nine, I took my own money down to the five and dime store and bought a record called *Thelonious Monk's Greatest Hits* for $1.99," Chestnut told Mark L. Small for *Berklee Today* (Spring 2001). "That had a large impact on me. I didn't know who [the jazz pianist and composer] Monk was when I bought it. I just saw the picture on the cover of a man sitting at the piano, and I wanted it." Still, in the ninth grade at North Harford High School, Chestnut was initially more interested in playing junior-varsity football than in playing music. That changed, as he told R. J. DeLuke for the All About Jazz Web site (February 11, 2008), when "the band director came up to me and said he wanted me to play in the jazz band. I didn't think twice about it."

In 1981 Chestnut enrolled at the Berklee College of Music, in Boston, Massachusetts, which has served as a training ground for many of the country's top jazz musicians. He excelled at Berklee, winning the Eubie Blake fellowship, the Quincy Jones scholarship, the Oscar Peterson scholarship, and the Basie Award. Unlike many of his peers, who left the school to take jobs with established bands after getting what has been called the "two year itch," Chestnut acted on his parents' advice to stay at Berklee, graduating in 1985. He then returned to Baltimore and found work playing on a Caribbean cruise whose performers also included the jazz greats Dizzy Gillespie, Joe Williams, Tommy Flanagan, Maxine Sullivan, and Gerry Mulligan. "That was quite an experience for a young musician, being able to hang out with all of those people," Chestnut told Jack Lloyd for the *Philadelphia Inquirer* (April 19, 1996). After he returned to Boston, Chestnut began playing at hotels and found out that Jon Hendricks was holding tryouts for his group. He auditioned successfully, staying with the band from 1986 to 1988 and moving to New York City. "I felt like the green boy with them," he told Small. "I'm glad that I had the good fortune of being exposed to some of the great jazz pioneers." He also benefited from the larger music scene in New York, telling DeLuke: "I loved it at the time. I was able to hang out with some of the greats, able to go to a club and see Cedar Walton hanging out. George Coleman. All the cats, they used to just come and hang out." He spent the years 1988 to 1991 working with groups led by talented artists of his generation, including the saxophonist Donald Harrison and the trumpeters Terence Blanchard and Wynton Marsalis.

According to Chestnut, his most important apprenticeship was under the great jazz singer Betty Carter. He has referred to the two years and three months he spent as her pianist (1991–93) as being like graduate school. Often compared to the legendary drummer Art Blakey for her ability to scout and mold the best young musicians around, Carter was known as an intimidating and demanding bandleader. Chestnut had met Carter when he was a student at Berklee; she had come without a pianist to give a talk and perform at the school, and the students assembled in the audience suggested that Chestnut was up to the job of accompanying her. "She invited me up, and I was shaking," Chestnut recalled to Small. "She called 'Body and Soul,' and I thought, great, I know this one. This is going to be fun. As I went to the piano she said, 'Play it in G.' I had always played it in C. When I sat down and couldn't think of what the first chord would be, Betty started singing the chords to me. Afterwards, I went backstage figuring I would apologize and take my whupping like a man. She gave me a hug and said it was wonderful. I learned a good lesson that day about being nervous. You have to find a way of channeling nervous energy so that it can be of benefit to you." Chestnut's tenure with Carter was pivotal for him, because she demanded that her band members take risks—to create, rather than re-create, the music they played. "She was the one who planted the seed in me to always try something different," the pianist told Peter Kirn for *Keyboard* (November 1, 2006). Another lesson Chestnut learned from Carter, as he said to DeLuke, was to "win people over with skill, not with gimmicks and tricks. She'd always say jazz is about finding out who you are. That takes work."

Meanwhile, Chestnut had stepped into the role of leader for several recordings, including *There's a Brighter Day Comin'*, a gospel album released in 1989. He followed that up with several albums he recorded as part of a trio: *The Nutman Speaks* and *The Nutman Speaks Again*, both released on the small Japanese label Alfa Jazz in 1992, and *Nut* (1992) and *Another Direction* (1993), released on Evidence, another small label. While those albums had shown that Chestnut could interpret standards intelligently as well as compose original music, their impact was limited by low distribution. In the early-to-mid-1990s, just as Chestnut began to wonder whether he would ever break through, major labels began to revive their long-neglected jazz subsidiaries by signing gifted young artists. While some of the "young lions," as they were often called, were signed in the early 1980s, that first wave had been "driven by marketing," Matt Pierson, a producer at Warner Bros. Records, told Jeff Levenson for *Billboard* (April 2, 1994). "It was an age trend"—that is, labels had signed up musicians based on their youth as much as their talent. The second wave, Pierson explained, was "music-driven. Labels are looking for artists who have their own voice, who have stories to tell, which is the way it should be." One night, as Chestnut was playing for Betty Carter at New York's famed club SOB's, an executive from Atlantic Records—which was launching its Atlantic Jazz subsidiary and was looking for talent—saw him play and asked Chestnut for a meeting. "Not long after [the meeting], I was at a pay phone at a subway stop in New York checking my phone messages," Chestnut told Small. "There was one . . . saying Atlantic wanted to sign me. I just started yelling and jumping up and down in the subway."

In 1993 Chestnut, then 30, signed with Atlantic, left Carter's group, and recorded *Revelation*, again as the leader of a trio, this one including Clarence Penn on drums and Christopher J. Tomas on bass. *Revelation* was a critical and commercial success, vastly exceeding expectations to become the year's best-selling jazz release, with the *Village Voice* and the *New York Times* calling it one of the best jazz albums of the year. Critics and fans praised the gospel and blues sensibilities evident on the albums's 11 tracks, all but two of which were composed by Chestnut. The pianist has since become most recognized for his live and recorded work in the trio format. "It puts me up on the front seat and it challenges me," Chestnut explained to DeLuke. "A lot of times people, I think, will think that the piano trio is just a little country club thing for background music. [But] the Oscar Peterson trio. . . . Ahmad Jamal's trio. . . . McCoy Tyner's trio and Herbie Hancock's trio, the Bill Evans trio—they were not trios to be in the background. If you were to run with a quartet, quintet, sextet, octet, or whatever, a lot of times the pianist goes into the role of accompaniment until it's his time to solo. But in a trio, you have the opportunity to design everything."

In 1994 Chestnut released *The Dark Before the Dawn* on Atlantic Records, with Steve Kirby on bass and Clarence Penn on drums. He followed up that well-received record the next year with *Earth Stories*, also on Atlantic, an album that showed growth, maturity, and versatility, in the opinions of critics, and that further showcased his writing skills: most of the tracks were original compositions. That same year, 1995, Chestnut recorded with the opera diva Kathleen Battle; their chemistry, owing in part to their shared church backgrounds, was so strong that Chestnut joined her on an extensive tour in 1995 and 1996. Also in 1996 Chestnut released an ambitious, gospel-influenced solo effort, *Blessed Quietness: A Collection of Hymns, Spirituals and Carols*. "Chestnut has taken a group of songs that already mean a great deal to the listener, and attempts to share what they mean to him," Jason R. Laipply wrote in a glowing review on the All About Jazz Web site (October 1, 1997). "Putting his faith, heritage, and musical talent on full display, Chestnut proves himself the type of musician who is unafraid to strive for direct communication. And with his unique arrangements of several of the pieces, he proves himself a man unafraid to push towards the new." Meanwhile, Chestnut continued to lend his skills as a sideman to several projects, including Kevin Mahogany's 1997 album *Another Time, Another Place* and James Carter's 1998 record *In Carterian Fashion*, to name just two of the numerous albums to which Chestnut has contributed in his career. He also performed live with several prestigious orchestras, including the St. Louis Symphony. He boosted his exposure in 1996 when he appeared briefly in Robert Altman's film *Kansas City*, as a prohibition-era stride pianist modeled on Count Basie. (He was also featured—as himself—in the related Altman documentary, *Jazz '34*.) In 1998 the pianist released *Cyrus Chestnut* on Atlantic, widely considered to be one of his best recordings. Working with the legendary Atlantic Records producer Ahmet Ertegun, Chestnut had the chance to perform with top names in contemporary jazz, including a trio boasting Ron Carter on bass and Billy Higgins on drums, supplemented by Joe Lovano and James Carter on saxophones and Anita Baker on vocals. Critics praised Chestnut for his intelligent and soulful compositions, again pointing to his ability to integrate blues and gospel seamlessly into a jazz setting.

In 2000 Atlantic approached Chestnut with a project they felt would be commercially successful and could lead to a crossover market. *A Charlie Brown Christmas* featured guest vocals from Vanessa Williams, Brian McKnight, the Manhattan Transfer, and the Boys' Choir of Harlem. The album was intended as both a commemoration of the 50th anniversary of Charles M. Schulz's comic strip, *Peanuts*, featuring Charlie Brown, and a reinterpretation of Vince Guaraldi's classic jazz album *A Charlie Brown Christmas*, whose music is featured on the beloved TV special of the same name, aired annually since 1965. Chestnut told DeLuke that he jumped at the opportunity to make the record because Guaraldi's Charlie Brown music "was really my first introduction to jazz. Because at the age of six or seven, watching the Charlie Brown cartoon, I was listening to the music of Vince Guaraldi." Chestnut also told Lisa Simeone for the National Public Radio Show *All Things Considered* (December 16, 2000) that when he was 16, he was asked to provide entertainment during the intermission at a high-school jazz-band contest. "I had just learned 'Linus and Lucy,' so after playing a few makeshift improvisations, I started playing 'Linus and Lucy.' The audience went wild. And through the rest of my high school days, I was known as the boy who could play Charlie Brown."

Returning to original compositions in 2001, Chestnut released *Soul Food*, featuring a strong trio with Christian McBride on bass and Lewis Nash on drums, supplemented with guest appearances by Marcus Printup, James Carter, Wycliffe Gordon, and Stefon Harris. The recording was included on *Down Beat* magazine's Best Records of 2002 list and made it to the Top 10 on the jazz charts. Chestnut told Steve Graybow for *Billboard* (October 20, 2001) that although he remains steeped in the jazz tradition, he was pleased that the album was not promoted exclusively as a traditional jazz recording, an approach record companies have often used as a marketing hook. "I don't want to be imprisoned by jazz history," he told Graybow. "I want to build upon history and move myself forward."

Despite the success of Chestnut's albums for Atlantic, in the early 2000s the major record labels "began a retreat from jazz," as Andrea Canter put it for JazzPolice.com (February 16, 2006), and Chestnut was dropped from the label. Before long Warner Bros. signed him and suggested that he make a gospel record. "The norm is to do a record stereotypical of that genre," Chestnut said, as quoted in a review of the resulting album, *You Are My Sunshine* (2003), on JazzWorld.com. "People say I have all these various influences in my music—classical, soul, gospel, jazz, etc. I've always been on this continuous journey to try to find ways of how to get all these various influences working together, not separately, but working as a 'collective roundtable' . . . I wrote some tunes for this album in an effort to show my intent to write and play that goes far beyond the nomenclature." Chestnut also said, as quoted by Makkada Selah in the *Miami Herald* (July 16, 2004), that he wanted to go beyond some of the enduring, limiting, and mutually exclusive notions associated, respectively, with jazz and religious music: "Jazz has been labeled secular, but it is both religious and secular. The spirituals on my CDs are as standard as any Cole Porter tune." While critics praised the album, Warner Bros. did not renew his contract.

In 2004 Chestnut collaborated with Ali Jackson, James Carter, and Reginald Veal on *Gold Sounds*, a jazz interpretation of the music of the 1970s funk group Parliament. In 2006 he released *Genuine Chestnut* on TelArc Records, a trio recording with Michael Hawkins on bass and Neal Smith on drums, which was hailed as another tour de force on which Chestnut fused the various genres he had explored throughout his career. "There's just no way not to like Cyrus Chestnut," Rick Anderson wrote in an AllMusic.com review. "His playing is robust but tasteful, and he plays ballads with a liquid fluency; his original compositions brim with good cheer; he favors middling tempos that neither tempt him to show off excessively nor to bog himself down in extended, self-indulgent elaboration. [*Genuine Chestnut*] showcases all of his strengths."

In 2007 Chestnut released *Cyrus Plays Elvis*, featuring his interpretation of Elvis Presley songs, on Koch Records. He had come up with the idea a couple of years earlier, while recording a version of Presley's "Love Me Tender" with a singer. Realizing that no one had ever done a jazz version of Presley's music, and coming to understand the blues and gospel influences that had informed it, Chestnut began studying Presley's work and reinterpreting it in front of live audiences in 2006. "The thing about all the stuff Elvis did is it's so well loved," he told DeLuke. "He is so well loved. If somebody's going to come in and do an interpretation of it, especially if you're going to bring it into the jazz world, the project couldn't be so space age—throwing in the kitchen sink, so to speak—putting in everything and trying to be just so hip that nobody actually really recognized what it was. On the flip side, it couldn't be just a basic cover, because it would just be corny and that wouldn't work either. So I had to find a happy medium. . . . [*Cyrus Plays Elvis*] goes in interesting directions. It was honest." In 2008 Chestnut released the album *Black Nile* on the Japanese label M&I.

In 2009 Chestnut, who continues to tour with his trio, released a solo album, *Spirit*, on the Jazz Legacy label. Recorded in 2008, the album features solo piano covers of jazz standards and pop songs from the 1970s as well as interpretations of classic hymns and gospel songs. "It's clearly a labor of love for the always impressive pianist, still an underrated player in the general scheme of things," Michael G. Nastos wrote in his review of *Spirit* for the All Music Guide (on-line).

Chestnut lived in Brooklyn, New York, until 2006, when he moved with his wife, Ellen, and daughter, Jazzmin, to Catonsville, Maryland. He can be found in church on Sundays, often playing the piano. "I love playing the piano . . . ," he told J. D. Considine for the *Baltimore Sun* (February 25, 1994). "I hope one day to really master it—but only five minutes before I die. Just let me get there five minutes before I get out of here, and then I'll be fine."

Chu, Steven

Feb. 28, 1948– Secretary of the U.S. Department of Energy; physicist

Address: U.S. Dept. of Energy, 1000
Independence Ave., S.W., Washington, DC 20585

Steven Chu is considered one of the world's leading experts on climate change and the development of alternative, environmentally friendly sources of energy. He first garnered attention in 1997, when he was jointly awarded the Nobel Prize in Physics for his work in developing methods to cool atoms using laser light. In December 2008 U.S. President-elect Barack Obama nominated Chu for the post of secretary of energy. Confirmed by the U.S. Senate on January 20, 2009, he is the first person of Chinese descent to occupy the post.

The second of three sons, Chu was born on February 28, 1948 in St. Louis, Missouri. He came from a family that valued learning. "Education in my family was not merely emphasized, it was our raison d'etre," Chu wrote in an autobiographical essay posted on nobelprize.org. "Virtually all of our aunts and uncles had Ph.D.'s in science or engineering, and it was taken for granted that the next generation of Chus were to follow the family tradition." His father, Ju Chin Chu, earned a chemical-engineering degree from the Massachusetts Institute of Technology (MIT), in Cambridge, where his mother, Ching Chen Li, studied economics. His maternal grandfather had also received an advanced degree in civil engineering, from Cornell University, in Ithaca, New York. (Chu's parents had originally planned to return to China upon finishing college but decided to settle in the U.S., due to the political unrest in their native country.) His older brother, Gilbert Chu, is a professor at the Stanford University School of Medicine; his brother Morgan Chu is a nationally known trial lawyer.

By 1950 Chu and his family had moved to Garden City, on Long Island, New York; his father taught nearby, in the New York City borough of Brooklyn, at what is now the Polytechnic Institute of New York University. From an early age Chu enjoyed constructing things with his hands. "I would be given for Christmas a model set of airplanes or boats and things, and I loved to put them together. I would ask my parents for things like Erector Sets," he said in an interview posted on the University of California, Berkeley Web site. "In many respects, my brothers and I are very similar, but in that respect, I seemed to love mechanical things in a way that was certainly nurtured by my parents, in that they said, 'Okay, he wants to do these things. We'll buy toys like that for him.' But my other two brothers didn't seem to like that."

Chu first developed an interest in science during his senior year at Garden City High School, when he took two advanced-placement courses, in calculus and physics. As a result of his A-minus average—well below family expectations—Chu, whose older brother was attending Princeton University and whose two cousins had been accepted to Harvard University, was denied admission to several Ivy League universities and enrolled instead at the University of Rochester, earning a B.A. degree in mathematics and a B.S. degree in physics in 1970. He then attended graduate school at the University of California (UC) at Berkeley, with the intention of becoming a theoretical physicist, but he developed an interest in experimental physics after conducting a series of laser experiments, under the supervision of Eugene Commins, his mentor.

After receiving his Ph.D. degree in physics, in 1976, Chu remained at UC Berkeley as a postdoctoral fellow until 1978. That year he joined the technical staff at AT&T Bell Laboratories, in Holmdel, New Jersey, where he met his future collaborator Art Ashkin, who was credited with developing the world's first methods of trapping atoms with laser light. At that time Ashkin and a group of fellow Bell scientists conducted several experiments, in which they explored how to cool an object by directing a laser beam at it.

Five years later, after funding for Ashkin's experiments was cut, Chu was promoted to head of the lab's quantum-electronics research department and collaborated with Ashkin on a series of experiments that involved manipulating atoms at low temperatures. "The [conventional wisdom] was first, you hold onto an atom; then you get it cold; and then you can do what you want with it. I said, Well, what if you reversed it? What if you cooled down the atom first? Don't hold onto it, but maybe in the process of cooling it down, it's going to hang around for enough time that you can have a chance of grabbing onto it,'" he said during the interview posted on the UC Berkeley Web site. "And so [after] a little calculation I said, 'Holy smokes. This looks like it's going to work.'"

In 1987, after nine years at Bell Labs, Chu accepted a position as a physics professor at Stanford University, in California, where he continued his research in low-temperature physics. The laser techniques he developed to cool and trap atoms and molecules earned him the 1997 Nobel Prize in Physics, which he shared with Claude Cohen-Tannoudji and William D. Phillips. While at Stanford Chu also helped establish the school's Bio-X program, which assembles scientists from the physics, chemistry, biology, and engineering fields. Chu also had two stints as chair of the Physics Department (1990–93 and 1999–2001).

In 2004 Chu was appointed the director of the Lawrence Berkeley National Laboratory, a U.S. Department of Energy national lab located at UC Berkeley. Under Chu the lab became an important center of research into alternative energies, energy efficiency, biofuels, and climate change. An advocate of reducing greenhouse gases, Chu has warned about the dangers of climate change and global warming, which he predicts will lead, if unchecked, to water and food shortages, resource wars, and chronic displacement of the world's poorest people. (The rise in temperatures due to climate change can lead to variable rainfall patterns. In developing countries it has led to decreased rainfall levels, reducing the water supply and making it difficult for crops to grow. In other areas it has resulted in rising sea levels and increased flooding, which can destroy the quality of water and contribute to waterborne diseases.) With the aim of avoiding such outcomes, he established the Helios Project, a new facility dedicated to researching low-cost solar and other sustainable, alternative, and renewable energy solutions, including advanced biofuels and artificial photosynthesis. Listing the facility's accomplishments, Steven Mufson wrote for the *Washington Post* (December 12, 2008), "The laboratory's scientists, including 11 Nobel laureates, have altered yeast and bacteria into organisms that produce gasoline and diesel, improved techniques for converting switchgrass into the sugars needed to produce transportation fuel, and used nanotechnology to improve the efficiency of photovoltaic cells used in solar panels, among other projects." Additionally, Chu is the founder of the Energy Biosciences Institute.

On December 11, 2008 President-elect Barack Obama nominated Chu to be the next U.S. secretary of energy; he was confirmed on Janaury 20, 2009 and sworn in on the following day. In that post he is responsible for implementing Obama's ambitious energy policy, which includes plans to invest $150 million over the next 10 years to create five million new jobs and to produce one million electric cars by 2015, among other projects. Chu has been called "America's first clean-energy secretary," and his mission, as Michael Grunwald described it for *Time* (August 23, 2009), is "part green evangelism, part venture capitalism and part politics." Both scientists and environmentalists expressed enthusiasm for his appointment, especially because past energy secretaries have often been, in Grunwald's words, "political loyalists with little energy expertise." Obama and Chu have listed several priorities, including promoting and institutionalizing energy efficiency, investing in wind, solar, and other renewable forms of energy, and providing incentives for privately funded research and development aimed at ending the nation's dependence on fossil fuels and making meaningful progress in the struggle to curtail global warming and climate change.

Chu has admitted to being politically naïve and has expressed frustration at the obstacles seemingly inherent in the day-to-day functioning of the bureaucracy in Washington. Some environmentalists have expressed the fear that clean-energy legislation will take a back seat to economic problems and the need to reform the nation's health-care system. Nevertheless, both the president and Chu have argued that the production of clean energy and measures to reverse global warming can create jobs and wealth. Chu has expressed optimism that a bill that requires cuts in carbon emissions will soon be passed and that the administration will lead the way in the fight against climate change.

A member of the Copenhagen Climate Council and a former adviser to the directors of the National Institutes of Health and the National Nuclear Security Agency, Chu has written or co-written more than 200 scientific papers and holds 10 honorary degrees. From his first marriage, which ended in divorce, he has two sons, Michael and Geoffrey. From his marriage to the physicist Jean (Fetter) Chu, in 1997, he has a stepson and a stepdaughter. —M.M.

Clinton, Hillary Rodham

NOTE: Earlier articles about Hillary Rodham Clinton appeared in *Current Biography* in 1993 and 2002.

Oct. 26, 1947– Secretary of the U.S. Department of State; former U.S. senator; former First Lady

Address: U.S. Dept. of State, Washington, DC 20520

Not long after Hillary Rodham Clinton was elected to the U.S. Senate in November 2000, observers began openly speculating about the likelihood that she would, one day soon, launch a campaign to become a Democratic presidential nominee. There was something of an assumption among party insiders that if she did decide to run, the brilliant and highly motivated former First Lady, whose husband, Bill Clinton, served as president from 1993 to 2001, would have little trouble securing the Democratic nomination. During her first years in the Senate, Clinton earned the support of New Yorkers by championing causes relevant to her adopted state, and she also gained the respect of her colleagues by working with Republicans to pass commonly sought legislation and deferring to senior senators on certain matters. By January 2007, when she announced her bid to become the first female president in the nation's history, Clinton had become one of the Senate's most successful fund-raisers, a leader in the Democratic Party, and a vocal critic of the policies of President George W. Bush. Clinton remained, however, a polarizing figure in national politics—a reputation she acquired during her eight years as First Lady, when she wielded an unprecedented degree of influence in national policy and was investigated for her involvement in several scandals that plagued her husband's time in office.

In 2008 Clinton took part in one of the longest, most divisive campaigns in the history of Democratic primaries. Though Illinois senator Barack Obama ultimately secured the party's nomination and was elected the country's first African-American president in November of that year, Clinton's historic campaign is not likely to be forgotten anytime soon. She conceded the primary race on June 7, 2008, telling her supporters, "As we gather here today, the 50th woman to leave this Earth is orbiting overhead. If we can blast 50 women into space, we will someday launch a woman into the White House." She continued, referring to the fact that some 18 million people had voted for her in the primaries, "Although we weren't able to shatter that highest, hardest glass ceiling, this time, thanks to you, it has about 18 million cracks in it and the light is shining through like never before."

Contrary to the advice of many of her supporters, after her concession Clinton endorsed Obama and campaigned energetically on his behalf before the general election. While the two had clashed frequently during the primaries, when Obama became president-elect, he nominated Clinton as his secretary of state. Confirmed by the U.S. Senate on January 21, 2009, she is the highest-ranking official in Obama's Cabinet, with primary responsibilities in the area of foreign affairs.

Clinton was born Hillary Diane Rodham on October 26, 1947 in Chicago, Illinois, the oldest child and only daughter of Hugh E. Rodham, who owned a drapery-making business, and Dorothy Howell Rodham, a full-time homemaker. Hillary and her brothers, Hugh and Tony, grew up in Park Ridge, Illinois, a middle-class suburb of Chicago to which the Rodhams moved when Hillary was four years old. Clinton's natural leadership abilities attracted lots of friends at Eugene Field Elementary School, Emerson Junior High, Maine East High School, and the newly built Maine South High School, to which she was transferred in her senior year. Always a high achiever, Clinton maintained good grades, earned Girl Scout merit badges and DAR (Daughters of the American Revolution) community-service awards, played the piano, engaged in sports, and worked as a lifeguard. She was a member of the debate team, a participant in student government, a National Merit Scholarship finalist, and a member of the National Honor Society. As a teenager, the socially conscious Clinton organized baby-sitting services for local migrant workers. Through a program run by her youth minister at the First United Methodist Church, the Reverend Don Jones, Clinton attended cultural events with black and Hispanic youths from Chicago's inner-city neighborhoods. In 1962 Jones took his students to listen to a speech by the civil rights leader Martin Luther King Jr., to whom the group was introduced backstage.

Early on in her life, Clinton was, like her parents, staunchly Republican, supporting Barry Goldwater in the presidential campaign of 1964. After graduating in 1965 from Maine South High School in the top 5 percent of her class, which voted her the student most likely to succeed, Clinton enrolled at the all-female Wellesley College, near Boston, Massachusetts, where she headed the local chapter of the Young Republicans. She was led slowly leftward in her politics by the political turbulence of the late 1960s. Clinton campaigned for the Democrat Eugene McCarthy for president in 1968, worked to enroll more black students at Wellesley, organized the school's first teach-ins on the Vietnam War (which turned into antiwar protests), and wrote her senior thesis on poverty and community development. In 1969 Clinton graduated from Wellesley with a B.A. degree with high honors in political science. As president of the student government, she delivered the school's first student commencement address, immediately following a speech by Senator Edward W. Brooke, a liberal Republican from Massachusetts. After shocking her audience by castigating Brooke for the irrelevance of his remarks, she spoke passionately about the attitudes and future of her graduating class. "We are, all of us, exploring a world that none of us understands and attempting to create within that uncertainty," she told her fellow seniors. "But there are some things we feel, feelings that our prevailing, acquisitive, and competitive corporate life, including, tragically, the universities, is not the way of life for us. We're searching for more immediate, ecstatic, and penetrating modes of living." Clinton's words and her photograph were published in *Life* magazine.

Clinton next enrolled at Yale Law School, in New Haven, Connecticut, where she served on the editorial board of the now-defunct *Yale Review of Law and Social Action*. In the summer of 1970, she worked for the civil rights lawyer and Yale alumna Marian Wright Edelman—the first black woman to pass the bar exam in Mississippi—at the Washington Research Project, a congressional lobbying and advocacy group that later became the Children's Defense Fund. In that position Clinton interviewed the families of migrant laborers and reported her findings to a Senate subcommittee headed by Walter F. Mondale of Minnesota. Back at Yale, scheduled to graduate in 1972, she prolonged her education for a year in order to work at Yale's Child Study Center, where she helped research a book by Anna Freud, Joseph Goldstein, and Albert Solnit entitled *Beyond the Best Interests of the Child* (1973). During her final year at Yale, Clinton also performed legal research for the Carnegie Council on Children, specializing in the rights of children to education and medical care.

Meanwhile, in her second year at Yale, Hillary Clinton had met her future husband, Bill Clinton, at the law library. Well matched in temperament and in their commitment to social justice, Hillary and Bill became inseparable. Having spent the previous year in Oxford, England, on a Rhodes Scholarship, Bill Clinton was then in his first year of law school. The couple spent the summer of 1972 in San Antonio, Texas, where Bill ran George S. McGovern's presidential campaign and Hillary registered Hispanic voters. They graduated, in the same class, in 1973.

For several months after her graduation, Hillary worked as a staff attorney for the Children's Defense Fund in Cambridge, Massachusetts, while Bill taught at the University of Arkansas School of Law in Fayetteville. They kept in touch by telephone and occasional visits. In January 1974 Hillary Clinton moved to Washington, D.C., at the behest of John Doar, the special counsel to the House Judiciary Committee, who was in charge of the committee's inquiry into the possible impeachment of President Richard Nixon. One of only three women on the staff of 43 lawyers, Clinton was put in charge of legal procedures. She impressed her peers with her objectivity and her ability to distinguish advocacy from judicial guidance. Her colleagues found her to be energetic, emotionally supportive, and cooperative. When the impeachment staff was disbanded following Nixon's resignation, on August 8, 1974, Clinton was deluged with offers of high-paying jobs at prestigious law firms on the East Coast and also received an invitation to return to her post at the Children's Defense Fund. To the dismay of her friends and family, she instead joined Bill on the faculty of the University of Arkansas School of Law.

In the summer of 1974, Bill Clinton launched what was ultimately an unsuccessful bid for a seat representing Arkansas's Third Congressional District, a Republican stronghold. Hillary worked as his unofficial campaign manager and also taught criminal law, ran a legal-services clinic, and took on prison projects and advocacy work in Fayetteville, a quiet college town in the Ozark Mountains.

In August 1975 Bill surprised Hillary with a house and a proposal of marriage. When they were wed, on October 11, 1975, Hillary retained her maiden name. After Bill Clinton was elected state attorney general, in 1976, he and Hillary moved to Little Rock, the state capital, where she taught law as an adjunct professor at the University of Arkansas and directed the school's legal-aid clinic. In 1977 President Jimmy Carter appointed her to the board of directors of the Legal Services Corp., a Washington-based organization that provides federal funds to legal-aid bureaus throughout the United States. In that same year she founded and presided over the Arkansas Advocates for Children and Families, a nonprofit legal-advocacy group aimed at identifying the problems facing low-income children. Also in 1977 she was among the first female associates hired by Rose Law Firm, an Arkansas practice that focuses on business transactions and litigation.

In 1978 Hillary campaigned for Bill in his first run for governor, and he defeated his Republican opponent, A. Lynn Lowe, by a margin of almost two to one. Hillary, who had recently been named to the board of directors of the Children's Defense Fund, continued to work at Rose Law Firm after the election, thus becoming Arkansas's first-ever working First Lady. Additionally, Bill appointed Hillary chairperson of the Rural Health Advisory Committee, whose members tackled the problems involved with providing health care in isolated areas. In 1980, the same year she was made a partner at Rose Law Firm, Hillary gave birth to Chelsea Victoria Clinton, who was named for Joni Mitchell's song "Chelsea Morning." Also that year, when Ronald Reagan swept Republicans into office in a national landslide, Bill lost the gubernatorial election to Republican Frank White. After extensive campaigning in the interim years, he was reelected to office in 1982. Hillary took her husband's name that year, as part of a comprehensive image makeover. (She also traded in her thick glasses for contact lenses, lightened and tamed her hair, lost 15 pounds, and began dressing more fashionably.)

Bill Clinton was reelected governor in 1984, 1986, 1988, and 1990. During that time Hillary served in appointed positions in her husband's administration and worked in various other positions of public service. She served, for example, on the Arkansas Education Standards Committee, sat on the board of directors of the Arkansas Children's Hospital, worked for the Southern Governors' Association Task Force on Infant Mortality, and organized the state's first neonatal care unit, along with a helicopter service to bring emergency care to people living in outlying rural areas. She also served for a time on the boards of directors of the retail giant Wal-Mart and the yogurt company TCBY, among other such firms, resigning from them when Bill's political aspirations made it necessary. In 1988 and 1991 Hillary was listed among the most influential lawyers in the United States by the *National Law Journal*, and in 1989 she was ranked among the best business-litigation attorneys in Arkansas.

In 1991 Bill Clinton launched his presidential campaign and took an early lead in the polls, but he soon became the target of a barrage of criticism, when Gennifer Flowers, a former lounge singer, alleged that she and Clinton had engaged in a 12-year affair. Insisting that the campaign directly address the uncomfortable issue, which threatened to derail her husband's campaign, Hillary Clinton was interviewed, alongside Bill, by the CBS News correspondent Steve Kroft on the television news magazine *60 Minutes* on Super Bowl Sunday in January 1992. That extraordinary event constituted most Americans' introduction to Hillary Clinton. Grilled about whether he had betrayed his wife, Bill admitted that he had "caused pain" in their marriage but refused to be more specific. Hillary put an end to that line of questioning when she said that the public should respect the "zone of privacy" that surrounds the way any two people deal with their marital problems. "We've gone further [in discussing an issue of this nature] than anybody we know of, and that's all we're going to say," she declared. When it was reported that Flowers had been paid for her story, the Clintons went on the offensive, transforming the issue from a near-certain liability into an attack on the failure of the press to enforce the standards of responsible journalism.

Subjected to more intense scrutiny than any previous presidential candidate's wife, Hillary Clinton learned the danger of providing the media with sound bites that could easily be taken out of context. In a notable example, her response to Democratic presidential candidate Jerry Brown's attack on her professional record—"Well, I suppose I could have stayed home and baked cookies and had teas, but what I decided to do was pursue my profession, which I entered before my husband was in public life"—was widely interpreted as an indication of arrogance, despite the fact that she went on to praise all the choices available to women. Despite such blunders, on Election Day 1992 Bill Clinton won the presidency.

Most of the negative publicity that Hillary Clinton attracted derived from anxiety about how much power she would wield if her husband were elected president and how she would transform the role of First Lady. Early in the campaign Bill Clinton had boasted that he and his wife represented a "buy one, get one free" package deal. Shortly after he became president, he named her to the unofficial post of leader of his Task Force on National Health Care Reform, whose 34 working groups and 500 employees worked in secrecy from January 25 to May 30, 1993 to come up with a viable way to tame the costs of the nation's health-care industry—$800 billion annually at that time—

while expanding services and coverage. After Bill Clinton unveiled his health-care package in a well-received speech to Congress, on September 22, 1993, Hillary Clinton, in an unprecedented demonstration of political clout for a First Lady, drummed up support for the legislation in testimony before two House committees. In defending the president's health plan, which he made the cornerstone of his domestic policy, she impressed members of both parties with her command of detail, her poise, and, by combining flattery with persuasion at every turn, her public-relations expertise. The Clintons' bold reform plan, which was debated for months after its unveiling, would have provided health insurance to all Americans, including the 37 million who were uninsured and the 22 million who were considered to be "underinsured" at that time. The Clintons argued that by cutting wasteful spending through government regulation, raising taxes on alcohol and tobacco, and injecting "managed competition" into the health-insurance market, their plan to overhaul the nation's health-care system, which represented 14 percent of the United States economy, was superior to alternative proposals.

The plan attracted strong criticism from several sides, including those who resented the fact that Hillary Clinton, who did not hold public office, had been placed in charge of putting forth the package. It also worried many Americans when President Clinton's secretary of health and human services, Donna E. Shalala, testified before the Senate Finance Committee that 40 percent of then-insured Americans would be charged more for their insurance under the plan. Furthermore, small-business organizations objected to the fact that the new legislation would require all employers to pay 80 percent of their employees' health-care premiums. Support for the plan petered out, and many Democrats blamed its lack of success on the methodology the Clintons had used in presenting and advocating for the bill. Hillary Clinton eventually placed most of the blame on herself. "I think I was naive and dumb, because my view was results speak for themselves," she told Marian Burros for the *New York Times*, as quoted in the Toronto *Globe and Mail* (January 11, 1995, on-line). "I regret very much that the efforts on health care were badly misunderstood, taken out of context and used politically against the administration. I take responsibility for that, and I'm sorry for that."

Hillary Clinton also became embroiled in several investigations that would plague the couple for most of Bill Clinton's tenure as president. Among the most significant of those was the complex and far-reaching legal case known as Whitewater, so-called because it centered on the commodity and real-estate investments the Clintons had made in the 1970s and 1980s that were related to the Whitewater Development Corp., which the Clintons had formed in 1979 with their friends James and Susan McDougal. The issue first surfaced during the 1992 presidential campaign, when the *New York Times* published a story suggesting that the McDougals had heavily financed the Clintons in the Whitewater Development Corp.'s investment of river real estate, in what was supposedly a 50-50 partnership. The article also stated that the Clintons had claimed tax deductions for interest payments on Whitewater, when those payments came from the Whitewater Corp. itself. The Clinton campaign responded by producing a report showing that the Clintons had made large investments in Whitewater with their own capital and had lost tens of thousands of dollars as a result. The controversy continued, however. In 1993, after Bill Clinton had been sworn in as president, the deputy White House counsel and Clinton legal associate Vincent Foster committed suicide; some wondered if he had been murdered (a theory that was later disproved) and whether or not legal documents regarding the Whitewater business had been removed from his briefcase before investigators appeared on the scene. (Foster had recently filed three years of tax returns pertaining to the Whitewater investment on the Clintons' behalf.) Reporters also uncovered the fact that Hillary Clinton had made a $1,000 commodities investment in 1978 that had returned $100,000 within 10 months, a surprisingly high figure given the relatively modest amount invested. In the face of growing concern over Whitewater legal matters, Hillary Clinton held a press conference on April 22, 1994, in which she stated that she alone had been responsible for the trades that had earned her $100,000. However, she later admitted that Jim Blair—a friend and the chief attorney for the poultry producer Tyson Foods, which is headquartered in Arkansas—had advised her. She also denied having had anything to do with Castle Grande, a fraudulent deal that was made by the Madison Guaranty Savings & Loan, run by James McDougal, and that ultimately cost the public $4 million. She stated at the time that one of her associates at the Rose legal offices had handled most of the work with Madison. That could not be independently verified, however, as her billing records had mysteriously disappeared. In May 1995 the U.S. Senate opened its own investigation of the Whitewater affair.

In January 1996 Hillary Clinton's legal billing records suddenly surfaced, casting doubt upon her veracity, as they showed that she had put in 60 hours of legal work for Madison over a 15-month period. In June 1996, after 13 months of investigation, the Senate Whitewater panel concluded its probe and issued reports whose contradictions occurred along party lines. The Republicans on the committee accused Hillary Clinton and several high-ranking Clinton administration officials of obstructing justice, declaring their belief that Hillary Clinton was responsible for the withholding of her Whitewater billing records. That report concluded that the First Lady had been aware of the Castle Grande scheme, having held 22 conversations related to Castle Grande during her work with Madison. The report also alleged that she was responsible for the removal of incriminating evidence from Vincent Foster's office and had instructed aides to thwart an official search. The Democrats on the Whitewater panel, however, stated that there was no evidence of any wrongdoing on the part of the Clintons and denounced the Republicans' report as the product of a politically inspired witch hunt. On September 20, 2000 Robert Ray, the third independent counsel for the Whitewater investigation, noted in his final report, as quoted by CNN.com (September 20, 2000, on-line), "This office has determined that the evidence was insufficient to prove to a jury beyond a reasonable doubt that either President or Mrs. Clinton knowingly participated in any criminal conduct . . . or knew of such conduct."

Meanwhile, a further source of difficulty for the First Lady was the Monica Lewinsky scandal, which was connected tangentially to the Whitewater investigation. The independent counsel Kenneth Starr, who had replaced Fiske on the Whitewater case, decided to investigate the possibility that Bill Clinton had had a sexual relationship with Monica Lewinsky, a former White House intern, and that the president had later urged her to lie about the affair in her affidavit for the Paula Jones case. (Paula Jones, a former Arkansas state employee, had brought suit against Bill Clinton, in which she accused him of sexual harassment.) On January 17, 1998 President Clinton gave his deposition in the Jones case, during which he denied that he had had an affair with Lewinsky. On January 21 the *Washington Post*, among other publications, broke the story and revealed the existence of secretly recorded audiotapes on which Lewinsky gave details of the alleged affair. While Bill Clinton continued making denials to the media and his Cabinet, Hillary Clinton appeared on several talk shows, declaring that the allegations were the product of a "right-wing conspiracy" to topple the administration. On February 11, 1998, as reported by CNN.com (February 11, 1998, on-line), she predicted that the charge would "slowly dissipate over time under the weight of its own insubstantiality." On August 17, 1998, however, after months of investigation, President Clinton testified before a grand jury that, while he had not engaged in witness tampering, he had been involved in a sexual relationship with Lewinsky; he repeated the admission in a televised address to the nation. On December 19, 1998 Clinton was impeached by the U.S. House of Representatives on charges of perjury and obstruction of justice (thus becoming only the second president, after Andrew Johnson in 1868, to be impeached); he was acquitted by the United States Senate the following February. In *Talk* magazine, according to the BBC (August 1, 1999, on-line), Hillary Clinton defended her husband, noting, "Everyone has some dysfunction in their families. You don't walk away if you love someone. You help the person." According to the First Lady, her husband was guilty of a "sin of weakness, not a sin of malice."

Despite the scandals Hillary Clinton continued to undertake causes involving aid to children and health-care reform. In May 1995 she persuaded the president to appoint an advisory committee on Persian Gulf War–related illnesses. In 1997 she played leading roles in both the White House Conference on Early Childhood Development and Learning and the White House Conference on Child Care. The latter played a major role in the development of the president's Children's Health Insurance Program. The First Lady was also active in helping to pass the Family and Medical Leave Act and the Adoption and Safe Family Act of 1997, the latter of which made for easier transitions for foster children moving to permanent homes and increased the number of adoptions. Beginning in 1995 Hillary Clinton wrote a weekly syndicated newspaper column that appeared in about 100 newspapers nationwide, called "Talking It Over," in which she shared observations she had made as First Lady. In 1996 Clinton published her first book, *It Takes a Village and Other Lessons Children Teach Us*, the proceeds from which went to children's hospitals. A best-seller, *It Takes a Village* focuses on the role that society can play in raising children.

The negative publicity Hillary Clinton received during the Whitewater investigation was largely offset by the Lewinsky scandal, by the end of which many Americans had come to view her sympathetically as the wronged wife who had nonetheless stood by her husband. In the summer of 1999, after U.S. senator Daniel Patrick Moynihan of New York announced that he would not run for another term, Hillary Clinton began to prepare a campaign to succeed him. Many observers predicted that she would be unable to rise above her scandal-tainted past, the fact that she was not from New York State, or the popularity of her likely opponent, New York City mayor Rudolph Giuliani. Clinton, however, studied the state and its politics and eventually gained the trust of New York residents by embarking on an extensive tour, traveling to remote parts of the state, listening to voters' concerns, and fielding their questions. In early January 2000 Hillary Clinton moved into a $1.7 million house in Chappaqua, in Westchester County, New York, to meet the residency requirements for running for office in New York State. On February 6 she officially announced her candidacy, marking the first time a First Lady had run for office. Calling herself a "new Democrat," she made improving education a major issue of her campaign and also promised legislation that would help boost the economy in Upstate New York. On May 16, 2000 she accepted the nomination of the New York State Democratic Party for United States senator.

Days later, Mayor Giuliani dropped out of the race to focus on his treatment for prostate cancer, and the New York congressman Rick Lazio emerged as the Republican Senate nominee. Lazio's constant attacks on Clinton's character ultimately backfired, and after earning 55 percent of the vote in the November 2000 election, Clinton was sworn in as a U.S. senator in January 2001.

Though many expected Clinton to cause a stir by immediately proposing legislation of national significance, the former First Lady spent the first few months of her Senate career focusing on topics of concern to New York State residents and deferring to ranking senators on more major issues. On February 13, 2001 she made her first address from the floor of the Senate, offering several moderate health-care initiatives. By mid-April she had introduced 10 bills, most of them part of an economic package for Upstate New York. In June 2001, taking her first stance on a major issue, she introduced legislation to ban racial profiling in routine police investigations and to end arrest quotas. By the end of 2001, she had introduced 70 pieces of legislation, among them bills to create a nursing corps, reduce arsenic levels in drinking water, and help people injured by landmines.

In the days following the terrorist attacks on the United States on September 11, 2001, Hillary Clinton, along with New York's senior senator, Charles E. Schumer, led the fight for the allocation of $20 billion in federal disaster aid for New York City. On October 11, 2002 Clinton—and 22 other Democrats—voted for the Senate resolution that gave President George W. Bush the authority to order U.S. armed forces to attack Iraq when he determined that such action was necessary. The vote aroused heated controversy regarding its constitutionality and its effect on international relations.

During her first term Clinton served on the Senate Budget Committee, the Senate Environment and Public Works Committee, the Senate Health, Education, Labor and Pensions Committee, and the Senate Armed Services Committee. She was soon being recognized as one of the Senate's most successful fund-raisers, hosting events for Democratic candidates at her Washington residence and supporting Democrats in races across the country through her political action committee (PAC). She was also influential in setting up a new liberal think tank called the Center for American Progress. In 2003 Clinton assumed the chairmanship of the Senate's Democratic Steering Committee, the group that sets the Democratic agenda, thus solidifying her place in the Senate's Democratic leadership. Many observers noted that her actions seemed to be aimed at setting the groundwork for a possible presidential run in 2004 or 2008.

In June 2003 Clinton published a best-selling autobiography, *Living History*, which focused on her eight years as First Lady. The volume received mixed reviews from critics, who took issue with what they saw as Clinton's lack of candor about controversial subjects, including the Lewinsky matter. "For all its traffic in intimate material—the scandals, the early-morning bedroom encounters, the self-doubts, *Living History* is not, finally, a recording of a life; it is a political act," Elizabeth Kolbert wrote for the *New Yorker* (October 12, 2003). "It offers an account of Clinton's actions that, however bowdlerized, she can refer back to if, as seems almost inevitable, questions about them arise on a future occasion." Indeed, most reviewers saw the book as an effort to set the record straight in preparation for a presidential campaign. A year later Bill Clinton published his best-selling, 1,000-page memoir, *My Life*. In it the former president admitted to marital infidelities and cast his wife as an innocent bystander in the Lewinsky affair and other scandals.

Reelected to the Senate by a wide margin in 2006, Clinton grew increasingly more outspoken in her criticism of the Bush administration's handling of the economy, the Iraq war, and domestic security. Encouraged by many of her Democratic colleagues as well as by her husband, on January 20, 2007 Clinton announced that she was forming an exploratory committee for a presidential run. In the beginning of the primary race, which initially included Joseph Biden, John Edwards, and Bill Richardson and four other Democratic candidates, there was an air of inevitability surrounding the notion that Clinton would become the party's nominee. For the first half of 2007, she was the uncontested frontrunner; she performed expertly in the Democratic debates and consistently led all of her opponents in polls. In October 2007 a national poll reported by Fox News (October 3, 2007, on-line) showed Clinton leading her closest competitor, the Illinois senator Barack Obama, who had risen to national fame with a landmark speech at the 2004 Democratic National Convention, by a margin of 33 points.

The ideologies and proposed policies of the two candidates, each of whom claimed among the most liberal voting records in the Senate, were quite similar. Their proposals differed most significantly, according to pundits, in the area of health care. Both Clinton's and Obama's plans included measures to make insurance more affordable for lower-income Americans, required private insurers to offer policies to everyone regardless of their medical history, and allowed people the choice to buy government-offered insurance. Clinton's plan, however, required everyone to buy insurance, while Obama's plan didn't. Though Obama argued that people would willingly purchase insurance if it were made affordable, Clinton pointed to evidence showing that a mandate was necessary for universal coverage to be achieved.

The two differed more widely in style and overall message. Obama's simple mantra of "change," his relative newness to the national political stage, and his impassioned speeches appealed to voters who disapproved of President George W. Bush and the overall course of the country. Clinton's campaign, headed by her chief strategist, Mark Penn, endeavored to portray Clinton as the more experienced and able candidate, while being careful not to align her with the policies and perspectives of the Bush administration.

On January 3, 2008 Obama won the Iowa caucuses, and Clinton came in third, behind John Edwards. Clinton was declared the "comeback kid" when she narrowly won New Hampshire's primary election, on January 8, 2008, a victory that some attributed to her unexpectedly emotional display of just a few days before, when her eyes welled up with tears and her voice cracked as she spoke to a group of supporters. That moment, replayed repeatedly on television and the Internet, was thought to have considerably softened Clinton's public image.

Problems with Clinton's campaign strategy became evident over the course of the next several contests. Her advisers had focused on winning the nation's largest and most populous states, which award the most pledged delegates. In doing so they had failed to organize effectively in smaller states. Overestimating Clinton's status as the frontrunner, the campaign had wrongly anticipated that she would be able to secure the nomination by February 5, 2008, the date known as Super Tuesday, when numerous states were to hold primary elections and 1,681 pledged delegates were at stake. On that date, though Clinton and Obama were essentially even in the popular vote, Obama secured 847 delegates to Clinton's 834. Because her campaign was unprepared, financially or logistically, to continue beyond February 5, Clinton was forced to lend the campaign $5 million of her own money. Meanwhile, the Obama campaign, which had anticipated a long race and had established a successful Internet-based fund-raising model, was drawing record-breaking donations. Clinton also made several top-level personnel changes, which, along with reports of campaign in-fighting, contributed to the public's perception of turmoil and disorganization. Obama's victory in the next several contests and the numerous endorsements that he had obtained from party leaders led some Democrats to call for Clinton to bow out of the race. Fear spread that the increasingly vitriolic primary would alienate undecided voters and cost the Democratic Party the general election.

Encouraged by her loyal supporters, however, Clinton campaigned throughout the spring. Obama and Clinton had each established distinct bases of support that remained relatively consistent throughout the race; in general, Obama's consisted of young voters, blacks, and college-educated whites, while Clinton's included women, the elderly, and blue-collar whites. Though Obama was clearly the frontrunner in the delegate count, the two were neck in neck in national polls. On March 4, 2008 Clinton pulled off impressive wins in Ohio and Texas, both by large margins. Appearing more resilient than she had for much of the campaign, she told a crowd in Ohio, as quoted by John Heilemann in *New York* magazine (June 23, 2008, online): "For everyone here in Ohio and across America who's ever been counted out but refused to be knocked out, and for everyone who has stumbled but stood right back up, and for everyone who works hard and never gives up, this one is for you." Clinton won nine of the last 15 contests, and during those final months, many observers noted that she came into her own as a candidate. "With that speech [in Ohio], Clinton had finally found a theme: the resilient fighter, the underdog, the victim," Heilemann noted. "Having abandoned her corporate, Establishment campaign, she seemed more liberated; she seemed intoxicated. Suddenly she was giving terrific, well-modulated Election Night speeches . . . that were every bit as good, in their way, as Obama's more-celebrated orations."

On June 3, 2008 Obama earned enough delegates to clinch his victory as the Democratic nominee, and Clinton delivered a speech in which she congratulated her opponent but did not concede the election. She finally did so four days later. Many observers wondered whether Clinton's fervent supporters, some of whom were so angry at their candidate's loss that they pledged to vote for the Republican John McCain, would ultimately transfer their support to Obama. Clinton urged them to switch their allegiance, saying, "The way to continue our fight now to accomplish the goals for which we stand is to take our energy, our passion, our strength and do all we can to help elect Barack Obama, the next president of the United States. . . . I endorse him and throw my full support behind him and I ask of you to join me in working as hard for Barack Obama as you have for me."

Some speculated that Clinton might be asked to join Obama as his vice-presidential pick, thereby uniting a party that had grown increasingly divided and possibly forming a stronger presidential ticket. In August, however, Obama announced that Joseph Biden would be his running mate. Despite that disappointment, Clinton, who was reportedly willing to consider the number-two spot on the ticket, continued to stump for her former rival. On August 26, 2008 Clinton delivered a speech at the Democratic National Convention, held in Denver, Colorado, in which she stated: "I haven't spent the past 35 years in the trenches advocating for children, campaigning for universal health care, helping parents balance work and family, and fighting for women's rights at home and around the world . . . to see another Republican in the White House squander the promise of our country and the hopes of our people. And you haven't worked so hard over the last 18 months, or endured the last eight years, to suffer through more failed leadership. No way. No how. No McCain. Barack Obama is my candidate. And he must be our President." She expressed no regrets about her long, ultimately unsuccessful race, saying, "For me, it's been a privilege to meet you in your homes, your workplaces, and your communities. Your stories reminded me every day that America's greatness is bound up in the lives of the American people—your hard work, your devotion to duty, your love for your children, and your determination to keep going, often in the face of enormous obstacles. You taught me so much, you made me laugh, and . . . you even made me cry. You allowed me to become part of your lives. And you became part of mine. . . . To my supporters, my champions . . . from the bottom of my heart: Thank you. You never gave in. You never gave up. And together we made history."

While Obama's groundbreaking campaign highlighted the issues of race and ethnicity in America, Clinton's equally groundbreaking attempt brought up issues of gender and sexism. One article, written by Robin Givhan for the *Washington Post* (July 20, 2007), was devoted to a lengthy analysis of Clinton's faintly visible cleavage during one Senate speech—a "small acknowledgement of sexuality and feminity," according to Givhan. Pundits regularly discussed the effect that Clinton's strength and ambition might have on male voters and often described her voice with such negative, female-associated terms as "nagging" and "shrill." Though she generally refrained from commenting on such issues during the campaign, Clinton told Heilemann, "The contrast between the [public's] outrage over anything concerning race compared to anything concerning gender was incredibly out of balance, I thought."

On December 1, 2008 President-elect Obama formally announced his choice of Clinton as secretary of state. Though Clinton has a shorter foreign-policy résumé than many of her predecessors in the post, her selection was widely praised by those who pointed to her substantial diplomatic skills as well as her vast understanding of global issues. Her detractors, however, warned of possible conflicts of interest, given that Bill Clinton is an in-demand public speaker whose clients include many prominent foreign figures and that his eponymous foundation has attracted wealthy foreign donors including Saudi Arabia's King Abdullah. Obama's transition team, widely acknowledged as one of the most effective in modern history, reached an agreement with the foundation, which released the names of its past donors and promised to report new contributors each year. The foundation also pledged to allow State Department ethics officials to examine any documents they desire. The foundation's Clinton Global Initiative program, which does humanitarian work, will be incorporated separately under the terms set forth by Obama's team and will no longer take money from foreign governments.

Confirmed by the Senate in a vote of 94–2, Clinton is charged with helping to mediate conflicts around the globe. During her Senate confirmation hearings, she stated her intention to make women's issues central to American foreign policy rather than "adjunct or auxiliary, or in any way lesser than all of the other issues we have to confront." Women's rights are among many issues she has addressed during her extensive travels as she has worked to establish a new direction in American foreign policy. She took her first trip as secretary of state in February 2009, visiting Japan, Indonesia, South Korea, and China; the following month she visited Mexico, where she discussed issues including border security and the illegal drug and arms trades. In August she embarked on a seven-nation tour of Africa during the eighth African Growth and Opportunities Act (AGOA) Forum, in Nairobi, Kenya. During her travels Clinton emphasized the Obama administration's commitment to encouraging development and democracy in other nations, criticized governmental corruption, and spoke out against the widespread abuse of women. Observers have noted that Clinton's international visits are distinctive in that she engages with people outside political and diplomatic circles; she often holds public roundtables and town-hall-style gatherings to hear the concerns of ordinary citizens.

Clinton faced a diplomatic crisis during the summer of 2009, when two American reporters on assignment in North Korea were arrested on charges including entering that country illegally and sentenced to 12 years of hard labor. The matter was made more delicate by North Korea's having recently flouted international law by testing several nuclear missiles. After weeks of efforts by the secretary of state, a diplomatic group led by former president Bill Clinton met with the North Korean president, Kim Jong Il; they succeeded in securing a "special pardon" from the North Korean government, and the journalists were released. In October 2009 Hillary Clinton visited Russia in an effort to obtain the country's support for a plan to confront Iran's alleged nuclear ambitions. Clinton faces challenges in redefining the U.S. diplomatic policy elsewhere in the world, including the Middle East, Afghanistan, and Pakistan.

Clinton, who lives in the nation's capital during the week, typically spends her weekends at the home she shares with Bill Clinton in Chappaqua, New York. The secretary of state loves art and sculpture and is a devout Methodist. The Clintons' daughter, Chelsea, studied history at Stanford University, in California, and earned a master's degree in international relations from the University of Oxford, in England. Now employed at a financial firm in New York City, she made many appearances during the presidential campaign in 2008, during which she called her mother her hero.

Cooper, Kyle

1963– Director of film-title sequences

Address: Prologue Films, 534 Victoria Ave.,
Venice, CA 90291

"My job is to make people in the theater feel like they don't want to be anywhere else," Kyle Cooper explained to Jennifer Vilaga for the magazine *Fast Company* (on-line), which named him among the 100 Most Creative People in Business for 2009. Cooper, who specializes in crafting the opening-credit segments of films, is considered to be the most influential designer of motion-picture title sequences since Saul Bass. Beginning his career at the design firm R/Greenberg Associates (RGA) in New York in the late 1980s, Cooper rose to prominence with his highly stylized opening-credit sequence for David Fincher's neo-noir thriller *Seven* (1995), which featured hand-scratched type and other disturbing imagery to evoke the workings of a serial killer's mind. The highly influential title sequence not only set the dark, gritty tone of the film but also helped usher in a renewed interest in motion-picture title design, an art form that was first revolutionized by Bass in the 1950s. On the strength of his work for *Seven*, in 1996 Cooper and his RGA colleagues Chip Houghton and Peter Frankfurt founded the design firm Imaginary Forces, which quickly became the hottest company of its kind in Hollywood. "*Seven* woke everyone up to the possibility of main title sequences again," Frankfurt told Adam Eeuwens for *Advertising Age's Creativity* (October 1, 1998). "*Seven* felt totally of the moment; this dark . . . thing that was 1995. That was the moment and it just clicked." At Imaginary Forces Cooper headed title-design teams responsible for the openings to such films as *Donnie Brasco* (1997), *The Mummy* (1999), *Arlington Road* (1999), and *Spider-Man* (2002), as well as projects ranging from the Netscape browser's comet-field logo to graphics for the televised Academy Awards presentation. Following in the tradition of MTV and the groundbreaking music publication *Ray Gun*, the hallmarks of Cooper's style included jagged typefaces, hyper-fast editing, and bizarre yet relevant imagery.

Wanting to spend more time involved in the creative process and less overseeing the work of others, Cooper left Imaginary Forces in 2003 to found the multimedia design firm Prologue Films. At that company he has continued to design highly acclaimed title sequences, including those for the films *Dawn of the Dead* (2004), *Spider-Man 2* (2004), *Wimbledon* (2004), *The New World* (2005), *Superman Returns* (2006), *Spider-Man 3* (2007), and *Tropic Thunder* (2008); the firm has also branched out into title designs for video games and television shows.

Kyle Cooper was born in 1963 into a devoutly Christian family. He grew up with his two brothers in the seaside town of Swampscott, north of Boston in Essex County, Massachusetts. At an early age Cooper developed a penchant for comic books. He followed the adventures of the Marvel Comics superheroes and read the horror stories in magazines such as *Tales from the Crypt*; he also devoured cult magazines including *Fangoria* and *Famous Monsters of Filmland*. In an interview posted on the Art of the Title Web site, Cooper recalled, "Growing up, my brother and I had 6,000 comics." He became enamored of the visuals in grisly films such as *The Exorcist* (1973) and *An American Werewolf in London* (1981), and he read the seminal *Monster Make-Up Handbook*, by the makeup artist Dick Smith, which featured step-by-step instructions on how to create the look of a cut throat and other grave wounds. Cooper's interest in the subject even led him to read medical journals. The knowledge he gained later informed his extremely detailed professional work. In the book *Kyle Cooper* (2003), Andrea Codrington wrote, "While Cooper's youthful emphasis on replicating the physical manifestations of the horror genre has been replaced over the years by a focus on its psychic machinations, this early obsession with flayed bodies and anatomical pathologies seems to have led to a desire to tear away at the surface of things—to reveal the metaphorical blood and guts that lie just beneath the skin of reality. In the same way that Alfred Hitchcock was known to set the most dastardly plots against the backdrop of national monuments such as Mt. Rushmore (*North by Northwest*) or the Golden Gate Bridge (*Vertigo*), Cooper repeatedly picks away at American icons, in order, more often than not, to reveal something sinister."

It has been noted that during his adolescence, Cooper once spent seven weeks using a pin to etch the details of a mutant creature's dragon-like scales onto a metal plate. Commenting on his somewhat obsessive attention to detail, he explained to Codrington, "It may be a faulty paradigm but I do respect things that are intricate. The dysfunction came from needing to create all these incredibly detailed drawings because my parents were getting divorced or . . . needing to make intricate edits because I was breaking up with a girlfriend or people were taking advantage of me." (Cooper, whose parents divorced when he was eight years old, was raised by his mother.) Codrington noted another of Cooper's youthful activities that prefigured his later work: he would look up words in the dictionary and draw the letters in ways that related to the words' meanings—"extinguish," for example, with the "u" upside-down, resembling a bucket pouring water.

Cooper attended the University of Massachusetts at Amherst, where he earned a B.F.A. degree in interior architecture. During that time, while on a trip to Bermuda, his mother was involved in a car accident and fell into a coma; she remained in that state for three years before dying. That traumatic event led Cooper to become a born-again Christian. It also led him to devote all of his energies to design. Cooper went on to earn an M.F.A. degree in

Kyle Cooper

graphic design from the Yale School of Art, in New Haven, Connecticut, writing his master's thesis on the pioneering Russian filmmaker Sergei Eisenstein. At Yale Cooper studied independently with Paul Rand, under whom he created a series of posters that made use of close-together type and conceptual imagery. He has since called Rand his greatest mentor. Referring to the common misperception that Saul Bass holds that distinction, Cooper noted in an interview posted on the Thunder Chunky Web site, "I love *Walk On The Wild Side* [1962] and *Man with The Golden Arm* [1955]"—which both featured groundbreaking title sequences by Bass—"but I actually have gotten much more familiar with his work after I started doing [film work]. Paul Rand was my mentor and he and Saul Bass were often compared to each other. There is no question that Saul Bass is the father of film titles but Paul Rand was the father of American graphic design." With regard to motion-picture title sequences, Cooper has cited Stephen O. Frankfurt's opening to Robert Mulligan's film adaptation of *To Kill a Mockingbird* (1962) as his favorite.

Upon graduating from Yale, in 1988, Cooper went to work for R/Greenberg Associates (now known as R/GA), a New York City firm devoted to film and video design. He served as the main title designer for Martin Scorsese's "Life Lessons" segment of the film *New York Stories* (1989), which impressed Scorsese enough to ask him to create a concept for his next project, *Goodfellas* (1990). Cooper's concept was rejected in favor of one proposed by Bass and his wife, Elaine, which began a long partnership between the couple and Scorsese. "I was too busy trying to think of a metaphor for the film, when really he just needed a beginning," Cooper recalled to N'Gai Croal for *Newsweek* (November 24, 1997).

Though Cooper was passed up for that job, he quickly ascended the ranks at R/Greenberg, rising from intern to creative director of the company's Los Angeles office in just a few years. In the 1990s he worked on title segments for such directors as Brian De Palma, Chris Columbus, Rob Reiner, Abel Ferrara, Adrian Lyne, John McTiernan, Philip Kaufman, Roger Donaldson, Robert Redford, James Cameron, and Mike Nichols. Among the films for which Cooper designed title sequences during that time are *The Bonfire of the Vanities* (1990); *Home Alone* (1990); *Home Alone 2* (1992); *Body Snatchers* (1993); *Carlito's Way* (1993); *Indecent Proposal* (1993); *Last Action Hero* (1993); *Rising Sun* (1993); *The Getaway* (1994); *Quiz Show* (1994); *True Lies* (1994); *Wolf* (1994); and *The American President* (1995). He worked on the sequences mostly in collaboration with other designers, including Garson Yu, Bruce Schluter, Thomas Barham, Michael Riley, and Richard Greenberg.

In 1995 Cooper was commissioned by the director David Fincher to create the title segments for *Seven*, a thriller, starring Morgan Freeman, Brad Pitt, and Gwyneth Paltrow, about a series of ritualistic murders inspired by the Christian notion of the seven deadly sins (pride, envy, gluttony, lust, wrath, greed, and sloth). Fincher wanted to go against the stars' likable images; the director told Mark Caro for the *Chicago Tribune* (December 10, 1995), "I said we definitely want people who think they're going to see *Legends of the Fall* to know that they're in the wrong movie. People should realize they're in for some evil." (Codrington wrote that Cooper himself "believes strongly in the existence of evil as an active, supernatural force in the world" and quoted him as saying, "Why deny the existence of evil? Let's all look at it for what it is.") Embracing Fincher's idea, Cooper created a title sequence that took the point of view of the serial killer. The sequence played to an eerie remix of the Nine Inch Nails song "Closer" and featured type scratched onto film stock with a pin, tight shots of the killer's copiously detailed notebooks, and split-second images of the killer slicing off his own fingerprints with razor blades. Cooper explained to N'Gai Croal, "My idea was to shoot [the murderer] John Doe's fetishistic preparation for his life's work, this very complex crime." Steeping himself in the mood of the film, Cooper spent hours at a time in his basement looking for dead insects and other unpleasant items to add to the end-credit sequence. Directing the visuals behind the credits took eight days, two of which were spent shooting on a soundstage with hand models. Cooper told Croal that his work with Fincher "opened my eyes a lot. It marked a very crucial point in my life."

Cooper's painstaking style is also evident in his title sequence for the John Frankenheimer film *The Island of Dr. Moreau* (1996), based on the H. G. Wells science-fiction novel of the same name, about a scientist who attempts to convert animals into people. Cooper's sequence compressed 400 shots into a little over two and a half minutes. Embracing Frankenheimer's idea of creating titles that would evoke violence at the cellular level, Cooper interspered splintering typography with a dizzying mix of stock medical photography, digital illustrations, and computer-animated images of cells dividing and multiplying, to reflect the theme of the film. In Cooper's title work for *Twister* (1996), the words swirl together and away from one another in a way suggestive of a tornado; in his titles for *Spider-Man*, the words coalesce to resemble flies getting stuck in a spider's web.

Meanwhile, the credit work for *Seven*, which *Entertainment Weekly* called a "masterpiece of dementia" and the *New York Times Magazine* hailed as one of the most important design innovations of the 1990s, single-handedly ushered in a new era in film-title design and brought a renewed interest to the form. Propelled by that success and acclaim, Cooper left R/Greenberg Associates in 1996 to found the design firm Imaginary Forces with his R/GA colleagues Chip Houghton and Peter Frankfurt. Imaginary Forces quickly became the most in-demand design firm in Hollywood during the late 1990s. The acclaimed title sequences produced by the firm included those for *Nixon* (1995); *Ghosts of Mississippi* (1996); *Gotti* (1996); *White Squall* (1996); *Donnie Brasco* (1997); and *Dreamcatcher* (2003). In addition to film projects, Cooper and his team designed the comet logo for the Internet company Netscape and worked on graphics for the televised Academy Awards ceremony. In 2002 the company branched out into video games and designed title graphics for Hideo Kojima's *Metal Gear Solid 2*.

By the start of the new millennium, Imaginary Forces had grown to a 90-person team of designers and artists. Cooper, meanwhile, had developed a reputation as "the guy who makes title sequences better than the movie," Zach Snyder, the director of *Dawn of the Dead* (for which Cooper designed the title shots), noted to Jon M. Gibson for *Wired* (June 2004, on-line). In many reviews of the films Cooper has worked on, critics have gone out of their way to praise the credit sequences, even as they panned the films themselves. As noted by Codrington, the *New Yorker* reviewer Anthony Lane, in his review for *Mission: Impossible*, wrote that the credits were "so tense and sexy that you could leave the theater immediately afterward without suffering the letdown of the film itself." In another review, of *Donnie Brasco*, Lane wrote in the first line, "The most beautiful thing about *Donnie Brasco* is the opening title sequence. . . . No one has had eyes like that, not since El Greco stopped painting saints." The *New York Times* critic Janet Maslin also contributed to the trend of praising Cooper's title designs more than the movies they adorn. In her review for Rob Reiner's *Ghosts of Mississippi*, she commented on Cooper's "rousing, majestic montage" before concluding, "None of what follows matches the impact of this title sequence." Cooper explained in a 1998 interview posted on the Web zine *Feed* that praise focusing solely on his work is "the worst thing for me. As a graphic designer I have to solve [the director's] problem, and if I'm not listening to the director and not giving him something that works in the service of his movie that's not going to get me any work."

Imaginary Forces continued to prosper, allowing Cooper to take a one-year leave to make his directorial debut, with the movie *New Port South* (2001). Produced by John Hughes and written by his son, James Hughes, the dark teen drama centered on teenagers rebelling against a high school's policies. The film received only a limited release and did poorly at the box office, opening to mixed reviews before going to DVD in 2002. In the following year Cooper decided to leave Imaginary Forces, after his administrative responsibilities began to get in the way of his creative work. That year he founded the design firm Prologue Films. One of the company's first major motion-picture projects was a remake of George Romero's 1978 cult horror film *Dawn of the Dead*. Cooper continued to push the boundaries of his specialty by using real blood in the opening title sequence.

Among the other films for which Prologue has supplied title sequences are *Spider-Man 2*; *Wimbledon* (2004); *Zathura: A Space Adventure* (2005); *The New World* (2005); *Freedomland* (2006); *Superman Returns* (2006); *The Painted Veil* (2006); *Bridge to Terabithia* (2007); *Spider-Man 3* (2007); *Across the Universe* (2007); *Tropic Thunder* (2008); and *RocknRolla* (2008). Cooper's work will also be seen in Julie Taymor's version of *The Tempest*, due for release in 2010 or 2011. In contrast to Imaginary Forces, which dedicated most of its time to film projects, Prologue—based in Venice, California—handles commercials as well as feature films. The company has worked on national campaigns for companies such as Hewlett Packard and American Express. Prologue has also provided designs for the video games *Metal Gear Solid 3: Snake Eater* (2004) and *Metal Gear Solid 3: Subsistence* (2005).

Codrington wrote that Cooper "is a postmodern paradox. He is an iconoclast who loves what he transgresses, whether the tenets of modernist typography, the idea of apple-pie America or even the belief in an all-loving, all-powerful God. He is by nature betwixt and between, not quite fitting into the commercial world of Hollywood and not entirely at home in the realm of high-design discourse. He is a true-believing Christian whose oeuvre has often lingered on the sinister themes of murder and madness." Cooper lives in Los Angeles, California, with his wife, Kimberly, an operations director at Prologue. He has received numerous honors for his design work, including a gold medal and Best of Show Award for graphic design at the New York Art Directors Club Awards, four Art Director's Club Merit Awards, a gold medal at the International Film & Television Festival of New York, an Architectural Foundation of Los Angeles Award for design achievement, two *I.D. Magazine* Annual Design Review Awards, five AIGA (American Institute of Graphic Arts) Awards for Outstanding Examples of Communication Graphics, and a 1998 Emmy Award nomination for the main title sequence for the TNT network's *The George Wallace Story.* Cooper is currently a faculty member of the Art Center College of Design in Pasadena, California. He also serves as a guest lecturer at the Yale University School of Art and is a member of the Type Directors Club.

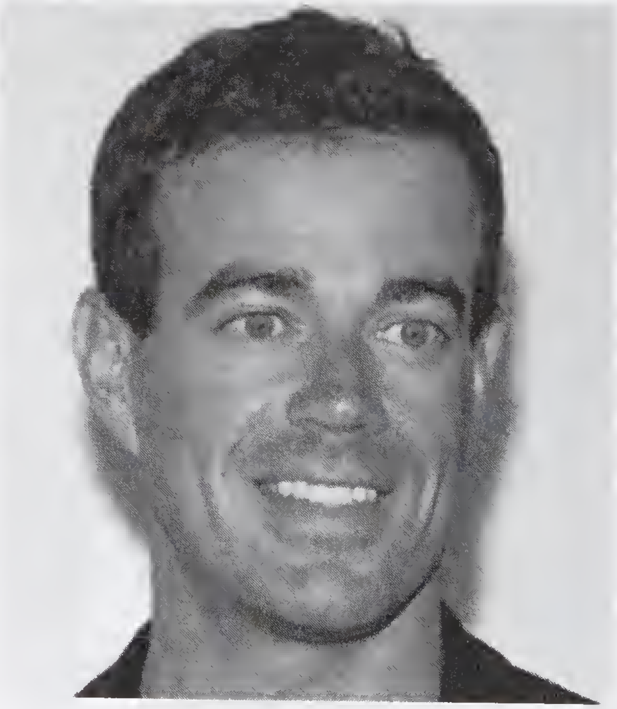
Daly, Carson

June 22, 1973– Television talk-show host

Address: c/o Endeavor Agency, 9601 Wilshire Blvd., Third Fl., Beverly Hills, CA 90212



Rob Loud/Getty Images

Carson Daly might be said to have turned inoffensiveness into wealth. As the host of the late-night talk show *Last Call with Carson Daly*, which debuted on NBC in early 2002 and airs at 1:35 a.m. Eastern Standard Time, Daly interviews celebrities and hosts musical acts for an average of one million viewers—with a geniality that often gets him compared to Dick Clark. Like that iconic TV host, Daly was for years the host of a music program, emceeing *Total Request Live* from 1998 to 2003.

The second of two children, Carson Jones Daly was born on June 22, 1973 in Santa Monica, California. His father, Jim Daly, died of cancer of the bladder when Carson was six years old, and the boy was raised afterward by his mother, Pattie Daly Caruso, and stepfather, Richard Caruso, a golf-store owner and real-estate agent. (Pattie Daly later became the host of her own, local talk show.) Raised as a Catholic, Daly considered becoming a priest until his mother convinced him that he would want to have a family someday. His older sister, Quinn, described him as having been a sociable young man with many friends but also a late bloomer romantically, one who had trouble finding dates. "I was kind of a wimpy type, a mama's boy a little bit," Daly told Jason Lynch and Cynthia Wang for *People* (May 29, 2000).

Daly also considered becoming a professional golfer. A capable player since age 13, he entered Loyola Marymount University, in Los Angeles, California, in 1992 on a partial golf scholarship, then left after one year to pursue a golf career full-time. But when his family friend Jimmy Kimmel, a radio and TV personality, helped him get an internship at the radio station KCMJ-FM in Palm Springs, Daly decided that he would like to go into broadcasting. He had long held an interest in the field, as evidenced by the make-believe radio shows he made with his sister beginning at age eight. Kimmel quickly saw potential in Daly, then 19, and invited him to be his on-air sidekick. A fairly innocent young man, Daly was a good foil for Kimmel's raunchy style. "He was extremely likable," Kimmel told Lynch and Wang. "I always told him, 'We've got to get you on MTV. It's the perfect place for you.'"

Daly quickly rose through the ranks of radio, getting three other jobs before winning a coveted spot as a deejay at the popular Los Angeles–based rock radio station KROQ-FM in 1996, at age 23. His work there got the attention of MTV executives, who, in 1998, invited him to host their new music-video program, *Total Request Live.* The program, often called *TRL*, was meant to draw teen and preteen viewers with its after-school time slot and by-request format. Fueled by the popularity of pop acts including Britney Spears and N' Sync, which it in turn helped to promote, the show quickly became the cable channel's most popular daily offering and an essential stop on the publicity circuit for anyone promoting an album geared toward young listeners. Geoff Mayfield of *Billboard* told Eric Messinger for the *New York Times* (April 2, 2000) that *TRL* was a key ingredient in selling "millions of records." *TRL* "is the thing—not the only thing but a key thing—that gets you from here to there," he said. Some admirers compared Daly to Dick Clark, the famous television host who introduced many rock acts to America via his long-running show *American Bandstand.*

"In contrast to some of the flamboyant celebrities that appear on *TRL* . . . ," Messinger wrote, "Daly comes across as just a regular guy. His banter is genial and lightly sarcastic. On the air, he is charmingly fidgety . . . he still doesn't quite seem to know what to do with his hands. But Daly doesn't want too much polish; he fashions himself a kind of uncelebrity celebrity." His on-air persona was parodied by the comedian Jimmy Fallon on *Saturday Night Live*; Fallon's impression began with the line, "Hi, I'm Carson Daly, and I'm totally average in every way!" Still, gentle mockery sometimes crept into Daly's demeanor. "It's never been something strategic or plotted with me, but I've started to see how it works," he told Messinger. "When I'm on the air, I'll often make a teen reference like, 'Oh, Justin is the cutest member of 'N Sync,' and kind of laugh, and you don't really know if I'm poking fun or taking it seriously." Though Daly was careful not to publicly state a dislike of any *TRL* acts, a friend of his told Messinger, "Let's just say that Carson isn't dancing around naked in his apartment to the Backstreet Boys."

As it grew more successful, *TRL* raised the ire of many cultural critics. Some criticized the music's homogeneity; fans requested the same videos so many times in a row that the show instituted a policy of retiring videos once they had been aired 65 times. The genres that the show stuck to—bubblegum pop, with some mainstream rock and hip-hop—were narrow and strictly commercial. "This stuff is all very simple—and music that is more grown-up or sophisticated has been pushed aside," Alan Light, the editor of *Spin*, told Messinger. In a long article for *Salon.com* (August 29, 2001), Sarah Kendzior painted *TRL* as representing a general societal obsession with fame, in that the show seemed to be, for the young people who attended tapings, less about music than about the experience of being on TV. "While older music fans profess outrage for MTV's blatant commercialism, the *TRL* audience blows off such concerns as irrelevant," Kendzior wrote. "The goal, obviously, is to get on TV. *TRL* may claim to mark a return to videos, but in the end it's just another reality series."

In 2000 Daly signed a contract that made him the program's executive producer and gave him license to develop shows for MTV and CBS, which were both owned by Viacom at the time. In 2002 Daly began hosting a late-night talk show on NBC, *Last Call with Carson Daly.* The show, which premiered a day late due to contract issues, received mixed reviews. "The show is not a radical move in late night, but it's appealing and sometimes unusual," Caryn James wrote for the *New York Times* (January 10, 2002). "The guest scheduled for tonight is the rap producer and sometime prison resident Suge Knight, not a guy who's likely to be making the rounds of talk shows. Guests like that should help *Last Call* and its pleasant host set themselves apart." James thought that Daly's "mix of soft friendliness with a touch of sardonic irreverence is appealing and adaptable to a wide range of guests. He looks like a teddy bear with a mischievous gleam in his eye." Writing for the *Los Angeles Times* (January 21, 2003) a year into the show's run, Scott Sandell was more negative: "Despite a year's worth of experience under his belt, Daly still struggles mightily to ask interesting questions." With a focus on musical guests, Daly's show has hosted the first network and/or U.S. appearances of bands including Panic! at the Disco, the Killers, Maroon 5, Jack Johnson, and Gavin DeGraw. Daly has also hosted more established acts, among them the rapper 50 Cent and the rock band Greenday, who performed their nine-minute song "Jesus of Suburbia" in its entirety.

In 2003 Daly became executive producer of his own company, Carson Daly Productions, as well as head of 456 Entertainment, a record label he co-founded with the record executive Jonathan Rifkind. "I always had a pretty good ear for a hit song," Daly told Tom Gliatto and Mark Dagostino for *People* (October 11, 2004). "The major companies don't give a [damn] about developing acts anymore. This is a true independent record company." Daly's label found some success with the British pop group Mis-teeq, which he discovered while vacationing in Saint-Tropez; their 2004 single "Scandalous" peaked at second place on the *Billboard* dance-singles sales chart and at number 35 on the *Billboard* "Hot 100" list. Meanwhile, late in

2003, after a year of flying back and forth between New York and Los Angeles to film both *TRL* and his NBC talk show, Daly left *TRL* and moved to Los Angeles. Talking with Mark Dagostino for *People* (November 25, 2006), Daly described filming *Last Call* in Los Angeles as being a drastic departure from making *TRL* in New York. "We shoot on the NBC lot, which is completely different from shooting on the *Saturday Night Live* set in New York," he said. "You're constantly reminded that you work in TV-land. You drive onto the lot and see people dressed like pilgrims, and the cast of *Days of Our Lives*, and all the big stars going into the *Tonight Show*." (With the recently introduced change in the show's format, many interviews take place away from the studio, mainly in settings in Los Angeles.) The move to Los Angeles coincided with Daly's decision to make changes in his personal life. After a high-profile relationship with the actress Jennifer Love Hewitt and another with the actress Tara Reid, which ended in a broken engagement, Daly was weary of being tabloid fodder. "I'm trying to re-enter the human race," he told Dagostino. "All of my rock 'n' roll living at MTV and my fast-paced public relationships—a lot of the press that people associated me with was tied in with all of that. And as I got a little bit older and moved on to NBC I thought, 'I've gotta grow up here.'"

As part of his effort to "grow up," Daly focused squarely on his work, developing a submission-based on-line program with NBC called *It's Your Show* in 2006. Each week Daly and his staff combed through viewer-submitted videos based on a given theme and awarded prize money for the best entries. Plans to develop a television version of the show never materialized. During the Writers Guild of America strike in 2007, Daly caught some criticism for being the first late-night talk-show host to return to the air without writers. He joined other personalities, such as Ellen DeGeneres, who broke picket lines to prevent their crews from being fired. "If I had not been back on the air tonight, 75 members of my loyal staff and crew were going to get laid off," he explained at the beginning of his show, as quoted by Brian Stelter in the *New York Times* (December 4, 2007). He described the "ultimatum" he received from NBC: "You either come back or they're laid off. I said, 'Let's turn the lights on, I'm gonna come back.' It's that simple."

In November 2008 Daly returned to New York to host the three-hour final installment of *TRL*, called "Total Finale Live." The program included performances by Beyoncé, 50 Cent, Fall Out Boy, the Backstreet Boys, Nelly, Snoop Dogg, and Ludacris. In addition to his regular series, Daly has hosted many TV specials over the course of his career, including *MTV New Year's Eve*, which he emceed for several consecutive years; *Manson TV* (1999), featuring the rocker Marilyn Manson; the *Miss Teen USA Pageant* on CBS (1999); *Britney Live* (2000); the *MTV Sports and Music Festival 5* (2001); and NBC's New Year's Eve prime-time special, which he also produced. Daly has also served as executive producer for programs including *TRL Super Bowl* (2001), *The 25 Hottest Stars under 25* (MTV, 2001), and the *Second Annual TRL Awards* (2004). For five years beginning in 2001, he hosted the radio show *Carson Daly's Most Requested*. Daly lives in Los Angeles with Siri Pinter, a writer's assistant for his late-night show, with whom he has a son, Jackson James Daly, born in March 2009.

D'Antoni, Mike

May 8, 1951– Head coach of the New York Knicks

Address: New York Knicks, Madison Square Garden, Two Penn Plaza, New York, NY 10121-0091

Mike D'Antoni, who became the head coach of the the New York Knicks in 2008, has one of the most unusual backgrounds of any coach in the National Basketball Association (NBA). After struggling for playing time in four seasons with NBA teams in the 1970s, D'Antoni spent 20 years in Italy, where, as a player and then a coach, he achieved celebrity status. He was the star point guard for Olimpia Milano, which competes with teams from Italy and other European countries in many tournaments year-round; during his time with the team, it won five Italian League titles. When he played with the national Italian basketball team, it won two European championships. As a coach of Olimpia Milano and then Benetton Treviso, he led his squads to several Italian and European championships and earned plaudits from many notoriously hard-to-please European sports fans. In Europe D'Antoni, who now holds dual American-Italian citizenship, became an expert in European-style basketball; a looser game than its American counterpart, it relies more on teamwork and rapid passes and shots, rather than the one-on-one matchups and displays of brute force common in NBA games. When he became the head coach of the Phoenix Suns of the NBA, in 2004, D'Antoni introduced to his players European-style offense, which was dubbed "run-and-gun," "high octane," or "seven seconds or less" (referring to the preferred maximum time between getting the ball and taking a shot). D'Antoni coached the Suns to four winning seasons, and under his leadership they dominated the Western Conference and shone not only as one of the most dynamic but one of the most entertaining teams in NBA history. D'Antoni gained a reputation as one of the NBA's most innovative coaches and was voted 2006 Coach of the Year by a panel of sportswriters. In May 2008 he signed a four-year, $24 million contract with the Knicks, who had not made the play-offs since 2001 and had faced turmoil both on and off the court in recent years. "The only thing I can promise," D'Antoni told Frank Isola for the New York *Daily News* (May 14, 2008), "is that we're going to play hard and be exciting—put on your seat belt and let's go." After a series of roster changes, which freed up salary-cap space for future player acquisitions, the Knicks finished the 2008–09 season with a disappointing record of 32–50. D'Antoni told Howard Beck for the *New York Times* (April 16, 2009, on-line): "Going forward, we can get a lot better real quick. Just have to have a little patience. And we're going to get there."

The second of the four children (three sons and one daughter) of Lewis and Betty Jo D'Antoni, Michael Andrew D'Antoni was born on May 8, 1951 in Mullens, West Virginia, a mining town so tiny that it lacked a traffic light. D'Antoni has recalled his childhood as idyllic. "Everybody looked after everybody. You felt safe," he told Wayne Coffey for the New York *Daily News* (May 18, 2008). "You thought you could conquer the world, and everybody else thought you could conquer it, too." D'Antoni's father, the son of an Italian immigrant coal miner, was a high-school principal and the legendary head coach of his school's basketball team; from 1950 through 1956 he guided the team to a 171–11 record. D'Antoni's mother worked as an assistant county clerk. She was an activist in the local Democratic Party and encouraged her family to engage in spirited political debates at the dinner table. The D'Antonis competed fiercely at games including ping pong, Monopoly, Risk, gin rummy, and bridge and posted the results on their refrigerator. Mike D'Antoni took to basketball early on. Joe Hill, a Mullens barber, recalled to Coffey that the boy and his basketball were "inseparable" and that "he'd dribble the ball all the way into town, and right into the barber shop."

D'Antoni played point guard in high school and at Marshall University, in Huntington, West Virginia. By the time he graduated from college, in 1973, he averaged 15 points and eight assists per game. The school's assist leader, he racked up a total of 659 assists, still the second-highest in Marshall's history. He was selected 20th in the second round of the 1973 NBA draft by the Kansas City/Omaha Kings. That year the Kings finished in fourth place in the Midwest Division, with a record of 33–49. Although D'Antoni was named to the All-Rookie second team in his first year, he played in only nine games in his two seasons with the Kings before being let go. In 1975, a year before the American Basketball Association (ABA) merged with the NBA, D'Antoni played 50 games with the ABA's Spirit of St. Louis. Next, he played two games with the San Antonio Spurs before the team cut him, in 1976. The next year, with his future in the NBA highly uncertain, the 25-year-old accepted an offer to play for the Milan, Italy–based Olimpia Milano, a member of the nation's 14-team professional league. Promised a year's salary of $30,000 and a place to live rent-free, D'Antoni, who neither spoke nor understood Italian, moved to Italy.

At that time European basketball differed from the American version in several ways. European leagues were generally less athletically competitive (a difference that has since significantly narrowed). Also, since most Europeans had not engaged in informal street or playground basketball games as youngsters, they avoided physical one-on-one matchups and fouls. Instead, European basketball, like soccer, emphasized quick ball movement and open formations. Teams were limited to having no more than two foreign players; the foreigners were usually Americans, who were often expected to lead their teams. While American players in European leagues were blamed for their team's losses, they were also given credit for victories, thus attaining stardom much more easily than they might have in the NBA. Because of his ancestry, D'Antoni was not categorized as foreign, making him an especially attractive acquisition.

D'Antoni still harbored dreams of playing with the NBA. After one season with Olimpia Milano, he asked the Chicago Bulls' management to consider him for the team. He attended the Bulls' summer rookie and veteran camps, where he performed well. A coach advised him that if he played equally well in the Bulls' preseason games, he would probably make the team. Soon afterward he suffered a thigh injury, which kept him out of the Bulls' first four preseason games and led him to reconsider his aspirations. "The Italian team [was] calling me," he recalled to Sam Smith for the *Chicago Tribune* (May 27, 2005). "There's more money in Europe. I said to myself, 'You know what, I might play here six months and be done. I can go over there and play 20 years.' I didn't even call [the Bulls]. I just went and it was like, 'Where's Mike?'"

In his first few years in Milan, D'Antoni concentrated on learning Italian. "I had no car, no phone, no TV," he told Teri Thompson for the *Daily News* (May 11, 2008). "I read about a book a day. That's about 600 books, and a new world opened up to me." D'Antoni stood out as Milano's star point guard and was celebrated for his ball-handling, passing, and defensive skills. He adopted the European style of offense and was given a lot of freedom to make strategic decisions on the court. Because of his impressive ball-stealing abilities, he was nicknamed "Arsenio Lupin," after Arsène Lupin, the fictional gentleman thief created by the French writer Maurice Leblanc. "The atmosphere playing here after the NBA is like being in college again," D'Antoni told Phil Hersh for the *Chicago Tribune* (March 31, 1986). "All of a sudden I'm important, I'm the star." During his 12 years with Olimpia Milano, D'Antoni became the franchise's leading scorer and helped his team win five Italian League titles. He also helped the Italian national team capture two European championships. D'Antoni earned a six-figure income, married an American model, Laurel Leibel, whom he had met in Milan, and associated with people famous in the fashion industry, among them Benettons and Versaces. "I grew up in Italy," he told Liz Robbins for the *New York Times* (January 16, 2005). "It broadened my way of life, how you deal with players, how you communicate." "I learned the American outlook on life isn't the only one there is," he told Greg Sandoval for the *Washington Post* (December 18, 2004). When D'Antoni retired from active play, in 1990, he was voted the league's top point guard of all time.

That year D'Antoni took on the job of coaching Olimpia Milano, with a starting salary of $200,000. He became one of Italy's top coaches, winning 68 percent of his games and guiding his team to the play-offs in each of seven seasons. From 1990 to 1994 the team's overall record was 86–34; they earned league titles in 1991 and 1992 and a Korać Cup in 1993. During that period D'Antoni fine-tuned his conception of high-tempo and improvisational play. He used an offensive formation often called "small ball"; instead of relying on a "big man" power center, who in more-traditional offenses remained next to the basket for short shots or dunks, "small ball" used three guards and two forwards who could adjust to movements all over the court like "quick, athletic, interchangeable parts," as Bob Cohn later described it for the *Washington Times* (December 25, 2004). D'Antoni had to modify that strategy when, in 1995, he became the coach of the Benetton Treviso, a squad that included two seven-foot players, Denis Marconato and Roberto Chiacig, whose height and playing style did not mesh with D'Antoni's "small-ball" offense. From 1995 to 1997 D'Antoni led Benetton Treviso to a record of 62–22; the team won the Cup of Europe in 1995 and the league title in 1997. Named Coach of the Year in Italy twice, he was said to be one of the best coaches in the league's history.

In the spring of 1997, after 20 years in Europe, D'Antoni accepted the post of director of personnel in the office of the Denver Nuggets, an NBA team that had finished the 1996–97 season fifth out of seven teams in the Midwest Division, with a win–loss record of 21–61. Though it was widely predicted that their performance in the 1997–98 season would not be much better, D'Antoni was excited to return to the NBA. "When you're living in Europe, you think you're missing out on something over here," he told Skip Myslenski for the *Chicago Tribune* (March 4, 1998). "You know, the NBA's the best, so you always have a dream to go back and try to climb the mountain a little bit more." While scouting for talent D'Antoni soon discovered that he missed coaching. In November 1997 he considered accepting an offer of a $700,000 annual salary to coach the basketball team in Barcelona, Spain, before rejecting that in favor of serving as the assistant to the head coach of the Nuggets, Bill Hanzlik, for half that amount. He thereby got "a front-row seat to what might be the most horrible NBA story ever told," Ian Thomsen wrote for the *International Herald Tribune* (January 31, 1998), in reference to the Nuggets' 1997–98 season. The team finished with 71 losses and 11 wins, only two games better than the worst record in NBA history. D'Antoni told Myslenski that his friends in Europe joked, "We thought you'd set some records in the NBA. . . . We just didn't think it'd be this quick."

After the 1998 season Hanzlik was fired, and D'Antoni took over as the Nuggets' head coach. With the return of players who had recovered from injuries and the hiring of several new ones, D'Antoni had high hopes for the team's chances to make the play-offs. A players' union strike over the issue of salary caps delayed the season's start until February 1999; in the remaining weeks of the season, the Nuggets compiled a record of 14–36, not enough to make the play-offs. D'Antoni was fired shortly before the start of the 1999 season, a less-than-ideal time to look for another job. Greg Sandoval, paraphrasing D'Antoni, described that experience as "one of the worst times of his life."

D'Antoni held administrative positions with the Spurs and the Portland Trail Blazers before returning to Italy to coach Benetton Treviso in the 2001–02 season. That year he led the team to the Italian League championship. After that season he became an assistant to Frank Johnson, the head coach of the Phoenix Suns. In 2001–02 the Suns finished with a 44–38 record. In the first 21 games of 2002–03, the team lost 13 games, and Johnson was ousted. On December 10, 2003 D'Antoni was named the Suns' new head coach; he hired his older brother, Dan, as his assistant coach. Taking over the squad midseason, he led the Suns to a final record of 21–40. In February 2004 D'Antoni made the controversial decision to trade the Suns' point guard Stephen Marbury to the New York Knicks. In the off-season, using money that became available with Marbury's departure, the Suns acquired several young, quick players, including the forward Quentin Richardson from the Los Angeles Clippers and, most importantly, the point guard Steve Nash from the Dallas Mavericks, a player known for his skills with assists, three-point shots, and free throws as well as his speed on offense.

In the 2004–05 season, his first as the team's head coach, D'Antoni engineered the third biggest season-to-season turnaround in NBA history. He introduced a strategy that relied on quick ball movement and shots taken in seven seconds or less during an offensive possession. In the conviction that that "high-octane" offense could beat even the best defense, he allowed Nash, who became an invaluable asset, the freedom to call plays and run the offense as fast as he liked. By December Nash was averaging 12 assists per game and had emerged as a three-point threat. The Suns' unusual offense proved to be both highly entertaining and highly effective. Chuck Culpepper, writing for *Newsday* (March 6, 2005), labeled it "free-flowing" and "picturesque," and Cohn described the Suns as "a throwback bunch, employing a hurry-up pace reminiscent of the racehorse NBA days before banging and plodding became the prevailing style." The Suns finished the season with the best record in the NBA (62–20) and the highest-scoring offense. They also broke the single-season record for three-point shots, with 796. In May 2005 D'Antoni was named the Coach of the Year, and Nash was named the Most Valuable Player. "I don't think many coaches in the NBA had such long coaching careers in Europe . . . ," Nash told Bill Harris for the *Toronto Sun* (May 11, 2005). "You don't have to be an NBA lifer to be a terrific coach, and he proves it. He's not very conventional." In the postseason, for the first time since 1993, the Suns advanced to the Western Conference finals, where they faced the Spurs. After losing the first three games in the best-of-seven series, the Suns won the fourth game. They lost the fifth game, 101–95.

Over the next three seasons, D'Antoni captained the Suns to 54, 61, and 44 wins, respectively, and consecutive play-off spots. In 2006 the Suns became the first team in NBA history to lead the league in scoring as well as percentages in field goals, free throws, and three-point shots. Nash was again voted the league's MVP, and the Suns advanced to the Western Conference finals, where they lost to the Mavericks in six games. In the 2006–07 season, the Suns enjoyed franchise-record winning streaks of 17 and 15 games and earned their third straight Pacific Division title. In the play-offs the Suns faced the Spurs in the Western Conference semi-finals. The Spurs won two of the first three games. During Game Four two starting members of the Suns, Amare Stoudemire and Boris Diaw, were suspended after leaving the bench when the Spurs' Robert Horry blatantly fouled Nash. The Suns won that game, then lost the next two, in part due to the absence of Stoudemire and Diaw. In February 2008 the Suns traded Shawn Marion to the Miami Heat for the seven-foot one-inch power center Shaquille O'Neal, who epitomized the traditional NBA style of play. The Suns finished the season with a 55–27 record, placing them sixth in the Western Conference. In the first round of the 2008 play-offs, they lost in five games to the Spurs, marking the fourth time in six years that Phoenix had ended its season with a loss to San Antonio. The Suns' repeated failure to advance to the NBA finals led many to question the overall effectiveness of D'Antoni's offensive style.

At the end of the 2007–08 season, the Suns' president, Steve Kerr, privately asked D'Antoni to alter his coaching style and place a stronger emphasis on defense, a suggestion that D'Antoni reportedly rejected. At his request, D'Antoni was granted permission to interview with other teams, despite the two years left on his contract. In April the Knicks' head coach, Isiah Thomas, was fired, in the wake of much criticism of his decisions regarding trades and coaching and his being named in a sexual-harassment lawsuit. The following month D'Antoni accepted a four-year contract with the Knicks.

New York fans were hopeful that D'Antoni—and the newly hired general manager, Donnie Walsh—would breathe new life into a team that Shaun Powell characterized for *Newsday* (May 11, 2008) as "bad and boring. That's two strikes. They haven't mattered in this town for a long time, and at least now, they have a coach who knows how to make basketball fun." D'Antoni's reputation as laid-back and inattentive led some to wonder whether he would mesh well with the Knicks' roster of "misfits," as Powell described them, and whether he would prove too thin-skinned for the often critical New York City media. The NBA draft lottery in May 2008 gave the Knicks a sixth-round draft pick, which was lower than they had anticipated. The Knicks selected the 20-year-old Italian player Danilo Gallinari and later signed Chris Duhon, who would become the team's new starting point guard. In the fall of 2008, Walsh made a number of roster changes that were widely interpreted as efforts to free up salary-cap space; that, in turn, would allow him to make an offer to one of a number of high-level players—including the Cavaliers' Lebron James and the Heat's Dwyane Wade—who will become free agents in 2010. D'Antoni succeeded in leading a drama-free 2008–09 season but finished with a disappointing record, including only 32 wins, which was not good enough to make the play-offs.

In 2009 the Knicks traded three players—Tim Thomas, Jerome James, and Anthony Roberson—to the Chicago Bulls in exchange for the versatile point guard Larry Hughes, and traded Malik Rose to the Oklahoma City Thunder for Chris Wilcox.

While acknowledging that the many trades that season interfered with the team's ability to establish a rhythm, D'Antoni remained optimistic about the team's future. In the summer and fall of 2009, he and Walsh continued to tweak the Knicks' roster. D'Antoni expressed particular excitement about Danilo Gallinari, the six-foot 10-inch forward from Italy who was drafted by the Knicks in 2008 but spent most of that season recovering from a back injury. In interviews D'Antoni and Walsh stated their hope that Gallinari's skills would help the Knicks earn a spot in the play-offs. D'Antoni has reportedly changed the Knicks' home-game-day routine, eliminating the morning shoot-around session to allow the players extra time to rest and to end players' commutes to two places in one day. (The team's training center is in Westchester County, north of New York City; their home games are held at Madison Square Garden, in the city's borough of Manhattan.)

Since 2006 D'Antoni has been one of three assistant coaches for the USA Men's Basketball Senior National Team. He helped guide them to a gold medal at the 2007 FIBA (International Basketball Federation) Americas Championship and a bronze medal at the 2006 FIBA World Championship in Japan. In 2007 D'Antoni was selected to coach the NBA Western Conference squad in the All-Star Game and led them to a 155–114 victory. While in Italy D'Antoni co-wrote two books on basketball strategy: *Playmaker*, written with the former Olimpia Milano head coach Dan Peterson, and *Vivendo Giacando*, written with the Italian sportswriter Tullio Lauro. (Neither book was registered with the U.S. Library of Congress.) In 2008 the Euroleague named D'Antoni one of the "50 Greatest Contributors in Euroleague History." D'Antoni served as the assistant coach, under head coach Mike Krzyzewski, of the U.S. national basketball team in the 2008 Olympics held in Beijing, China; the U.S. team won the gold medal.

D'Antoni and his wife married in 1986. In 2008 the couple and their teenage son, Michael, moved from Scottsdale, Arizona, to the New York City area. In his Suns office, according to Greg Sandoval, he kept a sign on his wall that read in Italian, referring to chess pieces, "When the game is over, the kings and pawns go into the same box." "It keeps me grounded," D'Antoni said.

Dati, Rachida

Nov. 27, 1965– Former French minister of justice; member of the European Parliament

Address: 7ème arrondissement de Paris Mairie,
116 rue de Grenelle, 75007 Paris, France

Joel Saget/AFP/Getty Images

The rise of Rachida Dati to one of the highest posts in the French government—that of minister of justice—has elements of a fairy tale. A child of Muslim immigrants who came to France from North Africa, Dati had no material advantages while growing up, but she had intelligence, ambition, determination, and good looks, and she succeeded in becoming well educated. Thanks to improbable opportunities that she created for herself, she fared well in the corporate world before earning a degree in law, entering government service, and, in 2002, joining Nicolas Sarkozy, then French minister of the interior, as an adviser. In early 2007 Sarkozy, a frontrunner for the presidency, picked her to be his spokesperson. A few months later, after Sarkozy won that office, he appointed her to head the Ministry of Justice. To some she was a symbol of change—the first person of North African ancestry and the first female Muslim to become a member of the French cabinet; to others, she was a puppet whom Sarkozy could use to justify the introduction of laws some perceived as harsh, particularly with regard to immigrants. Her management style, widely described as abrasive, angered many Justice

Ministry employees and led several to quit in protest. The pregnancy of the unmarried Dati provoked wide speculation as to the identity of the father (which she has not revealed), and her behavior became a hot topic in France when she returned to work less than a week after her daughter's birth, in early January 2009. Shortly afterward President Sarkozy, who had reportedly decided that she was more of a hindrance to him than a help, forced her to resign from her post; she did so in June 2009. Soon afterward French citizens elected Dati to a seat in the European Parliament, an arm of the European Union. According to John Lichfield, writing for the London *Independent* (February 13, 2009), Dati "let it be known" that she has set her sights on winning the mayoralty of Paris in 2014.

Rachida Dati was born on November 27, 1965 in Saint-Rémy, France, to poor Muslim parents of North African origin. She was the second of 12 children (some sources say 11). Her father, Mbarak Dati, was a Moroccan bricklayer, one of the many Muslim migrant workers who settled in Europe after World War II. Her mother, Fatim-Zohra Dati, an Algerian, was illiterate. According to Jason Burke in the London *Observer* (September 7, 2008), Dati was raised on the outskirts of Chalon-sur-Saône, in central France, where the family lived in a government housing project. Her father's first construction job in France was at a Catholic convent school. At his request, the school's administrators permitted Rachida and her older sister, Malika, to attend classes there. "It was here that Dati forged her fierce will to succeed," Angelique Chrisafis wrote for the London *Guardian* (November 20, 2008). "Anything less than top of the class was seen as a failure." In addition, Chrisafis wrote, Dati would "help adults in her council block write letters and fill out forms, order children to stop playing and do homework: she would give presentations about Islam to her Catholic class." When Dati was in her early teens, her mother died. (Readily available sources do not reveal the cause of her mother's death.) By the age of 14, she was not only helping to care for her many siblings while going to school but was also earning money at part-time jobs: selling Avon cosmetics door-to-door, answering phones as a nighttime hospital receptionist, and working at a supermarket. She left the Catholic school at 16; she later earned a master's degree in economics after studying at the University of Burgundy, in Dijon, France, and then at the University of Paris.

In 1987, at the age of 21, Dati wrote to the Embassy of Algeria in Paris asking for an invitation to its Independence Day celebration and succeeded in getting one. At the event she secured an invitation to lunch from France's then–justice minister, Albin Chalandon. "Suddenly, this nimble little woman came walking straight toward me and told me about the difficulties in her life, that she was physically exhausted, and that she needed my help," Chalandon recalled 20 years later, speaking to Anita Elash for the Toronto *Globe and Mail* (June 16, 2007). "This was someone with a lot of nerve, very direct, very intelligent, and who knew what she wanted. And when I saw all that, I decided it would be interesting to help someone of North African origin get out of the suburbs." Soon afterward Dati got a job as an accountant with the oil company ELF-Aquitaine, where Chalandon had been a director.

One day several years later, at an awards ceremony, she told the prominent businessman Jean-Luc Lagardère that she had dreams of working for him. Lagardère hired her as an auditor at Matra (later renamed the Lagardère Group), the conglomerate that he headed. Matra financed Dati's next academic degree, an MBA from the prestigious HEC School of Management, in Paris (the acronym stands for Hautes Etudes Commerciales, or Higher Studies in Commerce), which she earned in around 1993. (Dati's entry in *Who's Who* does not mention that school or degree. Whether or not she received it provoked a short-lived controversy in 2007, after a few journalists examined her application to law school.) From 1993 to 1994 Dati worked at the European Bank for Reconstruction and Development, in London, in its archiving and records-management department. After that she worked for a year at Suez S.A., a multinational French corporation, as secretary general of its bureau of urban development. From 1995 to 1997 she served as the technical adviser at the legal-management division of the Ministry of Education.

Taking the advice of Simone Veil, a former French minister of health and a Holocaust survivor, Dati decided to win the credentials necessary to become a magistrate—in France, either a prosecutor or a judge. From 1997 to 1999 she attended the prestigious National College of Magistrates, where she received a law degree. After graduation she became a magistrate judge in Bobigny, a city near Paris.

After three years of service in the judicial system, Dati landed a job with Nicolas Sarkozy, who was then the minister of the interior, responsible for maintaining the internal security of France. (The Ministry of the Interior has virtually nothing in common with the American Department of the Interior.) How Dati, a woman with no political experience, became one of Sarkozy's assistants has—like much of her life story—taken on an aura of legend. Dati wrote Sarkozy a series of letters (most accounts say five) asking for a job. In one letter she congratulated him on his tough (albeit unpopular) stance on young criminals. In 2002 Sarkozy hired her as a policy adviser. "There's something in me that echoes with him, a mirror effect," Chrisafis quoted her as saying. "Like me, he can't bear to be humiliated." Chrisafis continued: "Both feel themselves to be outsiders, her because of her background, him because of the foreign-sounding Hungarian surname he says haunted him, and the fact that he didn't study in Paris's elite graduate schools. He also feels deeply self-conscious about his absent father following his parents' divorce when he was a child, which set him apart from his bourgeois peers in western Paris." Dati devoted much of her time to policies and activities dealing with juvenile delinquents.

In 2006 Dati officially joined Union for a Popular Movement (UPM), a relatively conservative political party of which Sarkozy was also a member. In January 2007 Sarkozy was chosen as the official UPM candidate for president of France. On the day his candidacy was announced, Sarkozy—thanks in part to a strong suggestion from his then-wife, Cecilia—appointed Dati as his spokesperson for the presidential campaign. In May Sarkozy won 53 percent of the vote to defeat his main opponent, the Socialist Party candidate, Ségolène Royal. When Sarkozy took office, 10 days after the election, he appointed Dati minister of justice.

Sarkozy's selection of Dati to head the Ministry of Justice was seen by some as a hopeful sign of better governmental relations with Muslims and a symbol of France's increasing tolerance of Muslims—and by others as a calculated and overtly political move. To some, it was all of those things. On the positive side, Dati was the first person of North African origin and the first Muslim woman to hold a major government position in France. (Women in France hold significantly fewer political positions of power than women in most other European countries and many developing countries.) The main cause of cynical interpretations of Dati's appointment stemmed from remarks Sarkozy made in 2005, when he used such terms as "scum" and "thugs" to refer to the immigrants and children of immigrants (many of whom were Muslims or of North African origin) who rioted in violent protests against their marginalization, unemployment, poverty, and what they viewed as unfair treatment by the police. The appointment of Dati, said Sarkozy's critics, was a way of mollifying Muslims, North Africans, and others who opposed his tough stance on crime. But it also heartened conservatives, since Dati's stance on crime is also tough. She has supported minimum sentences for young offenders, many of them immigrants and some as young as 12, and she has pressed for a way to keep dangerous criminals locked up even after they have served their terms.

Dati soon took on the task of reforming the French court system. "Unpopular as it may be, the reform makes sense," according to the *Economist* (December 8, 2007). "The geography of the French court system has not changed in nearly half a century, despite huge population shifts. In largely rural areas, there is a *tribunal de grande instance* (county court) for fewer than 150,000 people; in big cities, one such court serves over 550,000. In Lorraine in eastern France, ten magistrates' courts employ a full-time judge without the workload to justify it, and two have none at all. By contrast, some city courts have vast backlogs." Acknowledging those changes in the "judiciary map," Dati drew up plans to close 178 of the 473 magistrates' courts and 23 county courts and to reallocate staff. The many lawyers, judges, and others who opposed her actions pointed out that France has 20 million more people than it did 40 years ago.

In September 2008 the public learned that Dati, at age 42, was pregnant. She announced that she would keep the identity of the father of her child secret. "I have a complicated private life and I'm keeping it off limits to the press," she declared, as quoted by Steven Erlanger in the *New York Times* (September 4, 2008). Her unmarried state received scant coverage in the mainstream press in France, where currently more than 50 percent of all births are out of wedlock. But in French tabloids and on French blogs and other Web sites, articles and discussions, most based on gossip, appeared for days on end. Fascination with Dati's pregnancy was also evident in news reports and commentary printed and posted outside France. "We are all enjoying the guessing game, but all I know is that I am extremely pleased for her," Valérie Hoffenburg, a Paris city councilor and one of Dati's close friends, told William Langley for the London *Sunday Telegraph* (September 7, 2008). "She has wanted a child for a long time, and has had many disappointments and sometimes been brought very low, and I think it is courageous of her to become pregnant knowing that there will be all this publicity and curiosity about who the father is." Hoffenburg then added that Dati, who is a secular Muslim, "has been held up as a role model for Muslim girls, and now we have Muslims denouncing her. Most people in France aren't shocked by an unmarried minister getting pregnant. The only real protests have come from her own community, and that must be hard for her."

On January 2, 2009 the 43-year-old Dati gave birth to a girl, Zohra. Five days after the delivery, by caesarian section, Dati—looking slim and attractive, according to many press reports—returned to work. While some of her compatriots applauded her commitment and dedication to her job, country, and president, her decision to resume her professional life so soon after the birth led to an outcry from French men and women, ranging from women's-rights activists to pediatric experts to politicians (most of them male). Some accused her of setting a bad example for French women, by not spending sufficient time with her newborn and failing to take advantage of her allowed time off. (Actually, French law stipulates that while companies must grant women four months of paid maternity leave, the government is not bound to give cabinet ministers or elected officials paid or unpaid leave after births.) Others noted that on the day that Dati came back to work, President Sarkozy held a press conference to announce important judicial reforms and perhaps had made Dati feel compelled to be at his side at that moment. A writer for Agence France Presse (January 13, 2009, online) quoted Ségolène Royal, who had four children with her partner (whom she never married) and was pregnant during her service as France's environment minister in the early 1990s, as saying, "Being back on the job only five days after a caesarian is too soon, there's no doubt about that. But this exceptional duty requires exceptional behaviour." Others expressed the view that Dati's action was a somewhat desperate act to keep her job. Some observers suspected that Sarkozy already had plans to remove her from his cabinet. In late January Charles Bremner, writing for the *Irish Independent* (January 24, 2009, on-line), and many other sources reported that Sarkozy had forced Dati to announce that she would run for a seat in the European Parliament that June and would leave her ministry job at that time. "Despite denials on all sides," John Lichfield wrote, "this amounted to a slow-motion dismissal" of Dati.

While few hard facts were discernible amid the abundance of rumors and speculation that surrounded Dati's fall from favor, most political insiders and analysts attributed the change in Dati's fortunes partly to her "imperious," "high-handed," "abrasive," and "overly aggressive" manner with staff members, as it was variously described, and her failure to discuss with them Sarkozy's changes to the judicial system, which as justice minister she was obliged to introduce. Nearly 50 Justice Ministry employees quit, according to some reports. Photo essays about Dati in fashion magazines along with her penchant for wearing very expensive clothing and jewelry in a time of recession also drew sharp criticism. "The trial of a brother for heroin trafficking was an excuse for more attacks," Jason Burke wrote. "The slightest gaffe is the pretext for editorials questioning her competence." Some political commentators believed that animosity between Dati and Sarkozy's second wife, the model and singer Carla Bruni, also contributed to Sarkozy's dissatisfaction with her. In October 2009 Dati's brother Jamal published a controversial book, *In the Shadow of Rachida*, that casts aspersions on Dati's behavior and alleged actions. "I've definitively cut myself off from my brother since he started this project," Dati told reporters, as quoted by Jack Bremer in the *First Post* (October 5, 2009, on-line), a British publication.

According to some sources, Sarkozy promised Dati that, once she began her service in the European Parliament, he would not stand in the way of her political ambitions. In addition to her membership in the Parliament, Dati is the mayor of the seventh arrondissement (district) in Paris, a mostly ceremonial position that she won in March 2008. In February 2009 she announced that she plans to run for mayor of Paris in 2014, when the second term of the current mayor will expire.

Davis, Artur

Oct. 9, 1967– U.S. representative from Alabama (Democrat)

Address: 208 Cannon House Office Bldg.,
Washington, DC 20515

"Too many of us, black and white, are teaching our children first and foremost about what separates us," Artur Davis said in 2002, shortly after he won his first election to represent Alabama's Seventh Congressional District, as quoted in the *Almanac of American Politics*. Since he entered the House of Representatives, Davis has become prominent as a member of a new wave of African-American politicians, for whom the struggle against racial discrimination has been superseded by the push for better schools, better and more widely available health care, and economic development that will lead to more and better-paying jobs. "If Obama is president, it will no longer be tenable to go to the white community and say you've been victimized," Davis told Matt Bai for the *New York Times Magazine* (August 10, 2008), three months before Barack Obama's victory in that year's presidential election—the first such victory by an African-American. "And I understand the poverty and the condition of black America and the 39 percent unemployment rate in some communities. I understand that. But if you go out to the country and say you've been victimized by the white community, while Barack Obama and Michelle and their kids are living in the White House, you will be shut off from having any influence." Raised by a single mother literally on the wrong side of the tracks in Montgomery, Alabama, Davis completed his undergraduate and law degrees at Harvard University. During the decade between his completion of law school and his swearing in as a congressman, he interned at a nonprofit legal organization, held the post of assistant U.S. attorney in a federal district court in Alabama, and maintained a private law practice. Stung by his defeat in his first bid for election to the House, against the veteran politician Earl Hilliard, he identified an issue—the Israeli-Palestinian controversy—on which the incumbent's stance displeased many supporters of Israel; by reaching those voters, most of whom lived in states other than Alabama, he raised far more in campaign contributions than his opponent and triumphed on Election Day 2002. In *Time* (September 1, 2008), Davis was listed among five up-and-coming Democrats whom the magazine identified as "hotshots to watch." According to many sources, Davis has set his sights on winning the governorship of Alabama in 2010.

Courtesy of the Office of Artur Davis

Artur Davis

"If you want an American bootstrap story, his is it," the political scientist Natalie Davis said of Artur Davis, as quoted by Jonetta Rose Barras for the *New Democrats Online* (April 15, 2003). Born in Montgomery on October 9, 1967, according to most accounts (only *Who's Who* has a different month—April), Artur Davis was raised by his mother and grandmother in a small house beside railroad tracks in the low-income, western part of that city. According to Phillip Rawls, a writer for the Associated Press (October 29, 2008, on-line), his father, a nurse, and his mother, a schoolteacher, divorced when he was very young. His father moved to California and seems to have been mostly or totally absent from Artur's life. "I was painfully shy as a child," Davis recalled to Rawls. His discomfort among his peers continued into high school. "I had a giant Afro way past the point where they were fashionable," he told Rawls. "I had glasses, which are fine when you are older, but they are not so great when you are 16 or 17." When not in school or at home, Davis stayed in the local public library, reading and learning. Davis attended Montgomery public schools, performing well enough at Jefferson Davis High School to gain admittance to Harvard University, in Cambridge, Massachusetts, through a scholarship. During the summer before his junior year, his mother received a foreclosure notice on their house, and she, Davis, and his grandmother lived in a "tiny motel room" for three weeks, as he recalled in the speech in which he seconded the nomination of Barack Obama as president at the 2008 Democratic National Convention, as transcribed for *Congressional Quarterly* (August 28, 2008). Davis graduated with a B.A. degree in government, magna cum laude, in 1990, and then enrolled at Harvard's law school. While there he befriended his fellow student Barack Obama, who had been elected editor in chief of the *Harvard Law Review*. The first time he heard Obama speak publicly, to other students in a Harvard classroom, he found his friend's words compelling. "He said we faced three challenges," Davis told Howard Fineman for *Newsweek* (February 25, 2008). "First: competence, which was expected. Second: excellence, which only some seek. Third: mastery, which very few ever tried for. It was a level of proficiency and skill so high it allowed you to do something better than anyone else. He urged us to seek that." While he was in law school, Davis served an internship with U.S. senator Howell Heflin, an Alabama Democrat. In 1993 Davis earned a J.D. degree, cum laude.

After he completed his formal education, Davis returned to the South and became an intern at the Southern Poverty Law Center, whose main office is in Montgomery. For one year he worked on matters concerned with civil rights, employment discrimination, and racial equality. He then clerked under U.S. District Court judge Myron H. Thompson, one of the first African-Americans appointed to the federal bench. In 1994 Davis became an assistant U.S. attorney with the United States District Court for the Middle District of Alabama, the federal trial court where Judge Thompson presided. During the next four years, he helped to prosecute civil and criminal cases involving white-collar offenders, drug dealers, and people accused of violent crimes. He often appeared on local television programs to comment on legal issues and cases, and his shyness faded away. Davis regarded his work as a public attorney as a springboard to elective office. "It gets you accustomed to making a case to a group of people, quickly and concisely," he told Michael Wilson for the *New York Times* (July 3, 2002). He told Phillips Rawls, "Being a lawyer and standing up and arguing in front of juries, that was probably the best political training I got."

In 1998 Davis left his government job to start a private practice in Birmingham that would focus on civil rights law. In 2000 he made an unsuccessful, poorly funded bid to unseat the four-term Democratic congressman Earl Hilliard, Alabama's first African-American representative in Congress since Reconstruction. For a brief time he provided political commentary on a local Fox television affiliate. In 2002 he tried again to win Hilliard's seat as the representative of Alabama's Seventh Congressional District, one of the poorest districts in the U.S., running a spirited primary campaign against the incumbent, who was 25 years his senior and whom he labeled a member of the old guard in politics—"a guy who saw himself principally as a spokesman for the community rather than as an actual legislator," as Matt Bai paraphrased Davis in the *New York Times Magazine* (August 6, 2008). "Earl Hilliard is where we came from, not where we are going, and it is time to bring him back home," Davis said during his campaign, according to K. Terrell Reed and Sonia Alleyne, writing for *Black Enterprise* (November 2002). For his part, Hilliard tried to plant doubts in his constituents' minds about Davis's commitment to the community, and he disparaged Davis's accomplishments as a government attorney. "The only thing he's done for black people is put them in jail," Hilliard declared, as quoted by Michael Wilson.

In addition to stirring up tension between generations of black politicians, the Hilliard-Davis race drew the attention of pro-Israel lobbying groups, which considered Hilliard to be weak in his support of Israel or partial to Palestinians in the decades-long Israeli-Palestinian conflict. Thanks to publicity within and outside Alabama generated by those groups, individuals and organizations sympathetic to their views contributed about $300,000 to Davis's war chest. John Nichols reported in the June 27, 2002 on-line issue of the *Nation* that, according to the Center for Responsive Politics, in total Davis raised $879,368—more than 10 times the amount he had collected two years earlier; according to the *National Journal* (July 9, 2002), 82 percent of contributions above $200 that came to Davis arrived from out of state, particularly from New York. Other sources reported that Davis secured $1 million, while Hilliard's 2002 total came to a little over $500,000. In the primary election, held on June 25, 2002, Davis beat Hilliard by a margin of 56 percent to 44 percent. In his interview with Michael Wilson, Davis downplayed his financial advantage in that contest. "All money enables you to do is communicate your message," he said. "If the message doesn't resonate, you lose." In the general election, held the following November, Davis trounced his only opponent, the Libertarian candidate, Lauren Orth McCay, winning 92 percent of the ballots cast.

Once in Congress, Davis quickly gained a reputation for practicing bipartisanship and what some have dubbed "postracial politics" (a label Davis does not embrace). A member of the centrist New Democrat Coalition, Davis has taken liberal stands on some issues and conservative positions on others. In a show of support for business and economic development, he promised to "reach out in an aggressive manner to the business community," as quoted by Alexandra Starr in *BusinessWeek* (July 15, 2002). He was also a champion of social programs that helped his constituents. In his first term he helped to restore previously cut funds to minority land-grant colleges such as Tuskegee University. He later led bipartisan efforts to restore funding to the HOPE VI program, which sought to renovate and improve public housing. "This project is a major step towards revitalizing the Ensley/Five Points West community," Davis said in a press release announcing the grant of $20 million to the housing program (June 4, 2004), referring to a section of Birmingham. "I am pleased that the administration has realized the value of this program and look forward to watching it come to fruition in the coming years." Davis also campaigned successfully for the passage of the Southern Empowerment and Economic Development Act, which authorized the creation of the Delta Black Belt Regional Authority to help residents of the Black Belt; a large area of the Deep South that is historically associated with slave labor in agriculture, the Black Belt is home to some of the nation's poorest citizens.

On another front, Davis attempted to promote much of the pro-Israel agenda that had been part of his campaign platform. Viewing Israel as an admirable democracy and U.S. ally surrounded by hostile forces, he co-sponsored several bills designed to impose harsher penalties on Israel's neighbors for showing aggression, such as the Syria Accountability Act, which imposed sanctions against the Syrian government for harboring terrorists. He also voted "yes" on the Solidarity with Israel Resolution and the "Iran Democracy" bill, both of which hinted that the use of U.S. force against countries including Iran and Syria would be justified if they did not meet certain standards of behavior. In 2003 he signed his name to a letter in which members of Congress stated that they were "deeply dismayed" at President George W. Bush's criticism of Israel's recent missile strike on a site in Gaza City where the Hamas leader Abdel Rantisi was believed to be; Israel's action, the letter maintained, "was clearly justified as an application of Israel's right to self defense," as quoted by Shirl McArthur in the *Washington Report on Middle East Affairs* (September 2003).

In the 2004 Democratic primary, Davis faced a challenge from Albert Turner Jr., whose father had been a civil rights leader and adviser to Martin Luther King Jr. Davis's status as an incumbent and his image as a practical, productive lawmaker enabled him to rebuff Turner's challenge and capture 88 percent of the vote. In the general election he defeated the Republican challenger—Steve Cameron, a musician—by a ratio of three votes to one. During the 109th Congress (2005–06), Davis was appointed to the House Committee on the Budget as well as the House Financial Services Committee and three of its five subcommittees: Housing and Community Opportunity; Capital Markets, Insurance, and Government Sponsored Enterprises; and Oversight and Investigations. He also began serving on the senior whip team of the Democratic Caucus and became a vice chair of the centrist New Democrat Coalition.

With the Republican congressman Chris Smith of New Jersey, Davis co-sponsored the Stem Cell Therapeutic & Research Act of 2005, which aimed to establish a national bank for the storage of blood from newborns' umbilical cords, which contains stem cells. President Bush signed the bill into law on December 20, 2005. "We and all the patients who will be helped applaud the efforts of Representatives Chris Smith and Artur Davis for their sponsorship of this bill," Robert L. Jones, the president of the New York Blood Center, said in a press release (December 20, 2005). "They both have been strong advocates in the fight to save lives through providing more and better cord blood transplants."

In 2006 Davis won the Democratic primary with almost 91 percent of the vote; in the general election he ran unopposed. During the 110th Congress he served on the influential Ways and Means Committee and two of its subcommittees—Social Security, and Income Security and Family Support. He was also appointed to the Judiciary Committee and three of its subcommittees: Constitution, Civil Rights, and Civil Liberties; Crime, Terrorism, and Homeland Security; and Immigration, Citizenship, Refugees, Border Security, and International Law. He also became a member of the House Majority Leader's Advisory Group and of the Steering and Policy Committee, which has the power to approve committee assignments and rules changes for the Democratic Caucus.

In Alabama Davis chaired the health-care subcommittee of Governor Bob Riley's Black Belt Action Commission, whose mission was to take steps to improve the quality of life in the Black Belt. In an effort to remedy an often overlooked problem, Davis initiated the Black Belt Eye Care Consortium, a network of organizations that would provide eye care without charge to underserved groups. "Proper eye care is a dire necessity for children and adults," Davis said in a press release on the commission's Web site. "I am very pleased that these groups have decided to work together to begin to deliver a sense of normalcy to the lives of adults and children who otherwise would struggle at the most basic tasks in life." Other programs headed by Davis's subcommittee include the Rural Alabama Diabetes and Glaucoma Initiative and the Community Care Network, the latter of which recently organized health fairs in the state's 12 Black Belt counties.

Despite his firsthand knowledge of lingering disparities between whites and blacks in wealth, health, and other areas, Davis has frequently noted the progress the U.S. has made with regard to racial equality. "Until our generation, it was assumed the highest we could aspire to was to be a member of the House," he told Howard Fineman. "Now that ceiling has been lifted." Davis was the first congressman from a state other than Illinois to endorse U.S. senator Barack Obama of Illinois in his quest for the presidency. He has come under fire for diverging from traditional liberal Democratic stances on such issues as abortion rights and gun control—for example, he voted for the Partial-Birth Abortion Ban Act of 2003, which criminalizes a rarely performed procedure, known medically as intact dilation and extraction (or evacuation), except in cases in which the life of the mother is threatened. Davis also voted for the Protection of Lawful Commerce in Arms Act of 2005, which prohibits people from bringing product-misuse lawsuits against gun manufacturers. In addition, he has been taken to task for straying from purely "black" issues too often. "Davis is one of those 'New Blacks' who are black in skin tone, but philosophically they are not," Hilliard said of him during the 2002 campaign, as quoted by Kay S. Hymowitz in the quarterly periodical *City Journal* (Winter 2007). Davis has countered that he believes traditional racial politics are neither helpful to minority constituents nor productive in the give-and-take required among members of Congress. He recalled to Hymowitz an instance in which one of his black constituents accused him of not putting black issues first. "I told him point-blank: What about my white colleague in the Third District who has a 35 percent black population? Do you want him to just represent white people? We're not going to win that game. We're the minority in most places." "In just my lifetime the meaning of leadership for African Americans has changed," he told Terrence Samuel for the *American Prospect* (September 2007). "When my mother came along you could teach, but you couldn't teach white children, you could lead, but you couldn't lead white people. This is a different space. Now you could live up to your potential. . . . I can't think of a single issue in American political life where you can still say 'This will exclusively affect blacks,' or 'This will only affect whites.'"

In press releases in late 2008, Davis described his efforts to promote the adoption of foster children whose care is supervised by Alabama government agencies (December 2, 2008); announced his creation of a judicial advisory committee to help him evaluate candidates for federal judgeships in Alabama and United States attorney positions (December 8, 2008); announced the launch of that committee's Web site (December 18, 2008); discussed his opposition to the federal bailout of the auto industry (December 10, 2008); informed his constituents of a meeting aimed to ensure that Alabama's most needed infrastructure projects are included in the forthcoming federal-stimulus package (December 15, 2008); and expressed his support for the continuation of tax incentives to spur business growth in so-called empowerment zones in Alabama's most depressed areas (December 16, 2008).

In early 2009 Davis announced that he would run for the governorship of Alabama in that state's general election in November 2010. His campaign officially began in June 2009, and in its first few months, observers gave Davis little chance of succeeding in the heavily white, mostly Republican state. "If elected, he would be the first black governor of a Deep South state since Reconstruction . . . ," Robbie Brown noted for the *New York Times* (June 5, 2009). "If Mr. Davis hopes to win, he must convince Alabamians that he is more than Mr. Obama with a Southern drawl—and far more centrist than the president. Mr. Obama lost Alabama by 21 percentage points to Senator John McCain." While some observers argued that Davis's bid was unwise and potentially damaging to both his career and Democrats in general, others maintained that Davis was determined to win and might continue to move to the right in relation to his national Democratic colleagues in order to appeal to his state's more conservative voters.

Davis lives in Birmingham and Washington, D.C. On January 1, 2009 he married Tara Johnson, an outreach coordinator with the Alabama Forestry Commission.

Doerr, John

(dore)

June 29, 1951– Venture capitalist; social and environmental activist

Address: Kleiner Perkins Caufield & Byers, 2750 Sand Hill Rd., Menlo Park, CA 94025

"I love helping people make a large-scale impact. I'm a networker, an organizer, an unbounded enthusiast and supporter of great entrepreneurs and leaders." That self-description by the venture capitalist John Doerr appeared in a Harvard Business School (HBS) booklet published in October 2008, when the school honored him with an Alumni Achievement Award. Since he joined the California venture-capital firm Kleiner Perkins Caufield & Byers (KPCB), in 1980, Doerr has handled investments in some of the most successful technological start-ups of the past three decades, among them Sun Microsystems, Netscape, Intuit, Compaq, Amazon.com, and Google. In *Forbes* (October 25, 1993), Nancy Rutter identified Doerr as "arguably the finest venture capitalist of his generation," while John Chambers, the chairman and chief executive officer of Cisco Systems, has described him as "the single best venture capitalist in the world," according to the HBS booklet. Doerr's importance and influence in the world of venture capital has been likened to that of Bill Gates, the co-founder of Microsoft, in the field of software. Dubbing him the "Johnny Appleseed" of venture capital, *Time Digital* (October 4, 1999) ranked Doerr number 17 on a list of the "50 most important people shaping technology," declaring, "In a world of Midas touches, . . . Doerr's handshake is the most golden."

Venture capitalists, Doerr explained in an interview with John Brockman for *Edge* (1996, on-line), "help assemble and then invest in a team of entrepreneurs or scientists. Usually the ventures are startups. Sometimes they're already going—I call those 'speedups.' . . . In the end, we're recruiters who pay you for the right to help build your team. You reward us with shares of stock. We both work like crazy to make the stock valuable." In an interview for the HBS *Bulletin* (December 1997, on-line), Doerr said that his firm looks for "five characteristics [that] distinguish outstanding ventures. Most ventures will have only two or three of these when they come to us, so we work with the team to add the missing elements. The characteristics are technical excellence; outstanding management; strategic focus on a large, rapidly growing market; and a set of financings reasonable for all parties. Fifth, and most important, is a tremendous sense of urgency. We want to back ventures that are the first or second entrants in their markets, so speeding the product to market in advance of the competition is absolutely crucial."

Doerr has attributed his success in part to the skills, knowledge, and insights of his KPCB partners—there were 30 as of October 2009—and the entrepreneurs they have helped to bankroll. He told Laura Rich for the *New York Times* (May 3, 2004), "I'm part of a firm with lots of prominent partners. One of the things that happened in the [dot-com] boom was too much attention was paid to venture capital and not enough to the entrepreneurs and innovators and scientists. And that is rightly where the action is." In recent years Doerr has become an energetic advocate for alternative energy. "The climate crisis is the most urgent problem facing our planet," he has said, as quoted in the HBS booklet. "It is critical that we accelerate the flow of investment into green technology." Doerr recruited former vice president Al Gore, a friend of his, who won the Nobel Peace Prize for his efforts to stop global warming, to join Kleiner Perkins' GreenTech Team, which focuses on investments in sustainable-energy and -fuel ventures. In 2009 Doerr was named to President Barack Obama's 15-member economic-recovery advisory board.

The eldest of five children, Louis John Doerr III was born on June 29, 1951 in St. Louis, Missouri, to Louis John Doerr Jr. and his wife, Rosemary. He grew up in a "tight-knit middle-class family," according to the HBS interviewer, and was "influenced by his entrepreneurial father"; indeed, in an autobiographical account for the book *Done Deals: Venture Capitalists Tell Their Stories* (2000), edited by Udayan Gupta, he referred to his father as his "hero." (On the KPCB Web site, he also named as his heroes his mother and two computer-company executives: Bill Joy, the co-founder of Sun Microsystems, who has been a KPCB partner since 2005, and William F. "Bill" Campbell, currently the chairman and CEO of Intuit.) "My parents worked hard to give all five of their children something that no one could take away—a great education," Doerr told the interviewer. He attended Chaminade College Preparatory School, a Catholic boys school in St. Louis. Following his graduation he enrolled at Rice University, in Houston, Texas, where he studied electrical engineering. During his sophomore year, with two friends, he started a graphics-software business, Warren Rowe and Associates. After earning a B.S. degree, in 1973, and an M.S. degree, also in electrical engineering, in 1974, Doerr sold his interest in the software company and moved to Cambridge, Massachusetts, to pursue an M.B.A. at the Harvard Business School. He was interested in starting his own business and spent his first summer away from Harvard in California, hoping to find work at a venture-capital firm. "Venture capital, I'd heard, had something to do with building new companies," Doerr told Gupta. "So I cold-called Silicon Valley's venture groups, hoping to apprentice myself to one." At that time venture-capital jobs were sparse. Instead, Doerr was hired for the summer by the up-and-coming Intel Corp., a maker of semiconductor chips that was headquartered in Santa Clara, California.

Founded six years earlier, Intel had introduced in April 1974 its 8080 microprocessor, an eight-bit central processing unit (CPU) that is now considered the first true general-purpose microprocessor. Doerr spent that summer with Andrew "Andy" Grove, an Intel executive, helping to train Intel's sales force in the U.S. and Europe. Gupta wrote that Grove, who had been with Intel virtually from its beginning, served as a mentor to Doerr. After that summer Doerr returned to Harvard, at the same time working for Intel as a field engineer. Intel assigned him to work with the Digital Equipment Corp. (DEC), in Maynard, Massachusetts, which manufactured minicomputers for engineers and scientists. (DEC was acquired in 1998 by Compaq, which merged with Hewlett-Packard in 2002.) Upon his graduation from Harvard, in 1976, Doerr moved to Santa Clara, where he joined Intel's engineering department and then its marketing department. He transferred to Intel's Chicago office to take a job in sales, then returned to Santa Clara to become Intel's marketing manager. In 1978 Doerr married Ann Howland, a Rice graduate who was working at Intel as a software engineer.

In 1980 Doerr left Intel to join KPCB—named for the partners Eugene Kleiner, Tom Perkins, Frank Caufield, and Brook Byers—in Palo Alto, California. He was initially reluctant to take the job. KPCB "wanted a gofer to help check out new business plans. I was still interested in someday starting a venture, but I wasn't so sure about venture capital," he wrote for *Done Deals*. When the four partners interviewed him, they "promised that if I worked for them, they would someday back me in starting a new venture." They did just that the following year, when Doerr and the computer scientist Carver Mead co-founded Silicon Compilers, a company specializing in the development of software that aids in the design and manufacture of computer chips. Silicon Compilers later merged with Silicon Design Labs and was bought by Mentor Graphics in the early 1990s.

Doerr became a full partner at KPCB in 1982. That year he advocated investment in Compaq, a fledgling computer company that had been founded earlier in the year by three former employees of the semiconductor manufacturer Texas Instruments. KPCB had already turned down a request for funds from Compaq, when the company sought to sell hard-disk drives for IBM desktop computers. After Compaq executives revised their business plans to focus on building the first transportable computer, Doerr persuaded his partners to invest. In its first year Compaq sold $110 million worth of portable computers. In 1986 Compaq appeared on the *Fortune* 500 list (*Fortune*'s annual ranking of the 500 largest corporations in the U.S.), sooner after its founding than any other firm at that time. By 1988 Compaq's total revenues since its launch totaled $1 billion, a figure it reached faster than any other start-up in history.

In 1990 Doerr was instrumental in KPCB's $4.7 million investment in Intuit Inc., a computer-software company responsible for the finance software Quicken and QuickBooks. Scott Cook, the founder of the seven-year-old Intuit, which was already enjoying moderate success, wanted additional support to strengthen the company's hold on the market. In 1993 KPCB, which received ownership of 12 percent of Intuit's stock for their investment, helped facilitate Intuit's merger with Chipsoft Inc., which marketed the tax-preparation software TurboTax. Six years later Doerr's 85,000 shares of Intuit were valued at $8.2 million.

In 1994 Doerr handled KPCB's investment in Netscape Communications, founded in April of that year by the entrepreneur Jim Clark and the software engineer Marc Andreessen as the Mosaic Communications Corp. Clark and Andreesen were marketing Mosaic, the first Internet browser, which Andreessen had created with Eric Bina. KPCB invested $5 million for a 25 percent stake in the company. In 1995, after Mosaic was renamed Netscape, the company went public. At the beginning of its first day of trading, its stock price was

$28; by the closing bell it had risen to $58. In time KPCB's investment in Netscape earned the partners a total of $400 million. (America Online purchased Netscape for $4.2 billion in 1998.) Among Doerr's other major success stories were KPCB's $8 million investment in Amazon.com in 1996, which netted $60 million for the firm when Amazon.com went public the following year, and their $12.5 million infusion of funds into Google in 2001, an investment whose worth in 2007 was $12 billion.

A few of Doerr's recommendations have not borne fruit. One of his most notable failures involved the Go Corp., founded in 1987 by Bill Joy, of Sun Microsystems, Robert Carr, of the Ashton-Tate Corp., and Mitchell Kapor and S. Jerrold Kaplan, both of the Lotus Development Corp. The four entrepreneurs wanted to develop a mobile computer controllable with a pen: the computer would recognize a user's handwriting and transfer the data over wireless networks as e-mail messages, voicemail, or faxes. With $30 million of venture capital, almost $5 million of it from KPCB, Go was among the most investment-heavy start-ups in history. Nevertheless, it failed, "but not for lack of vision or good corporate partners," Doerr wrote in *Done Deals*. "IBM, AT&T, and [KPCB] backed some of America's smartest, most passionate entrepreneurs who were convinced that pen computers were the next big thing. But our implementation was just wrong. We misread the market and picked the wrong price point, and the handwriting recognition was too ambitious." "If you're not failing once in a while, you're not venturing enough," Vern Raburn, the former chairman of the Paul Allen Group, a technology-management company, and the founder of the Eclipse Aviation Corp., told Daniel Lyons for *Computer Reseller News* (November 18, 1996). "In a way, you could say [Doerr] is the ultimate venture capitalist."

As a member of various boards of directors, Doerr has been associated with several companies whose officers were accused of insider trading and accounting fraud. (They include the real-estate company Homestore.com Inc., later known as Homestore Inc., and Martha Stewart Living Omnimedia Inc. Three of Homestore's executives pleaded guilty to securities fraud in connection with the company's accounting practices in 2002. Doerr, who sat on the board of Stewart's company from July 1999 to March 2002, was a defendant in a 2003 lawsuit brought by Stewart shareholders, but the charges against him were dropped.) Before the burst of the so-called dot-com bubble (the period between 1995 and 2001, when Internet-based companies flourished, leading to extraordinarily bullish stock markets), Doerr had often touted the Internet as the source of "the greatest legal creation of wealth in the history of the planet," in his words. He thus encouraged people to have a romanticized view of the investment world, according to the business and technology expert Paul Kedrosky, now a senior fellow at the Kauffman Foundation, which is devoted to entrepreneurship. Doerr "was a blue-eyed believer but his proclamations were so full of hyperbole that there was no good that could come of them . . . ," Kedrosky complained to Ariana Eunjung Cha for the *Washington Post* (November 13, 2002). "He made a lot of people lose a lot of money." Paul Saffo, a former director of the Institute for the Future, defended Doerr, telling Cha, "It is in the nature of technological innovations for inventors and the people closest to them to be excited by what they see. . . . That John Doerr's enthusiasm was infectious is not John Doerr's fault." Still, some critics say Doerr's practice of *keiretsu*, a Japanese term that refers to a network of firms that help each other by sharing financial and strategic information, helped cause the dangerous inflation of the dot-com bubble. "During the late 1990s," Cha wrote, "the Kleiner keiretsu companies, which included e-retailers, optical-networking toolmakers and software companies, would sometimes get their initial revenue from online ads, equipment and services they bought from each other. . . . The result, some critics say, was an artificial demand for the companies' products that was deceptive because it wouldn't have existed without the involvement of Kleiner partners."

In about 2005 Doerr began to urge his partners to invest in alternative-energy projects. "I worry that America will not be able to innovate fast enough in its policies and technologies to prevent the catastrophic, irreversible climate crisis," he told Erika Brown for *Forbes* (January 24, 2008, online). "I want Kleiner to make major, measurable contributions to solving global warming. It's the largest economic opportunity of the 21st century, and a moral imperative." The firm's dedication to the green movement prompted the 2000 U.S. Democratic presidential nominee and environmental activist Al Gore, who has been a friend of Doerr's for years, to join KPCB as a partner in 2007. In turn, Doerr joined the board of Gore and David Blood's London-based investment company Generation Investment Management. In an article about the cooperative efforts of Gore, Doerr, and Blood, Marc Gunther and Adam Lashinsky wrote for *Fortune* (November 26, 2007), "If Gore is the elder statesman of the group, Doerr is the salesman. Famous both for his boundless energy and his high-end hucksterism, at 56 he is wiry and birdlike in his tendency to flit from topic to topic. He specializes in making everyone around him believe as passionately about his current cause—first the PC, then the Internet, now the environment—as he does." As of January 2008 KPCB had invested in 26 energy-related companies. Doerr currently sits on the boards of several, among them Amyris, a renewable-products company that creates and markets biofuels and malaria drugs; Bloom Energy, which manufactures fuel cells; and Miasolé, a maker of solar panels.

Doerr is an activist in areas including education reform, elimination of global poverty, improvement of health care around the world, stem-cell research, and an increase in the number of women in leadership positions. In 1998, with Brook Byers and the social entrepreneur Kim Smith, he co-founded the NewSchools Venture Fund, whose mission is to promote innovation in the education of children in kindergarten through 12th grade. The fund supports both nonprofit and profit-making entities. Doerr co-chaired successful efforts to pass Propositions 39 and 71—on ballots statewide in California in 2000 and 2004, respectively—the first of which raised about $23 billion for public schools and the second of which authorized the allocation of $3 billion in state funds for stem-cell research. Until recently he was a board member of the Grameen Foundation, which to date, through microfinancing (loans ranging from less than $100 to a few hundred dollars in U.S. currency), has helped 45 million people who were living in poverty in 23 countries start and maintain their own businesses. He is currently on the board of trustees of the Aspen Institute, which strives "to foster values-based leadership . . . and to provide a neutral and balanced venue for discussing and acting on critical issues," according to its Web site. Doerr was influential in the creation of the Biomedical Advanced Research and Development Authority (BARDA), overseen by the assistant secretary for preparedness and response, within the U.S. Department of Health and Human Services; established by the Pandemic and All-Hazards Preparedness Act of 2006, BARDA works to prepare the U.S. to meet threats posed by potentially epidemic or pandemic infectious diseases, such as influenza, as well as chemical, radiological, and nuclear threats. He devoted time and energy to the passage in California of the Global Warming Solutions Act, which the state's governor, Arnold Schwarzenegger, signed into law in 2006. The first such legislation to go into effect in the U.S., it requires the total amount of greenhouse-gas emissions in California to drop to 1990 levels by 2020 and calls for penalties for noncompliance.

With his personal funds, Doerr invests in businesses devoted to genomics, advanced medical equipment, technologies to increase Internet bandwidth, and alternative energy. He sits on the boards of directors of companies including Amazon.com, Google, Bloom Energy, Navigenics, and Zazzle. A thin man with sandy blond hair and glasses, he has been described as energetic, charismatic, and affable. Every year since 2001 *Forbes* has listed him among the 400 richest people in the U.S., and for the past seven years, it has placed him among the top four on its "Midas" list, which recognizes "the top tech deal makers in the world." Doerr's honors include the 2007 Lifetime Achievement Award from the Lester Center for Entrepreneurship and Innovation at the University of California–Berkeley. In 1997 Doerr and his wife established the L. John and Ann H. Doerr chair in computational engineering at Rice University, a $1 million endowment that honors Ken Kennedy, a professor who encouraged them to meet. They live with their two adopted daughters—Mary, who is in her late teens, and Ester, an adolescent—in Woodside, California. Since 2000, when his wife was diagnosed with cancer, Doerr has made sure to be home for supper with his family at least 20 days of every month. His recreational activities include bicycling, hiking, skiing, traveling, and surfing the Web.

Donovan, Shaun

Jan. 24, 1966– Secretary of the U.S. Department of Housing and Urban Development

Address: U.S. Dept. of Housing and Urban Development, 451 Seventh St., S.W., Washington, DC 20410

Shaun Donovan began serving as the commissioner of the New York City Department of Housing Preservation and Development (HPD) in 2004. He took a brief leave of absence in 2008 to advise the Democratic presidential candidate Barack Obama during his successful run. In December of that year, the president-elect chose Donovan to head the U.S. Department of Housing and Urban Development

(HUD). He was confirmed by the U.S. Senate on January 22, 2009 and sworn in on January 27.

Shaun L. Donovan was born on January 24, 1966 in New York City. As a young boy he became fascinated with building model cars and dreamed of being a car designer. After graduating, in 1983, from the prestigious Dalton School, located on Manhattan's Upper East Side, he enrolled at Harvard University, in Cambridge, Massachusetts, earning a B.A. degree in engineering in 1987. Donovan also pursued graduate studies at Harvard; in 1995 he obtained both an M.A. degree in architecture from the Graduate School of Design and a master's degree in public administration from the John F. Kennedy School of Government. Over the next three years, Donovan worked as an architect in Italy and New York City; he also had a stint with the Community Preservation Corp. (CPC), a New York City–based nonprofit lender and developer of affordable housing. During that period Donovan conducted research and wrote case studies for the Joint Center for Housing Studies at Harvard.

In 1998 Donovan began a three-year stint at HUD, serving first as a special assistant and then as the deputy assistant secretary for multifamily housing. He helped oversee the development and administration of privately owned, government-subsidized housing programs, which provided more than $9 billion annually to 1.7 million families. His duties included managing a portfolio of 30,000 multifamily properties with more than two million housing units. He was also named acting commissioner of the Federal Housing Administration (FHA) during the transition from Bill Clinton's administration to that of George W. Bush.

After leaving the federal government, Donovan served as a visiting scholar at New York University (NYU), from June 2001 to July 2002, conducting research on the preservation of federally assisted housing. While at NYU he also worked as a consultant for the Millennial Housing Commission, a panel created by Congress to address the need for affordable multifamily housing in the U.S. He then spent two years as a managing director at Prudential Mortgage Capital Co., where he was responsible for managing the company's portfolio of affordable loans, which totaled more than $1.5 billion in debt from a number of federal agencies, including the FHA and the Federal National Mortgage Association (also known as Fannie Mae), the nation's largest underwriter of home mortgages. (In 2000 Prudential had acquired the WMF Group, a financial-services firm and lender to FHA and Fannie Mae.)

In March 2004 New York mayor Michael Bloomberg appointed Donovan to head HPD, whose task involves "building more low- and moderate-income housing in New York City while navigating the web of interests, including landlords, developers and lenders, who all have a stake in the outcome," according to the *New York Times* (December 13, 2008). At that time the city was plagued by problems, including a growing population, rising land and construction costs, and a declining inventory of city-owned property. Another point of concern involved landlords, who were increasingly opting out of state and federal programs that had kept rents low.

During his tenure at the HPD, Donovan implemented Bloomberg's New Housing Marketplace Plan, a $7.5 billion affordable-housing plan—currently the largest in the nation—to build or renovate 165,000 units that would house up to 500,000 New York City residents by 2013. Donovan was credited as a pioneer for capitalizing on the strength of the real-estate market and finding innovative ways to finance low- and moderate-cost housing. He told Janny Scott for the *New York Times* (September 25, 2006, on-line): "There are groups that would argue that we should only work with nonprofits. I believe we should work with [for-profit companies, too]. Because at some fundamental level, I believe in competition. I believe that by having a broader pool available, having for-profits in the mix, we may get a lower price or be able to manage it more efficiently." Donovan further argued that affordable housing was not simply a moral issue but was central to the economic development of the city. "We must make sure we can continue to attract the low- and moderate-paid workers who fuel those economies," he told Matthew Schuerman for the *New York Observer* (August 13, 2007). "So this is a fundamental competitive issue for the city as well as being a social justice issue. If the city can't continue to attract and house—and it's really been people from all over the world—it's a real risk to our economy overall."

Donovan has successfully pushed for inclusionary zoning—a concept not previously embraced by the Bloomberg administration—as a viable strategy to achieve affordable-housing goals. He persuaded private real-estate developers to allocate part of their projects for lower-income housing, and in exchange the developers were permitted to build at a greater density. Additionally, Donovan was instrumental in the reform of the city's 421A tax-abatement provision, which offers tax breaks to developers who are willing to include affordable housing in upscale development projects. He was instrumental in establishing the New York City Acquisition Fund—$200 million that was financed by the city government and seven major foundations and financial companies—whose goal is to help small developers and nonprofit groups compete on private-land acquisitions. Donovan's efforts helped keep foreclosures on low- and moderate-income housing to a minimum, with just five foreclosures out of 17,000 participating homes.

Donovan was granted a leave of absence from his position as New York City's housing commissioner to serve as an adviser during Senator Barack Obama's successful presidential campaign in 2008. On December 13 of that year, Donovan was President-elect Obama's surprising choice to be the next HUD secretary. (A number of Latino groups had campaigned to have the mayor of Miami, Florida, Manny Diaz, a native of Cuba, nominated for the post.)

In his first several months in office, Donovan had to deal with consequences of the housing bubble that was generated during the George W. Bush administration, as well as the related economic recession of 2008 and 2009 and its devastating effects on the housing industry. (An estimated 3.5 million foreclosures were predicted to occur during the first year of the Obama administration.) Donovan has worked with several federal agencies on measures to limit foreclosures and with mortgage providers to renegotiate terms so as to allow many to keep their homes. He has also made considerable efforts to improve the operations of the housing-assistance program in New Orleans, Louisiana, where, four years after the devastation caused by Hurricane Katrina, many people still lack permanent dwellings. Most observers, however, agreed that given the scope of the recession—and particularly its effects on the housing market—as of late 2009 it was too early to evaluate Donovan's performance. He has come under some criticism for his longstanding cooperation with ACORN (the Association of Community Organizations for Reform Now), an organization dedicated to fighting poverty and pushing for a higher minimum wage, more affordable housing, and increased voter registration among the poor and lower middle class. Various conservative media outlets have accused the organization of being corrupt, and Donovan, who worked with ACORN extensively while he was New York City's top urban-development official, has been forced to distance himself from the group.

Donovan, a recipient of the 2008 Public Service Award from the New York Housing Conference and National Housing Conference, is married to Liza Gilbert, a landscape architect, with whom he has two children, Lucas and Milo.

Douthat, Ross

(DOW-thut)

Nov. 28, 1979– Writer; op-ed columnist for the New York Times

Address: New York Times, *1627 I St., N.W., Washington, DC 20006*

Courtesy of Ross Douthat

In April 2009 Ross Douthat left his position as a senior editor of the *Atlantic* to join the *New York Times* as an op-ed columnist. The 29-year-old Douthat, a social conservative, is the youngest regular *Times* op-ed writer since the newspaper launched that page, in 1970. In addition to his six-year tenure at the *Atlantic*, he has been a film critic for the conservative magazine *National Review* since 2005 and has written two books. *Privilege: Harvard and the Education of the Ruling Class* (2005) is an autobiographical account of his undergraduate years at Harvard University; *Grand New Party: How Republicans Can Win the Working Class and Save the American Dream* (2008), written with Reihan Salam, analyzes the history of the Republican Party and proposes policies that might make the GOP more appealing to working-class voters. Douthat has also written for the *Wall Street Journal*, the *Weekly Standard*, *Policy Review*, *GQ*, the *Claremont Review of Books*, *Slate*, and *Details*. When his *Atlantic* colleague Marc Ambinder learned that Douthat would be leaving the magazine for the *New York Times*, he described the move on his *Atlantic* blog (March 11, 2009) as "one step back for the *Atlantic*, but an order of magnitude forward for the country." Ambinder then described Douthat as a "late-twenties-year-old public intellectual with the sensibility of a 60-year eminence grise" and compared his range to that of the radical journalist Christopher Hitchens; his "pitch" to that of the British historian A. J. P. Taylor, if the liberal Taylor had been a conservative; his conscience to that of the Protestant theologian and "Christian realist" philosopher Reinhold Neibuhr; and his "intellectual honesty" to that of "his frequent sparring partner, Andrew Sullivan," a senior editor at the *Atlantic* since 2007. Since he joined the *New York Times*, Douthat has written pieces on topics including the fictionalized view of Catholic history and its role in modern America presented by Dan Brown in his best-selling novel *The Da Vinci Code*, the increased power of the Supreme Court and why he believes justices should have term limits, and the correlation between the current economic crisis in the U.S. and the recent election in Iran.

The first of the two children of Patricia Snow and Charles Douthat, Ross Gregory Douthat was born on November 28, 1979 in New Haven, Connecticut. He has a younger sister, Jeanne. His mother, a Yale University graduate, was primarily a homemaker for some years. She is now a writer; her essays have appeared in periodicals including *First Things*, published by the Institute on Religion and Public Life. Douthat's father is a partner in the New Haven law firm Jacob, Grudberg, Belt, Dow & Katz; he specializes in cases involving people seriously injured by medical malpractice and dangerous products and in workplace accidents. With his partner Jonathan Katz, Charles Douthat coauthored *Injury Claims in Connecticut*, a consumer's guide. Ross Douthat was raised in an affluent suburb of New Haven by parents who were social and political liberals. He told Terry Gross for the National Public Radio program *Fresh Air* (July 16, 2008), "When I was growing up, my earliest political memory is my mother dragging us out to a polling station and saying, 'I need to grab every woman by the lapels and tell them to vote for Geraldine Ferraro.'" (Ferraro was a U.S. congresswoman when, in 1984, she became the Democratic vice-presidential nominee; she was the first woman to join the presidential ticket of a major political party in the U.S.) Ross attended Episcopalian church services with his family until his parents became practicing Pentecostals. When he was a teenager, all the Douthats converted to Catholicism. Douthat told Gross that as a youth he was already a "contrarian" in his "fairly liberal" town, and, in addition, he believes that "a lot of my conservatism does grow out of sort of socially conservative convictions that are rooted in religious belief."

Douthat attended Hamden Hall, a private school in Hamden, Connecticut, where he and his friend Michael Barbaro, now a reporter for the *New York Times*, edited and wrote for the school's newspaper, the *Advent*, as well as anonymously for an underground paper called *La Verite@*. He also tried his hand at writing a science-fiction novel; he completed most or all of it, Barbaro told Sheelah Kolhatkar for the *New York Observer* (March 6, 2005). "I think he sent that around to publishers and was really, really crestfallen when that didn't get any response," Barbaro said. After his high-school graduation, Douthat enrolled at Harvard University, in Cambridge, Massachusetts. He considered a career in law before making the decision to pursue his passion for writing. In his years as an undergraduate, he contributed biweekly opinion columns to the *Harvard Crimson*, the daily campus newspaper, and edited the school's biweekly conservative student paper, the *Harvard Salient*. Douthat earned money during his first two summers at Harvard by writing for SparkNotes, a Web site that at that time offered free study guides of literature. The summer before his senior year, he interned at the *National Review* under the conservative icon William F. Buckley Jr., the founder and longtime editor in chief of the magazine, who at that time was an editor at large.

Douthat graduated magna cum laude from Harvard in 2002, with a B.A. degree in history and literature. In the fall of 2002, he began working as a researcher at the *Atlantic* (formerly the *Atlantic Monthly*), in Washington, D.C. He soon began to toy with the idea of writing a memoir about his experiences at Harvard. "It seemed like there hadn't been anything written in a long time about the undergraduate experience from an undergraduate perspective," he explained to Kolhatkar. He cited as a work that he admired on that subject—but that was not written from that perspective—an article called "The Organization Kid," which David Brooks wrote for the *Atlantic* (April 2001). For his article Brooks, then a senior editor at the *Weekly Standard*, interviewed undergraduates at Princeton University and "sort of tried to get the sense of the place," Douthat told Kolhatkar. "And then you have Tom Wolfe with [the 2004 novel] *I Am Charlotte Simmons*—a similar thing, you know: Older reporter goes and tries to be a fly on the wall at college, and so forth. Those were very good, but I felt like college from the point of view of the college student was fertile literary terrain." He wrote several chapters during his free time and, with the help of a literary agent, began submitting his work to publishing houses. Before long Douthat received a $120,000 advance from Hyperion Books.

Privilege: Harvard and the Education of the Ruling Class was published in March 2005. Called a "withering indictment of Harvard's institutional culture" by Bryce Christensen for *Booklist* (February 1, 2005), *Privilege* recounts Douthat's experiences at that elite school, focusing on issues of diversity, academic rigor, sex, and class. In two statements that sum up its theme, Douthat wrote in *Privilege*, "Harvard is a terrible mess of a place—an incubator for an American ruling class that is smug, self-congratulatory, and intellectually adrift," and "Meritocracy is the ideological veneer, but social and economic stratification are the reality." In an interview with Kathryn Jean Lopez for the *National Review* (May 26, 2005, on-line), Douthat said, "On the one hand, Harvard—like America—is a fantastically wealthy place, a pioneer in science, medicine and technology, and possessed of an enviable degree of power and influence. . . . It has many of early-21st century America's strengths—but many of the country's weaknesses as well. Its diversity is skin-deep: like the country as a whole, Harvard is actually getting more class-stratified, not less so, both within the school and in how well the student body reflects the broader society. Its scientific successes have been balanced by drift and even rot in the humanities, which mirror the larger rot in American popular culture; its formidable clout is undercut by a deep insecurity about its purpose and its founding ideals; and perhaps most importantly, its unprecedented wealth has too often fostered a spirit of materialism, greed, and success-at-all-costs."

Douthat has said that he was not a member of Harvard's privileged class because he did not attend any of the "right" private schools and was not one of the people who "lived in the right suburb, vacationed in the right windswept part of Long Island or Maine or Nantucket or the Vineyard," as he wrote in *Privilege*. In the book he criticized the school's relatively unchallenging courses, lack of economic diversity (according to Douthat around 70 percent of Harvard students have parents who earn more than $100,000 per year), and grade inflation, a trend that has occurred at many other colleges, too, in recent decades. In an article on the same topic that he wrote for the *Atlantic* (March 2005, on-line), Douthat cited statistics: "More than 90 percent of the [Harvard] class of 2001 had earned grade-point averages of B-minus or higher. Half of all the grades given the year before were [A's] or A-minuses; only six percent were C-pluses or lower. By way of comparison, in 1940 C-minus was the most common GPA at Harvard, and in 1955 just 15 percent of undergraduates had a GPA of B-plus or higher." Readers who enjoyed *Privilege* included William F. Buckley Jr., who characterized it in the *National Review* (March 28, 2005) as "a satisfying account of the Harvard experience." Less pleased was a writer for the *New Yorker* (April 11, 2005, on-line), who complained, "Douthat critiques his peers' sense of entitlement from the perspective of a cultural conservative, although his high moral tone is somewhat compromised by an eagerness to bolster this account of campus life with salacious anecdotes of debauchery, greed, and snobbery. Douthat skewers the political and sexual shenanigans of his classmates and provides a thoughtful analysis of the prevailing liberal politics of the campus. But his righteous indignation can seem misplaced, when so many of the injustices that exercise him are so petty. It's hard to get really upset about charges of button-stealing in a campus election." Stephen Metcalf, writing for *Slate* (March 10, 2005, on-line), also found fault with *Privilege*: "Nothing in Douthat's tone, an awkward mix of *Brideshead* elegy with the *National Review Online*, renders his anatomy of college life trustworthy. As with many a promising young fogy, no adults have interposed themselves between Douthat and his first book contract, and so he has been allowed to persist in the belief that sounding wearied and a little bored will aid him in sounding adult and worldly."

At the *Atlantic* Douthat worked his way up the ladder to reporter, blogger, associate editor, and, in 2006, senior editor. He wrote articles on such topics as the radio host Howard Stern's possible influence on undecided voters in the 2004 presidential election, religion in the U.S. and Europe, and the possible link between pornography and adultery. On his own time he co-authored, with the *Atlantic* editor Reihan Salam, *Grand New Party: How Republicans Can Win the Working Class and Save the American Dream* (2008). That book stemmed from an article that Douthat and Salam had written for the *Weekly Standard* (November 14, 2005) called "The Party of Sam's Club"; the title referred to the assertion in 2001 by the governor of Minnesota, the Republican Tim Pawlenty, that Republicans "need to be the party of Sam's Club, not just the country club." (Sam's Club, an arm of Wal-Mart, is a national chain of so-called warehouse retail clubs, through which, for a modest membership fee, consumers can buy products in bulk at lower prices than charged at ordinary stores.) In their article Douthat and Salam argued that the Republican Party must focus on issues of immediate concern to people in the working class. The writers suggested that Republican politicians put aside their small-government ideals to support child-rearing incentives, wage subsidies for the working poor, reform of the health-care industry, and other social measures that would help families and low-income Americans. "Many of the issues that the Republican party rode to power remain salient today, of course. The GOP doesn't need to rethink its support for a strong national defense, for instance, or its commitment to social conservatism," Douthat and Salam wrote. "But having risen to power at a time when most Americans were worried about losing their economic *freedom*, the party needs to adapt to a new reality—namely, that today, Americans are increasingly worried about their economic *security*—and reorient its agenda to address those concerns."

In *Grand New Party*, Douthat and Salam discussed the history of the Republican Party and expanded on the ideas set forth in their 2005 article. "The biggest challenge—and it's one [Salam and I] try and tackle in our book—is that the Republican Party has become a working class party, but it's become . . . largely a white working class party," Douthat told Terry Gross, "and the challenge for Republican politicians demographically over the next 20 to 30 years is to persuade Hispanic and also black American working class voters to vote the way white working class voters do right now, and that's a challenge I'm not sure the Republican Party is prepared to meet." The columnist David Brooks, for whom Salam worked for a while as a junior editor at the *New York Times*, wrote of the book for the *Times* (June 27, 2008), "There have been other outstanding books on how the GOP can rediscover its soul . . . , but if I could put one book on the desk of every Republican officeholder, *Grand New Party* would be it. You can discount my praise because of my friendship with the authors, but this is the best single roadmap of where the party should and is likely to head." Norman J. Ornstein, a political scientist and a resident scholar at the American Enterprise Institute, a conservative-leaning think tank, wrote in his review for the *New York Times* (June 29, 2008), "The core Republican and conservative establishment should read this book. Its members may hate activist government, or at least bow politically to the hatred, but Douthat and Salam make a strong case that a conservatism of reflexive tax cuts and sink-or-swim economics will never resonate with the huge core of voters who are spread thin [financially] and falling behind." Some reviewers, among them Daniel McCarthy, writing for the libertarian magazine *Reason* (November 1, 2008), criticized Douthat and Salam for failing to offer a clear definition of "working class," while others, such as Stephen Amidon, in a review for the *New York Observer* (June 20, 2008), contended that the authors' suggestions were far more likely to please Democrats, many of whom would be willing to spend even more than proposed for programs considered in *Grand New Party*. The book failed to capture a wide audience; according to Ira Boudway in *New York* (March 30, 2009), only 6,500 copies had been sold before that issue of the magazine reached newsstands. Douthat's *Atlantic* colleague Andrew Sullivan told Boudway that *Grand New Party* "put coalition politics before philosophical coherence, and that's why it failed, despite its many virtues, to impact the debate."

In March 2009 the *New York Times* announced that Douthat would succeed the *Weekly Standard* editor Bill Kristol as one of its op-ed columnists. Although his appointment has received praise from many members of the media (including some liberals), some left-leaning writers have criticized his views on hot-button issues. In 2001 he supported President George W. Bush's decision to invade Iraq, later writing for the *Harvard Salient* (February 14, 2002, on-line), "It goes without saying that [Saddam Hussein] . . . is busy trying to acquire a nuclear bomb, to supplement his extensive collection of biological and chemical weaponry." He criticized Islam, writing for the *Harvard Crimson* (October 22, 2001), "Where Christianity has a Christ who turns the other cheek and gives himself over to be crucified, Islam has a Prophet who makes war—in self-defense, arguably, but with a glad heart, a warlike spirit and a knowledge that Allah is on his side. . . . That spirit endures to this day. Just ask Osama bin Laden." On social issues Douthat has remained true to conservative Catholic ideals. He is strongly anti-abortion and opposes stem-cell research. In a post on his *Atlantic* blog (February 25, 2009), Douthat wrote, "I don't expect or want American social policy to reflect the Catholic Church's teaching on contraception, I don't have a problem with our public health services providing access to birth control. . . . But I also think that an awful lot of the policies liberals like to champion in this area—expanded public-school sex ed programs chief among them—don't deliver anything remotely like the benefits they promise. And I'm extremely wary of defining 'common ground' on abortion in terms that essentially require the pro-life movement to give up the store in the legal debate, in exchange for at best marginal returns where the abortion rate is concerned." Writing for the liberal magazine the *Nation* (April 6, 2009), Katha Pollitt expressed her opposition to Douthat's appointment: "Even for a blogo-pundit, Douthat seems unusually averse to engaging with women intellectually, even on perennial topics like abortion and birth control, where you'd think we'd bring something missing to the table—like an interest in our health, well-being, happiness, longevity, pleasure and ability to have some control over our lives."

In 2007 Douthat married Abigail Tucker, whom he met when both were students at Harvard. Tucker was a reporter for the *Baltimore Sun* before becoming a *Smithsonian* magazine staff writer. The couple live in Washington, D.C.

Duncan, Arne

(AR-nee)

Nov. 6, 1964– Secretary of the U.S. Department of Education

Address: U.S. Dept. of Education, 400 Maryland Ave., S.W., Washington, DC 20202

For seven years beginning in 2001, Arne Duncan served as the chief executive officer of Chicago Public Schools (CPS), overseeing the nation's third-largest school system. In December 2008 he was nominated by President-elect Barack Obama to be the U.S. secretary of education. Confirmed by the U.S. Senate on January 20, 2009 and sworn in the next day, Duncan is only the second schools superintendent (the former Houston superintendent Rod Paige was the first) to become the nation's top educator.

Arne Duncan was born on November 6, 1964 to Susan Goodrich (Morton) and Starkey Davis Duncan in Chicago, Illinois. He hails from a family of educators. His father was a psychology professor at the University of Chicago, and his mother was the founding director of an after-school tutoring center for underprivileged minority adolescents in Chicago's South Side. As a youth Duncan developed a

Jonathan Ernst/Getty Images

Arne Duncan

passion for basketball and honed his skills in pickup games. "I'd go out to play on the South Side and the West Side, where I was the only white kid," he told Grant Pick for an interview posted on the Catalyst Chicago Web site (June 2003). "There were so many great role models. I learned to judge character."

Duncan played basketball at the University of Chicago Laboratory Schools, one of the nation's top preparatory schools, where he served as team captain during his senior year. After graduating from high school, he studied sociology at Harvard University, in Cambridge, Massachusetts. As a freshman he played for the junior-varsity basketball team and was named the starting forward for the varsity squad during his sophomore year. Following his junior year Duncan, who finished among the team leaders in rebounds, assists, and scoring, took a yearlong leave of absence from school to conduct research for his thesis (entitled "The Values, Aspirations and Opportunities of the Urban Underclass"), which explored the difficulties that children face in inner-city neighborhoods. He spent the year in Chicago, where he served as a tutor for his mother's after-school program.

Upon returning to Harvard Duncan was named co-captain of the varsity basketball team. As a senior he was among the team leaders in scoring, steals, rebounds, assists, three-point shots, field-goal percentage, and free-throw percentage. He also earned first team Academic All-American honors. After graduating magna cum laude with a B.A. degree in sociology, in 1987, Duncan pursued a professional basketball career and spent the next four years (1987–91) playing for several now-defunct Australian professional and semiprofessional squads, including the Eastside Melbourne Spectres of the National Basketball League, the Launceston Ocelots, and the Devonport Warriors. At that time Duncan, who also worked with children who were wards of the state, met his future wife.

When Duncan returned to Chicago in 1992, his childhood friend John W. Rogers Jr. appointed him director of the Ariel Education Initiative, a nonprofit mentoring and tutoring program designed to enhance educational opportunities for Chicago's inner-city youth. Duncan also helped establish the Ariel Elementary Community Academy, a small public school located on the South Side.

In 1998 Duncan joined the Chicago Public Schools—the country's third-largest school system, behind those of New York City and Los Angeles—and spent his first year overseeing the state magnet schools and programs. "I had spent a lot of time in the classrooms at Ariel," he told Pick. "Here were kids with high academic potential who weren't being asked to do homework. It broke my heart. Throughout my [experience with] my mother's program and at Ariel, the public schools had always been the enemy. I wanted to change that." In 1999 he began serving as the deputy chief of staff to CPS chief executive officer Paul Vallas, and two years later Chicago mayor Richard Daley ousted Vallas and named Duncan to succeed him. Duncan was viewed as an unlikely choice, due to his lack of an education degree or formal teaching experience.

As superintendent of Chicago Public Schools, Duncan implemented several controversial reforms. To raise the performance levels in the city's schools, which had consistently lagged behind the state average for seven years, Duncan shut down a number of underperforming schools and fired ineffective teachers. In 2004 he helped launch Renaissance 2010, Mayor Daley's bold program to close 60 public schools and replace them with new charter, contract, or small schools by 2010.

Duncan received criticism from the teachers' unions for supporting performance-based financial initiatives not only for teachers but for students as well. In September 2008 a privately funded program was launched in which students in 20 Chicago schools could earn $4,000 per year for achieving straight-A grades. "The majority of our students don't come from families with a lot of economic wealth," Duncan told the *Chicago Tribune* (September 11, 2008). "I'm always trying to level the playing field. . . . This is the kind of incentive that middle-class families have had for decades." In December of that year, his proposal to establish a public high school for gay, lesbian, and transgendered teens—which was ultimately turned down—also met with criticism.

Duncan's performance as CPS superintendent, though controversial, was effective. Under his command, 53 new public schools were established, including the thriving Dodge Renaissance Academy, a once-failing school that had been closed in 2002 and has been hailed as a model for teacher-training programs since it reopened in 2005. Additionally, the schools' graduation rate has increased by nearly 6 percent. Duncan is also credited with raising the percentage of elementary-school students whose perfomances meet the state standards from 38 percent to 65 percent, although high-school scores have remained a source of concern.

In addition, Duncan served as an education-policy adviser to Barack Obama, beginning when Obama was a state senator. The two met in the early 1990s through Craig Robinson, Obama's brother-in-law, and often played pickup basketball games. During Obama's 2008 presidential campaign, Duncan helped Obama draft an education platform that advocated investment in early-childhood education, emphasis on math and sciences, merit-based pay initiatives for teachers, and training and recruitment programs for principals.

At a press conference held at the Dodge Renaissance Academy on December 16, 2008, President-elect Obama nominated Duncan to be the next secretary of education. His selection was hailed by the leaders of two major teachers' unions: Randi Weingarten of the American Federation of Teachers and Jo Anderson of the Illinois Education Association.

Confirmed (along with five other Cabinet members) by the Senate in a unanimous vote, Duncan is responsible for overseeing the Department of Education, which allocates billions of dollars in federal funding and guides the country's schooling policies and standards. His primary challenge will be to address the shortcomings of the No Child Left Behind Act, the controversial federal policy passed in 2001 that requires poorly performing schools to track data on low-income and minority students and impose penalties on the schools if those pupils do not perform well. The law also offers pay incentives to effective teachers who help improve student achievement. As Karen Kingsbury wrote for *Time* (December 16, 2008, on-line), the legislation "has managed to rankle both Republicans (for interfering with state initiatives) and Democrats (for placing so much emphasis on standardized testing)." While Duncan supports No Child Left Behind's accountability requirements, he called for increased funding and emphasized the need to gain the support of both political parties in order to get meaningful reforms passed.

In his first year as education secretary, Duncan, along with Obama administration officials, created an incentive for states to engage actively in education reform through the Race to the Top fund, which consisted of $4.3 billion in grant money, awarded competitively to those states that demonstrated their commitment to effective—and measurable—reform. The incentives have been particularly beneficial to charter schools. Duncan also made progress in negotiating with skeptical teachers' unions with regard to performance standards.

Duncan was named citizen of the year by the City Club of Chicago in 2006. He and his wife, Karen, have two children, Claire and Ryan.

Eve Welch, courtesy of Denis Dutton

Dutton, Denis

Feb. 9, 1944– Philosopher

Address: Philosophy School of Humanities,
University of Canterbury, Private Bag 4800,
Christchurch 8140, New Zealand

During a national tour to promote his most recent book, *The Art Instinct: Beauty, Pleasure, & Human Evolution* (2009), Denis Dutton stopped in New York City to give lectures and interviews. One interview stood out, not because it was particularly illuminating (it was not), but because listeners found it very funny. Dutton—a philosopher whose area of expertise is art, aesthetics, and evolutionary psychology—was getting peppered with absurd questions on the TV show *The Colbert Report.* Not very many philosophers can pride themselves on having verbally sparred with Stephen Colbert, but Dutton is no ordinary philosopher. In addition to being a prolific writer and highly regarded professor at the University of Canterbury, in New Zealand, he is the founder and editor of Arts & Letters Daily (aldaily.com)—which at least one authoritative source, the London *Observer*, has called the world's best Web site. A random day's sample might include links to stories, essays, and articles about the life of Charlie Chaplin; the irreconcilable differences between science and religion; Leonardo da Vinci's tendency to procrastinate; theories on links between race and IQ; the deification of the writer Franz Kafka; high-tech warfare; a scholarly explanation of charisma; or dozens of other subjects. For his role in managing the site, Dutton was named by *Time* (October 28, 2005) as one of "the most influential media personalities in the world." The site is influential not only because it gets three million hits per month but also because many writers and editors view it as an endless source of story ideas.

Meanwhile, Dutton's book *The Art Instinct* has been widely praised as ambitious, insightful, and original. The renowned evolutionary psychologist Steven Pinker said, as quoted in the *Washington Post* (February 4, 2009), that Dutton's book "marks out the future of humanities—connecting aesthetics and criticism to an understanding of human nature from the cognitive and biological sciences." The book argues that art—from the most sophisticated Beethoven quartets and Picasso paintings to sitcoms and popular fiction—has its basis in Darwinian adaptation, particularly the adaptation of the human imagination. The arts are a cultural phenomenon, Dutton admits, but they are also, he maintains, rooted in human biology—the side of creativity explored in *The Art Instinct*. Dutton is the author of numerous essays and reviews; he edited the books *The Concept of Creativity in Science and Art* (with Michael Krausz, 1981) and *The Forger's Art: Forgery and the Philosophy of Art* (1983).

The son of William and Thelma Dutton, Denis Laurence Dutton was born on February 9, 1944 in Los Angeles, California. He grew up, along with two brothers and a sister, in the city's North Hollywood district. His parents met at Paramount Pictures, where they both worked in the 1930s. Around the time that Dutton was finishing his studies at North Hollywood High School, his parents opened Dutton's Books, which became one of the best-known independent bookstores in Los Angeles. Dutton spent a lot of time reading and browsing at the store. He also conducted his own chemistry experiments. "I was a tinkerer and an experimenter as a teenager," Dutton told *Current Biography*, the source of quotes for this article unless otherwise noted. During his high-school years, Dutton's main interests were building telescopes, photographing the stars, and visiting observatories with friends. The order and beauty he found in astronomy filled him with a philosophical wonderment.

No one kindled the young Dutton's curiosity as much as his father. William Dutton liked to ask "big" questions at the dinner table. "Ours was a household where there was a lot of talk, a lot of argument—about what I later recognized were philosophical questions," Dutton recalled. "Questions of value, of existence, of the place of culture in life and the arts." In one evening the family's conversation might range from a single work of art to the origins of the universe. "I learned from my parents the idea that there's nothing that's beyond questioning, whether it's politics, science, religion or the arts." Although he was too young to participate, he remembers his mother organizing a Great Books group to discuss John Stuart Mill's *On Liberty*. Together with his father, Dutton read popular books on the Big Bang theory and Albert Einstein's theory of relativity, and he discussed the books with his father and siblings. One day Dutton's father discussed the structure of the atom; using an analogy popular at the time, William Dutton compared the atom's nucleus to the sun and the electrons to planets orbiting the sun, then jokingly suggested, pointing to a chair, that perhaps every atom in the chair was a solar system with an orbiting Earth where people were living just like us. "It was all good, imaginative fun," Dutton recalled, "but for a child's mind it was extremely intriguing."

In the early 1960s Dutton began his college education as a chemistry major at the University of California, Santa Barbara (UCSB). After his first year he switched his major to philosophy. At the time the UCSB Philosophy Department's focus was that of Ludwig Wittgenstein, an early-20th-century Austrian-born philosopher whose work involved language, mathematics, and logic. The courses that most fascinated Dutton, however, were in the philosophy of art and aesthetics. "I was trying to figure out how works of art—literature, music, paintings—could produce such intense experiences in human beings," he said. Like most thinkers at the time, he regarded aesthetic pleasure and values as being determined by one's culture, but he also suspected that there was something innate and natural in people's aesthetic preferences.

After graduating from college, in 1966, Dutton joined the Peace Corps and went to India. He was a big fan of Indian music; upon arriving in India he took up the sitar. (He studied with Pandit Pandurang Parate, a student of the famed sitar player Ravi Shankar, who would go on to influence many 1960s rock bands, most notably the Beatles.) Dutton, along with other Peace Corps volunteers, taught local residents to grow mushrooms in air-conditioned underground rooms. "It was a great idea," Dutton said, "except the Indians in that area do not eat mushrooms. All the buildings are chicken coops now." But Dutton made at least one valuable contribution to those he was trying to serve. Before returning to the U.S., in 1968, he gave a Zenith transoceanic radio to an Indian couple he had befriended. (At the time India had strict regulations regarding imports and exports, so such a radio was rare and valuable.) The husband and wife worked in education and desperately wanted to open their own school, so they sold the portable radio for about 1,000 rupees—a lot of money at the time—and founded what they named Dutton's School. The school started off humbly, with a few students and instructors. It now has a staff of more than 50 teachers.

In the summer of 1968, Dutton arrived in New York City, where he enrolled in the graduate philosophy program at New York University. Because tuition at the university proved to be prohibitively expensive, he transferred after one year to his alma mater, UCSB. Although his studies were not concentrated on any one area of philosophy, his doctoral thesis focused on the relationship between art and anthropology, particularly the perceived problems of cross-cultural understanding. After graduating, in 1973, he accepted a teaching position at the University of Michigan at Dearborn, moving there with Margit, his wife of four years. "I made it my business to try to teach almost every philosophy course in the catalog . . . ," Dutton recalled. "What I tried to do was to sharpen my philosophical background simply by teaching as many different courses as I could. Specialization is sometimes a vice." Although Dutton now considers himself a specialist in aesthetics, the history of music, and applications of Darwinism, he nevertheless remains, to a degree, a generalist. During his time in Michigan, he founded the journal *Philosophy and Literature*, which is now published by John Hopkins University Press and edited by Dutton.

In 1984 Dutton, his wife, and their two young children moved to Christchurch, New Zealand, where Dutton had been offered a teaching position at the University of Canterbury. "The idea of living in New Zealand struck us as charming," Dutton recalled. While still in Michigan he and his wife checked out library books about New Zealand. "Little did we know, those books were 20 years old. We were expecting a country of sheep farmers and cricket players. Yes, there are enough of them here, but this land is rather varied in its offerings." At the university he now teaches both graduate and undergraduate courses on the philosophy of art.

By 1995 Dutton had been in academia for nearly three decades and had encountered much academic writing that he thought lacked depth and coherence. He had become particularly weary of "the obscurantism and the junk prose that characterize literary theory," as he put it. One evening he was sitting at home in his easy chair, "trying to untangle some essentially meaningless, indecipherable" essay, when he had the idea of holding a contest for such incoherence. That is how the Bad Writing Contest was born. Since the academics doing the writing would not—for obvious reasons—submit their own work, readers were asked to find what they thought to be "the ugliest, most stylistically awful" sentences in a recent academic article or book and submit them to Dutton's journal, *Philosophy and Literature*. (The contest was not open to submissions that parodied such writing, because, Dutton explained, the amount of unintentionally bad writing in academia made parody superfluous.) Judith Butler—a celebrated figure, professor of rhetoric and comparative literature at the University of California, Berkeley, and author of many books, including *Gender Trouble* (1990)—was the winner of the fourth annual Bad Writing Contest, in December 1998. The article from which the "bad" sentence was taken, titled "Further Reflections on the Conversations of Our Time," appeared in the journal *Diacritics*. After Dutton's journal pronounced Butler the winner, dozens of newspapers around the globe carried the story. Butler's "winning" sentence read: "The move from a structuralist account in which capital is understood to structure social relations in relatively homologous ways to a view of hegemony in which power relations are subject to repetition, convergence, and rearticulation brought the question of temporality into the thinking of structure, and marked a shift from a form of Althusserian theory that takes structural totalities as theoretical objects to one in which the insights into the contingent possibility of structure inaugurate a renewed conception of hegemony as bound up with the contingent sites and strategies of the rearticulation of power." After months of receiving press coverage, some of it harsh, Butler retaliated in an op-ed article for the *New York Times* (March 20, 1999), in which she defended her use of "difficult and demanding language" to communicate social criticism. Butler's article missed the point, according to Dutton. "Much of the writing in literary theory wasn't bad because the points it was trying to make were difficult," he explained, "but because the thesis of the writing was banal, and the only way to make it interesting was to make the style difficult." Dutton ended the contest in 1999, with some—mistakenly, according to Dutton—attributing his timing to Butler's essay. "It was ended because the point had been made and it was time-consuming to run it every year," Dutton said. "One could only read so much bad writing."

In October 1998, as the Internet "bubble" was growing, Dutton created Arts & Letters Daily, a Web site that would soon change what a great number of people—academics, philosophers, psychologists, scientists, businesspeople, university students, politicians, artists, and many others—read on-line. When the site was only three months old, the London *Observer*, in a widely quoted comment, called Arts & Letters Daily the best Web site in the world. The cluttered layout—like that of 18th-century British broadsheets—was not easy on the eyes, but people flocked to the site for its content: carefully selected links to essays, articles, book reviews, and op-eds about an extremely broad range of topics. "Arts & Letters Daily is designed to provoke curiosity and expand the interests of its readers," Dutton said. "The nicest e-mails I get are from people who say, 'I never thought I would be interested in that subject.'" The site was sparked when Dutton put together a list of academics' e-mail addresses, so that he could send colleagues links to on-line articles he found interesting or thought-provoking. "Searching for material to put on [a mass email], I inadvertently had become something of an expert on the availability of good reading available on the Internet."

By 2000 several companies were interested in purchasing the site. The parent company of the academic literary magazine *Lingua Franca* offered $500,000 for it—a staggering figure, considering that Dutton had started the Web site at a cost of about $300. After the sale Dutton stayed on as editor. As a result of the economic slowdown that occurred after the September 11, 2001 terrorist attacks on New York City, *Lingua Franca* lost its financial support and, in 2002, shut down Arts & Letters Daily without fulfilling its sale agreement with Dutton. Within a few weeks, however, the *Chronicle of Higher Education*, a widely circulated, widely respected academic publication, purchased the site through the New York bankruptcy court. Again, Dutton stayed on as editor. During 2002, when the site was receiving 1.5 million hits per month, Dutton was awarded the "People's Voice" Webby Award at a ceremony in San Francisco, California. More than 10 years after it was founded, the site receives three million hits each month. Like his tenure as a professor in Michigan, during which he taught nearly every philosophy class available, managing Arts & Letters has been a highly educational experience for Dutton. "I feel, as an editor, immensely broadened as a result of producing it on a daily basis for all these years," he said.

Dutton's goal of formulating a coherent theory that examines human artistic practices and preferences from an evolutionary standpoint—a project that had occupied him for 15 years—was realized with the publication of his book *The Art Instinct: Beauty, Pleasure, & Human Evolution* (2009) on the 200th anniversary of the birth of Charles Darwin. (Darwin, a 19th-century English naturalist, developed the theory that some members of a given species survive and procreate, and others do not, according to their varying characteristics; traits that help ensure survival are passed to subsequent generations in a process called natural selection. The process in which a species gradually changes is known as evolution.) Culture, Dutton reasoned, surely exerts a powerful influence on our behavior and our views on nearly everything, especially the arts. Still, he posed the question: if the concept of evolution is important to the understanding of our biological and psychological makeup—from our circulatory system and organs to our intellect and emotions—would it not help us to understand our feelings and preferences with regard to the arts? *The Art Instinct* delves deeply into another question: What effect has evolution had on the human use of, understanding of, and relationship to art? Biologists, neurologists, psychologists, and philosophers agree—if not on every detail, at least on the general premise—that evolution accounts for our desire for food and sex; as a result we also developed specific tastes—for example, for food that is fatty or sweet or for a mate who is physically attractive. (Men's preferences with regard to women's body types, for example, tend to correspond to waist-to-hip ratios that statistically indicate greater fertility.) The point is not that each innate preference is still relevant to our survival—it may not be. But the reason for the preference is relevant, because it sheds light on our choices.

Understanding the interests, preferences, and capacities of our ancestors from the Pleistocene period (1.8 million to 10,000 years ago) with regard to natural and sexual selection, Dutton wrote, is the key to understanding our innate preferences and emotions with regard to art. For example, in his book Dutton cited a cross-cultural study that found that people all over the world prefer the same general kind of pictorial representations: "a landscape with trees and open areas, water, human figures, and animals." Hundreds of generations ago, Dutton wrote, our ancestors most likely found such an actual landscape useful because it indicated safety and fertile soil. In other words, such a view created certain associations—and emotions—that were crucial to the survival of our ancestors; and although such landscapes no longer have the same use for most of us, we still have positive feelings about them because of the process of natural selection.

Sexual selection, Dutton argued, played a more significant role than natural selection with regard to evolution and the arts. A classic example used to distinguish the two phenomena involves the peacock. The male peacock's tail, from the point of view of natural selection, amounts to a major disadvantage: it is big, heavy, and hard to grow, and it allows the peacock's natural enemies to spot the bird very easily. What accounts for its continued existence? The peacock's tail, according to Darwin's theory of sexual selection, indicates the bird's fitness for survival. Just as a human female's waist-to-hip ratio indicates her fertility, a large, colorful tail indicates a healthy male peacock. There are two kinds of sexual selection: in one, members of the same sex compete against each other for a desirable mate; in the other, an individual attempts to attract and seduce a member of the opposite sex. To a degree, Dutton wrote, the development of art can be explained through an analogy to the second kind of sexual selection: the ability of our distant ancestors to create stories, music, paintings, anecdotes, and various beautiful objects was—and continues to be—an indication of emotional and intellectual fitness.

Dutton's observations and conclusions are descriptive rather than prescriptive. In other words, Dutton does not maintain that our natural drives and innate feelings are necessarily good and must be catered to. His investigations have been aimed at finding explanations, not to telling artists what kind of art to create. Our innate preferences, he wrote, need not control our tastes: "Once we understand and know an impulse, we can choose to go along with it or we can resist it." Just as our knowledge of our sexual and dietary preferences sheds light on our choices for food and a mate, Dutton wrote, our knowledge of our aesthetic preferences—admittedly much more complicated than our preferences for certain foods—sheds light on our relationships with various arts, from *The Simpsons* and *The Daily Show* to the works of Franz Schubert and Salvador Dali.

Reviews of *The Art Instinct* were generally positive. "Why do we create art and beauty?" Carlin Romano wrote for the *Philadelphia Inquirer* (January 25, 2009). "Dutton may be the best-equipped thinker in the world to explain." Romano went on to call the book "the most shrewd, precisely written and provocative study you'll find on its topic's place in human nature. . . . *The Art Instinct* is the experiment of a master, and future aestheticians, one suspects, will naturally need to adapt to it." One major review was largely negative. Jonah Lehrer wrote for the *Washington Post* (January 11, 2009), "[Dutton] argues that our desire for beauty is firmly grounded in evolution, a side effect of the struggle to survive and reproduce. In this sense, a cubist painting by Picasso is no more mysterious than the allure of a *Playboy* centerfold: Both are works of culture that attempt to sate a biological drive. . . . Like so many other aesthetic theories, Dutton's ideas are ultimately undone by what they can't explain. This is the irony of evolutionary aesthetics: Although it sets out to solve the mystery of art, to explain why people write poems and smear paint on canvases, it ends up affirming the mystery. The most exquisite stuff is what we can't explain. That's why we call it art." Anthony Gottlieb, writing for the *New York Times Book Review* (February 1, 2009), expressed a different view. He observed that because "we know so little about the environment of our Pleistocene ancestors," any hypothesis about what helped them survive is "bound to be highly speculative." That ought to be a problem for Dutton, Gottlieb wrote, "but I rather think it isn't." Gottlieb went on to write of Dutton: "His discussion of the arts and of our responses to them is uniformly insightful and penetrating."

Dutton was one of the founders in 1986 of the New Zealand Skeptics, an organization dedicated to examining paranormal claims and debunking what he calls "pseudoscience." In 2000, after heading the group for many years, he was awarded the Medal for Services to Science and Technology by the Royal Society of New Zealand.

Dutton has contributed essays to many books, including *Literature and the Question of Philosophy* (1987), *Encyclopedia of Hoaxes* (1994), *The Encyclopedia of Aesthetics* (1998), *The Dictionary of Art* (1998), *The Literary Animal* (2005), and *The Encyclopedia of American Art* (2009). He is on the editorial boards of publications including *Evolutionary Psychology*, *Contemporary Aesthetics*, and the *Journal of Comparative Literature and Aesthetics*.

Dutton is a vocal proponent of public radio. During his undergraduate days at UCSB, he became a radio announcer for the local classical-music station, KRCW, and later served as general manager of KCSB, the UCSB student station. In Michigan he worked for the radio station WQRS, and in New Zealand he was on the board of directors of Radio New Zealand, a public radio station.

Dutton lives in Christchurch, New Zealand, with his wife. The couple's daughter, Sonia, lives in New York; their son, Benjamin, lives in Sydney, Australia.

El-Tahri, Jihan

1962(?)– Documentary filmmaker; writer; journalist

Address: Big Sister Productions, 4 rue Lacépède, 75005 Paris, France

Jihan El-Tahri is a documentary filmmaker whose award-winning work has been widely described as provocative, revealing, illuminating, and absorbing. Her films include *The House of Saud*, a look into the modern history of Saudi Arabia and its complex relationship with the United States; *Cuba: An African Odyssey*, an investigation of Cuba's crucial yet often-overlooked support for African liberation movements; and *Behind the Rainbow*, an examination of the evolution in South Africa of the once-outlawed African National Congress, which has been in power since 1994. Although her aims as a filmmaker include the demolishing of widely believed myths, and she has described herself as a "loose cannon political activist," as she said in an interview with Daniel Dercksen for the South Africa *Cape Argus* (November 29, 2008), El-Tahri also told Dercksen, "I never give a conclusion to any one of my films. Who am I to conclude? I get you to the point where I provide a key to understand all the different elements and then it's your job to think about it. I don't have answers—I want everybody else to help me find the answer." For a decade before she began writing, directing, and producing documentaries, El-Tahri worked as a journalist; she covered the Middle East and Africa for Reuters, the *Washington Post*, *U.S. News & World Report*, and other news organizations. By 1990 she had started making films for French television, and in 1995 she began making documentaries for the BBC (British Broadcasting Corp.). Valuable to varying degrees as primary historical sources, her heavily researched films offer compelling narratives, an abundance of information, and clear presentations of complex issues and events. El-Tahri has proved adept at unearthing archival images previously seen only by experts or collectors, and to a remarkable extent she has succeeded in filming unprecedented, extensive interviews with highly influential people.

The youngest of the three daughters of Egyptian parents, Jihan El-Tahri was born in Beirut, Lebanon, in about 1962. She prefers to identify herself as African; according to the London *Guardian* (April 28, 2004, on-line), she has dual Egyptian and French citizenship. Her father, Hamdy El-Tahri, was a diplomat, and her family moved often, to locations in Egypt, Panama (where her father was an ambassador), Lebanon, Finland, and England. According to a profile in *AME Info* (January 26, 2003, on-line) of Neveen El-Tahri, Jihan's eldest sister, Hamdy El-Tahri raised his daughters to be strong-minded and independent, and all have pursued careers (Neveen as a financial broker in Cairo, Egypt, and Nermeen as an executive for American Express in London, England). El-Tahri has said that she was drawn to politics from a young age, telling Joseph Fahim for the *Daily News Egypt* (February 22, 2007, on-line), "I've always been fascinated by decision making and how the world is run. Early on, I realized that even a herd of sheep has a leader. Politics is probably the only thing that makes me tick." El-Tahri did not want to attend any Egyptian university, where memorization was emphasized, she told Fahim. "I wanted to learn how to find answers for myself," she explained. She resolved to study at the American University in Cairo (AUC), she said, where teachers provided students with the tools "to ask the important questions that need to be asked"—what she described as the "American system" of instruction. Her father, however, opposed her decision to apply to the AUC, seeing its preponderance of brief certificate programs as an indication that a "real" education was not possible there. To impress upon him that she would not consider any other college, El-Tahri remained at home for one semester after she completed high school, "until my panicked father realized I was serious." El-Tahri earned a B.A. degree with honors in political science from AUC in 1984 and a master's degree in the same subject from that school in 1986.

From the mid-1980s to the mid-1990s, El-Tahri worked as a news correspondent, stringer, researcher, and producer, mostly in the Middle East and North Africa, for various media outlets: Reuters, *U.S. News & World Report*, the *Financial Times*, the London *Sunday Times*, and the *Washington Post*. "It was the best training anyone could ever get because they teach you to break down the information into the basic minimum and move on," she told Fahim. During that period she reported on events including the Iran–Iraq War; the Lebanese civil war; the move by the Palestine Liberation Organization (PLO), headed by Yasir Arafat, to Tunis, Tunisia, and Arafat's subsequent return to the Gaza Strip, which was then under Israeli control; Algerian elections and Islamic resistance movements in Algeria; the Madrid Conference of 1991; and the Persian Gulf War of 1990–91. While with the *Sunday Times*, El-Tahri felt frustrated, because coverage of the most significant regional events was invariably assigned to Marie Colvin, the "star reporter of the paper," she told Fahim. Rebuffed yet again when she asked to be sent to Algeria to cover an important conference, she went there on her own. Colvin never came, and El-Tahri landed an exclusive interview with Arafat. She sent the story to the *Sunday Times*, which published it with Colvin's byline. "I resigned on the spot," she recalled to Fahri. "It was a blessing in disguise because Patrick Tyler from the *Washington Post* offered me a job." El-Tahri said that the Western media's practice of miscrediting articles to Westerners remains common. "At the end of the day, I'm a female Arab Muslim working on their turf. . . . I've been asked many times to change my name."

The *Washington Post* sent El-Tahri to cover the PLO, whose leadership was then in exile in Tunisia. After being arrested several times in Tunis for reasons that were never explained to her, she decided to make France her base, while still covering the Middle East and North Africa. When war erupted in the Persian Gulf in 1990, *U.S. News & World Report* assigned her to report on it. Her experience there marked a turning point in her life. She told Dercksen, "I suddenly started wondering, 'Am I an Arab? Am I a Westerner because I've only been in the Arab world for six years of my life?' I reached the conclusion that fundamentally my identity is an African one." Moreover, disillusioned with what she saw as essentially propaganda in the mainstream Western media and the media's censorship of unwelcome news, she decided to quit journalism. Her reporting of the war earned her an international prize for diplomatic correspondence, which in turn led to a job with the French TV company CAPA (Chabalier Associates Press Agency) as a producer. To a large extent she abandoned journalism in favor of documentary filmmaking, which allowed her to delve far more deeply into her subjects and to concentrate on African issues. In a departure from that path, she co-wrote, with Edward T. Pound, a long article for *U.S. News & World Report* (October 31, 1994) about the use of sanctions as political tools; they wrote specifically about Libya, whose government, despite sanctions, refused to bring to justice the masterminds behind the bombing in 1988 of Pan Am Flight 103, which killed 270 people, including 189 Americans. "In Libya," they wrote, "economic sanctions imposed by the United Nations have hurt ordinary citizens but done little to moderate the country's outlaw behavior."

"The Gulf war was traumatizing for me and I decided that I'm not going to cover anything about the Middle East any more," El-Tahri told Fahim. Instead, she chose topics that challenged her precisely because she knew little or nothing about them. Her films from the mid-1990s include *Abortion in Ireland*; *The Spiral Tribe: Rave Parties in the UK*; *Organ Thieves* (about the thefts of human organs in Colombia); and *The Koran and the Kalashnikov*. El-Tahri produced the last-named documentary, which first aired in English in 2000; it included footage she had shot in 1992 of Al Qaeda camps in Sudan.

El-Tahri's book *The Seven Lives of Yasser Arafat*, written with the French journalist Christophe Boltanski, was published in 1997. As with most people whose political activities remained underground for long periods, much of Arafat's life had been kept secret and had become either the stuff of legend or fodder for demonization; El-Tahri and Boltanski's book was an attempt to separate fact from myth. The following year, along with the Israeli historian Ahron Bregman, she wrote and produced *Israel and the Arabs: The Fifty Years War*, a critically acclaimed, six-part documentary series for the BBC; a book adapted from that series, called *The Fifty Years War: Israel and the Arabs*, was published in 1999. "Working with Bregman wasn't easy because he's an academic," El-Tahri told Fahim. "We got into lots of fights but it was a great learning experience." Observers praised the series as eye-opening and as offering remarkably candid interviews with Arabs and Israelis, among them people who had seldom granted interviews and others who worked behind-the-scenes and had seldom been seen or heard in the print or broadcast media. The authors' "major contribution," Paul Lalor wrote in a book review for the *Times Higher Education Supplement* (May 15, 1998), "is that they help to demolish a number of myths and to bring already published information to a wider public via an entertaining and engaging writing style."

To make *L'Afrique en Morceaux: La Tragédie des Grands Lacs* (*The Tragedy of the Great Lakes*, 2001), which aired on Canal+, a French pay-TV channel, El-Tahri worked with Peter Chappell for three years. That film is about the short-lived peace that followed the death in 1997 of Mobutu Sese Seko, the longtime president and dictator of Zaire (formerly the Belgian Congo, now the Democratic Republic of the Congo), and the region's subsequent descent into years of brutal warfare involving forces from within and without. El-Tahri's next film, *The Price of Aid* (2003), is an examination of the politics of international food aid. Looking behind the generosity of rich nations to poorer ones, and focusing on a severe food shortage in Zambia and surrounding areas in 2002, the film revealed the aid industry to be one that sometimes takes advantage of crisis, creates the destructive conditions of chronic and self-reinforcing dependency, and serves commercial interests, creating new problems for the victims of famine. "While it is good for American agribusiness, it does not always benefit Africans and African agriculture . . . ," Patricia B. McGee wrote for *Educational Media Reviews Online* (February 11, 2005). "American food aid has at its heart the purpose of protecting the heavily subsidized American farmer." "*The Price af Aid* is a lucid examination of a very tangled, complex issue," McGee wrote. "El Tahri does a fine job of presenting the many voices and points of view within a clearly understandable framework." El-Tahri's documentary *The History af a Suicide: Pierre Bérégavay*, about a French Socialist politician, also appeared in 2001; *Viewpaints an AIDS* aired the following year.

El-Tahri told Fahim that after the September 11, 2001 terrorist attacks on the United States, she had been interviewed many times for her opinions on what had occurred and on terrorism. She had also been asked to make a documentary about those subjects, but she had refused. Instead, she decided to research the history of Saudi Arabia, the native land of 15 of the 19 September 11 attackers. The documentary that emerged, *The Hause of Saud*, focuses on the secretive Saudi royal family. "Jihan spent considerable time gaining the trust of her interviewees," Martin Smith of the BBC said in an on-line question-and-answer session with *Washington Post* (February 9, 2005) readers. "It's a testament to her skill." The original version of *The House of Saud* is three hours long; although BBC executives hailed it, they had her cut it down to two one-hour programs. In response El-Tahri set up her own company, Big Sisters Productions, to gain more editorial control of future projects. The documentary for which El-Tahri is perhaps best known, *The House of Saud* aired in Great Britain in 2004 and in the U.S. the next year and was highly praised by viewers and critics in both places. Its examination of the ways in which the Al Sauds had maintained their grip on power and the family's relationship with the United States also sparked a great deal of controversy, not least because discussions of the American backing of the dictatorship for economic and geopolitically strategic reasons has long been taboo in both countries.

El-Tahri's next film, *Cuba: An African Odyssey* (2006), explores the rarely publicized story of how, after their success in ousting the dictatorship of Fulgencio Batista in 1959, Cuban revolutionaries under the leadership of Fidel Castro and Che Guevara gave critical military, tactical, and humanitarian support to emerging anticolonial movements in Africa, from the early 1960s to the late 1980s. The movie contains never-before-seen archival footage and extraordinarily candid interviews with the major players from various nations who helped shape the continent's modern history. South African legislators were so impressed with the film that the Parliamentary Millennium Programme (PMP), the Parliament's primary nation-building and heritage program, set up special screenings of the film to help educate the public about the role of people from nations in addition to South Africa in the country's liberation struggle. (That aspect of the solidarity movement is called internationalism.) The film starts with footage of Nelson Mandela, months after being released from prison, thanking Fidel Castro in Havana, Cuba's capital, for his crucial part in ending apartheid, the legal system whereby the black South African majority had long suffered the brutal oppression and racial segregation institutionalized by the white minority. Why, the film asks, did the revered Mandela choose Castro as the first foreign leader he visited after gaining his freedom, and why would he show such appreciation and respect to Castro, who had been denounced in the West as a vicious dictator? Over the following two hours, the film argues that in the midst of the brutal yet faltering colonial empires set up by Belgium and Portugal, an intractable white government in South Africa, the jockeying for power between the U.S. and the Soviet Union, as well as competing indigenous interests, Cuba was alone in responding to the call of liberation movements whose goal was self-determination. In the spirit of revolutionary internationalism, as the PMP statement put it, Castro saw "the struggle in Africa as an extension of his own." When the proxy war in Namibia between Cuba and South Africa reached a stalemate, in the late 1980s, Cuba agreed to leave the continent for good in exchange for the withdrawal of South African troops from Namibia and the release of political prisoners in South Africa. (Cuba's additional demand for the ending of apartheid was rejected.) Revelations offered in the film include the following: the head of the CIA in the Congo admitted that U.S. president Dwight D. Eisenhower had ordered the killing of the anticolonial hero Patrice Lumumba and had backed the coup led by Mobutu Sese Seko; American diplomats admitted to backing the apartheid government in South Africa, providing it with money and weapons in its fight against the Angolans and Cubans; and the head of Russian intelligence admitted that the Kremlin had no knowledge of Che Guevara's operations in the Congo and conceded that the decision to support African liberation movements was made not in Moscow, as Americans had been led to believe, but in Havana.

The subject of El-Tahri's next film, *Behind the Rainbow* (2008), is the change that the African National Congress underwent after it gained power in South Africa. "The ANC is the final liberation movement on the African continent to undergo the delicate transformation from an exiled revolutionary movement to a ruling party governing state institutions," she told Dercksen. El-Tahri told the South African newspaper *Sunday Independent* (November 30, 2008), "I started this film after the 2004 election because I realized that the coming phase was no longer about the struggle but about the future of this country. I wanted to witness firsthand this moment of transformation and the pains of dealing with the transforming of your struggle credentials into policies that fulfil the promise to the people. I am using the ANC to demonstrate a process that every country on the continent can identify with." The film, which was produced by El-Tahri and Steven Markovitz, took more than five years to make. Like *Cuba*, it includes rare archival images and interviews with political heavyweights. With the aim of telling the story of South African politics in the past several decades, it focuses on the relationship and rivalry between two freedom-seeking comrades turned rivals, Jacob Zuma and Thabo Mbeki. "After a lot of research, I found this amazing story of how they met in Swaziland and how a bond was created when they were forced to share a jail cell," El-Tahri told Tanya Farber for the *Cape Argus* (November 21, 2008). "It gives us an understanding of how brothers can part ways over political interests."

El-Tahri has said that the experience of making *Behind the Rainbow* was the most difficult she has had as a documentary filmmaker. "I never would have thought that it would be that hard . . . ," she told Dercksen. "As an Arab woman covering Saudi Arabia for four years, and the Congo during the Civil War with everybody hacking everybody else and you were stuck in the middle, I didn't think anything could have been more difficult, but South Africa was." For the first six months of her project, most of the major political figures refused to be interviewed. "The ANC is such a disciplined movement, and it's very difficult to engage on a level that isn't party disciplined," she told Dercksen. "It's very hard when the collective idea is that you shouldn't be speaking to someone." Another difficulty was adapting to the facts on the ground: after she had spent several years on the project, the principal figures' jobs changed unexpectedly, forcing El-Tahri to adapt to "history's unfolding," as she put it to Dercksen. In addition, she told Janet Smith for the *Cape Argus* (November 27, 2008), she had to whittle down a tremendous amount of footage. "This should be a five-hour film," she said. "It's history, it's politics. But I knew I had to have one narrative, not deal with 10. And the ANC is that narrative. Also, it had to remain a film, so it had to be entertaining." She told Farber that she could have made a commercially successful film in six months but instead chose to "place everything in its proper context and look at how things have evolved." In a review of *Behind the Rainbow* that could describe El-Tahri's entire body of work, Janet Smith wrote for the *Pretoria (South Africa) News* (November 22, 2008), "If we did not see, this film goes some way to opening our eyes. And that means that if we have forgotten, we must remember. And since the media largely concentrates on examining the day to day political strife, we could so rapidly allow the significance of the past to be excised. This film revives it. It lifts the layers of polish, the layers of dirt. It reveals the underneath, the many things we did not properly contemplate. Even though it has been nearly 15 years since the South African soul was shifted, we have had pitifully few conversations." Another critic, Phillip Altbeker, wrote for the South Africa *Weekender* (November 29, 2008) that the film gives viewers "the opportunity to examine and explain our political history and to see it in the light of comparable circumstances elsewhere on the continent without obvious prejudice."

El-Tahri is a member of the executive bureau of the Federation of Pan-African Cinema and secretary general of the Guild of African filmmakers in the Diaspora. Her honors include the French Figra d'Or Award (1995) for *The Koran and the Kalashnikov*; a British Television Award (1998) for *Israel and the Arabs*; a European Media Prize (2004) for *The Price of Aid*; and a Banff Festival Award (2005) for *The House of Saud*. *Cuba: An African Odyssey* received several honors: it was named best documentary at the 2007 Pan African Film Festival and best film directed by a woman of color at the 2007 African Diaspora Film Festival, and it won an Olivier Masson Prize at the 2006 Sunny Side of the Docs Festival; El-Tahri was named best director at the 2007 Vues D'Afrique Festival in Montreal, Canada. *Behind the Rainbow* was named best documentary at the 2009 Pan African Film Festival in Burkina Faso.

El-Tahri told Janet Smith for the *Cape Argus* that she usually works on several projects at once. She has two children, and her work, she told Smith, "takes a heavy toll." Speaking of her children, she said, "I think they'll understand more and more later on. When you have to do something you believe in, there's often a price to pay. But, of course, it has to be worth it." El-Tahri lives in France.

Elo, Jorma

(EL-oh, YOR-ma)

Aug. 30, 1961– Ballet dancer; choreographer

Address: Boston Ballet, 19 Clarendon St., Boston, MA 02116

In the past decade Jorma Elo has become one of the busiest choreographers in the ballet world. Trained in dance mostly in Finland, his native land, Elo turned professional at the age of 16, when he joined the Finnish National Ballet. He next performed with the Cullberg Ballet, a Swedish troupe, and then, for 14 years beginning in 1990, with the Nederlands Dans Theater (NDT), a Dutch company. "I loved doing classical work, but you have to have a wide range of technical abilities to be a really good classical dancer, and I lacked some of these abilities," he told Sheryl Flatow for *PlaybillArts.com* (October 17, 2006). "I knew I could never be a prince. So I wanted to try something else. I needed to develop." Elo was performing regularly with the NDT when, with the encouragement of its artistic director, Jiří Kylián, he tried his hand at choreography. Since 2000 he has created more than two dozen dances, among them *1st Flash* and *Plan to A*, for NDT; *Cut to Drive*, for the Norwegian National Ballet; *Happy Is Happy*, *Twisted Shadow*, and *Two Fast*, for the Finnish National Ballet; *Glow-Stop*, for American Ballet Theatre, in New York City; *Slice to Sharp*, for the New York City Ballet; and for the Boston Ballet, where he has served as resident choreographer since 2005, *Sharp Side of Dark*, *Plan to B*, *Carmen*, *Brake the Eyes*, *In on Blue*, and, most recently, *Le Sacre du Printemps*. Companies that have introduced new dances by Elo also include the Vienna Opera Ballet, in Austria; the Royal New Zealand Ballet; the Royal Ballet of Flanders, in Belgium; Basler Ballet, in Switzerland; the San Francisco Ballet, in California; and Hubbard Street Dance Chicago, in Illinois.

Influenced and inspired by the ideas of choreographers including Mats Ek, Ohad Naharin, Hans van Manen, Paul Lightfoot, and William Forsythe as well as Kylián, Elo's work "challenges dancers

Eric Antoniou, courtesy of American Ballet Theatre
Jorma Elo

and excites audiences with a high intensity fusion of classical and contemporary movement that is physically demanding to the extreme as it hurtles along at warp speed," according to Flatow. In the *Boston Globe* (February 25, 2007, on-line), Geoff Edgers wrote that Elo's choreography is distinguished by "traditional jumps and turns mixed with undulating hips, windmilling arms, and jerking, thrusting moves more likely to be seen in a modern dance piece." "Elo's works . . . unwind like gyroscopes spinning off their axes," Erica Orden wrote for the *New York Sun* (October 16, 2006). "His ballets are at once vigorous and elegant—carefully edited constructions of darting limbs and intricate, whippet-fast partnering sequences."

While Elo's choreography has pleased many critics and inspired standing ovations, some dance aficionados have condemned it in scathing terms. When Roslyn Sulcas, during an interview for the *New York Times* (October 15, 2006), mentioned complaints about his choreography for *Carmen*, Elo responded, "Are there rules we have to follow? Can somebody sue me?" He added, "I use classical technique, but I'm open to everything. There's all sorts of stuff you can't put in boxes. I'm just trying to ask some questions in each piece." "Choreography is basically problem-solving," he explained to Christopher Moore for the Christchurch, New Zealand, *Press* (February 27, 2008). "It never stops for me. I am constantly looking at areas in which a work can be improved. My mind is always attuned to making something better. Whether I succeed, I don't know, but I never feel that anything is complete."

Elo was born on August 30, 1961 in Helsinki, Finland. His father was a urologist; his mother, too, was a physician. As a boy he enjoyed playing ice hockey, often as his team's goaltender. At 12, following in his older sisters' footsteps, he enrolled in a ballet class, primarily because he hoped to become more flexible and agile on the ice. Within the next two years, he had abandoned hockey in favor of dance. In an interview for *Esquire* (November 6, 2008, on-line), he said that he had come to regard hockey and ballet "in much the same way: To get it right, you have to see how things will evolve, their patterns and their movements, before anybody else." But in the dance studio, he told Christopher Moore, he had also "discovered an environment where I could create something." He also told Moore, "I fell totally in love with the theatre from the moment I stepped into the Helsinki Opera House," where the Finnish National Ballet performs. At 14 Elo earned a dance scholarship to attend the Finnish National Ballet School. He next studied at the renowned Vaganova Ballet Academy, in St. Petersburg, Russia; graduates of the school, founded in 1738, include such towering dancers and/or choreographers as Mikhail Fokine, Vaslav Nijinsky, George Balanchine, Anna Pavlova, Rudolph Nureyev, and Mikhail Baryshnikov. At 16 Elo became a member of the Finnish National Ballet. "When I told my parents I was going to start dancing as a professional dancer, they thought it was a crazy idea . . . ," he told an interviewer for *Pasatiempo* (July 6, 2007), a magazine associated with the newspaper *Santa Fe New Mexican*. "They expected me to go to university and be a doctor, or something. I kind of had to prove in a way, I could do it."

Elo danced with the Finnish National Ballet for six years, beginning in 1978. During that time he also fulfilled nine months of military service, required of all Finnish male citizens. Military officials granted him special permission to perform at night. In 1984, feeling that he wanted a change, he joined the Cullberg Ballet, a modern-dance troupe based in Norborg, Sweden, near Stockholm. There, he worked with Mats Ek, a dancer and choreographer who in 1978 became the troupe's co–artistic director, with the company's founder, Birgit Cullberg. In 1985 Ek became artistic director. "There was so much creativity there," Elo told Roslyn Sulcas. "[Ek] had an amazing skill at making you use your body to create dramatic effect. It was like having a big magnifying glass on the process of creativity." In 1990 the Czech choreographer Jiří Kylián, then the artistic director of the NDT, based in The Hague, staged one of his works at the Cullberg Ballet. "[Kylián] had a completely different intensity to Mats," Elo told Sulcas. "He said very few but very well-chosen words. I thought, 'I'd love to work with this guy.'" Elo left Cullberg later that year to join the NDT, considered one of the world's foremost modern-dance companies. "At the Nederlands Dans Theater, everything was about making something new . . . trying a new angle," Elo told

Christopher Moore. "Kylián looked at every aspect of dance. He fed dancers' minds." Kylián advised his dancers to try their hands at choreography. Elo began by creating 10-minute pieces for the company's annual workshops. His friend Mikko Nissinen, who had studied with Elo at the Finnish National Ballet School, commissioned him to choreograph works for the Alberta Ballet, in Calgary, Alberta, Canada, where Nissinen was then the artistic director.

Elo's first piece for the Alberta Ballet, *Blank Snow*, was included in Nissinen's inaugural Festival of New Works, in October 2000. "In an evening of strong, entertaining choreography, *Blank Snow* . . . is this critic's pick," Faye Lippitt wrote for the *Calgary Herald* (October 28, 2000). "The choreography is superb and strong dancing by each performer becomes quite simply a celebration of bodies. Bursts of released longing mix with both agony and passion in this exploration of emotions. Marvelously simple lighting and props top off the dramatic effect of the piece." Elo's second piece, *L'Après Midi d'un Faune/Spectre de la Rose*, was a reworking of ballets choreographed by Nijinsky, in 1912, and Fokine, in 1911, respectively; Nijinsky danced in both premieres. Elo's version debuted during the Alberta Ballet's second Festival of New Works, in 2001. "It's a fascinating piece," Bob Clark wrote for the *Calgary Herald* (October 28, 2001). "The rooted movement of the five constantly grouping and re-grouping dancers achieves a sinuous and sculptural quality—and intimacy, too—through the ever-changing twining and untwining of limbs." Pamela Anthony, the reviewer for the *Edmonton (Alberta) Journal* (November 4, 2001), wrote, "Elo is prolific in his movement inventions, and the dance is dense with intricate, fluid motion. . . . The most challenging and complex choreography on the program, [the piece] provided a stunning illustration of the technical and artistic depths of this company."

Elo soon received commissions from other dance companies, including the Pennsylvania Ballet and the Finnish National Ballet. When Nissinen became artistic director of the Boston Ballet, in 2002, he again commissioned Elo to create dances for the troupe. *Sharp Side of Dark* (2002), set to Johann Sebastian Bach's *Goldberg Variations*, was the first of Elo's pieces to incorporate pointe work, which requires the dancer to remain on the tips of the toes with the aid of special ballet shoes. "I was thinking of a dancer's life," Elo told Christine Temin for the *Boston Globe* (September 15, 2002), "of how we're so focused on virtuosity that we don't see life from a broad point of view. At the same time, we're longing for what we're missing. . . . [The pointe work] relates to that original idea of concentration on virtuosity. Pointe work is the extreme of a ballet dancer's technique. It lifts the ballerina out of the real world." Elo's *Plan to B* premiered in 2004. Theodore Bale, writing for *Dance Magazine* (January 2006), described *Plan to B* as "a spectacle of ricochet lighting and solo virtuosity set to organ music by the [17th-century composer Heinrich] von Biber" that "quickly became Boston Ballet's new signature work and ticket to the future."

Meanwhile—because, by his own account, he loved to dance—Elo had continued to perform with the NDT. In 2004, at the age of 42, Elo left the company to dedicate himself to choreography. "Nederlands Dans Theater was great to me. They gave me lots of time off, but I was away more than I was there, and it wasn't fair to anyone," he told Roslyn Sulcas. "I've come late to . . . [choreographing] full time, which is probably why I often get described as a 'young' choreographer." In December 2005 Mikko Nissinen named Elo Boston Ballet's resident choreographer. "[Elo's] distinct movement vocabulary made him an obvious choice," Nissinen told Theodore Bale. "He really develops the dancers. Working with Jorma has pushed many of them to another level." Since he took the post, Elo has created four more dances for the company: *Carmen* (2006), based on the story by Prosper Mérimée that inspired the opera *Carmen*, by Georges Bizet; *Brake the Eyes* (2007); *In on Blue* (2008), and *Le Sacre du Printemps* (2009).

Often when Elo is choreographing for a particular company, he will observe the dancers to draw inspiration and try to take into account their individual dancing styles. While working on *Sharp Side of Dark* for the Boston Ballet, as he explained to Theodore Bale for the *Boston Herald* (September 17, 2002), "First I watched the dancers in class, and then in rehearsals" of William Forsythe's *In the Middle, Somewhat Elevated*. "And then I gave them some material, and was looking at how they were moving. . . . Of course, I was looking for some contrast in the way they approached the movement. Some people had more softness, and others were very direct. I wanted different dynamic approaches." Kevin McKenzie, artistic director of American Ballet Theatre, described to Roslyn Sulcas how Elo worked with his company for *Glow-Stop* (2006): "At the first rehearsal he came in and started doing a movement without saying anything. The dancers kind of looked at each other uncertainly and started to copy him. He is like a painter starting off with a blank canvas and sketching the work. Later he shades and colors the piece." Elo may choose music for a dance after he has choreographed some of it; for other dances, a particular piece of music sparks his creativity.

Elo's work has pleased many critics as well as lay audiences. In a review of Elo's *Slice to Sharp*, for example, which was choreographed for the New York City Ballet in 2006 and set to music by von Biber and Antonio Vivaldi, John Rockwell, the *New York Times* (June 19, 2006) critic, called the piece "an exhilarating exercise in flat-out virtuosity." He added, "This is dance as animalistic release, albeit with a breathless abandon that only supreme technicians could accomplish. With some of the company's brightest stars, the 24-minute *Slice to Sharp* provoked the loudest cheering and the longest string of curtain calls seen at the New York State Theater in some time." *Brake the Eyes*, set to music by Mozart, struck a reviewer for the Quincy, Massachusetts, *Patriot Ledger* (March 2, 2007) as "a stunner." "Elo has choreographed to each notation of the ever-changing music and sound score in fascinating ways, as if the various styles of contemporary moving have been mixed to a froth in a blender and spilled out under the stage lights," the *Patriot Ledger* writer declared. Reviewing a performance by the Colorado- and New Mexico–based Aspen Santa Fe Ballet of Elo's *1st Flash* (2003), the arts critic Sid Smith wrote for the *Chicago Tribune* (November 19, 2007), "Elo projects strange, wriggling, oddball modernity onto his pristine classical base. Here the graft is deeply personal, employing a score by that towering emblem of Elo's Finnish homeland: Jean Sibelius. The juxtaposition is startling but exquisite, Sibelius' sweet melodies in outright opposition to Elo's streetwise tics and mercilessly fast phrasing."

Not all critics are fans of Elo's work, however. Robert Johnson, for instance, wrote in his review of *Glow-Stop* for the Newark, New Jersey, *Star-Ledger* (October 23, 2006), "Like cheap gold paint, the novelty of Jorma Elo's choreography wears off quickly. . . . For those who saw Elo's *Slice to Sharp*, at New York City Ballet, or who have seen any contemporary ballet at all during the past five years, *Glow-Stop* holds no surprises. Fast and hyper-articulated, the piece offers a string of fashionable clichés." Sarah Kaufman, writing for the *Washington Post* (June 16, 2008), reported that *Brake the Eyes* "felt like an assault on the art form, peculiar and pointless." Upon the premiere by the Boston Ballet of *Le Sacre du Printemps*, in May 2009, Alan Helms wrote for the British publication *Ballet.co Magazine* (June 2009) that Elo is "currently much in demand, and though I generally [do not like] his work, audiences usually do, so mine is definitely a minority opinion. When I first saw Elo's work four years ago it had the attraction of novelty, but it quickly became so predictable that before the curtain rose on a new piece you knew exactly what you were about to see. And what you saw was an unparalleled ugliness of movement: dancers flatfooted and knock-kneed bending sharply from the waist and moving like spastic praying mantises to what Alastair Macaulay has aptly called an anti-ballet aesthetic. To my surprise, Elo's new *Sacre* contains passages of lovely classical ballet, which shows that he can do it if he wants but also emphasizes just how ugly the ugly parts are."

Elo has also designed costumes and lighting for his ballets and made background videos for some of them. "I'm interested in mixing media onstage," he told Christine Temin. "I make dance movies that tell stories. I find narrative easier to do with a camera, because I can edit." Elo's honors include the prize for choreography at the 2005 Helsinki International Ballet Competition. In 2006 he won both the $75,000 Prince Charitable Trusts Prize for his work *From All Sides*, created for Hubbard Street Dance Chicago, and the Choo-San Goh Choreographic Award, from the Choo-San Goh and H. Robert Magee Foundation. Also in 2006 *Pointe Magazine* named him a Dance VIP and *Dance Magazine* listed him among "25 to watch" in the dance world.

According to Roslyn Sulcas, Elo is "of medium height and has a dancer's trimly muscular body. . . . [He] looks like a boyish professor of architecture (complete with rectangular, heavy-rimmed glasses) and speaks fluent, lightly accented English." Elo has homes in Boston and the Netherlands. His longtime girlfriend, Nancy Euverink, is a former principal dancer with the NDT. She now stages ballets and occasionally works as Elo's assistant.

Emanuel, Ari

Mar. 29, 1961– Talent agent

Address: William Morris Endeavor
Entertainment, 1 William Morris Pl., Beverly
Hills, CA 90212

"Call me Helen Keller, baby, because I'm a . . . miracle worker." Those brash words were spoken by the fictional Hollywood talent agent Ari Gold (played by Jeremy Piven) in an episode of HBO's acclaimed comedy series *Entourage*. The show, which is loosely based on the real-life escapades of the actor-producer Mark Wahlberg and his circle during his years as a struggling rapper-turned-actor, has consistently generated "water-cooler" buzz in Hollywood for its realistic portrayal of some of the entertainment industry's most infamous players. No character has drawn more attention than Piven's scene-stealing Gold, whose manic behavior and go-for-the-jugular attitude are modeled on those of the real-life agent Ari Emanu-

Kevin Winter/Getty Images

Ari Emanuel

el. Since 1995, when he and three associates left International Creative Management to form Endeavor Talent Agency, Emanuel has become one of the most visible and successful people in his field, "a volatile charmer with a streak of foot-tapping impatience," as Bernard Weinraub put it for the *New York Times* (August 2, 2004). He is certainly the most controversial: a fearless and calculating businessman, he has relentlessly bullied studio heads on behalf of his clients; publicly attacked Disney's former CEO, Michael Eisner, for trying to shelve Emanuel's client Michael Moore's controversial documentary *Fahrenheit 9/11* (2004) for political reasons; called for an industry-wide blacklisting of Mel Gibson in July 2006, after the actor-director made anti-Semitic remarks; and been the subject of scandalous stories told among Hollywood insiders. Leslie Moonves, the president and chief executive officer of CBS Corp., told Weinraub, "Ari is relentless. There's no more loyal a guy for his clients. He'll beg, borrow and steal to get his clients what he wants. He clearly loves this business. He loves the art of the deal." Aaron Sorkin, one of Emanuel's most loyal clients and the creator of the television drama *The West Wing*, said to Danielle Berrin for the *Jewish Journal* (November 6, 2008, on-line), "With Ari, it's all about the bottom line. In a business deal, he's going to try to kill for you, and it's just going to be about putting as much money in your pocket as he can, until you tell him that there's something else that's important to you." Among Endeavor's other well-known clients are the director Martin Scorsese; Larry David, co-creator of the sitcoms *Seinfeld* and *Curb Your Enthusiasm*; the talk-show host Conan O'Brien; and a "Who's Who" roster of A-list actors including Wahlberg, Robert DeNiro, Matt Damon, Ben Affleck, Christian Bale, Michael Douglas, Jude Law, Adam Sandler, Jennifer Lopez, Drew Barrymore, Jennifer Garner, Jessica Alba, and Reese Witherspoon. Following in the tradition of the maverick talent agent and Hollywood powerhouse Michael Ovitz, the former chairman of Creative Artists Agency (CAA), Emanuel has also helped Endeavor to branch into other areas, including advertising, communications technology, and publishing. Emanuel told Michael Cieply for the *New York Times* (July 27, 2008, on-line), "I feel like we're just getting started."

One of four children, Ariel Z. "Ari" Emanuel was born on March 29, 1961 in Chicago, Illinois, to an Israeli-born pediatrician, Benjamin M. Emanuel, and the American-born Marsha (Smulevitz) Emanuel, a civil rights activist who later became a psychiatric social worker. Emanuel's family has deep political roots. In the 1930s his paternal grandparents changed the family surname from Auerbach to Emanuel in honor of their son Emanuel, who was killed in the 1933 Arab insurrection in Palestine. In the 1940s his father was active in Irgun, the Zionist paramilitary organization headed by the future Israeli prime minister Menachem Begin. Emanuel's family immigrated to the U.S. from Israel in 1959, settling in Chicago. There, his father built a medical practice from the ground up, which included treating poor immigrants for free. (He later quit the American Medical Association over its position on national health care.) Emanuel and his two brothers, Ezekiel and Rahm, were raised in Wilmette, a lakeshore Chicago suburb. Ezekiel, a nationally renowned bioethicist and a leading opponent of state-assisted suicide, is a special adviser to the White House budget director and serves as chairman of the bioethics department of the Clinical Center at the National Institutes of Health (NIH). Rahm, President Barack Obama's chief of staff, served previously as a Democratic U.S. congressman from Illinois and a top adviser to President Bill Clinton. (*The West Wing* character Josh Lyman, played by Bradley Whitford, was modeled on Rahm.) Emanuel also has an adopted sister, Shoshana.

With his siblings Emanuel enjoyed a culturally rich upbringing. His mother, the onetime owner of a Chicago-area rock-and-roll club, ran a local branch of the Congress of Racial Equality (CORE) and frequently took Ari and his brothers in the 1960s to marches protesting the Vietnam War. Growing up, Ari learned from his parents to respect but question and challenge authority; during family dinners he was schooled in the art of arguing. He recalled to Weinraub, "There was never a time at the dinner table when politics didn't come up. We always argued. I suppose that affected the way I talk to people. It doesn't mean you don't like somebody."

As a boy Emanuel was diagnosed as dyslexic and hyperactive; his mother spent many hours teaching him to read. He told Susan Baer for the

Washingtonian (May 2008), "Teachers said I'd never graduate high school, let alone college." (In 2007 the Lab School of Washington and Baltimore presented Emanuel with an award recognizing achievers with learning disabilities.) Emanuel went on to attend New Trier West High School, in Winnetka, Illinois, one of the most competitive high schools in the country. After graduating, he attended Macalester College, in St. Paul, Minnesota. While there he became a roommate and friend of the actor and director Peter Berg, who has directed such films as *The Kingdom* (2007) and *Hancock* (2008). Berg later recalled to Scott Bowles for *USA Today* (September 26, 2007) that the two had so little money that "we couldn't afford beer. One of us would distract a woman at a bar by flirting with her while the other one stole her drink."

After graduating from Macalester, in 1983, Emanuel played on the professional racquetball circuit and lived for a time in Paris, France, where he cultivated a playboy lifestyle. He then moved to New York City, where he began working as an assistant to Robert Lantz, a veteran talent agent who has represented the likes of Milos Forman and others. "Nothing stopped him," Lantz recalled to Elisabeth Bumiller for the *New York Times* (June 15, 1997, on-line). Impressed with his tenacity, Lantz soon suggested that Emanuel move to Los Angeles, California. In 1987 Lantz helped him land a trainee position at CAA, then at its height under Michael Ovitz. Emanuel later told Weinraub that Lantz gave him four valuable pieces of advice: "You have to have taste, you have to be aggressive, you have to be fearless and you have to have the ability to sell."

Emanuel learned the ropes of the entertainment industry in CAA's mailroom. Frequently likened to military boot camps, talent agencies' mailrooms weed out entry-level employees; many wanting to break into the entertainment industry never make it past that first stage, in which cruel and demeaning treatment is not uncommon. Those who move beyond the mailroom normally become agents' assistants and then, sometimes, agents. Undaunted by that atmosphere, Emanuel enjoyed a meteoric rise to the top of the industry. From CAA he moved on to Inter Talent and then International Creative Management (ICM). A turning point in Emanuel's life came when he was accidentally hit by a car driven by an ICM client, leaving him with cracked ribs and a badly injured knee. The incident led him to rethink the direction of his life. He recalled to Bumiller, "I wasn't going to sit around and say my big book on my life when I'm 50 years old is C.A.A. or I.C.M. I'd shoot myself."

In a move reminiscent of Ovitz's break from the William Morris Agency, in 1975, when he and four other similarly disgruntled employees left the agency to form Creative Artists Agency, Emanuel and three other agents—David Greenblatt, Rick Rosen, and Tom Strickler—started plotting their departure from ICM to form an agency of their own. Not long afterward ICM executives learned about their plan through an employee who had caught an assistant taking files from the office after hours for one of the conspiring agents, and all four men were fired. Emanuel and his co-defectors officially launched Endeavor Talent Agency on March 30, 1995. Although ICM's chairman, Jeff Berg, threatened them with a lawsuit, no suit was filed. Upon receiving a vehement midnight phone call from Berg, Emanuel recalled to Bumiller, "I said, 'I don't work for you. Don't raise your voice at me.' And I hung up."

Endeavor's beginnings were modest. The agency was run from a small office above a restaurant in South Beverly Hills; nearly everyone on its small list of clients was a TV writer-producer—there were few filmmakers and no movie stars. Endeavor's clout in the talent-agent industry grew as more partners stepped aboard with prominent clients. In 1996 the company relocated to a high-rise building on Wilshire Boulevard, and three new partners, formerly with CAA, joined the operation: David Lonner, Doug Robinson, and Adam Venit. While Lonner helped bring in feature-film directors, a group that Endeavor had been lacking, Robinson and Venit represented actors including Lisa Kudrow, Hank Azaria, David Spade, and Adam Sandler. Over the next several years, as its client list expanded significantly, Endeavor became known for its take-no-prisoners attitude toward negotiating and innovative approach to the industry, which included a strong focus on up-and-coming filmmakers trying to establish themselves apart from the studios. In 2003 Emanuel commissioned the architect Neil Denari to design Endeavor's headquarters in Beverly Hills.

Another key development at Endeavor came in 2001, when the company acquired the agent Patrick Whitesell from CAA. Whitesell became a partner at Endeavor and brought on board such high-profile stars as Ben Affleck, Matt Damon, Jude Law, Hugh Jackman, and Christian Bale. Among the 200-plus people who have since chosen Endeavor to represent them are the actors Amy Adams, Jessica Alba, Javier Bardem, Steve Carell, Sacha Baron Cohen, Robert DeNiro, Michael Douglas, America Ferrera, James Franco, Jennifer Garner, Dustin Hoffman, Kate Hudson, Keira Knightley, Shia LaBeouf, Jennifer Lopez, Frances McDormand, Ellen Page, Robert Pattinson, Charlie Sheen, Tilda Swinton, Rachel Weisz, and Mark Wahlberg; the directors Peter Berg, Spike Lee, Shawn Levy, McG, Adam McKay, Michael Moore, and Martin Scorsese; and the writers Anthony Bozza, Bruno Heller, Andre Nemec, Stephanie Savage, and Mark Schwahn. Endeavor's television group has packaged hit series created by Larry David (*Curb Your Enthusiasm*), Tina Fey (*30 Rock*), Ricky Gervais (*The Office*), Seth McFarlane (*Family Guy*), Conan O'Brien (*Late Night with Conan O'Brien*), and Josh Schwartz (*The O.C.* and *Gossip Girl*)—all of whom are clients. The company has also been associated with some of the most commercially successful movies of the 2000s, including *Charlie's Angels* (2000), *Meet the Parents* (2000), *Little Miss Sun-*

shine (2006), *Night at the Museum* (2006), *The Departed* (2006), *Enchanted* (2007), and the groundbreaking documentaries *Fahrenheit 9/11* (2004) and Al Gore's *An Inconvenient Truth* (2006).

While Endeavor has grown into the second-most-powerful agency in Hollywood (behind CAA), it has been mired in several controversies over the years. In April 2002 a former Endeavor agent, Sandra Epstein, who at one time was the sole female among about a dozen agents, brought a sexual-harassment suit against the company. That led underwriters at Endeavor's insurer, Lloyd's of London, to cancel the agency's employment-practices policy, which spawned a countersuit by Endeavor. In court depositions and filings in the second suit, Epstein and other former Endeavor employees alleged that the agency was a haven for drug use, sexual trysts, bigotry, and homophobia. Emanuel was accused of allowing a friend to operate a pornographic Internet site out of the agency's offices. and one agent was said to have tried to make his assistants arrange his meetings with prostitutes. While the second suit was ultimately settled under undisclosed terms, Epstein settled her claims for $2.25 million. Currently, roughly half of Endeavor's 80 agents and a quarter of its partners are women. Also, similar to Ovitz's approach at CAA, Emanuel has fostered a collaborative work environment by encouraging interaction among departments, with television agents working alongside movie agents.

Emanuel again put Endeavor in hot water in 2004, when he publicly castigated Michael Eisner, then chairman of the Walt Disney Co., for trying to shelve Michael Moore's documentary *Fahrenheit 9/11*, which took a critical look at the presidency of George W. Bush and the so-called war on terrorism. Eisner had tried to block Miramax from distributing the documentary in fear that it would endanger tax breaks Disney received for its theme parks and hotels in Florida, where Bush's brother, Jeb, served as governor at the time. Miramax's former owners, the brothers Harvey and Bob Weinstein, later acquired the rights to the documentary, which was distributed by Lions Gate Films. *Fahrenheit 9/11* went on to win the Palm d'Or at the 2004 Cannes Film Festival, the festival's highest honor, and became the highest-grossing documentary of all time, with $220 million in sales worldwide. Weinraub quoted Michael Moore as saying, "We would not have gotten the release our film received without Ari's work. He took a big risk. He did something agents were not supposed to do when he went on the record. He broke one of the unwritten rules. He made sure the film wasn't shelved." Emanuel went on to make headlines again in July 2006, when he called for an industry-wide blacklisting of Mel Gibson after the actor-director made anti-Semitic remarks during a drunken tirade.

Emanuel's profile has risen dramatically since Endeavor packaged the HBO television series *Entourage*, which is based loosely on the life of Mark Wahlberg, his group of friends, and his manager/producer, Steve Levinson. Since it debuted, in 2004, the show has been considered "the most accurately nuanced satire of the entertainment industry since the 1992 HBO comedy series *The Larry Sanders Show*," Hilary De Vries wrote for the *New York Times* (September 5, 2005). While the show centers on a young A-list star named Vincent Chase (played by Adrian Grenier) and his friends, the character who has drawn the most attention is Vincent's agent, Ari Gold, who was modeled after Emanuel. On the show Gold is portrayed as an abrasive, fast-talking Hollywood superagent who pops Viagra and likes to "hug it out" with colleagues after screaming at them. Emanuel, who personally enlisted Jeremy Piven to portray Gold, has acknowledged that the character is in many ways similar to himself—but has said that he does not take Viagra or do a lot of hugging. Commenting on Piven's portrayal, which garnered three consecutive Emmy Awards (2006–08), Emanuel explained to Kim Masters for the *Los Angeles Times* (July 14, 2004), "There's absolutely times when I'm over the top. Not to the level that he is, [but] there are parts of the character that are me. People that know me—they know that I'm a character, but I'm not that character." He admitted to Weinraub that Gold is "a lot funnier than I am." The show's creator, Doug Ellin, has said that the character is actually a composite of two agents, Emanuel and Ellin's own agent, Jeff Jacobs of CAA. Both agents have signed releases waiving the right to sue. The sixth season of *Entourage* began in July 2009.

Endeavor enjoyed much success in 2007 and 2008. In 2007 Endeavor clients swept nominations in the adapted-screenplay category at the Academy Awards for films including *The Departed*, and in 2008 an independent study of the U.S. television market conducted by tvtracker.com placed Endeavor first among major agencies in almost every category. According to the study, Endeavor clients created or ran 51 percent of prime-time shows and packaged 58 percent of new dramas for the 2007–08 season, 31 percent of all new comedies, and 33 percent of all new reality/unscripted series. Endeavor, which generates approximately $100 million in revenue per year, has also expanded its services beyond entertainment. The agency's marketing division has worked with a number of corporate clients, including American Express, AT&T, AOL, and Revlon. Endeavor also has a commercial/voiceover division, which has partnered on campaigns with leading brands including Neutrogena, L'Oréal, and Mercedes-Benz, and a literary division that encompasses all aspects of the publishing industry.

In 2009, following months of discussion and rumors, William Morris and Endeavor agreed to merge as William Morris Endeavor Entertainment (WME Entertainment). James A. Wiatt, who was the chief executive of William Morris, was named chairman of the new company, and Emanuel was named co-chief executive, along with Endeavor's

Patrick Whitesell and William Morris's David Wirtschafter. The merger was largely driven by the economic downturn that began in 2008 and forced television companies and film studios to cut costs. WME Entertainment hopes to shift the balance of power from the studios back to the agencies and challenge CAA in the Hollywood pecking order. According to an article in the *New York Times* (June 10, 2009, on-line), "Even hardened observers of Hollywood's coarse ways were stunned when Mr. Emanuel and his colleagues dumped dozens of Morris agents and parted ways with Mr. Wiatt, who had since become the Morris chairman, less than a month after the merger was approved."

Emanuel and his wife, the former Sarah Addington, live with their three children in a $10 million home in Brentwood, in western Los Angeles. Emanuel has hosted numerous fund-raisers for the Democratic Party, including a $2,300-per-plate fund-raiser for Barack Obama at Emanuel's home in 2008. He is also known for his environmental activism and has led campaigns against gas-guzzling SUVs. Emanuel, who is known to start calling studio heads at 4 a.m. to lobby for his clients, was named one of the 50 smartest people in Hollywood by *Entertainment Weekly* in 2007.

Emanuel, Rahm

NOTE: An earlier article about Rahm Emanuel appeared in *Current Biography* in 1998.

Nov. 29, 1959– White House chief of staff; former U.S. representative from Illinois (Democrat)

Address: The White House, 1600 Pennsylvania Ave., N.W., Washington, DC 20500

Rahm Emanuel, a onetime high-level staffer in the Bill Clinton White House and former U.S. congressman from Illinois, was appointed by President Barack Obama to be the chief of staff in his administration, and when Obama took office, on January 20, 2009, Emanuel became one of the most powerful men in Washington. Although the specific duties of individual White House chiefs of staff have varied from one administration to the next, Emanuel is largely responsible for overseeing the other staff members, managing Obama's schedule, and controlling access to the president. Emanuel has been involved in government for more than 20 years and is both admired and feared for his political savvy, sharp tongue, and dedication to his work. He attacks problems with a relentlessness that often gives others pause. The political strategist James Carville, in a widely quoted assessment, once said about the wiry, five-foot-eight Emanuel, "I have never seen that small a mass produce that much energy."

Although Emanuel's work as chief of staff is usually not visible to the general public, he has been influential in virtually all arenas of White House activity, among them the economy, foreign policy, and national security. He played a significant role in the negotiations that led to the Obama administration's $787 billion stimulus package; the development of a plan to expand access to community colleges; the addition of Turkey to Obama's list of countries to visit during his diplomatic trip to Europe; and discussions and decisions regarding Pakistan, Israel, Russia, and the wars in Iraq and Afghanistan. In October 2009 a group of writers for *GQ* magazine placed Emanuel at the top of its list of the 50 most powerful people in Washington, D.C., aside from the president, vice president, and First Lady. According to *GQ*, Emanuel "knows procedure, he's ruthlessly pragmatic about what is politically achievable, and he knows how and when to twist arms and call in the many favors he's owed. All of which has helped him wrangle fence-sitters when it came to ponying up for the stimulus package, negotiate with the Senate Finance Committee on health care, and keep the liberal and conservative elements of his own party in line."

Dynamism seems to run in Emanuel's family. His father, Benjamin Emanuel, a pediatrician, was born in Jerusalem and passed secret codes for Menachem Begin's underground Irgun movement during the decade before Israel became a state. His mother, Marsha, a psychiatric social worker, is an American-born Jew who lived in Israel for a time and later became active in the civil rights movement in the United States. The Emanuels raised three sons in the Chicago, Illinois, area. Rahm, the middle son, was born on November 29, 1959. (An adopted daughter, Shoshana, joined the family years later.) In an interview with Elisabeth Bumiller for the *New York Times Magazine* (June 15, 1997, on-line), Emanuel said that his parents "left an indelible print that they expected nothing but the best from us, and taught us to expect it from ourselves." The children were required to keep abreast of current events and politics, and they had to come to the dinner table each evening "prepared to do battle," as Emanuel put it. Every Sunday, the family went on an excursion to a cultural institution in Chicago, and every summer the boys were sent to camp in Israel. Rahm developed an enduring attachment to the Jewish state. When the 1991 Persian Gulf War broke out, he flew to Israel and spent time at an army base, working on tank and jeep brakes. (His volunteer stint has led to persistent, but mistaken, reports that he was a member of the Israeli Defense Force and that he holds Israeli, rather than American, citizenship.)

The Emanuel brothers have been the subject of many magazine and newspaper articles. The eldest, Ezekiel, known as Zeke, is a well-known oncologist and medical ethicist. The youngest son, Ariel, called Ari, is a Hollywood talent agent with his own firm. The brothers "understand and enjoy power," Bumiller wrote, "and know how using it behind the scenes can change the way people think, live, and die." (Ari is the model for the character Ari Gold on the HBO show *Entourage*, and Rahm was the model for the character Josh Lyman on *The West Wing*.) In February 2009 Ezekiel Emanuel was appointed to the Obama administration's Office of Management and Budget as a special adviser.

While the boys were growing up, their mother insisted that they take ballet lessons, and Rahm showed a special talent for dance. He was offered a scholarship to the Joffrey Ballet School but turned it down. "I was way too small to be anything major," he was quoted as saying in *People* (January 11, 1993), "and I have too much ego to be a secondary performer." But Emanuel continued to train even as an adult, and on one occasion, after a dance class, he ran into Bill and Hillary Clinton. "They were taking [their daughter] Chelsea to her dance class," he told the *People* interviewer, "and out comes their national finance director in his leotard and tights."

Emanuel attended Sarah Lawrence College, in Bronxville, New York, where he earned a B.A. degree in liberal arts in 1981. He first got involved in politics in 1980, during his senior year in college, when he worked on the congressional campaign of David Robinson, an Illinois Democrat. The candidate's campaign manager, David Wilhelm, was "stunned by Rahm," as he recalled to Lloyd Grove for the *Washington Post* (July 7, 1992, on-line). "He was our finance director, 19 or 20 years old, and when people would give $250, he would call back and say, 'That's not enough.'" Wilhelm also worked with Emanuel on Richard M. Daley's successful 1989 run for mayor of Chicago. "Rahm would literally stand on top of my desk and gesticulate wildly about what we needed to do for him," Wilhelm told Grove. Emanuel reportedly executed one of his most notorious political deeds in the mid-1980s, when he allegedly sent a pollster with whom he had had a disagreement a large, decomposing fish.

In between those two political campaigns, in 1985, Emanuel earned an M.A. degree in speech and communications from Northwestern University, in Evanston, Illinois. Four years later, after stints as the Midwest field director for the Democratic Congressional Campaign Committee and then as the committee's national campaign director, he set up his own political consulting firm. According to the *People* article, when David Wilhelm became Bill Clinton's campaign manager in 1991, his first order was "Get Rahm."

Immediately after being hired as Clinton's national finance director, in November 1991, Rahm began stepping on "more toes than he ever did dancing *The Nutcracker*," Grove wrote. He called the campaign's Little Rock, Arkansas, headquarters to say that he was arriving from Chicago on a Sunday and that he needed a lift from the airport, after which he wanted to meet his staff. He was told that while he would get a ride, none of the staffers worked on Sundays. "You do now," Emanuel replied. Shocked to discover that the campaign had only about $600,000 in the bank, he organized 26 fund-raising events between Thanksgiving and Christmas that netted more than $3 million. "The money was credibility," Emanuel told Roger Simon for the *New Republic* (February 3, 1997). "It showed that a governor from the state of Arkansas could play in the major leagues." (Having a large nest egg also helped Clinton weather the storm of bad publicity that erupted in February 1992 about his alleged extramarital affairs and draft evasion.) In Little Rock Emanuel worked with strategists including James Carville and George Stephanopoulos.

Emanuel decided to solicit money primarily through fund-raising events, rather than through the more popular (and expensive) method of direct mail. He convinced Clinton that if he made the time to show up at arranged events and shake hands, he could raise millions. Indeed, the campaign raised more money than any previous presidential run and did so without getting mired in any fund-raising scandals.

Following his 1992 victory Bill Clinton tapped Emanuel to organize the inaugural celebrations. Emanuel, working with a 300-member staff, successfully arranged five days of events, including almost a dozen balls, several concerts, and the opening of the White House to the general public. "This is like being the CEO of . . . 3,500 bar mitzvahs," he told Jill Abramson for the *Wall Street Journal* (January 4, 1993). After Clinton's inauguration Emanuel tried to settle into his new position as the president's political director, but his tenure was rocky. He clashed repeatedly with Susan Thomases, a close confidante of Hillary Rodham Clinton, who reportedly believed that Emanuel was the source of leaks that reflected badly on the White House. (He vigorously denied the charge.) In less than a year, Emanuel was demoted to director of special projects and was exiled to an office that he described, according to Bumiller, as "a White House closet with a Playskool phone." Leon Panetta, the White House chief of staff from 1994 to 1997, has said that Emanuel's problems stemmed from a clash of cultures between Chicagoans and Arkansans. "His style is direct," Panetta told William Neikirk for the *Chicago Tribune* (November 23, 1997). "He tells you what he thinks. . . . A lot of people don't like that."

Emanuel prepared himself for a comeback. The demotion reminded him of an incident he had experienced as a 17-year-old: while working at the fast-food chain Arby's, he sliced off half of the middle finger on his right hand and did not immediately seek medical attention. Instead, he went to his school prom. The injury led to gangrene, which spread up his arm. "I could have died," he told Neikirk. "I could have professionally had a major wreck. In both cases, life transformed itself. I think I grew out of the political one. I didn't slow down any, I kind of focused and became more determined, but I did become more measured."

Emanuel's first assignment as special-projects director was to help coordinate the White House's effort to get the North American Free Trade Agreement (NAFTA) through Congress. When the hotly debated legislation passed, in November 1993, Emanuel's influence within the administration began to rise. He turned his attention to other policy issues; determining the best way to approach them turned out to be one of his greatest strengths. Like some of Clinton's other advisers, he was convinced that the president ought to focus on matters of concern to middle-class Americans. Toward that end he "plunged into the crime issue in particular, seeking to strengthen Clinton's and the party's ties to the law-enforcement community and stealing an issue away from the Republicans," Neikirk noted. "From the Brady bill [screening handgun purchasers] to the assault-weapons ban to a law dealing with sexual offenders, Emanuel's hands were all over the issue." He was also a strong proponent of the welfare- and immigration-reform bills that many members of the liberal wing of the Democratic Party opposed.

In addition to developing domestic policies, an important part of Emanuel's White House service was to promote the president's agenda in the media. Many reporters acknowledged that Emanuel was smart and effective, but they complained that he was a shameless spin doctor. "I got along with him, but like everyone else who ever covered [the White House], I also hung up on him," David Lauter, a *Los Angeles Times* writer, told Bumiller. "He'll call you up and start spinning something about how this is the greatest thing that any president has done in the history of man." Asked by Neikirk if he was bothered that some people considered him "obnoxious and arrogant," Emanuel replied, "No. . . . Am I obnoxious? I am loud. Am I loyal? Absolutely. Every bit."

Emanuel, who was nicknamed "Rahmbo" because of his aggressiveness, intended to resign after Clinton's first term, but when the president offered him a promotion to senior presidential adviser and executive assistant to the chief of staff for policy, he agreed to stay. George Stephanopoulos had filled the position during Clinton's first term. Ensconced in Stephanopoulos's old office, Emanuel played a key role in helping to form the administration's domestic policy. He was one of the five or six most senior people in the White House and formed the president's circle of closest and most trusted advisers. Unlike the liberal Stephanopoulos, Emanuel was a centrist and proved influential in Clinton's emergence as a more pragmatic, middle-of-the-road executive. (Emanuel was also a central player in the administration's handling of allegations that Clinton had had a sexual relationship with Monica Lewinsky, a former White House intern.)

Emanuel described his dealings with Clinton to Neikirk as "very frank and honest. . . . We have a very solid friendship, a relationship, rather. When I leave here, I will probably use 'friendship.' When I'm here, 'relationship.'" Emanuel left the Clinton White House in October 1998. He and his wife, Amy Rule, did not want to raise their children in Washington, D.C., and Rahm was also, by many accounts, interested in finding a higher-paying job in the private sector, in order to ensure financial security for his family. They decided to return to Chicago and bought a home in the neighborhood of Ravenswood, on the north side of town. Emanuel soon began working as an investment banker with the firm Dresdner Kleinwort Wasserstein, a job he obtained through Bruce Wasserstein, a Wall Street figure who had raised a lot of money for Clinton. Although Emanuel had never before worked at a similar institution, he viewed mergers and acquisitions as being not very different from funding campaigns and getting legislation passed. "You bring people together. You keep them talking," he told a reporter for the *Chicago Reader* (February 15, 2002). "You learn when a no could really mean a yes." During his two and a half years with the firm, Emanuel reportedly earned more than $16 million.

In the winter of 2002, Emanuel decided to run for the congressional seat representing Illinois's Fifth District, which spans much of the North Side of Chicago, from Lake Michigan into the western suburbs, and includes the neighborhood of Ravenswood. "Most Chicago politicians push the notion that they're neighborhood guys," the *Chicago Reader* reporter wrote. "They point to the parks where they played, the high schools they graduated from. But Emanuel isn't a neighborhood guy." In his earlier years in Chicago, the reporter wrote, Emanuel never ran for office, never led a local grassroots movement, and never joined a community group. Besides those disadvantages, it was widely acknowledged that Emanuel needed to change his image as an arrogant, pushy political operative. "He had to show he cared," the *Chicago Reader* reporter opined, "not just in a grand public-policy sense, but in a personal way." Rahm started emphasizing his family's ties to Chicago: his uncle Les had been a Chicago police officer for more than 20 years, his grandparents had lived in the city, and his father had a practice there for a time. During interviews and press conferences, Emanuel became more patient and moderated his temper, but many political observers expressed skepticism. Still, Emanuel managed to gain public support and the endorsement of the AFL-CIO, the Chicago Teachers' Union, and, not surprisingly, Bill Clinton.

Emanuel was elected to Congress in 2002 with 67 percent of the vote, and two years later he was easily reelected with 76 percent of the vote. As a congressman, Emanuel supported stem-cell research, abortion rights, benefits for same-sex domestic partners, strong gun control, tax incentives for production and use of renewable energy, comprehensive immigration reform without amnesty, and a quick withdrawal from Iraq. In 2005 then–Minority Leader Nancy Pelosi, a Democrat from California, asked Emanuel to become head of the Democratic Congressional Campaign Committee, reasoning that as a powerful, goal-oriented, experienced politician, he could help Democrats gain House seats in the November 2006 election.

In the summer of 2006, Emanuel and another former Clinton staffer, Bruce Reed, published the book *The Plan: Big Ideas for America*, which a reviewer for the *Economist* (August 19, 2006) called "[an] answer to Mr. [Newt] Gingrich's *Contract with America*, the small-government manifesto that helped Republicans capture the House in 1994." The reviewer called the pair's plan "solid and mostly sensible" and noted that it called for insurers to encourage free physicals to prevent costly illnesses later, for teachers to be paid for performance, and for families whose annual gross incomes did not exceed $100,000 to pay no more than 10 percent in taxes.

The Democrats gained some 30 seats in the House that November, and much of the credit was given to Emanuel, whom Naftali Bendavid, in an article for the *Chicago Tribune* (November 12, 2006) headlined "The House that Rahm Built," called "a brutally effective taskmaster." Emanuel, Bendavid noted, "[remade] the Democratic Party in his own image. Democrats had never raised enough money. Emanuel . . . yelled at colleagues and threatened his candidates into generating an unprecedented amount of campaign cash. Democrats had a history of appeasing party constituencies. Emanuel tore up the old litmus tests on abortion and other issues. With techniques that would make a Big Ten football coach blush, he recruited candidates who could mount tough challenges in some of the reddest patches in America. Democrats had blanched at hardball. Emanuel . . . muscled weaker Democrats out of races in favor of stronger ones." Bendavid concluded, "The Republicans always had killers on their side, ruthless closers like Karl Rove, Tom DeLay and Lee Atwater, the late mudslinging mastermind credited with getting the first President Bush elected. In Emanuel, Democrats had their counterpart." (Helping the Democrats' cause were several ongoing sex and corruption scandals among Republicans and increasing voter dissatisfaction with the situation in Iraq.)

Despite his close ties to Bill and Hillary Clinton, Emanuel endorsed his fellow Chicagoan Obama in the 2008 Democratic presidential primaries, rather than the former First Lady. He had been, he quipped to many reporters, "hiding under my desk" for much of the primary season.

In November Emanuel was reelected to his congressional seat with 74 percent of the vote, and many political analysts believed he was on his way to becoming House Speaker. That changed, however, when Obama offered him the position of White House chief of staff. Because Emanuel and his wife have three children—Zachariah, Ilana, and Leah—he was torn about accepting so demanding and time-consuming a job. After taking a few days to mull over the offer, he accepted. As quoted in the *Huffington Post* (November 6, 2008, on-line), he released a statement addressed to the president-elect: "I know what a privilege it is to serve in the White House, and am humbled by the responsibility we owe the American people. I'm leaving a [congressional] job I love to join your White House for one simple reason—like the record amount of voters who cast their ballot over the last month, I want to do everything I can to help deliver the change America needs." He added, "I am grateful to the people of the Fifth Congressional District who sent me to work on their behalf. I was proud to serve on a leadership team with Speaker Pelosi, Majority Leader Steny Hoyer and Majority Whip Jim Clyburn. They have taught me invaluable lessons—even a few lessons in humility, believe it or not. I want to say a special word about my Republican colleagues, who serve with dignity, decency and a deep sense of patriotism. We often disagree, but I respect their motives. Now is a time for unity, and Mr. President-elect, I will do everything in my power to help you stitch together the frayed fabric of our politics, and help summon Americans of both parties to unite in common purpose."

Emanuel's appointment has caused some controversy. His management style, while unquestionably effective, has often been called into question. "We joke that someone should open a special trauma ward in Washington for people who've worked for Rahm," Jose Cerda, a fellow Clinton staffer, had told Joshua Green for *Rolling Stone* (October 20, 2005, on-line). Additionally, his strong support for Israel worries those who feel he might exert anti-Arab pressure on Obama. Emanuel's father added to those fears when he told a reporter for an Israeli newspaper, as quoted in the *New York Times* (November 13, 2008, on-line), "Obviously he'll influence the president to be pro-Israel. Why wouldn't he? What is he, an Arab? He's not going to be mopping floors at the White House." Emanuel quickly issued a formal apology and disavowed his father's remarks. Others' doubts notwithstanding, Obama has asserted that Emanuel was a wise pick. In an official press release, also quoted in the *Huffington Post* (November 6, 2008, on-line), the president-elect said, "The Chief of Staff is central to the ability of a President and Administration to accomplish an agenda. And no one I know is better at getting things done than Rahm Emanuel."

Emin, Tracey

(EH-min)

July 3, 1963– Artist; writer; filmmaker

Address: c/o Saatchi Gallery, Duke of York's HQ, King's Road, London SW3 4SQ, England

Enthusiasm, admiration, wonder, empathy—such reactions have greeted the work of the British artist Tracey Emin, which has been described as painfully honest, deeply moving, captivating, and thought-provoking. Her creations have also been met with disgust, derision, shock, and condemnation, and they have been labeled shallow, puerile, crude, repellent, intolerably egocentric, and absurdly narcissistic. Like Damien Hirst and Rachel Whiteread, Emin is a prominent member of a group dubbed the Young British Artists in the early 1990s. Now in their 40s, they are distinguished in part by a "fascination with the real: with how real objects can be incorporated, modified, implied, whatever, in . . . art and made somehow unreal or hyper-real," Michael Kimmelman wrote for the *New York Times* (May 17, 1996). In a complimentary assessment of Emin's work, Adrian Searle wrote for the London *Guardian* (April 22, 2007), "As a storyteller [Emin is] superb. She lets us rummage through her life and aspirations, and into corners most of us keep well away from the public gaze. Is Emin an artist or an autobiographer? Either way, her only invention, and only subject, is herself. Such solipsism could be seen as self-indulgent, or brave, or silly. Perhaps it is all three. But whatever else the phenomenon of Tracey Emin entails, she has turned the details of her private life . . . into something like poetry, or theatre, or unalloyed confession. The best of her work is filled with pathos, humour, regret, pain, and forgiveness. Her vulnerability and her self-confidence—bordering on monomania—are of a piece. . . . The best thing about her work is the way she deals with what most of us would keep to ourselves." Matthew Collings, writing for the London *Independent* (March 25, 1997), also lauded Emin for "do[ing] something we'd almost forgotten art could do. She tells stories. Harrowing, heartbreaking, funny and ironic stories" that offer glimpses into "her struggle to escape the past through art." But Collings's opinion later changed radically; in a fiercely derogatory article, subtitled "Tracey Emin: Failure + Charisma = Success," for *Modern Painters* (November 2008), he wrote, "Historically, Tracey Emin's rise was a touch-and-go situation: you could laugh in embarrassment or ignore her or maybe embrace the madness—and the last one won. Between 1993, her first show at White Cube, and 1999, her Turner

Prize nomination, she took the artworld. After that, she took the world. . . . Art writers round the world who want to be thought of as informed tend to be admiring toward her. She is thought to have suffered in life and to have found ways to transform suffering into art. In England, knowledge of her greatness reaches far beyond the artworld: art writers in the UK national press at first combined sneering with sympathy and then gradually caved in. Now it's all-out fawning. She's a household name. Years ago, she could be mocked as a media tart and a hopeless exhibitionist (in the pathological sense), but now it's considered a great faux pas to come out with an opinion like this." In another, somewhat mixed appraisal, for *Tate Magazine* (September/October 2002), Melanie McGrath wrote, "I don't know whether Tracy Emin is a great artist. . . . At its best, Emin's art presents the world in ways you've always known about but never admitted, or you've never wanted to admit, or never perhaps until that moment articulated."

"I'm not stupid," Emin declared to Catherine Deveney for the *Living Scotsman* (July 13, 2008, on-line). "I don't go around throwing up and saying, 'This is art.' I went to art school for seven years. . . . I really know what I'm talking about. I'm a brilliant f***ing artist. If I wasn't, I wouldn't be having the level of success that I am." "Anyone who knows me knows that I am really sincere about my work," she told Karen Wright for *Modern Painters* (June 2005). Emin's work includes drawings (most of them monoprints), paintings, photographs, and embroidered and appliquéd fabric—many with text on them; sculptures in bronze and other materials; objects constructed with found materials; sentiments or ideas spelled out in neon lights; assemblages of her journals or other memorabilia or possessions; videos; and performances. Among her most famous pieces is *Everyone I Have Ever Slept With 1963–1995* (1995), a small, igloo-shaped tent whose inner walls displayed the names of Emin's bedmates since birth, including not only her sex partners but her maternal grandmother, brother, and two aborted fetuses—a work that the ad-agency mogul and art connoisseur Charles Saatchi bought from a dealer in 1997 for £40,000, equal to $65,520 then. Others among Emin's best-known works are *My Bed* (1999), a double bed (in which she had once remained for several days in a suicidal depression) with stained, bunched-up sheets, standing beside a small rug cluttered with dirty slippers, bloodied panties, used condoms, empty liquor bottles, cigarette butts, and other debris (purchased by Saatchi in 2000 for £200,000, the equivalent of about $303,200 then); *Roman Standard* (2005), a small bronze bird perched atop a 16-foot-tall pole that stands near the Anglican Cathedral in Liverpool, England (commissioned by the BBC for £60,000, or about $122,000); and *Keep Me Safe* (2007), those words written in neon lights, with glass shaped by a helper of Emin's (sold at a Sotheby's auction for a children's charity for £60,000, or about $119,500).

Emin's most attention-getting works also include her one-minute film *Homage to Edvard Munch and All My Dead Children* (1999), in which she is seen naked, screaming on a jetty near the summer house of Munch. (She has named that Norwegian painter and the Austrian painter Egon Schiele as two of her important early influences.) Others are *The Last Thing I Said to You Is Don't Leave Me Here, or The Hut* (1999), a small, dilapidated beach shack she once owned, exhibited along with two photos of a nude Emin inside the hut; *One Secret Is to Save Everything* (2007), a 21-by-14-foot white flag with those words, written in orange-red letters, superimposed on hand-embroidered, swimming sperm; and *Star Trek Voyager* (2007), an embroidered blanket (sold at an auction for £800,000, or $1,601,600, the proceeds donated to the Elton John AIDS Foundation). Richard Brooks reported for the London *Sunday Times* (May 3, 2009, on-line) that the nearly 200 pieces Emin has given to charities "had a combined estimated value of £10 million," or about $15 million, according to the artist herself.

In 2007 Emin represented Great Britain at the 52d Venice Biennale, in Italy. That year she was one of two artists named to the independent, privately funded Royal Academy of Arts; one of Britain's most influential arts institutions, the academy restricts its membership to 80 active artists. Works by Emin are in the permanent collections of museums including the Tate Museum, in London; the National Galleries of Scotland, in Edinburgh; the Frans Hals Museum, in Harlaam, the Netherlands; the Castello di Rivoli Museum of Contemporary Art, in Torino, Italy; and the Brooklyn Museum of Art, in New York City. Emin has participated in dozens of solo and group shows worldwide. Books about her include *Tracey Emin*, by Neal Brown (2006), and *Tracey Emin 20 Years* (2009), by Patrick Elliott. She is the author and illustrator of books including *Exploration of the Soul* (1994), *Absolute Tracey* (1998), *This Is Another Place* (2003), *Strangeland* (2005), *Tracey Emin: Works 1963–2006* (2006), *Tracey Emin: Borrowed Light* (2007), and *One Thousand Drawings* (2009). She has co-written other books, among them *The Art of Tracey Emin* (2002) and *Tracey Emin: You Left Me Breathing* (2008). She has also made one, poorly received feature film, *Top Spot* (2003), and several very short films, among them *Why I Never Became a Dancer* (1995), about her humiliating experience in adolescence at a disco-dance contest, when her performance prompted young men in the audience to shout "Slag, slag, slag"—British slang for "whore." Essays by Emin, headed "My Life in a Column," have appeared in the London *Independent* since 2005.

Along with her twin brother, Paul, Tracey Karima Emin was born out of wedlock on July 3, 1963 in Croydon, a borough of London, England. On their mother's side they have an older half-brother, Alan Cashin. Emin's father, Envar Emin, a Turkish Cypriot, was a real-estate developer and chef; one of his properties was the International Hotel in Margate, a seaside town and popular vacation spot in southeastern England, where Tracey and her brother grew up. Emin's mother, Pamela Cashin, an Englishwoman, worked in the hotel as a chambermaid and, at night, in a club as a waitress. Cashin told her daughter that she nearly underwent an abortion and would have done so if she had known that she was carrying twins. During Emin's early years her father would spend part of each week with Cashin and the twins and part with his wife and their children. He has said that he fathered 23 illegitimate children; Emin told Nigel Farmdale for the London *Telegraph* (October 30, 2002) that the total was probably 11. Emin's home life "seemed quite natural," she told Miranda Sawyer for the London *Guardian* (July 20, 1997). "I was brought up to be completely honest, to express how you feel emotionally, with dramatic scenes. Screwed-up but loving is the best way to describe our family." For years Emin's family lived in luxury in the International Hotel; after it failed, they moved into a nearby staff cottage. "Growing up by the seaside was a magical experience, especially back then, when the great British seaside was in its heyday," Emin told Charlotte Philby for the London *Independent* (August 1, 2009, on-line). In Margate's lido—a resort complex containing a swimming pool and other recreational facilities—and elsewhere in the town, "there was always something to do" with her brother and their friends, she said. Emin attended an Anglican church school and, for brief periods, Sunday school, gym and youth clubs, and a "Jesus art club," as she labeled it, and she was a member of the Girl Guides (similar to Girl Scouts in the U.S.).

At the age of 13, following a New Year's Eve party, in an incident she has recalled in her books and many interviews, Emin was raped by an "older boy," as Miranda Sawyer described him. "As upsetting and distressing as it was, and much as I didn't want it to happen, I went, 'Oh yeah, it's what happens,'" Emin told Sawyer. By her own account, during the next two years she had sex—occasionally against her will—with dozens of men. Her mother, who had known about but not reported the first rape, apparently was unaware of or unconcerned about Emin's promiscuity or the sexual abuse she suffered. Her mother raised no objections when, around that time, Emin dropped out of school; her brother, too, quit school, and for months the twins hung out together. At 15 Emin left Margate and settled in London, about 50 miles west, and began working at a shoe shop. At 17 she enrolled at the Medway College of Design, in Rochester, near London, where she studied fashion. There she met Billy Childish, a painter, musician, and poet, with whom she embarked on a tumultuous five-year affair. She remained at Medway for a year and a half. For a while afterward she took printmaking classes at the John Cass School of Art (now part of London Metropolitan University). Although she had never earned a secondary-school diploma, she was accepted at the Maidstone College of Art, a division of the University for the Creative Arts; she studied at the campus in Kent, between Margate and London, and earned a fine-arts degree in 1986. She next enrolled at the Royal College of Art, in London, which offers only graduate courses. In 1989 Emin completed a master's degree in painting there. At around the time she graduated, she fell into a severe depression, triggered, she has said, by an abortion. (She subsequently underwent a second abortion.) The depression led her to destroy—after she photographed them—all the paintings she had made while at the Royal College, and she did not paint for several years afterward. In her January 29, 2009 *Independent* column, she wrote, "When I first started becoming successful, I was filled with strange guilt and misunderstanding of myself. I felt that my abortions had somehow been a Faustian pact, and in return for my children's souls, I had been given my success. I am not a Catholic, but I have a profound belief in the soul. It's only now, now that I know that it will never be possible for me to have children, that the guilt has finally lifted. I give a lot out into the world, and I care and love for all that I create. It's a really big endeavour that extends much further than just the ego of myself."

Meanwhile, in 1993, in collaboration with Sarah Lucas—who, like Emin, was later to become a major figure among the Young British Artists—she opened a small store, called the Shop, in Bethnal Green, in London's East End. There, with Emin as the primary storekeeper, the women sold their own handiwork. Emin's included decorated T-shirts, découpage ashtrays, and small appliquéd blankets, among other items. At a party during that time, Emin met the wealthy, influential art dealer and agent Jay Jopling, the owner of the White Cube gallery, in London. Jopling already represented Antony Gormley and Damien Hirst, both of whom had won the prestigious Turner Prize (in 1994 and 1995, respectively), launched in 1984 "to celebrate new developments in contemporary art," according to the Web site of the Tate museums, which sponsor the prize. In 1994 Jopling invited Emin to exhibit at the White Cube. Titled My Major Retrospective, her show included an assemblage of personal artifacts, including old letters, the crumpled cigarette pack her uncle Colin had been holding when he was decapitated in a car accident, bloody tissue in a vial, and a hospital bracelet; photographs of her Royal College of Art paintings; and a quilt with the stitched names of relatives of hers and messages to them. "It was an intensely emotional exhibit, a blast of warm humanism in an art world that had got used to cool cerebralism as the norm," Matthew Collings wrote for the London *Independent* (March 25, 2007). "Not everyone liked it. When someone reveals so much about themselves so straightforwardly, it can be embarrassing. . . . [Emin had] become a brilliant observer and monitor of human feeling, an inspired tapper into the things that people really care about."

In 1994, chauffeured by her then-boyfriend, the art curator Carl Freedman (an early promoter of the Young British Artists and, later, a gallery owner), Emin embarked on an extensive reading tour in the U.S. Sitting on a chair bequeathed to her by her much-beloved, recently deceased maternal grandmother, she would read from her handwritten memoir *Exploration of the Soul*, much of which dealt with her sexual experiences. A photograph of her, seated with book in hand, in Monument Valley (which straddles Arizona and Utah), is in the permanent collection of the Tate, as is the chair, parts of which are covered with names and other text that Emin embroidered. The money she earned from the readings covered the costs of the trip. She and Freedman also vacationed together in Whitstable; Emin later had the beach hut that they used transported to London, where in 1999 it appeared in a group show at the Saatchi Gallery. In 2004 the hut was destroyed in a huge fire at a private warehouse in which Saatchi, other gallery owners, major museums, and the British royal family had stored artwork from their collections.

Among the dozens of other items that were incinerated in the fire was Emin's handmade tent, *Everyone I Have Ever Slept With 1963–1995*, which, along with *My Bed*, she considers one of her "seminal" pieces, she told Barry Didcock for the *Sunday Herald* (April 30, 2006), a Scottish paper. Reportedly constructed after Freedman challenged her to make something "totally outstanding," in Emin's words, the tent debuted in 1995 at the Freedman-curated show Minky Manky, at the South London Gallery. After removing their shoes, visitors to the show could crawl through the work, which was about the size of a two-person tent. "The tent really is a remarkable work," Matthew Collings wrote for the *Independent* (March 25, 1997). "Instead of merely sensational, the effect is rather intimate and loving." "You can have various emotions about such a piece . . . , but you have to conclude that it's doubtful whether anyone has conjured up quite such a singular project before," Richard Gott wrote for the London *Guardian* (April 5, 1997). The tent appeared in Sensation, an exhibit devoted to pieces in the collection of Charles Saatchi. The show—in particular, works by Chris Ofili and Marcus Harvey—drew intense criticism and controversy, along with huge crowds, during its run at the Royal Academy of Art, in London, in 1997, and later, in 1999–2000, after it traveled to the Brooklyn Museum of Art.

From 1995 to 1998 Emin ran a tiny storefront gallery in London. The Tracey Emin Museum, as she called it, was open for a few hours two days a week. For two weeks in 1996, she placed herself on exhibit in a small walled-in space within the Galleri Andreas Brädström, in Stockholm, Sweden. Through wide-angle lenses set in the walls, which made everything in the space look distorted and tiny, viewers could see Emin, completely naked, as she ate, slept, and—for the first time in years—painted at an easel. The enclosure was later removed, along with 14 paintings, 78 drawings, body prints, personal belongings, kitchen supplies, and other items; owned by Charles Saatchi, it is called *Exorcism of the Last Painting I Ever Made* and has been exhibited in its entirety as an installation.

In a notorious incident in December 1997, Emin appeared with a group of gallery owners and art experts on a TV show that aired immediately after that year's Turner Prize awards dinner. Seemingly drunk, she slurred her words, interrupted other guests, and cursed before she abruptly detached her microphone partway through the program and then "walked noisily out of the studio, her loud goodbyes greeted with relieved laughter," Clare Longrigg wrote for the *Guardian* (December 4, 1997). Emin later contended that prescription medication had affected her behavior that night.

With the inclusion of *My Bed* in the 1999 Turner Prize exhibition, Emin became an art superstar. "Steve McQueen was the eventual winner, but nobody remembers that because it was Emin who captured the real prize: a place in the national consciousness," Barry Didcock wrote. Like virtually all her work, *My Bed* stirred a broad array of reactions. Matthew Collings wrote for the London *Observer* (October 24, 1999), "The critical storm that blew up during the week over Tracey Emin's unmade bed, made into art, was about content not formal qualities. It was assumed it didn't have any formal qualities, only cheap shock content. But this is wrong. For one thing, it has a lovely rumpled whiteness. Yes, there was torture and anguish; these are part of what the bed is. . . . It's because she so blatantly shows it that people get incensed. It's a truthful bed. On the other hand, Emin might be a maximalist in the emotion league but she's surprisingly economical in the things she collects to suggest meanings." By contrast, Mark Lawson wrote for the *Guardian* (October 23, 1999), "There's something phenomenally self-indulgent about squalidity. As a lifestyle choice, it doesn't serve anyone but you—and maybe the roaches you brag about spotting as they scuttle across your kitchen floor. It's a weird breed of hedonism, a twisted debauchery, a strange machismo. . . . Still, Tracey Emin's turned squalor into an art form."

A 2001 show of Emin's at White Cube, called You Forgot to Kiss My Soul, provoked similarly disparate assessments. (The show shared the title of a work in neon, in which those words, in Emin's handwriting, were fashioned in glass by an assistant and enclosed in a neon valentine.) Those who admired the show included Richard Dorment, who wrote for the London *Daily Telegraph* (May 2, 2001), "As usual, everything is about Emin herself, but what is different is that now, at 37, she has reached a stage of maturity where she can draw on her own experience to make statements that feel more universal. She has used her imagination to give dramatic shape to autobiographical material: what we have now is a coherent artistic vision." Philip Hensher, writing for the *Independent* (April

27, 2001), felt otherwise: "A dullard might hit on an interesting concept by chance, but the likelihood that they will go on to explore that idea, or even fully understand the implications of their initial concept, is a fairly small one. That's pretty clearly what happened to Tracey Emin. Plenty of people . . . believe her to be a charlatan, and cite her insatiable enthusiasm for publicity in support of that view. I don't think that's true, since for a charlatan, one can have some grudging admiration. She's something much worse: she's just no good."

The neons, drawings, photographs, embroidered and appliquéd fabrics, writing, videos, and sculptures on exhibit in Emin's show This Is Another Place, at the Museum of Modern Art in Oxford, England, in 2002, led Charlotte Mullins to assert in a *Financial Times* (November 11, 2002) review that "the strength that lies behind all of Emin's successful work" is that the artist "speaks from her soul. . . . She might exorcise horrors and mistakes from her own past in her work, but in doing so she translates them into universal experiences." Her sometime admirer Adrian Searle, however, wrote for the *Guardian* (November 12, 2002), "To say that these wall-hangings and half-begun paintings and drawings and confessional writings are just so much awful logorrhea, as indulgent and incoherent as they are heartfelt and soul-baring, is to state the obvious. There doesn't seem to be any quality control here at all (or perhaps pain management?), let alone much sense of the distinction between private revelation and publicity. Some of it is difficult to take seriously on any level. . . . Emin's scrappy canvases and drawings done in a tired fuzzy line, her half-baked sentimentalizing and incoherent writings, have only one point: as evidence of her slog through life's brutalities." In her own defense, Emin told a reporter for the *Sydney (Australia) Morning Herald* (February 1, 2003), "My work is about communication. I think I communicate really easily and really quickly. You don't have to be a genius to understand it. And that's why I get slagged off by a lot of critics. . . . I'm taking their job away from them."

"Emin divides people like no other artist alive," Barry Didcock wrote. "She is hated and adored in equal measure." That division exists among readers of her books as well as viewers of her artworks. Regarding *Strangeland* (2005), for example, a collection of reminiscences and observations, Nicholas Lezard wrote for the *Guardian* (October 7, 2006), "*Strangeland* is necessary, and not just the latest instalment of [Emin's] artistic project. It has too many funny stories in it for that. Nor, by the same token, is it the product of a self-pitying publicity hound. Self-pitying is, strangely, the last thing Emin is. . . . *Strangeland* comes over as honest and extraordinary." But Alev Adil, writing for the *Independent* (October 14, 2005), complained, "As an 'autobiography,' *Strangeland* fails abysmally. Emin writes, in the conventional sense, very badly. . . . Emin's writing privileges authenticity over craft, choosing a clumsy and sensationalist exploration of victimhood."

In 2008 Emin organized the Royal Academy of Arts summer exhibition. The following year she had solo shows at the Schirn Kunsthalle, in Frankfurt, Germany; CAC Málaga (Centro de Arte Contemporáneo de Málaga), in Spain; the Museum of Art–Fort Lauderdale, in Florida; and the Scottish National Gallery of Modern Art, in Edinburgh. Other solo Emin shows were scheduled to open in 2009 at the Tate Modern, in October, and at the Lehmann Maupin Gallery, in New York City, in November.

Emin lives in a 450-year-old Huguenot house in the Spitalfields section of London. She has reluctantly accepted the probability that she will never become a mother. "As an older woman without children, society sees you as pretty redundant," she told Miranda Sawyer for the London *Mirror* (September 24, 2009, on-line). "Especially because you lose your looks. But you have to force yourself to think, 'Maybe the mirror's not so important.' Rather than thinking, 'I've got to get my breasts raised or get some Botox,' why not think, 'I'm going to learn French'? I learned to drive last year. It was the best thing I've ever done in my life. And now I'm going to learn how to speak French."

Favreau, Jon

(fav-ROH)

June 2, 1981– White House director of speechwriting

Address: The White House, 1600 Pennsylvania Ave., N.W., Washington, DC 20500

Jon Favreau, President Barack Obama's head speechwriter, has compared his job to that of a batting coach for Ted Williams, one of the greatest hitters in the history of Major League Baseball. The president, after all, is well known for his superlative skills as a writer and speaker; he has written two best-selling books, and the first speech he gave before a national audience—the keynote address at the 2004 Democratic National Convention, which he wrote by himself—was hailed as "magical," "electrifying," and "transformative," and it immediately made him a rising star in his party. Nevertheless, like all presidents since Calvin Coolidge, who served in the White House in the 1920s, Obama has a team of official speechwriters. Favreau, who assumed his post in 2009 when he was 27, is the second-youngest person ever to serve as a president's head speechwriter. (The first was James Fallows, who was two months younger than Favreau when he joined the administration of Jimmy Carter.) Favreau has worked for Obama since the latter entered the U.S. Senate, in 2005, and partly through extensive study of Obama's writings and speeches and memorization of large parts of both, he has become the president's "mind reader," in Obama's words. The goal of both men in writing a speech, Favreau has said, according to Mike Dorning in the *Chicago Tribune* (March 7, 2009, on-line), is to "tell a story. That's the most important part of every speech, more than any given line. Does it tell a story from beginning to end?" The president's longtime adviser David Axelrod said of Favreau to Dorning, "I call him Mozart because he's just this young creative genius" and because Favreau, like Obama, "think[s] in terms of the cadence of the words. Not just the meaning of the words but the cadence of the words, how they work together, how they sound together." Axelrod also told Dorning, "I've never worked for a politician who values words as much as the president does. The speechwriter is an unusually important person in the operation." "Barack trusts [Favreau]," Axelrod told Ashley Parker for the *New York Times* (January 20, 2009). "And Barack doesn't trust too many folks with that—the notion of surrendering that much authority over his own words." Favreau's experience in politics dates to his junior year in college, when he spent several months as an intern in the office of U.S. senator John Kerry of Massachusetts. During Kerry's run for the presidency as the Democratic nominee, in 2004, Favreau served as his deputy speechwriter. Stephanie E. Yuhl, a professor of history who taught Favreau during his college years, told Lisa D. Welsh for the Worcester, Massachusetts, *Telegram & Gazette* (January 20, 2009), "Jon has an extraordinary talent of taking very complex ideas and translating them into very accessible language so that everyone can formulate their own decision"—a talent that has been attributed to Obama as well. And like Obama, Favreau has a strong sense of social justice and responsibility to others. "He and Obama are a good fit," Yuhl said. "They have a very cooperative, fluid kind of writing and working relationship."

Jonathan Favreau was born on June 2, 1981 in Winchester, Massachusetts, to Mark Favreau, a high-tech consultant, and Lillian Favreau, a public-school teacher. With his younger brother, Andrew, he was raised in North Reading, a suburb of Boston, Massachusetts. (Favreau is not related to the screenwriter, actor, and director of the same name.) His mother told Mike Dorning that she has a recording of him as a two-year-old reciting, with minimal prompting, Clement Clarke Moore's poem "A Visit from St. Nicholas" (better known as "The Night Before Christmas"). According to his father, as quoted by Mike Cullity in the *Manchester (New*

Hampshire) Union Leader (January 18, 2009), "Jon always had an amazing way with the written word." During his middle-school years, Favreau attended a leadership seminar in the nation's capital with his best friend, Josh Porter. "He just loved the idea of how much power there is there," Porter told Dorning.

After he graduated from North Reading High School, Favreau studied political science at the College of the Holy Cross, a Jesuit liberal-arts university in Worcester, Massachusetts. The school urged and expected students to take action to further social justice and help others, and Favreau took that injunction much to heart. "He was one of those kids that comes along once in a while that sets the place on fire," Gary DeAngelis, the associate director of the Holy Cross Center for Interdisciplinary and Special Studies, told Thomas Caywood for the Worcester *Sunday Telegram* (January 27, 2008). Favreau devoted some of his time to the organization Habitat for Humanity, which builds houses for people in need, and to a program that arranges weekly visits with cancer patients. With the Student Programs for Urban Development (SPUD), he volunteered in 1999 and 2000 in the Welfare Solidarity project, which aimed to inform welfare recipients about their rights and benefits and assist them in other ways as well. In 2000 he was named the program's director and succeeded in securing additional funding for it. With the support of professors and Holy Cross administrators, who made participation a component of coursework, he increased student involvement in the project. In 2002 he became the head of another SPUD effort, the Main South Workforce Development Program, which aided unemployed members of the community with job placement and training. In his college years Favreau also served as the treasurer and debate-committee chair of the campus's chapter of College Democrats of America.

"During my first few years at Holy Cross, my experiences advocating for clients in the Worcester welfare office left me wondering why I would regularly encounter single, working mothers who could not afford food, housing, or medical care, despite the fact that they worked over forty hours a week," Favreau recalled in the speech he gave at his graduation as the valedictorian of his class, as quoted in the *Des Moines (Iowa) Register* (January 19, 2009, on-line). "If the idea was to get people off welfare rolls and into jobs, why were the jobs failing to provide even the most basic standard of living?" Seeking answers to those questions, and eager to "see firsthand how and why decisions concerning welfare and other issues important to me were being made," as he said in his speech, Favreau spent one semester of his junior year in Washington, D.C., as an intern for Senator John Kerry. He worked closely with David E. Wade, the senator's communications and press director, primarily compiling press clippings for use in drafting opinions and positions. Recognizing Favreau's talents, Wade gave him the opportunity to write as well. Wade told Caywood, "Sometimes you see interns who try to distinguish themselves by constantly talking. They want to show you and tell you how much they know. Or they ask you endlessly if your job is like [the television series] *The West Wing*. Jon just very quietly, determinedly put his head down and distinguished himself through his writing. . . . This was clearly a young man in a hurry who was going to be going places. I thought he represented the right cocktail for politics: creativity, an unrelenting work ethic, enormous drive and a complete lack of ego." An essay that Favreau wrote about his experiences in Washington won his college's award for best thesis of the year. He also won a $30,000 Harry S. Truman Scholarship, a federally funded grant awarded to college juniors for their leadership abilities and potential for achievement in public service. (That money, which Favreau has not yet used, was supposed to cover some of the costs of graduate school.) As an undergraduate Favreau served as the editor of the op-ed page of the campus newspaper, and he became a serious student of the piano. He earned a B.A. degree in 2003.

Immediately after his graduation Favreau moved to the nation's capital to take on the job of press assistant for John Kerry's 2004 presidential campaign. In addition to assembling print, audio, and Internet news clips for the campaign's senior staff members, he prepared talking points and suggested a "message of the day" for transmission to the media. As the Kerry campaign began to stumble, and speechwriters and others departed, Favreau was promoted to deputy speechwriter. According to Eli Saslow's profile of him for the *Washington Post* (December 18, 2008), some staffers had gotten hold of a copy of his Holy Cross commencement address and felt that it merited giving him an opportunity to write, particularly because Kerry's poor poll ratings were discouraging speechwriters from joining his campaign, and in any event, a lack of funds precluded an expansion of the staff.

Favreau met Barack Obama backstage at the 2004 Democratic National Convention, shortly before the then-little-known Illinois state senator was to deliver that year's keynote address. Favreau had been sent to tell Obama to remove a sentence that Kerry wanted to use in his own speech. Favreau recalled to Ashley Parker that Obama, who had been rehearsing his address, "kind of looked at me, kind of confused—like, 'Who is this kid?'" Obama did not delete the sentence—"There are no red states or blue states, there are only the United States of America"—and his speech immediately catapulted him into the front ranks of Democratic politicians nationwide. Kerry's electoral loss to the incumbent, the Republican George W. Bush, the following November capped a period of disillusionment for Favreau. "After the Kerry campaign, after all the backbiting and nastiness, my idealism and enthusiasm for politics was crushed," he told Richard Wolffe for *Newsweek* (January 6, 2008, online). "I was grateful for the experience I got, but it was such a difficult experience, along with losing, that I was done. It took Barack to rekindle that" idealism and enthusiasm. Favreau told Parker that, finding himself without a job and short of money, he took advantage of "all the happy-hour specials I could find in Washington."

Favreau's period of unemployment was brief: soon after the 2004 congressional elections, in which Obama won a seat in the U.S. Senate, Robert Gibbs, who had been Kerry's campaign press secretary and had become Obama's communications director, invited Favreau to meet with Obama about a possible speechwriting job. Thinking that he wanted to give politics "one more shot with someone I'm ideologically aligned with," as quoted by Mike Cullity, he talked with Obama in January 2005, on the day that Obama was sworn in. The two chatted about their experiences in social work and their thoughts on social justice, and Favreau discovered that he was "closely aligned" with what Obama believed, as he told Charles P. Pierce for the *Boston Globe Magazine* (December 21, 2008). Instead of questioning Favreau about his background, Obama asked him about his motivations and goals in the political arena and his theory of speechwriting. According to Wolffe, Favreau told Obama, "I have no theory. But when I saw you at the convention, you basically told a story about your life from beginning to end, and it was a story that fit with the larger American narrative. People applauded not because you wrote an applause line but because you touched something in the party and the country that people had not touched before. Democrats haven't had that in a long time." Favreau also told Obama, as quoted by Saslow, "A speech can broaden the circle of people who care about this stuff. How do you say to the average person that's been hurting: 'I hear you. I'm there. Even though you've been so disappointed and cynical about politics in the past, and with good reason, we can move in the right direction. Just give me a chance.'"

For the next two years, Favreau worked in Obama's office in Washington. Then he moved to Chicago, Illinois, to work on the senator's incipient presidential campaign. He memorized many of Obama's speeches and long sections of his books and made a concentrated study of his tone and cadence, in both written works and oral presentations, thereby "channeling" Obama, as he has put it. According to Saslow, Favreau "mastered Obama's writing style—short, elegant sentences—and internalized his boss's tendency toward reflection and ideological balance."

After Obama officially announced his candidacy for the presidency, in February 2007—in a speech that, according to Wolffe, the politician had written himself—Favreau moved to the Lincoln Park area of Chicago, where he shared a home with six other Obama staffers. Favreau became the head speechwriter of a youthful team that also included Adam Frankel and Ben Rhodes. Later, Sarah Hurwitz, a former speechwriter for President Bill Clinton, was added to the team. "We were always informal—that's Favs's style," Rhodes told Saslow, using the nickname by which Favreau's close friends and associates refer to him. "I don't think he ever scheduled a meeting where we all sat down at a table and said, 'Here's what we have to do this week.' And if he had, we probably would have laughed at him." That casual approach notwithstanding, during the many months of the campaign, Favreau would often wake up at 5:00 a.m. and not get to bed until 22 hours later, keeping himself going with espressos and energy drinks and playing a computer video game while on breaks. He has also admitted to several reporters that he became obsessed with opinion polls—his "daily crack," as he called them.

For inspiration as a speechwriter, Favreau has often looked to the past; he told Parker that he has read many written works and speeches by John F. Kennedy, former U.S. attorney general and senator Robert F. Kennedy, and Martin Luther King Jr. "Many Democratic candidates have attempted to evoke both John and Robert Kennedy, but Senator Obama seems to have had more success than most," Parker remarked. Favreau has also named as influential President Ronald Reagan's speechwriter Peggy Noonan (he particularly admires the speech Reagan gave at Pointe du Hoc, in France, to mark the 40th anniversary of D-Day), and Michael Gerson, who wrote for George W. Bush. During the campaign Favreau often appropriated lines from Obama's books and previous speeches. While some speeches were almost entirely the work of the candidate, for others Obama relied to varying degrees on his writers. Favreau described to Wolffe how he and Obama work together: "What I do is to sit with him for half an hour. He talks and I type everything he says. I reshape it, I write. He writes, he reshapes it. That's how we get a finished product. It's a great way to write speeches. A lot of times"—with other politicians—"you write something, you hand it in, it gets hacked by advisers, it gets to the candidate and then it gets sent back to you. This"—the method the president uses—"is a much more intimate way to work." At times Favreau would find his job daunting. "If you start thinking about what's at stake, it can get paralyzing," he told Saslow. Occasionally Obama would offer words of encouragement: according to Saslow, he would tell Favreau, for example, "Don't worry. I'm a writer, too, and I know that sometimes the muse hits you and sometimes it doesn't. We'll figure it out together."

Favreau has contributed significantly to some of Obama's most memorable campaign speeches. He wrote the line "You know, they said this day would never come," the first words Obama spoke when he addressed cheering supporters in Iowa on January 3, 2008, after he became the first person of color to emerge victorious from the Democratic presidential caucuses in that state, whose population is more than 90 percent white. Days later U.S. senator Hillary Clinton of New York, Obama's main rival among the Democratic candidates, accused Obama of lacking substance, saying, according to Ashley Parker, "You campaign in poetry, but you govern in prose." After Clinton won the New Hampshire primary, on January 9, Obama recycled the hopeful slogan of his 2004 senatorial campaign, "Yes, we can." While many have credited Favreau with those words, they are in fact Obama's, but Favreau is said to have been instrumental in the decision to use them again. In concluding his concession speech in New Hampshire, Obama introduced the slogan by saying, "When we have faced down impossible odds, when we've been told we're not ready or that we shouldn't try or that we can't, generations of Americans have responded with a simple creed that sums up the spirit of a people: Yes, we can. Yes, we can. Yes, we can." He then repeated the words in succeeding paragraphs nine times, as a concise way of demonstrating the determination of the nation's founders, slaves and abolitionists, immigrants, workers who unionized, women who fought for the right to vote, President Kennedy when he decided to send men to the moon, Martin Luther King Jr. in his struggle to achieve justice and equality for African-Americans, and his own supporters in the current campaign. He ended by saying, "Tonight, we will begin the next great chapter in the American story, with three words that will ring from coast to coast, from sea to shining sea: Yes, we can." "And at that moment, a mere presidential campaign was transformed into a movement, coalesced around three simple words," Mark Warren wrote for *Esquire* (December 3, 2008).

According to Saslow, Obama called Favreau on the night of Saturday, March 15, 2008 and told him that he would be giving a speech about race and religion the following Tuesday, in Philadelphia, Pennsylvania. The impetus for it was the furor that had erupted after the public learned that Jeremiah Wright, the pastor of the Chicago church that Obama had attended for many years, had used, in Obama's words in his speech, "incendiary language to express views that have the potential not only to widen the racial divide, but views that denigrate both the greatness and the goodness of our nation; that rightly offend white and black alike." Obama dictated his ideas over the phone for half an hour and told Favreau to organize and polish them. "It would have been a great speech right then," Favreau told Saslow. Entitled "A More Perfect Union," the speech went some distance to quiet the uproar and quell the doubts that many people felt about Obama's association with Wright. Obama himself told Favreau, according to Eli Saslow, "So, I think that worked." An editorial headed "Profiles in Courage" that appeared the following day in the *New York Times* (a newspaper that had endorsed Clinton in the Democratic primaries) agreed: "There are moments—increasingly rare in risk-abhorrent modern campaigns—when politicians are called upon to bare their fundamental beliefs. In the best of these moments, the speaker does not just salve the current political wound, but also illuminates larger, troubling issues that the nation is wrestling with. . . . Senator Barack Obama, who has not faced such tests of character this year, faced one on Tuesday. It is hard to imagine how he could have handled it better. . . . He put Mr. Wright, his beliefs and the reaction to them into the larger context of race relations with an honesty seldom heard in public life. . . . He not only cleared the air over a particular controversy—he raised the discussion to a higher plane."

For the speech with which Obama accepted his party's nomination at the 2008 Democratic National Convention, Favreau reportedly wrote a first draft that the senator rejected as too long and lacking in focus. Obama rewrote it and then gave it to Favreau to whittle down to an acceptable length. According to some sources, the two were editing it until a few hours before Obama delivered the 44-minute speech, in front of an estimated 84,000 people crowded onto Invesco Field at Mile High, a stadium in Denver, Colorado, on the night of August 8, 2008.

Favreau and his team prepared two speeches for Obama to use on the night of the general election—one in the event of victory and the other, defeat. They were told, according to Catherine Philp, writing for the London *Times* (November 29, 2008), to "figure out a good Lincoln quote to bring it all together." Favreau recommended the lines from Lincoln's first, 1861 inaugural address that signaled the president's graciousness and desire for bipartisanship: "We are not enemies, but friends. We must not be enemies. Though passion may have strained, it must not break our bonds of affection." Obama included the first and third sentences in his Election Night speech.

Favreau worked on the first draft of Obama's inauguration speech in a Washington Starbucks, according to Ed Pilkington in the London *Guardian* (January 20, 2009), and then it went back and forth between the president-elect and his speechwriter four or five times. As Favreau told Saslow, Obama had indicated that the vision and theme he wanted to convey should focus on "this moment that we're in, and the idea that America was founded on certain ideals that we need to take back." For the next several weeks, Favreau and his team engaged in research, studying periods of crisis in the nation's history, conducting interviews of Peggy Noonan and other speechwriters and David McCullough and other historians, and listening to past inaugural speeches. On January 20, 2009 a record-breaking crowd of well over a million people filled the National Mall, in Washington, D.C., to witness the nation's first African-American president deliver his inaugural address. Although the speech did not strike most listeners as destined for immortality, it was widely praised. "More novel than short story, more ballad than poem—writers agree that restraint and plain speaking were the qualities that distinguished President Obama's inaugural address," Susan Salter Reynolds wrote for the *Los Angeles Times* (January 21, 2009). "Long on plot

. . . , it did what literature does best: the backward glance, the standing on shoulders, the salute to ancestors and other sources of wisdom." The memoirist Patricia Hampl told Reynolds, "I was glad that he denied himself rhetorical flourishes and gave a speech as refined and restrained in its power so that political language itself was restored to its greatest value—saying what the speaker means." The speech struck the writer Mark Kurlansky, as he told Reynolds, as "the most sophisticated view of the world and our role in it of any inaugural address in history." In his *Washington Post* (January 21, 2009) column, Michael Gerson complained that the speech contained too many clichés and platitudes, but then he wrote, "[Obama] rooted his vision of social and economic restoration in the renewal of moral virtues—courage, honesty, fair play, loyalty, tolerance, patriotism and duty. He insisted on using the word 'virtue' and explained that such convictions are not merely useful but 'true.' This shows a deep understanding of America, which remains moral to its core—and a mature understanding of American leadership." *New York Times* editorial writers (January 21, 2009) wrote, "What was surprising about the speech was how much Mr. Obama dwelled on America's choices at this moment in history, rather than the momentousness of his ascension to the presidency."

Earlier, in December 2008, Favreau had drawn criticism from some women's organizations and right-wing pundits stemming from a photo of him that appeared on Facebook.com and then many other sites. The photo showed him at a party standing next to a cardboard figure of Hillary Clinton, his left hand groping her breast, while another, unnamed partygoer, wearing a shirt reading "Obama Staff," nuzzles her ear and offers her a bottle of beer. Favreau immediately apologized to both Clinton and Obama, and Clinton released a statement, as quoted in an opinion piece by Kathleen Parker in the *Washington Post* (December 13, 2008), stating, "Senator Clinton is pleased to learn of Jon's obvious interest in the State Department, and is currently reviewing his application."

Obama, who as president addresses the country every week on the radio and the Internet, has made several memorable speeches in his first year in office. Among them was one directed at the "Muslim world," entitled "A New Beginning" and delivered in Cairo, Egypt, in June 2009; another was about his plans for health-care reform (what many observers have called his "signature issue"), delivered to Congress in September 2009. Favreau, who continues to lead a group of a half-dozen speechwriters at the White House, received what seemed like criticism from William Safire, a Pulitzer Prize–winning columnist and former speechwriter for President Richard Nixon, who said in April 2009 that Favreau was receiving "too much publicity too soon," as quoted by Stephanie Green and Elizabeth Grover in the *Washington Times* (April 17, 2009). Safire added that a presidential speechwriter should have a "passion for anonymity." In reality, apart from a couple of romantic relationships that have generated some gossip, Favreau has remained relatively anonymous.

Favreau lives in the Dupont Circle district of Washington, D.C. Someday, he remarked to Saslow a few weeks after the November 2008 election, he may "write a screenplay, or maybe a fiction book based loosely on what all of this was like. You had a bunch of kids working on this campaign together, and it was such a mix of the serious and momentous and just the silly ways that we are. For people in my generation, it was an unbelievable way to grow up." Favreau told John Marchese for *Holy Cross Magazine* (Summer 2009), "What Obama has been able to do, both himself and the movement that he's created, is to inspire people in a fundamental way to want to participate again. That's been the best thing about working for him."

Gallagher, Ellen

1965– Artist

Address: c/o Gagosian Gallery, 555 W. 24th St.,
New York, NY 10011

"I don't quite fit in," the artist Ellen Gallagher told Julie L. Belcove for *W* magazine (March 1, 2001), "but I think that's a good thing." Since 1995, when her inclusion in the prestigious Whitney Biennial created a stir in the art world, Gallagher has won acclaim for both the technical skill evident in her paintings and collages and her work's subtle commentary on issues involving race. That subtlety is perhaps the aspect of her work that keeps her from "quite fitting in." Rather than exemplifying protest art, Gallagher's pieces invite a variety of interpretations, making her ideas hard to classify—just as her style is difficult to pin down, mixing, for example, abstract and representational elements. Her work has been exhibited in major galleries and museums, including the Whitney Museum, the Gagosian Gallery, and the Mary Boone Gallery, all in New York; the Anthony d'Offay Gallery, in London, England; the Galerie Max Hetzler, in Berlin, Germany; and the Institute of Contemporary Art in Boston, Massachusetts. Gallagher has "a great stamina for work," one of her friends, the writer and performer Anna Deavere Smith, said of her to Edward Lewine for the *New York Times* (January 23, 2005). "'But she isn't just ambitious. She's after

Nicole Bengiveno, *The New York Times*/Redux
Ellen Gallagher

something as an artist and is willing to take time to find it."

Ellen Gallagher was born in 1965 in Providence, Rhode Island. Her mother, an Irish-American, worked as a coordinator for the government-funded Head Start early-childhood-education program; her father, an African-American, was "a professional boxer but not a very good one," as she told Celia McGee for the *New York Times* (January 7, 1996). Although her parents never married and she was raised primarily by her mother, she maintained a close relationship with her paternal grandmother, an immigrant from Cape Verde, an island republic off the western coast of Africa. Gallagher, who attended prestigious private schools—including the Moses Brown school, in Providence—on scholarships, was never a distinguished student. Her mother, whom she described to Belcove as "a strong, complicated woman," did not push her to succeed; instead, Gallagher said, she experienced "a profound lack of guidance."

Gallagher enrolled at Oberlin College, in Oberlin, Ohio, when she was only 16, initially studying creative writing there. She dropped out to work as a commercial fisherman in Alaska. Tiring of that after a year, she returned to Oberlin, which seemed to her, after her time away, to be a "very small, contained universe," as she said to Belcove. Her body, muscular from manual labor, "revealed choices I had made in my life . . . ," she said. "I tried to pretend to be who I was before, but my body was telling the truth."

Deciding that she wanted to work with her hands, Gallagher left Oberlin for good, but not before participating in a semester-long oceanography program in which she studied tiny water snails called pteropods. "Their shells were incredibly beautiful and elaborate and I would study them under the microscope then draw them," she told Tim Teeman for the London *Times* (July 20, 2005). While Gallagher became "really connected" to the drawings, she did not decide immediately to attend art school; instead, after leaving Oberlin, she went to work as a carpenter in Seattle, Washington. "It never occurred to me then that I would be an artist," she told Belcove. "I thought I would be in some really menial labor job or some really tough physical work my whole life—and that seemed really scary to me."

In 1992 Gallagher enrolled at the School of the Museum of Fine Art in Boston. In Cambridge, just outside Boston, she joined a collective of African-American writers and artists called the Dark Room; she began to incorporate into her work her interest in the significance that race is given in America. In the summer of 1993, Gallagher studied at the Skowhegan School of Painting and Sculpture, in Maine, where she took classes with artists including Ann Hamilton, Peter Halley, and Kiki Smith, forming a lasting friendship with Smith.

Gallagher mounted her first solo show in 1992 at the Akin Gallery, in Boston. Her second took place in 1994, at the Mario Diacono Gallery, also in Boston. Gallagher's paintings, which appeared from afar to be minimalist abstractions, coalesced into more realistic—and sinister—images as the viewer moved closer, incorporating tiny drawings of bulging lips and eyeballs and other examples of racist caricature. Another notable element was the lined children's notebook paper on which the works were painted; the paper was attached to canvases. "This humble but evocative material injects a wry immediacy into Gallagher's works by summoning a state of childhood pre-literacy and powerlessness," Ann Wilson Lloyd wrote for *Art in America* (April 1, 1995). Other critics pointed out that the notebook paper could symbolize the way racism is learned, like math and reading, rather than inborn. Lloyd also made note of the paintings' tiny lips and eyes, writing, "These slight and simple markings suggest lurking narratives. *Decoy*, for instance, contains nine bale shapes, each made up of row upon row of pencil-drawn lips. Dotted here and there are pairs of painted eyes rolled comically heavenward in a minstrel-show parody. For all Gallagher's offhandedness, there's a haunting implication of violence in one messy, blotted patch where eyes and lips come together in a scramble."

In 1995 Klaus Kerstess, the curator of that year's Whitney Biennial, asked Gallagher to participate in that high-profile biannual New York group show. Having seen her work in a group exhibition at New York's Artists' Space, he was so taken with it that he visited her Boston studio. Already interested in including her paintings in the biennial, he became convinced once he saw her work in Boston. As quoted by Paul Goldberger in the *New York Times* (February 26, 1995), Gallagher told Kerstess about her work, "I started out by using more explicit minstrel images, but then I realized that I was more interested in the language. Humor in minstrelsy is linguistic, not slapstick, and I wanted to show that." She did so by including visual allusions to language, among them the lined paper and, perhaps, the lips. Although the Whitney Biennial is generally a crowded affair, Gallagher received some positive notice. "Gallagher . . . combines complex references in these cool, irony-tinged compositions and subsumes multiple cultural histories within her sly social commentary," Lloyd wrote. She also caught the eye of Mary Boone of the Mary Boone Gallery, who in 1996 offered the artist her first New York solo show. Gallagher mounted seven new works that further examined America's history of racial stereotypes. Those painting/collages, she told Celia McGee for the *New York Times* (January 7, 1996), "deal with the way experience gets worked into abstract yet readable signs." The U.S. chapter of the International Association of Art Critics named the exhibition the year's best by an emerging artist, and Gallagher's star continued to rise, despite her being seen only rarely on the New York art circuit. That changed in 1997, when Gallagher moved from the coastal town of Provincetown, Massachusetts, to New York City. She missed living by the sea; "the tide would sometimes swell up to my door and then go way back out, and I loved that feeling of uncontrolled nature, this place where there was no clearly defined inside or outside," she told Belcove. She enjoyed living in a major cultural center, however. "I'm here for the people, for the other artists," she said. "And I thought, as you get older, if you're not married and if you don't live in a city like this, it can be weird. You start to stand out, or you just become a character."

Gallagher mounted her second New York solo exhibition, in 1998, at the Gagosian Gallery, which shortly thereafter became her home gallery. The work she showed continued her previous motifs, but with some permutations. Roberta Smith wrote for the *New York Times* (March 20, 1998) that Gallagher "expand[ed] her rather simple strategy to include differences of gender and culture as well as race"—for example, one piece showed "a stemmed heart shape that is suggestively phallic and spadelike, and a fat, curvy S-shape." At the same time, Smith wrote, the artist seemed "to chafe at [the strategy's] limits. Her surfaces continue to bubble with tiny details that like radioactive particles have big, uncontrollable implications." Smith believed Gallagher had room for improvement but was doing important work nonetheless. "The problem in these works is that the close reading is often more exciting than the big picture," she wrote, "but they lay an important foundation in Ms. Gallagher's attempt to bridge the gap between the abstract and the social."

As Gallagher's work attracted more notice, it sparked many conversations about race. Although the work dealt with racial themes, it could not be fit neatly into the category of "activist art." "She's certainly talking about race, but not in a didactic way," Thyrza Nichols Goodeve, an art writer who contributed to the catalog for Gallagher's 2000 show at the Anthony d'Offay Gallery, in London, told Belcove. "She's creating a new vocabulary. She's using stereotypes—minstrel stereotypes—and taking them apart piece by piece." Others marveled at how seamlessly Gallagher merged the aesthetic concerns of her minimalist forebears, who included Agnes Martin, with her social commentary, not allowing the latter to dominate the former. "You can't separate the way it's painted from what she's talking about," Tom Finkelpearl, deputy director of the P.S.1 Contemporary Art Center, in New York, told Belcove. "They're about blackness," he said of a series of her paintings that were made partly with hand-cut pieces of rubber. "About the color black and the reflections off this black paint—and also about black culture, black hairstyles, black people in America."

That ability to work on multiple levels accounted in large part for the acclaim Gallagher's work received. "They can fade into a pleasant pattern. Or they can shock with the memory of the history they represent," Joanne Silver wrote for the *Boston Herald* (February 2, 1997) about Gallagher's paintings. "Gallagher achieves an elegant tension between the coolness of her Agnes Martin–like canvases and the heat of her emotional content. In so doing, she expands the possibilities of both minimalism and expressionism, and refuses to be pigeonholed." That was true of few of her contemporaries, and Gallagher found it daunting at times to be in a category more or less by herself. "Sometimes that's painful because I feel, damn, it's all on me," she told Belcove. Her uniqueness, however, served to increase her work's value, monetarily as well as artistically; by 2001 her paintings were valued at around $60,000 each.

In the fall of 2001, the Institute of Contemporary Art in New York mounted a 10-year retrospective of Gallagher's work, including the pieces in her latest series, titled Watery Ecstatic. In those works she included references to Herman Melville's racially symbolic novel *Moby-Dick* and to a mythical "black Atlantis" called Drexciya (said to be peopled by slaves thrown overboard during the Middle Passage, the route by which Africans were forcibly transported from their homeland to the Americas). She had presented similar works in Blubber, her show at the Gagosian Gallery, earlier that year. "Ms. Gallagher has always been good at raising complicated ideas, and she's getting better because she's starting to mess around with the Minimalism-plus-minstrel-show content of her somewhat pat and demure paintings of a few years back," Holland Cotter wrote for the *New York Times* (April 13, 2001) about the show at the Gagosian. "The new work is funnier and nastier and alludes to all kinds of unwieldy things, not least to that great erotic emblem of American whiteness and darkness, Melville's sperm-whale leviathan Moby-Dick." Also included in the 2001 retrospective were collages Gallagher made using ads for wigs. The ads, taken from magazines—including *Ebony*—dating from the 1930s to the 1970s, varied from overtly racist offers to "whiten" African-American customers to efforts toward empowering them: some of the wigs are Afros, seen in the 1970s as symbols of black pride and freedom. Gallagher told Belcove, "People forget or don't understand that these very complicated, destructive forms can also be embodied with a kind of power and assertiveness."

The following years saw many successful shows for Gallagher, including exhibitions at the Fruitmarker Gallery, in Edinburgh, Scotland, in 2004; the Gagosian Gallery, in 2004; the Freud Museum, in England (where she exhibited her works alongside objects that belonged to Sigmund Freud, the founder of the psychoanalytic approach to psychology), in 2005; the Whitney Museum, in 2005; and the Tate Liverpool, in England, in 2007. The last-named show featured more paintings in her Watery Ecstatic series. Coinciding with local events commemorating the 200th anniversary of England's abolition of slavery, Gallagher's exhibition was not officially linked to the bicentennial but nonetheless seemed a fitting accompaniment. The paintings continued her examination of the history of slavery via the mythical underwater land called Drexciya, presenting her basic themes in steadily evolving ways. One example of that evolution was the introduction of a peg-legged, wild-haired male character in the painting *Bird in Hand*, whom she described to Michael Glover for the London *Times* (April 18, 2007) as "a kind of evil doctor" who figures into "an origin myth of sorts" involving "the corruption of Darwinian thought" and the classification of people into artificial categories. Gallagher told Glover that she enjoyed improvising in that way, saying that her ideas were "like blues or hip-hop. You've got this original loop and then all these other rhythms that build off it. So that any time you come back to your loop it is always difficult, always displaced somehow, even though it is the same beat or phrase."

Gallagher has published six monographs of her work, with her 2001 volume, *Ellen Gallagher*, including an introductory essay by the cultural critic Greg Tate. In the fall of 2008, her work was shown in the group exhibit For What You Are About to Receive, the Gagosian Gallery's second—and her first—show in Moscow, Russia. The group exhibition featured the works of canonical modern artists such as Alexander Calder, Jeff Koons, Pablo Picasso, and Roy Lichtenstein alongside those of newer names, among them Tom Friedman and Gallagher. The show included her 1994 piece "Laugh Tracks." Writing for the *Boston Herald* (July 10, 1994), Mary Sherman had described the piece as "what look like children's writing tablets . . . pasted side-by-side onto a canvas" on which "crossing lines made up of circles filled with dots look like stitches, seemingly binding the pages together. This lacing effect and the breaks between the lined pages transform the work's spatial arrangement from a physical to a mental one, encouraging endless interpretations of the artist's intent." That piece seemed apt for inclusion in the 2008 show, which, according to a press release, sought to contrast "ways in which contemporary artists continue to investigate the twin pillars of twentieth century art: the readymade and pure abstraction, reflecting on the sublime through a self-conscious engagement with material and process."

Gallagher has won numerous awards, including the American Academy Award (1993), the Ann Gund fellowship (1993), the Provincetown Fine Arts Work Center fellowship (1995), and the Joan Mitchell fellowship (1997). She currently divides her time between New York City and Rotterdam, the Netherlands.

Gates, Robert M.

NOTE: Earlier articles about Robert M. Gates appeared in *Current Biography* in 1992 and 2007.

Sep. 25, 1943– Secretary of the U.S. Department of Defense

Address: Office of the Secretary of Defense, 1000 Defense Pentagon, Washington, DC 20301

Robert M. Gates "is not a man who reveals himself," Paul Burka wrote for *Texas Monthly* (November 2006). "He's all business, a man under total self-control. He doesn't fidget. He isn't a backslapper. He doesn't make small talk. He doesn't boast; neither does he engage in false modesty. He is a motivator, not a cheerleader. He is always polite. He wears an air of authority as if it were tailored by Brooks Brothers. He answers questions fully but volunteers little. Most of his laughter comes from a finely developed sense of irony. I would back him to the hilt in a no-limit poker game." Gates was in a sense backed in such a "game" by President George W. Bush, who appointed him secretary of defense in late 2006, thereby making him one of the most important participants in the high-stakes military operations the U.S. has undertaken in the Middle East in recent years. Gates continues in his post in the administration of President Barack Obama, making him the first U.S. secretary of defense in 60 years to stay on under a new commander in

Robert M. Gates

chief—and the first ever to be retained by a new president not of the party of the outgoing administration.

A career intelligence analyst, Gates served as the 15th director of the Central Intelligence Agency (CIA) from 1991 to 1993 and then spent a number of years in academia, becoming, in 2002, Texas A&M University's 22d president, a position he held until being sworn in as the U.S.'s 22d secretary of defense. In the latter post he has proven much more popular at home and abroad than his immediate predecessor, Donald H. Rumsfeld, having emphasized diplomacy over force in dealing with foreign-policy problems and approached Democrats on Capitol Hill in a spirit of bipartisanship.

Robert Michael Gates was born on September 25, 1943 in Wichita, Kansas. His father sold wholesale auto parts for a living. Raised in a middle-class section of Wichita, Gates was, by all accounts, a model child—a straight-A student and an Eagle Scout. A voracious reader, he tutored underprivileged children in his spare time and took part in activities sponsored by local religious youth groups. After graduating from high school, Gates enrolled at the College of William and Mary, in Williamsburg, Virginia, as a premedical student, but he soon switched his major to history, concentrating on that of Western Europe. During his college days he worked part-time as a school-bus driver and developed the custom of teaching his riders German and Russian words and phrases. William and Mary granted Gates a B.A. degree with honors in 1965, also naming him the graduate "who has made the greatest contribution to his fellow man," as Dan Goodgame reported for *Time* (May 27, 1991). Gates went on to obtain an M.A. degree in history from Indiana University's Institute on Soviet and East European Studies—now called the Russian and East European Institute—in 1966. While studying at Indiana, Gates was invited by a CIA recruiter to come to Washington, D.C., for an interview. Although he later admitted that he accepted the invitation only for the free trip to Washington, when the agency offered him a position as an analyst, he accepted it. Working for the CIA did not exempt Gates from the draft, and he served in Vietnam from 1967 to 1969 as a commissioned officer in the Strategic Air Command before entering the CIA full-time.

After returning from Vietnam Gates became an intelligence analyst specializing in Soviet affairs and impressed his superiors with his ability to peruse enormous amounts of information quickly and to produce crisply written, coherent reports. In 1971 he was rewarded for his outstanding work with an assignment on the CIA's support staff at the initial negotiations between the United States and the Soviet Union on reducing strategic arms. Although he appeared to be on the fast track at the CIA, Gates was still considering a career as a history professor, and in his off-hours he studied for a doctorate in Russian and Soviet history at Georgetown University, in Washington, D.C. He even refused a CIA offer to finance his studies because he "didn't want to feel obligated to stay," as Goodgame reported, in case an attractive teaching position opened up. Gates received his Ph.D. from Georgetown in 1974, having submitted a 290-page dissertation on Soviet assessments of China that later became known as an authoritative text on Sino-Soviet relations.

That year Gates was assigned to the staff of the National Security Council, where he remained for the next five years, serving under Presidents Richard Nixon, Gerald R. Ford, and Jimmy Carter. By 1979 he longed to return to the CIA, confiding to colleagues that his ambition was to someday be director of the agency. In January 1980 he was reassigned to the CIA as national intelligence officer for the Soviet Union and executive assistant to the director, Stansfield Turner. In 1980 Carter lost the presidency to Ronald Reagan, who appointed a new CIA director, William J. Casey. Casey soon became a mentor for Gates, and promoted him to deputy director for intelligence in January 1982, passing over about 60 other senior-level candidates. In September 1983 Casey appointed Gates to the concurrent position of chairman of the National Intelligence Council, with responsibility for overseeing the preparation of all intelligence estimates. One factor in Gates's rapid rise to the top of the CIA was his expertise on the Soviet Union, which was the main focus of United States intelligence efforts in the Cold War–driven 1980s. Even after Mikhail Gorbachev's rise to power in the Soviet Union in 1985 and his introduction of glasnost, a policy of openness, shortly after that, Gates remained a strict cold warrior.

When Gates was promoted to deputy director of central intelligence, on April 18, 1986, succeeding the retiring John McMahon in the agency's number-two position, he received his first exposure to the operations side of espionage. Exactly eight months later, he was named acting director while Casey underwent surgery for the removal of a brain tumor. Casey resigned his post on January 29, 1987, and four days later Reagan nominated Gates to be his successor in what was expected to be a straightforward appointment. Evidence began to surface, however, that Gates had possibly been involved in the Iran-Contra affair—the administration's sale of arms to Iran, with funds illegally directed to anti-Communist rebels in Nicaragua. Republican senator William S. Cohen of Maine interrogated Gates at his confirmation hearing, accusing him of knowing more about the arms sales than he had admitted and describing him as "an ambitious young man, type-A personality, climbing the ladder of success," as Dusko Doder and Walter Pincus reported for the *Washington Post* (February 18, 1987). "You basically didn't want to rock the boat. You were not prepared to lay your career on the line over a matter you did not create. You didn't want to know about it." Gates conceded that he had not done enough to keep Congress fully informed of the administration's activities, but he refuted the charge that he had hesitated to step forward out of fear for his career. "Sycophants can only rise to a certain level," he responded in a rare show of emotion, Stephen Engelberg reported for the *New York Times* (February 19, 1987). "There is an ample supply of them in this town, and they only go so far. Senior officials understand that the most dangerous thing in the world is a yes man, and the people I have worked for felt the candor with which I apprised them was a valuable asset." With his chances for confirmation fading quickly, Gates withdrew his nomination on March 2, 1987. A day later Reagan nominated William H. Webster to be director of central intelligence; Webster was confirmed by the Senate on May 19. At Reagan's request Gates stayed on as deputy director of the agency. When Brent Scowcroft, Gates's former boss in the Ford administration, was named national security adviser by President-elect George H. W. Bush in December 1988, he arranged for Gates's appointment as his deputy.

On May 14, 1991 Gates got a rare second chance at his dream job when Bush named him to succeed Webster, who was retiring, as director of central intelligence. Although the Iran-Contra affair no longer dominated the headlines, Gates's peripheral role in it still posed a potential obstacle to his confirmation. He was also widely criticized for being too slow to anticipate the collapse of the Soviet Union. Gates's case was further weakened when Congressman Dave McCurdy of Oklahoma, the chairman of the House Intelligence Committee, recommended, on October 2, that Gates withdraw his nomination. Nevertheless, two weeks later, the committee, after hearing statements from members both in support of and in opposition to Gates, voted 11 to four to recommend his confirmation by the full Senate. On November 5 the Senate voted, 64 to 31, to confirm Gates, as 22 Democrats joined all 42 Republicans present in supporting him. Seven days later Gates was sworn in as the nation's 15th director of central intelligence. (At 48 he was the youngest person ever to assume that prestigious position, and he was the first CIA director to have risen through the agency's analytical branch, where raw intelligence is studied and interpreted, as distinct from the operational branch, which is responsible for the collection of intelligence.) Gates subsequently redirected the CIA's resources away from monitoring the former Soviet Union toward checking the spread of nuclear weapons in the Third World and combating the international drug trade.

Gates resigned from the CIA on January 20, 1993. For the next several years, he worked as a traveling academic, evaluating theses for the International Studies Program at the University of Washington and lecturing at a number of schools, including Harvard, Yale, Georgetown, and the College of William and Mary. He also published many articles on government and foreign policy and was a frequent contributor to the *New York Times*'s op-ed page. In 1996 Gates published a memoir of his time at the CIA, titled *From the Shadows: The Ultimate Insider's Story of Five Presidents and How They Won the Cold War*, to largely positive reviews. While its title seemed to promise a scandalous account, the book proved to be an analysis of policy—and a response to the longstanding criticisms of Gates's tough stance on the Soviet Union—rather than a confessional tell-all.

In 1999 Gates was appointed interim dean of the George Bush School of Government and Public Service at Texas A&M. Though he was initially reluctant to leave his home in Seattle, Washington, he and his wife began spending more and more time on the A&M campus. On August 1, 2002 Gates was appointed the university's 22d president. He explained his decision to take the post to the Associated Press (May 11, 2002): "If I could do one more public service, I should. And I couldn't think of a better place to do it than Texas A&M." During his tenure as president, Gates made marked progress in the school's "Vision 2020" plan, which seeks to turn A&M into one of the country's top 10 public universities by the year 2020.

Throughout his time at Texas A&M, Gates maintained a connection with national politics as a frequent guest on political talk shows. On the afternoon of the September 11, 2001 attacks on the World Trade Center, Gates defended the U.S. intelligence community to Paula Zahn for CNN News (September 11, 2001). "I think we have to bear in mind, even against the background of this catastrophe today, that the FBI and CIA have thwarted some very major terrorist operations against [the] United States in recent years," he said. "So they have had some very important successes and saved a lot of lives." In the years that followed, as the U.S. began its invasion of Iraq, Gates continued to appear frequently on the news-analysis circuit. He also began getting active politically again. In January 2004 he co-chaired a Council on Foreign Relations task force on U.S. involvement in Iran, a country with which the United States had not had diplomatic relations since 1979. The task force urged the U.S. to pursue diplomacy over force on the issue of Iran's nuclear weapons, suggesting that Iran be allowed to develop its nuclear program in exchange for committing to use that resource solely for peaceful ends.

In 2005 President George W. Bush offered Gates the newly created post of United States director of national intelligence (DNI). Despite a reluctance to return to Washington, D.C., Gates initially decided to accept the position, feeling that it was his duty to serve the U.S. in a time of war. He scheduled a press conference to announce his decision and wrote an e-mail message to the Texas A&M student body expressing his sadness over leaving the school. Then Gates changed his mind, electing to stay at A&M—because of how much he felt he could accomplish at the university and how little he felt he could accomplish as DNI. Even though he remained in Texas, Gates stayed active in the political sphere, and in 2006 Congress appointed him a member of the Iraq Study Group, also called the Baker-Hamilton Commission, a bipartisan panel formed to assess the situation in Iraq and make specific policy recommendations.

On November 8, 2006, one day after the Democrats succeeded in winning a majority in the House of Representatives and the Senate, Secretary of Defense Donald Rumsfeld resigned, and Bush nominated Gates to become the next defense secretary. Despite an intense love for his work at A&M and an aversion to returning to Washington, D.C., Gates—who was one of the most popular presidents in A&M's history—accepted Bush's nomination, citing a sense of duty. At an on-campus farewell rally, Gates told the A&M student body, as Matthew Watkins reported for the Bryan, Texas, *Eagle* (December 8, 2006, on-line), "A little less than a month ago, I was worried about beating the hell out of Nebraska. Now, I am worried about beating the hell out of Al Qaeda. I can't tell you how much you all mean to me and how big a part of my life you have become, and I will miss you forever." Most pundits praised Gates's nomination, calling him the "anti-Rumsfeld," because it was widely believed that he would be more pragmatic and more cautious than Rumsfeld regarding military interventions; more apt to hold officials responsible for military disasters, such as the torture of prisoners at Abu Ghraib prison, in Iraq; more realistic regarding events in Iraq and other troublespots; and not defensive, prickly, or confrontational in his dealings with the media or Congress. Gates won even greater approval for the honesty he displayed in his Senate confirmation hearing a few weeks later. When asked by Senator Carl Levin, a Democrat from Michigan, if he believed the United States was winning the war in Iraq, Gates responded with a simple "No, sir." His answer immediately became such big news that he felt the need to clarify his words a few hours later, saying instead, "We are not winning, but we are not losing." When asked if he thought it had been a good idea to invade Iraq, he answered, "I think it's too soon to tell," adding, "I suspect, in hindsight, some of the folks in the administration probably would not make the same decisions that they made." Despite such unexpectedly candid answers, Gates still underwent intense scrutiny from senators concerned that he would simply become a mouthpiece for the administration. Gates strongly asserted that he would act independently. "I am not giving up the presidency of Texas A&M, the job that I probably enjoyed more than any that I've ever had, making considerable personal financial sacrifice, and frankly, going through this process, to come back to Washington to be a bump on a log," Gates told Senator Edward M. Kennedy, as quoted on CNN's *The Situation Room* (December 5, 2006). He further stated, "If I am confirmed, I'll be independent. I intend to draw my own conclusions and I'll make my recommendations. . . . I can assure you that I don't owe anybody anything."

The 23 members of the Armed Services Committee voted unanimously to confirm Gates, and he was sworn in as the secretary of defense on December 18, 2006. During his speech at the swearing-in ceremony, Gates gave a measured analysis of the war in Iraq, refraining from making any concrete statements about plans. "All of us want to find a way to bring America's sons and daughters home again," he said, as quoted by *The World Today* (December 19, 2006), an ABC Australia program. "But as the President has made clear, we simply cannot afford to fail in the Middle East. Failure in Iraq at this juncture would be a calamity that would haunt our nation, impair our credibility and endanger Americans for decades to come." That same day the Pentagon released its quarterly report on the situation in Iraq, which Jim Miklaszewski described for NBC News (December 18, 2006) as its "most devastating" yet. The report stated that the past three months had seen the highest number of attacks by Iraqi insurgents on record, with both American and Iraqi casualties on the rise.

On December 21, 2006, three days after being sworn in, Gates went to Iraq to talk to the commanders and troops on the ground. At the beginning of 2007, he recommended increasing the U.S. Army's strength in Iraq by 65,000 troops; he later oversaw the addition of some 30,000 soldiers. In February of that year, Gates announced the firings of the secretary of the army, Francis J. Harvey, and the army 's surgeon general, Kevin C. Kiley, following the disclosure in a series of *Washington Post* articles of inadequate medical care, instances of outright neglect, nearly impossible-to-negotiate red tape, and crumbling facilities at the Walter Reed Army Medical Center, in the nation's capital, where many servicemen and -women wounded in Iraq or Afghanistan were brought for treatment. In March 2007, reversing one of Rumsfeld's policies, he met with the directors of U.S. intelligence agencies with the goal of easing tensions between the intelligence community and the Pentagon. His recommendation that month that the detention center at Guantánamo Bay, Cuba, be closed was batted down by Vice President Dick Cheney and President Bush's former chief political strategist, Karl Rove.

In an effort to maintain adequate numbers of troops in Iraq and Afghanistan, Gates announced in April 2007 that the tours of duty for most active army units would increase from 12 to 15 months and that soldiers would remain at home for one year between tours. "This policy is a difficult but necessary interim step," he said at a news conference, as quoted by David S. Cloud in the *New York Times* (April 12, 2007). "Our forces are stretched, there's no question about that." The following September Gates spoke before the Senate Appropriations Committee regarding the continued involvement of the U.S. in Iraq, suggesting that in the future American forces there would consist of five combat brigades serving as a "long-term presence." "When I speak of a long-term presence, I'm thinking of a very modest U.S. presence with no permanent bases, where we can continue to go after Al Qaeda in Iraq and help the Iraqi forces," he said, according to David S. Cloud in the *New York Times* (September 27, 2007). He also said that, besides the many billions of dollars needed for other war-related expenses, the Pentagon wanted $11 billion for 15,000 additional heavily armored vehicles, to protect American troops from the increasingly sophisticated roadside bombs planted by insurgents in Iraq. Gates has said that he writes personal letters of condolence to the families of all Americans killed in service there.

In April 2008 Gates gave a speech at West Point in which he emphasized the need for the branches of the U.S. military to "reexamine their culture and their way of doing business" and to "think outside the box in problem solving," as quoted by Thom Shanker in the *New York Times* (April 23, 2008). On the same day, in an address at the Maxwell Air Force Base, in Alabama, he gave an urgent call for the armed-service branches to increase the availability of surveillance aircraft in war zones, implicitly criticizing the air force, in particular, for not having done so. With that address, as Shanker observed, Gates "departed sharply" from the "tone of reconciliation" he had attempted to set between military officers and their civilian superiors. In June of that year, Gates came out in favor of extending to three years the tours of thousands of U.S. troops stationed in South Korea and allowing the troops' families to live with them there. The previous, 12-month tours reflected the view that South Korea continued to be a combat zone; in giving approval for a policy shift, Gates said, as quoted by Eric Schmitt in the *New York Times* (June 4, 2008), "I don't think anybody considers the Republic of Korea today a combat zone." Also that month Gates fired the two top leaders of the air force—its civilian secretary, Michael W. Wynne, and General T. Michael Moseley—following disclosures that the air force had twice failed to guard components of nuclear weapons adequately. In September Gates lent his support to plans to withdraw 8,000 U.S. troops from Iraq by early 2009, while warning of the need for caution in doing so. (General David H. Petraeus stated around that time that the number of daily attacks by insurgents in Iraq had fallen to 25 from a high of 180 in June 2007.)

In late November 2008, three weeks after he was elected president, Barack Obama announced that he would retain Gates as defense secretary. As reported by Peter Baker and Thom Shanker for the *New York Times* (November 26, 2008), some criticized the decision. An unnamed adviser to Obama said that keeping the defense secretary from a Republican administration made Democrats "look like they're too wimpy to be trusted" to run the military, while Loren B. Thompson, head of the research group Lexington Institute, said, "I really can't begin to understand from a political point of view how Barack Obama, a person who got the nomination because he ran against the Iraq war, can keep around the guy who's been in charge of it for the last two years." Offering a different perspective, another unnamed Obama adviser said, "From our point of view, it looks pretty damn good because of continuity and stability. And I don't think there are any ideological problems." In December Gates said that the Pentagon planned to send thousands of additional troops to Afghanistan as soon as the spring of 2009 to counter the threat posed in that country by the Taliban. In late January 2009 President Obama took steps long sought by Gates, signing executive orders to close the detention center at Guantánamo Bay within a year. As of late October 2009, however, its closing remained an elusive goal, largely because of the unwillingness of all 50 U.S. states to imprison any captives from Guantánamo within their borders.

In March 2009 Obama announced that the number of additional troops to be deployed to Afghanistan would be 21,000. (Later in the year an additional 13,000 support troops—engineers, military police, and medical personnel—were also sent to Afghanistan).That month Obama also announced that U.S. combat troops would withdraw from Iraq by August 2010, although up to 50,000 could remain behind as a transitional force. Gates, who had supported the Bush administration's withdrawal of 8,000 troops from the country in early 2009, defended Obama's strategy, appearing on NBC's *Meet the Press* to point out that the remaining troops would serve as "advisory and assistance brigades" to aid in the transition to Iraqi control, as Emily S. Rueb wrote for the *New York Times* (March 1, 2009, on-line). As of September 2009 4,000 U.S. troops were expected to return home by the end of the next month.

In May 2009 Gates requested the resignation of the top U.S. general in Afghanistan, David D. McKiernan. The request came in the face of significantly increasing violence in that country. Gates's recommendation to the president was that the veteran Special Operations commander Stanley A. McChrystal succeed McKiernan; McChrystal took over in June 2009 as commander of U.S. forces in Afghanistan. According to Ann Scott Tyson, writing for the *Washington Post* (May 12, 2009), the removal of McKiernan "is in keeping with Gates's style of demanding accountability by dismissing senior military and civilian officials for a host of problems, including nuclear weapons mismanagement and inadequate care for wounded troops."

Gates has opposed the setting of a deadline for an end to military action in Afghanistan, a measure some Democrats have sought. In a September 2009 interview on CNN's *State of the Union*, according to the *Lewiston (Idaho) Morning Tribune* (September 28, 2009), Gates said an early pullout could be perceived as a defeat. "The notion of timelines and exit strategies and so on, frankly, I think would all be a strategic mistake," he said. "The reality is, failure in Afghanistan would be a huge setback for the United States." Gates made the comments as Obama was reevaluating his administration's strategy in the war-torn country and awaiting the results of Afghanistan's November elections. (General McChrystal, meanwhile, requested 40,000 more U.S. troops in Afghanistan.)

In April 2009 Gates announced a potential 2010 Pentagon budget that reflected a shift in priorities at the Defense Department. He proposed terminating overly expensive and long-running projects in favor of investing further in programs to aid the military in its ongoing fight against terrorists. Among other reforms, Gates sought to phase out production of the Air Force's expensive F-22 fighter jet and to terminate plans for 28 presidential helicopters whose estimated cost would total more than $13 billion. The plans to phase out F-22 production frustrated members of Congress from states where the aircraft's parts are manufactured. Nonetheless, Congress passed the budget in October, with most of the Pentagon's recommendations intact, including the cap on F-22 production. The legislation also raised military pay and provided funding for mine-resistant vehicles above the Pentagon's recommendations. "Mr. Gates has emerged as the man in the middle between policies of the past he once championed and the revisions and reversals he is now carrying out . . . ," Peter Baker and Thomas Shanker wrote for the *New York Times* (September 22, 2009). "Along the way, Mr. Gates has become a White House favorite, both for his pragmatic style and his political value. With little national security experience of his own, Mr. Obama has leaned heavily on the holdover Pentagon chief for advice, aides said. And as a result, Mr. Gates has played a central role in reshaping national security policy."

Gates has been married for more than 40 years to the former Rebecca Wilkie, whom he met at Indiana University when they were dormitory counselors chaperoning a hayride together. They have two adult children, Eleanor and Bradley. Among the awards Gates has received are the Presidential Citizens Medal, the Intelligence Medal of Merit, and the Arthur S. Flemming Award, presented annually to the 10 most outstanding federal employees. Gates is a two-time recipient of the National Intelligence Distinguished Service Medal and a three-time recipient of the CIA's highest award, the Distinguished Intelligence Medal.

Geithner, Timothy F.

(GITE-ner)

Aug. 18, 1961– Secretary of the U.S. Department of the Treasury

Address: U.S. Dept. of the Treasury, 1500 Pennsylvania Ave., N.W., Washington, DC 20220

In November 2008 President-elect Barack Obama announced his selection of Timothy F. Geithner, the president and chief executive officer of the Federal Reserve Bank of New York since 2003, as his nominee for U.S. secretary of treasury. Confirmed by the U.S. Senate on January 26, 2009, Geithner is one of the youngest treasury secretaries in the history of the nation. He is currently grappling with the daunting task of steering the nation's economy through its worst crisis since the Great Depression. Despite the large amount of criticism that Geithner, to no one's surprise, has received since he assumed his new post, Obama has remained confident in his choice. The president emphasized the enormity of Geithner's job, saying, "There has never been a secretary of the treasury, except maybe Alexander Hamilton right after the Revolutionary War, who's had to deal with the multiplicity of issues that Secretary Geithner's having to deal with, all at the same time."

Timothy Franz Geithner was born on August 18, 1961 to Deborah and Peter Geithner in the New York City borough of Brooklyn. He is one of four children, with two brothers, David and Jonathan, and a sister, Sarah. His father worked as an official with the U.S. Agency for International Development (USAID) and held senior posts with the Ford Foundation; he currently serves as president of that foundation's alumni association. As a result of his father's early work, Geithner spent most of his childhood abroad in Zimbabwe (then called Rhodesia) and several Asian countries, including China, India, and Thailand. His mother was a piano teacher.

After attending elementary school in New Delhi, India, and graduating from the International School of Bangkok, in Thailand, Geithner followed in his father's footsteps, enrolling at Dartmouth College, in Hanover, New Hampshire, where he received a B.A. degree in government and Asian studies in 1983. While there he met Carole Sonnenfeld, his future wife. Two years later Geithner earned a master's degree in international economics and East Asian studies from the Johns Hopkins School of Advanced International Studies, in Washington, D.C.

From 1985 to 1988 Geithner worked at the New York City–based international consulting firm Kissinger Associates, helping the company's founder, the former secretary of state Henry Kissinger, conduct research for a book. Geithner then embarked on a 14-year stint at the U.S. Department of Treasury. As the assistant financial attaché at the U.S. Embassy in Tokyo, Japan, he was credited with persuading Japan to contribute $13 billion to the Persian Gulf War campaign and to negotiate a financial-services agreement with the U.S. He was also involved in negotiating a World Trade Organization (WTO) financial-services agreement on behalf of the U.S.

Geithner quickly rose through the treasury's ranks during the late 1990s, becoming the deputy assistant secretary for international monetary and financial policy (1995–96), the senior deputy assistant secretary for international affairs (1996–97), and the assistant secretary of the treasury for international affairs (1997–98). In 1998 Geithner was named the special assistant to Lawrence Summers, then the treasury undersecretary for international affairs. In that role he was instrumental in helping arrange $100 billion in rescue packages for Brazil and South Korea, which had been affected by the Asian financial crisis of the late 1990s. (The crisis was preceded by the collapse of the Thai currency, which led to the decrease of foreign investment in emerging market economies, including Russia and Brazil.)

In 2001, shortly after serving as a senior fellow in international economics at the Council on Foreign Relations, Geithner joined the International Monetary Fund (IMF), where he was appointed the director of the Policy Development and Review Department. Two years later Geithner succeeded William J. McDonough as president and CEO of the Federal Reserve Bank of New York, the largest of the Fed's 12 regional banks. His appointment surprised many in the financial-services industry due to his lack of commercial-banking experience. He was hailed, however, for his intellect and his extraordinary communication skills. During his five-year tenure at the New York Fed, Geithner acted as the vice chairman of the 12-member Federal Open Market Committee (FOMC), an arm of the Federal Reserve that is responsible for open-market operations, namely the purchase and sale of U.S. Treasury and federal agency securities.

In an effort to stabilize the credit market, which had been crippled by defaults in subprime mortgage loans and home foreclosures, Geithner was a chief negotiator in the sale of Bear Stearns, the country's fifth-largest investment bank, to JPMorgan Chase, in March 2008. Later that year he also helped orchestrate the federal government's $150 billion rescue package for American International Group (AIG), the largest insurance company in the U.S. In exchange, the government would retain an 80 percent stake in AIG. Geithner drew criticism, however, for his decision to force the investment bank Lehman Brothers to file for bankruptcy, a decision that many in the financial industry felt contributed to the developing global economic crisis.

After being rumored to be President-elect Barack Obama's nominee for treasury secretary, Geithner was officially nominated to the post in late November 2008. His nomination became controversial in mid-January 2009, when it was revealed that he had neglected to pay $34,000 in federal taxes in the early 2000s, during his tenure with the International Monetary Fund. Because the IMF is an international organization, it does not withhold money from its employees' pay for Social Security and Medicare; instead, it gives employees extra money so that they can pay the Internal Revenue Service (IRS) themselves. Told erroneously by his accountant that he was exempt from what amounted to a self-employment tax, Geithner kept the extra funds from the IMF. (He has since paid back the taxes, with interest.) Some argued that a nominee who could not keep track of his own finances should not be entrusted with those of the nation. Nonetheless, the Senate confirmed Geithner, by a vote of 60 to 34. In a press conference on February 10, 2009, Geithner announced an expansion of the bailout plan for the nation's beleaguered banking system, one that would attempt to raise up to $2 trillion from the U.S. treasury, the Federal Reserve, and private investors. In March Geithner was harshly criticized after it was revealed that American International Group (AIG), an insurance company that had received more than $170 billion in government bailout money, gave $165 million in bonuses to hundreds of its employees, including people whose activities had apparently contributed to the financial meltdown. Many members of Congress, as well as ordinary citizens, were outraged and questioned why Geithner had failed to stop AIG's payments. Geithner had spoken to AIG's chairman and chief executive officer, Edward Libby, about the bonuses prior to their distribution, but lawyers had advised the treasury secretary that the government could not override the contracts that AIG executives had signed in 2008 to guarantee the bonuses.

Geithner got a reprieve from the anger over the bonuses on March 23, 2009, when he publicly revealed the details of his bailout plan. The plan focused on drawing private investors into partnerships with a new federal entity that could help rid banks of an estimated $1 trillion in troubled assets that would otherwise hinder economic recovery. The plan was received positively among financial-industry professionals; some economists, though, expressed doubts about its effectiveness. In the months since it was implemented, stock prices have slowly risen, and in the third quarter (July–September) of 2009, the gross domestic product grew by 3.5 percent, its best performance in two years. Whether or not the bailout plan will ultimately succeed remains unknown, however.

In addition to working on the economic recovery, Geithner has been pushing for the passage of financial-reform legislation that would give new powers to regulators and the Federal Reserve to combat the kinds of risky behavior among the nation's major financial institutions that led to the meltdown in 2008. He revealed the details of the bill before the House Financial Services Committee on October 29, 2009.

Geithner and his wife have two children, Elise and Benjamin. During his free time Geithner enjoys fly-fishing, surfing, and playing tennis.

Gibbs, Robert

Mar. 29, 1971– White House press secretary

Address: The White House, 1600 Pennsylvania Ave., N.W., Washington, DC 20500

Mandel Ngan/AFP/Getty Images

Linda Douglass, a member of Barack Obama's presidential-campaign staff, told Howard Kurtz for the *Washington Post* (November 12, 2008) that she and her fellow workers called Robert Gibbs "the Barack Whisperer"—a reference to the term "horse whisperer," a person who has an uncommon ability to understand the minds of horses. Gibbs "completely understands [Obama's] thinking and knows how Barack wants to come across," she explained. One of the president's close friends, Gibbs identified himself as a media specialist for his entry in *Who's Who in America*; he served as Obama's chief spokesperson before Election Day and was part of his close-knit inner circle of advisers, led by David Plouffe, the head of the campaign, and David Axelrod, its chief strategist. "Obama's operatives spoke with a single voice and a precise message and only when they wanted to," Mark Leibovich wrote for the *New York Times Magazine* (December 21, 2008, on-line). "They did it with a smile, not complaining—at least not publicly—about how the press was the enemy. And they did it using interactive tools that bred a feeling of real-time connectedness between campaign and voter." Following Obama's victory, the president-elect chose Gibbs for the post of White House press secretary, with responsibility for gathering information—about the president's schedule and the administration's official position on issues and events, for example—and transmitting that information to members of the media. The press secretary fields questions from the White House press corps during on-the-record briefings known as "press gaggles" and during formal, televised press conferences. Sometimes said to hold the "podium job," the press secretary is in effect the public face of the administration. "Gibbs is about to start a job that, like the presidency, seems to age its occupants disproportionately to the years they spend in the job," Leibovich wrote. "And it happens live and on C-Span." Leibovich described Gibbs as "affable" but as having "pit-bullish tendencies behind the scenes in defense of [Obama]." In his first months as press secretary, Gibbs, while addressing a host of complicated issues, established what many have described as a genial—even light-hearted—relationship with the press.

Robert L. Gibbs was born on March 29, 1971 in Auburn, Alabama, to Robert and Nancy Gibbs. Liberal Democrats, both of his parents were librarians at Auburn University. Nancy Gibbs is currently the acquisitions director for the libraries at Duke University, in North Carolina. Years ago, when her children were young and she would attend meetings of the local branch of the League of Women Voters or participate in voter-registration drives, she would take Bobby, as he was then called, and his younger brother, John, with her. As the boys matured, the family often engaged in heated political discussions at the dinner table.

At Auburn High School Gibbs played the saxophone in the band and was a goalkeeper on the soccer team. After his graduation, in 1989, he entered North Carolina State University, where he majored in political science. He also continued to play soccer, although, by his own admission, he was not one of the better players on the university's team. In 1991, as an undergraduate, Gibbs worked as an intern with the Democratic U.S. congressman Glen Browder, who represented Alabama's Third District. Browder soon recognized that Gibbs "was not just another college student looking to spend a few months in Washington," Phillip Rawls wrote for the Associated Press (November 7, 2008, on-line). "Robert had a special quality even back then," Browder told Rawls. "In retrospect, it was clear that Robert was destined to make his mark." In 1992, the year he earned a B.A. degree, with honors, Gibbs served as a volunteer with Bill Clinton's successful presidential campaign.

After Gibbs completed college Browder hired him as a full-time employee; for a time he held the title of executive assistant. Over the next several years, Gibbs handled a variety of duties for the congressman, and he observed firsthand how Browder conducted his reelection campaign in 1994. At that time, according to Browder, it was still unusual in southern states for white politicians to seek the support of African-Americans publicly. Instead, they engaged in what he described to Rawls as "stealth Reconstruction," attempting to win black support discreetly and without alienating white voters. As a witness to such tactics, Gibbs gained insight into the complicated issues surrounding race in the political sphere.

In 1996 Gibbs and another Browder aide, Shar Hendrick, left Washington to work in Alabama on the congressman's race for a seat in the U.S. Senate, which proved to be unsuccessful. The pair roomed together, and Hendrick has joked that while Gibbs has many skills and abilities, housekeeping is not among them.

In 1998 Gibbs served as the spokesperson for the Democratic U.S. senator Ernest Frederick "Fritz" Hollings of South Carolina, during Hollings's fifth, successful reelection campaign. In 2000 Gibbs acted as the spokesperson for the Michigan Democrat Debbie Stabenow during her victorious run for the U.S. Senate. While working with Stabenow Gibbs caught the attention of the Democratic political strategist Jim Jordan, who in 2002 hired Gibbs to work for the Democratic Senatorial Campaign Committee (DSCC), an organization devoted to electing Democrats to the U.S. Senate. At the DSCC Gibbs held the positions of communications director, political director, and, later, executive director. Jordan told Kurtz that Gibbs had "a strong personality [and] all the skills of a good flack. He knew how to move a negative story."

In 2003, when Jordan was hired to manage the 2004 presidential campaign of Democratic U.S. senator John Kerry of Massachusetts, he recruited Gibbs to serve as the campaign's national press secretary. In November 2003, as part of a broad plan to reorganize his foundering campaign, Kerry fired Jordan, and Gibbs quit in protest. Gibbs next worked for a brief period with a group called Americans for Jobs, Healthcare, and Progressive Values. In key primary states the group ran an aggressive ad campaign attacking another Democratic presidential hopeful, former governor Howard Dean of Vermont. One of its most controversial commercials showed an image of the Al Qaeda terrorist leader Osama bin Laden while a voiceover emphasized Dean's inexperience in military matters and foreign affairs. That ad was widely considered responsible for Dean's defeat. (Kerry ultimately secured the nomination but lost the general election to George W. Bush.) In some political circles Gibbs has been strongly criticized for his involvement in the 527 group.

After a brief period of unemployment, Gibbs heard from Jordan about a job opening with Obama's U.S. Senate campaign—that of communications director. When he met Obama, Gibbs knew little about him other than that he was a member of the Illinois state Senate. The two immediately felt drawn to each other, in part because of their shared love for sports, especially college football. Gibbs accepted the job, having "promised" himself that he would serve as spokesperson or communications director "only . . . for somebody I had a really good relationship with," as he recalled to a reporter for *Newsweek* (May 19, 2008, on-line).

At the 2004 Democratic National Convention, held in Boston, Massachusetts, Obama, then little-known outside Illinois, delivered the keynote address. The power of his words and his ability to connect with people of diverse backgrounds placed him overnight among the ranks of potential Democratic Party leaders. He was elected to the Senate by a wide margin, and Gibbs remained on his staff as communications director and close adviser. Gibbs was said to be among the first to recognize the freshman senator as a political phenomenon and to encourage him to capitalize on his popularity. Gibbs began laying the groundwork for a 2008 presidential bid by Obama. He worked particularly hard to dispel the criticisms of those who saw Obama as overly ambitious, given his inexperience in the national and international arenas.

On February 10, 2007 Obama delivered a speech in Springfield, Illinois, in which he officially threw his hat into the presidential ring. When he entered the race for the presidency, other competitors included U.S. senator Hillary Clinton of New York, a former First Lady, whom many already considered to be the frontrunner. Working with Plouffe and Axelrod, Gibbs was charged with overseeing communications strategy and operations. In that capacity he helped Obama control his tendency to give excessively detailed and complex answers and use too many polysyllabic words in debates and interviews; Gibbs also ensured that Obama made the many courtesy calls to local officials required during a national campaign. As the Democratic primary campaign progressed, Gibbs, Plouffe, and Axelrod became informal policy advisers as well.

Things did not always run smoothly, however, despite the closeness of the team. Gibbs became known, as Leibovich noted, for his "frustrating and at times harmful knack for going dark for long periods of time, ignoring urgent e-mail messages from reporters and co-workers." Gibbs also disliked supervising junior members of the communications staff, telling Leibovich, "It's not what I'm good at, not what I want to do." The situation improved considerably when Anita Dunn was hired as the communications team's director, in February 2008. For the duration of the campaign, Gibbs acted as chief spokesperson and often presented Obama's views to the press.

While reporters spoke highly of Gibbs's gregariousness and quick wit, they were often frustrated by his tight control over their access to Obama. One complained, according to Gabriel Sherman, writing for the *New Republic* (July 24, 2008, on-line), that Gibbs was a "communications director who doesn't communicate." David Mendell, a reporter and author of a book about Obama, *From Promise to Power* (2007), described Gibbs to Sherman as "Obama's hired gun, skillfully trained to shoot at reporters whose coverage was deemed unfair." Mendell explained, "If [Gibbs] feels you're necessary to achieve a campaign goal, he will give you access and allow you in. But, if he feels you're not going to be of help, he can just ignore you." In addition, Gibbs's temper sometimes flared, and he was known to verbally attack journalists whose articles he thought sullied Obama's image or message. "In hindsight, there are discussions that I had in the heat of the moment that if I had to do over again, [I] would do differently," Gibbs admitted to Kurtz. "I think you do better when you treat people with respect. There were a couple of times that I flew off the handle."

Overall, Obama's presidential campaign has been cited as one of the best-run in U.S. history, with much of its success credited to the mastery of new technology by Gibbs and his colleagues. The campaign committee amassed a vast database of e-mail addresses of Obama's supporters, which were used—along with Web sites, blogs, text messaging, and on-line videos—to communicate directly to voters. (The Web sites included fightthesmears.com, launched to combat misinformation or lies that were being spread about the candidate's religious beliefs and political goals.) The Gibbs/Axelrod/Plouffe team also ruled against some traditional ways of communicating with the media. Obama, for example, never visited with the editorial board of the *Washington Post*, as virtually all other presidential candidates in recent decades have done. Referring to a city and a town in Iowa, Gibbs said to Leibovich, "You could go to Cedar Rapids and Waterloo and understand that people aren't reading the *Washington Post*."

On June 3, 2008 Obama won enough delegates to secure the Democratic nomination. Three days later Gibbs came under considerable fire from the media, after reporters on a Chicago-bound plane ready for takeoff realized that, contrary to what they had been led to expect, Obama was not with them. (He had stayed in Washington to meet secretly with Hillary Clinton.) Finding himself subjected to the anger of a planeload of journalists was "maybe the toughest point that I had," as Gibbs recalled to Jake Tapper during an interview for *ABC's This Week* (December 27, 2008, on-line). The Washington, D.C., bureau chiefs of several news organizations sent letters to Gibbs and Plouffe, accusing them of intentionally misleading the reporters. "Most of the pictures in that event are with me holding my hands up," Gibbs told Tapper, "as if I'm . . . being in a sense, held hostage."

On October 8, 2008 Gibbs attracted an unusual amount of attention when he confronted Sean Hannity, the far-right-wing co-host of the Fox News television program *Hannity and Colmes*, regarding Hannity's repeated attacks on Obama for reportedly consorting with a "known terrorist," William "Bill" Ayers. Ayers, who has held the title of distinguished professor of education at the Chicago campus of the University of Illinois since 1999, was during his 20s a founding member of the Weathermen (later called the Weather Underground), a radical leftist organization responsible between 1970 and 1974 for several bombings and riots mounted to protest the Vietnam War and other examples of what they denounced as U.S. imperialism. For a while Obama and Ayers, both residents of Chicago, had sat on the boards of the same philanthropic and educational organizations, and Ayers had hosted a small party to support Obama's bid for a seat in the Illinois state Senate. Ignoring the fact that when Ayers was active with the Weathermen, Obama was eight years old, Hannity—and the Republican presidential nominee, U.S. senator John McCain of Arizona—implied that Obama's links to Ayers provided evidence that he was a radical leftist whose statements to the contrary were not to be believed. When Hannity asked Gibbs whether Obama, given his associatiion with Ayers, could be trusted to fight terrorism, Gibbs responded by noting that Hannity had recently had as a guest on his program Andy Martin, a notorious anti-Semite. Gibbs went on to read previous statements or remarks made by Martin, including one in which he called a judge a "slimy Jew." If Obama's acquaintance with Ayers indicated that he was a terrorist sympathizer, Gibbs pointed out, then Hannity's relationship with Martin must make Hannity an anti-Semite. The ensuing shouting match, which became a popular clip on the video-sharing Web site YouTube, helped to undermine McCain's efforts to cast doubts on Obama's patriotism. Gibbs told Howard Kurtz that he enjoys such occasions, which give him the chance to spar with reporters or commentators. "Anybody who does this [job] has to like a little of the back and forth," he said.

Four days after Obama's victory in his race against McCain, the president-elect announced that after his inauguration, on January 20, 2009, Gibbs would serve as White House press secretary—one of the most high-pressure and visible positions in any administration. A press secretary "can send markets crashing and troops in motion by one slip of the tongue," Axelrod remarked to Leibovich. Gibbs reports to Rahm Emanuel, the former Illinois congressman whom Obama appointed chief of staff. Ellen Moran is the director and Dan Pfeiffer the deputy director of the communications team.

Gibbs delivered his first official briefing on January 22, 2009. In responding to questions on topics including the economic recession, health-care reform, and the wars in Afghanistan and Iraq, Gibbs has established a reputation for injecting an element of humor into his briefings. According to an article in the on-line publication *Politico* (May 27, 2009), during Gibbs's first four months as press secretary, the briefing transcripts included more than 600 instances of laughter. (His predecessors, President George W. Bush's press secretaries Dana Perino, Scott McClellan, and the late Tony Snow, got 57, 66, and 217 laughs, respectively, during their first four months in the job.) While some have attributed the lightheartedness in the Obama pressroom to the newness of the administration, others have cited Gibbs's personality. Mark Knoller, a longtime journalist for CBS News who has covered the White House for decades, told *Politico*, "[Gibbs] is at ease at the lectern, understands the press and is willing to offer a quip at our expense or his own." When he heard about the laughter count, Gibbs was quoted as saying, "I have always hoped that we could do our important jobs and still have a little fun doing it."

In the fall of 2009, Gibbs and other senior administration officials, including Rahm Emanuel and David Axelrod, publicly expressed their dissatisfaction with the manner in which the cable network Fox News was reporting on the White House. Fox News broadcasts several shows hosted by far-right-wing commentators who not only invariably criticize the administration but who, according to many observers of other political persuasions, slant their coverage so as to demean it, in the process misleading the public or propagating out-and-out falsehoods. Asked by an ABC journalist whether the White House should weigh in on the standards of news organizations, Gibbs said, as quoted in the *New York Times* (October 20, 2009), "We render opinion based on some of their coverage and the fairness of their coverage." In late October, responding to Republicans' allegations that Obama was rewarding campaign donors with special privileges and visits to the White House, Gibbs announced that the administration would make public lists of visitors to the White House.

Taking a tongue-in-cheek pride in his southern heritage, Gibbs was a member of the organization Rednecks for Obama. In a closet in his office, which is only yards from the president's, he keeps an army flak jacket, left there in 1977 by Ron Nessen, President Gerald Ford's press secretary, reportedly to be worn as protection when members of the White House press corp launch verbal attacks at whoever occupies that office.

The 38-year-old Gibbs struck Leibovich as having "an ageless face—at once boyish and well worn—that could put him anywhere from 25 to 50." "Gibbs gained considerable weight during the campaign that he is trying to shed, and he has a habit—maybe unconscious—of running his hands up and down his paunch while he speaks," Leibovich continued. Obama told Leibovich, "The chronicle of his weight is a story unto itself." Gibbs lives in Alexandria, Virginia, with his wife, Mary Catherine, an attorney, and their son, Ethan, who was six years old in 2009.

Gilbert and George

Artists

Proesch, Gilbert
Sep. 11, 1943–

Passmore, George
Jan. 8, 1942–

*Address: Gilbert and George, 12 Fournier St.,
London E1 6QE, England*

The artists known as Gilbert and George "have formed a unit of singular genius . . . perennially fusing art and life, abstraction and representation, morality and decadence with the greatest of ease and inventing new mediums as they go," Roberta Smith wrote for the *New York Times* (September 27, 1991). Born Gilbert Proesch, in Italy, and George Passmore, in England, the men have been working and living together for over four decades. Except when talking about their lives before they met, in 1967, Gilbert and George refer to themselves as one person, and rarely if ever have they appeared in public separately; "in adopting a collective name, the artists refused individualization and reinforced the point that their art is their life together," Ray Ann Lockard wrote for glbtq.com in 2002. Of working-class origins, each man studied art in a series of academic settings; at the last school that both attended, in England, they discovered that they held similar views about art. The subject of art, they declared, "must be the human condition . . . ," as quoted by Julie Razzanti and Céline Gimenez in an undated essay posted on the Web site of the University of Perpignan, in France. "The whole formal side of life—colours and forms—is there only to serve the subject and is of no importance in itself. We hate art for art's sake. We are totally opposed to it." Soon after they began to collaborate, Gilbert and George became performance artists. Their act *Singing Sculpture*, in which for four years they performed as "living sculptures" in many places in and outside of Great Britain, "established their reputation," according to the Web site of the Tate Modern, in London, England. Thereafter they expressed themselves in charcoal drawings, paint, handmade books, videos, and, increasingly, photos and photomontages; the montages, which they laboriously printed and colored by hand for many years, are now produced with their custom-made computer and state-of-the-art software.

In their work Gilbert and George have examined a multitude of subjects, among them aspects of their own physical, sexual, emotional, spiritual, and intellectual lives; feelings of hope, love, desire, humility, embarrassment, fear, disgust, and rage; religion, faith, and religious hypocrisy; urban life and the natural world; and aging, death, homosexuality, prostitution, alcoholism, individual identity, racial tensions, class differences, AIDS, and violence, including the terrorist bombings carried out in London on July 7, 2005. Notably absent from their work are images of females. The photos in their works are among the hundreds of thousands in their continually expanding collection of pictures they have taken within a few miles of their home; they obtain most of the printed texts used in their pictures from places in their London neighborhood, such as signs posted on lampposts or walls, graffiti, or the headline-bearing posters displayed outside newsdealers' shops. Between 1971 and 2005 the artists produced well over 1,000 works, many of them wall-size. "What makes their huge pictures so special is the way in which the grubby, disturbing, upsetting, defecatory subjects they represent are portrayed in the most fastidiously conceived and beautifully crafted manner," Jonathan Glancey wrote for the London *Independent* (August 26, 1995).

"We never argue," George told John Tusa for a BBC Radio interview (2002, on-line). "We don't believe in discussing or planning or in ideas. How we are as people when we go to the studio is how the pictures will be." That statement notwithstanding, in 1986 Gilbert and George spelled out their principles in a manifesto called "What Our Art Means." As posted on the Web site of Kunsthaus-Bregenz, an exhibition space in Austria, it begins with a section called "Art for All": "We want Our Art to speak across the barriers of knowledge directly to People about their life and not about their knowledge of art. The 20th century has been cursed with an art that cannot be understood. . . . We say that puzzling, obscure, and form-obsessed art is decadent and a cruel denial of the Life of People." In the next part, "Progress Through Friendship," they wrote, "Our Art is the friendship between the viewer and our pictures. Each picture speaks of a 'Particular View' which the viewer may consider in the light of his own life. The true function of Art is to bring about new understanding, progress and advancement." "True Art comes from three main life-forces," they declared in another section: "They are: the head, the soul, and the sex. In our life these forces are shaking and moving themselves into everchanging different arrangements. Each one of our pictures is a frozen representation of one of these 'arrangements.'" In their manifesto's conclusion they declared, "The content of mankind is our subject and our inspiration. . . . We want to find and accept all the good and bad in ourselves. Civilisation has always depended for advancement on the 'giving person.' We want to spill our blood, brains and seed in our life-search for new meanings and purpose to give to life." In addition, in a two-minute video, now posted on the Internet, Gilbert and George recited their personal 10 commandments, the sixth of which states, "Thou shalt not know exactly what they dost, but thou shalt do it." Others order them to "fight conformism," "be the messenger of freedoms," "make use of sex," "have a sense of purpose," "give thy love," and "give something back."

Gilbert (left) and George

In recent years Gilbert and George have become best known for their boldly, flatly colored photomontages, some more than 30 feet in length, each including an overlying grid of black horizontal and vertical lines that divide the whole into upwards of 16 identical rectangles. Many of them contain religious imagery, often cruciform shapes, accompanied by profane texts and depictions of nudity or bodily fluids and excretions—in some pictures, hugely blown-up images of human turds or greatly magnified photomicrographs of blood, urine, tears, sweat, semen, or saliva. Virtually all include pictures of Gilbert and George's faces or other body parts, clothed or nude. "For us, being naked in front of the public, we are trying to make ourselves vulnerable in front of the viewer," one of them said in 1997, as quoted by Robert Rosenblum in his book *Introducing Gilbert & George* (2004). "That is very important because art is based on making ourselves more vulnerable and opening up what is inside us." The artists have said that they want to "unshock" viewers, to enable them to openly accept intrinsic aspects of human existence—such as defecation—that are generally kept hidden and rarely depicted in art. At the same time, as Gilbert told Andrew Wilson for the *Journal of Contemporary Art* (Winter 1993), art "has to be shocking in the beginning because if it wouldn't be shocking, then it wouldn't be new." Some of their individual works or series have titles that are decidedly provocative, if not shocking: *Sh*t Faith* (1982); *Sperm Eaters* (1082); *Sh*tted* (1983); *Naked Sh*t Pictures* (1995); *Blood, Tears, Spunk, P*ss* (1996); *In the P*ss* (1997); and *Sonofagod Pictures: Was Jesus Heterosexual?* (2006).

In stark contrast to such bawdiness, scatalogy, and political incorrectness, in public Gilbert and George are invariably dressed in immaculate shirts, patterned ties, and nearly identical, conservatively tailored, three-button suits—the "responsibility suits of our art," as they call them. Though during interviews they sometimes use four-letter words, they display excellent manners, kindness, and congeniality, as well as purposefulness, seriousness, and empathy. "We don't think that we're free and we're helping the audience, we feel that together with the viewer we're doing it, we're walking down life's road hand in hand with the viewer," George told John Tusa. "We don't want people running away from our exhibition because they find it freaky or too unusual or not part of their world," he told Andrew Wilson. "We want to seduce the viewer into entering our friendly world, to discuss together with us." A quarter-century ago, in an observation echoed by many since then, John Russell described Gilbert and George for the *New York Times* (March 4, 1984) as "paragons of composure, models of circumspection, all-time prize winners in the courtesy stakes. In fact, they can be ranked as living sculptures that just happen not to have been cast in bronze." Russell added, "They have looked into themselves, fished out whatever lay deepest, and presented it to us in a direct and fearless way. What else are artists there for?"

Gilbert and George as "living sculptures" and their works on paper have been the subjects of hundreds of print and Internet articles and have been in group and solo shows ("solo" because the men are considered a single artist) in galleries and museums worldwide every year for more than four decades. In 1972, 1977, and 1982 they accepted invitations to participate in Documenta Kassel, a highly regarded exhibition of contemporary works held in Germany every five years. In 1980, an especially busy year, they had solo shows in galleries in Amsterdam, the Netherlands; Düsseldorf, Germany; Athens, Greece; New York City; London; and Paris, France. Also that year the Stedelijk Museum, in the Netherlands, arranged a Gilbert and George retrospective that traveled to four museums in 1981: the Kunsthalle in Düsseldorf; the Kunsthalle in Bern, Switzerland; the Georges Pompidou Centre, in Paris; and the Whitechapel Art Gallery, in London. In 2007 more than 200 of their works were displayed in a huge retrospective that filled all 18 rooms of one floor of the Tate Modern and part of another.

Although some critics and laypeople have criticized work of theirs as narcissistic, shallow, tiresomely repetitive, or sordid or condemned it as blasphemous, evil, vile, the products of demented or psychopathic minds, or a blatant con, reactions have more often been positive, though sometimes with reservations. In 1986 Gilbert and George won the Turner Prize, Great Britain's most prestigious honor for contemporary artists who are under 50 and working in the United Kingdom. In 2005 they represented Great Britain at the Venice Biennale, in Italy.

Gilbert was born Gilbert Proesch on September 11, 1943 in San Marino, a village in the Dolomite Alps, in northern Italy. "My family was pretty much a peasant family, up in the mountains and totally isolated," he told Wolf Jahn, the author of *The Art of Gilbert & George, or, An Aesthetic of Existence* (1989), for a 1999 interview that appeared in *Tate Etc.* (Issue 9, 2007). "I think that's very important. When you're isolated from life in the city, you're different. I've never lost that." Gilbert's first language was Ladino (which derives from Spanish and is spoken mainly by a dwindling number of Sephardic Jews). His family was Catholic, and he attended church every Sunday until his late teens. "I had quite a nice childhood," he told Jahn. His father, a woodcarver, taught him that craft, and at a young age Gilbert began to make wooden religious objects, such as pieces for nativity scenes; he later worked with marble, too. He also enjoyed drawing. The first art school he attended was in Wolkenstein, in the Dolomites. "I was the only person there from a different village, a different culture," he told Jahn. "So I already felt isolated . . . different." He next took art classes at a school in Hallein, Austria. Later in his teens he enrolled at the Academy of Fine Arts in Munich, Germany. According to Matthew Collings, writing for the London *Independent* (November 6, 1999), other students there bullied him mercilessly because of his strangeness: "His torments included being stripped naked, being hung upside down by his feet from a high window, and being packed into a trunk partly filled with wet clay." Gilbert's skills in sculpting, Collings reported, eventually brought him the respect and friendship of his tormentors. In 1967 he won acceptance to the three-year program in advanced sculpture at Central St. Martins College of Art and Design, a division of the University of Arts London, and he moved to England.

George was born George Passmore on January 8, 1942 in Plymouth, Devon, a county in England, and grew up in nearby Totnes. His only sibling, a brother, is a vicar in a Protestant church. His father abandoned the family at around the time of his birth; his mother, Hermione Ernestine, a waitress, was divorced several times and reportedly had a series of boyfriends. The family was extremely poor; their building had no heat or hot water, and tenants shared a toilet. "Nobody had a nice piece of furniture, or a radio that worked," George recalled to Jahn. George's mother, determined to improve her sons' lives, paid for elocution lessons for them, and she "worked like a dog," George said, so she could afford to buy gold-framed glasses for him, rather than have him wear the inexpensive ones supplied by the National Health Service. "We were never allowed to play outside with the other children," he told Jahn. "We were always separate in some way." George left school at 15 and found work in a shop. A painting of his called *The Estrangement*, depicting a family arguing, was included in a local exhibition. Soon afterward he won a grant to attend art classes at Dartington Hall, a school near Totnes supported by a private trust and known for its progressive philosophy of education. "He thought the school was wonderful; it seemed to represent an ideal society," Collings wrote. After three years of study there, George tried unsuccessfully to gain entrance to a teachers' college. He then hitchhiked to London, where he worked in a department store during the day and as a barman at night. For a year he took art classes at the Oxford School of Art. He was admitted into the advanced-sculpture program at Central St. Martins in 1965.

When Gilbert and George met at Central St. Martins, two years later, they became friends "immediately," George recalled to Jahn. The reason, Gilbert said, was that "George was the only one who accepted my pidgin English." Sources differ as to the precise sequence of events in Gilbert and George's lives and careers from then through the first half of the 1970s, but most agree on the essentials. The men soon discovered that they felt similarly dissatisfied with the approach to sculpture pervasive at St. Martins at that time. "The style of art that was current then was formalistic art, it was to do with color, shape, form, weight, and you discussed art in those terms, you never discussed feeling, meanings, sex, race, religion, money, none of those things came into the discussion about art," George, who completed the Central St. Martins course in 1968, told John Tusa. "It was just another language, the language of sculpture. And we thought that was wrong, because if you took those sculptures out of the building of St. Martins School of Art into the street they wouldn't address the issues that were inside of all the people on the street, they [the viewers] wouldn't even identify them as art." For their earliest collaborations Gilbert and George "made objects of our own and showed them together," Gilbert told Robert Rosenblum. Then, Gilbert told Rosenblum, "we realised we didn't need the objects any more. It was just us."

For *The Meal* (1969) the pair ate and chatted with the British artist David Hockney while invited guests looked on. For *Postal Sculptures* ("mail art"), which debuted around that time and continued for a half-dozen years, the men mailed in plain brown envelopes to well-known artists and others their neatly signed, hand-drawn double portraits of themselves, along with "very personal messages," as Gilbert told Jahn. Also during that period the men bought an 18th-century house (in which George had been a renter) in Spitalfields, a working-class neighborhood in London's East End. They still live in that house, which they spent years restoring themselves. They also purchased adjoining and nearby properties, where they built their studios.

Early on in their partnership, Gilbert and George tried largely in vain to gain acceptance of their photographic "magazine sculptures" in gallery exhibitions. One such piece, entitled *George the C*nt* *and Gilbert the Sh*t* (1969), contains a portrait of each artist with the respective four-letter word superimposed on it. "A preemptive strike on their critics," Regina Marler wrote for the *Advocate* (April 22, 2008), it was rejected by all but one gallery (Robert Fraser's, where the piece was on display for one afternoon only). Amazed and angered by the rejection of their work for the exhibition When Attitude Becomes Form: Live in Your Head, mounted at the Institute of Contemporary Arts in London in 1969, they came to the opening with painted faces and stood motionless until the show closed for the night. That act so impressed the contemporary-art dealer Konrad Fischer that soon afterward he exhibited them in the same poses at his gallery in Düsseldorf, Germany. Gilbert and George were recognized in a professional publication for the first time in October 1969, when an article about them by the Dutch artist Ger Van Elk was included in the British monthly *Museums Journal*. Also in 1969 they revealed some of their ideas in "The Laws of the Sculptors," in which they wrote, in part, as quoted by Michael Bracewell in the London *Independent* (May 27, 2001), "Always be smartly dressed, well-groomed, relaxed, friendly, polite, and in complete control," and "Make the world to believe in you and to pay heavily for this privilege," referring to the price they themselves would have to pay. "I think all honest artworks, or creative things, are destructive, in that they damage the creator in some way . . . ," George told Jahn."You f*ck yourself up in some way by doing pictures such as *Sh*tty Naked Human World*," he added, referring to 1994 series that contains images of the artists naked and clothed alongside hugely enlarged photos of their feces. "We become a little bit damaged, sexually or psychologically or emotionally."

Meanwhile, for some time Gilbert and George, their faces and hands covered in metallic makeup, had taken their performance art to the streets of London, sometimes simply strolling and at other times standing under one stone arch or another while singing or lip-synching to "Underneath the Arches," a 1932 British music-hall song, by Flanagan and Allen, in which a tramp sings of sleeping and dreaming under a railroad bridge every night. Word of that act spread, and they began to perform at locations in England. Billing themselves "The Singing Sculpture," the bronze-visaged Gilbert and George, clad in identical suits, would stand on a table and sing or lip-synch, executing what Roberta Smith, in the *New York Times* (October 24, 2007), described as "gently robotic dance steps," while one of them held a cane and the other a glove; a tape recorder underneath their perch provided the music. When the tape ended "the artists exchanged cane and glove," Ray Anne Lockard wrote; "then one of them stepped down from the table, reset the equipment, and stepped back up." Ger van Elk arranged for Gilbert and George to perform on the steps of the Stedelijk Museum, and then Konrad Fischer brought them to the Kunsthalle Düsseldorf, where, for the first time, they performed nonstop for eight hours. The art dealer Ileana Sonnabend and the director of her gallery, Antonio Homem, saw their act in Brussels, Belgium. "We stood there for an hour totally mesmerized," Homem told Carol Vogel for the *New York Times* (April 4, 2005). Gilbert and George's performance at the opening of Sonnabend's New York gallery, in 1971, "had the art world talking," Roberta Smith wrote (October 24, 2007). Smith described the duo's reprisal of their performance 20 years later at the Sonnabend Gallery in New York City: "Less a performance than a performance of a performance, this ritual simultaneously widens the gap between the artists and their audience and creates an odd intimacy. After a while, they come to resemble objects at an exhibition, forming a temporary sculpture that happens to be living." In 1971 and 1991 the Sonnabend Gallery also showed the same 23 enormous Gilbert and George drawings, almost-life-size portrayals of the men standing stiffly in parklike settings, all the drawings "seem[ing] to have been rapidly filled in by a giant, impatient hand," in Smith's view. Spatterings of acid had made the paper look old. Titled as a series *The General Jungle*, the pieces were captioned with such titles as "We Feel Briefly, But Seriously, for Our Fellow Artist Men" and "Nothing Can Touch Us or Take Us Out of Ourselves, It Is a Sculpture." Gilbert and George's last performance piece, *Red Sculpture*, debuted in Tokyo, Japan, in 1975.

By that time Gilbert and George had turned to drawing, painting, photography, and video as ways of reaching bigger audiences. Often noted among their black-and-white photomontages from the early 1970s is *Smashed* (1973), which documents an evening in which both men got drunk on gin and tonics—as they did day and night for several years, by their own account. Containing blurry, off-center, or tilted images arranged in a seemingly haphazard fashion, the montage conveys the sensation of inebriation. In their 12-minute film *Gordon's Makes Us Drunk*, (1972), a well-dressed Gilbert and George sit on decorous upholstered chairs at a small table set in front of a large, sheer-curtained window, repeatedly pouring themselves drinks from a bottle of Gordon's gin whose label has their names imprinted on it; classical music plays on the soundtrack. "Their deadpan expressions and repeated declaration that 'Gordon's makes us very drunk' creates an absurd scene that ironically questions identity, nationality and 'good behaviour,'" according to the Tate Modern Web site. *Smashed* and *Gordon's Makes Us Drunk* were part of Gilbert and George's series *Drinking Sculptures*. "We could see that all the other artists were drinking, but during the day they painted a nice grey square with a yellow line down the side," George told Jahn. "We thought that was completely fake. Why shouldn't all of life come into your art? The artists drink, but they do sober pictures. So we did drinking sculptures, true to life."

In about 1975 Gilbert and George used colored paint—bright red and yellow—for the first time in their work. Later in that decade they began to paint their photographs, all of which they developed in their own darkroom, with a limited palette of additional bold colors. Their series of photomontages *Dirty Words Pictures* (1977) include their photos of street graffiti, mostly shot in London and mostly obscene. Writing for the London *Observer* (June 9, 2002), Tim Adams suggested that the pictures represented "an about-face in G&G's lock-stepped career: where previously they had been happy enough to toy with a private sort of frank absurdity, this work looks like a more earnest stab at social realism." In an essay included in Bart Moore-Gilbert's *The Challenge of the Arts in the 1970s: Cultural Closure?* (1994), Stuart Sillars wrote that as social commentary the series is "powerful, disturbing and, because of its use of immediately recognizable late-twentieth century images, accessible—even if, to many, it is also deeply offensive." *Prostitute Poof* (1977), *The Alcoholic* (1978), and others among their photomontages from that period feature pictures taken in their London neighborhood and some of its troubled, marginalized inhabitants. In the view of Paul Richard, writing for the *Washington Post* (February 26, 1984), in the photos of themselves in those works, they seem primarily to be "observers, witnesses, participants, never . . . haters."

An often-noted Gilbert and George photomontage series is the four-part *Death Hope Life Fear* (1984), each piece in which includes from two to 19 photos of young men along with photos of the artists. In *Life*, which is more than 14 feet high and eight feet wide, seven images of Gilbert and George, ranging from two feet to 12 feet tall, appear in the middle, one behind the other. Their poses resemble those of some images of Jesus or saints: in each, Gilbert or George stands with one arm extending diagonally toward the ground with the palm facing the viewer, while the other arm is raised, with elbow bent and the palm also visible. The extended right arm of the tallest George nearly touches the hand of a teenaged boy, standing at the left, while the extended left hand of the tallest Gilbert touches the head of a slightly younger boy, standing at the right. Four hugely magnified, dappled leaves point upward on either side of the men, while at the top there are two two-foot-wide eyes, with white eyelashes, black irises, and red lids. The word "LIFE" appears between the eyes. In each of the 25-piece series *Gingko* (2005), which Gilbert and George showed at that year's Venice Biennale, the artists included huge blowups of Chinese gingko leaves. The Tate Modern acquired one of those photomontages, the 54-panel *Fates*, which is about 25 feet long and 14 feet high.

In the summer of 2009, *The Jack Freak Pictures*, Gilbert and George's first show since their 2007 Tate Modern exhibition, was mounted at the White Cube in London. It consisted of 153 images—the most the artists had ever produced for one series. The images incorporated the British flag, urban elements, and religious iconography. The White Cube's Web site posted comments by the writer and cultural commentator Michael Bracewell, who described the new show as containing "among the most iconic, philosophically astute and visually violent works that Gilbert & George have ever created." In a review of the show for the London *Guardian* (July 9, 2009, on-line), Jonathan Jones wrote, "The Britain in these pictures is scared, maddened, exciting, graffitied. The freaks who walk its mean streets and spooky parks are G&G themselves, playing visual games that distort their faces into cyclopean monstrosities; they turn their bodies inside out, and put themselves in impossible places and postures. Sometimes it's just an eye, moist and staring, that catches your attention in a chaotic pulse of medals, flags and street names. Yet, for all the apparent chaos, these pictures create kaleidoscopic structures that suggest everything is connected."

Examples of the more controversial of Gilbert and George's works include the eight-feet-square *We* (1983). In it the artists, in their signature attire, are seen standing and squatting near a partial cross, outlined in red, in whose four vertical and horizontal arms appear hugely magnified photos of the shafts of penises. Another example is *Naked Sh*t* (1994), in which a naked Gilbert and George, facing the viewers and holding their unzipped trousers at thigh level, stand on either side of a human turd that is taller than they are and about as wide. As in all their photos, George wears eyeglasses, and both men wear wristwatches. In *Spunkland* (1997) the artists are again unclothed but seen from the back; they stand at the far left of the montage, holding hands and looking toward the right; the background consists of an enormous blowup of a photomicrograph of semen.

Gilbert and George wrote the screenplay and drew extremely detailed storyboards for their 69-minute documentary film *The World of Gilbert and George* (1981), which they also directed. "When the cameraman was next to us, we had to be able to tell him that we wanted something absolutely identical to the drawing," Gilbert told the French art and film critic François Jonquet, as quoted by Michael Bracewell in a review of the film posted on the Web site of Arts Council England in 2007, when the film was released on DVD. "Otherwise, we would have lost control. . . . And we always want to remain in control." "One of the great films about London," Bracewell wrote, it presents the artists' world as "a place where the local becomes universal—through the East End streets and their inhabitants, we are shown the common denominations of modern human existence, in all its quotidian banality and fathomless emotional energy." He also wrote, "There is nothing obscure or esoteric about this film of their 'world.' Rather, it has an urgency, drama and open-handedness which is richly generous to the viewer. There is humour, too . . . and a compassionate insight into the lives of ordinary citizens. It is a film which shows the capacity for boredom, passion, reverie, anger, fear, faith and love that exists within us all—the same epic sweep of feelings that are the subject of all the art that Gilbert & George have made over the last forty years."

Except for their height (George is several inches taller) and George's chainsmoking, Gilbert and George have erased whatever differences they may have had in their public personas. In the late 1960s George was married briefly; that union produced two children. Although in interviews they have steadfastly refused to discuss their sexual preferences, they are widely assumed to be a couple. The men have raised money for AIDS-related causes—they donated all the proceeds of one of their shows to AIDS organizations—and are said to be supportive of young artists. Their home, which has been described as extremely clean and neat, does not contain a kitchen; the men eat all of their meals out, usually in the same eateries every day. Among other collections, they own many children's books and religious and theosophical books. Described as workaholics, they have rarely taken vacations. On a long wall of one of their studios, they maintain an extremely detailed index of all their photographs; their photos of crosses, for example, number in the thousands and those of themselves in the tens of thousands, and their records list many subcategories of each subject. They store in boxes all their 35-millimeter negatives and a contact sheet developed from each roll of film. They also maintain an archive of their 1,200 newspaper posters. In conversations transcribed for and posted on the Tate Modern's Web site in 2007, Gilbert and George described their techniques for making photomontages.

Brooke Gladstone is the managing editor and co-host, with Bob Garfield, of *On the Media*, a weekly National Public Radio (NPR) program that features analyses of all things media-related—issues such as free speech, privacy, spin, fairness, and the complex relationships among words, truth, and perception. Gladstone's pet peeve, she told *Current Biography*—the source of quotes for this article, unless otherwise noted—is "the tendency of reporters who are at pains to appear objective by indulging in something that we call 'false balance.' There aren't always two equal sides to a story." Citing global warming and the harmful effects of cigarettes as examples of issues without two equal sides, Gladstone said that the principle applies to political issues and any other source of debate for which the evidence on one side is overwhelming. "If you see a story for what it is, if you see the sky is blue, you don't need equal voice saying that the sky is green." While Gladstone does not believe in journalistic "objectivity," she does believe in fairness, seeking to practice it on her show—on which a great variety of perspectives give the listeners a deep, nuanced understanding of complicated, often divisive, issues. Prior to joining *On the Media*, in 2001, Gladstone served successively as the senior editor of the NPR programs *Weekend Edition* and *All Things Considered*, the network's Moscow reporter, and an NPR media correspondent based in New York City.

Gladstone, the third of six children, was born on March 6, 1955 in Long Island, New York. "It was a fun, noisy childhood," Gladstone said. "A lot of loud, verbal kids competing with each other over the dinner table for attention. And generally it was kind of a free-for-all in that time." Although growing up on Long Island was "sometimes bone-crunchingly boring," the teenage Gladstone kept busy by reading books and taking trips with friends to New York City, where "we saw a lot of strange and frightening things in those days, but just thought that's how cities are," she said. "And it certainly didn't prevent us from coming back again and again. . . . It was the city of [the gritty Martin Scorsese film] *Taxi Driver*. I had a kid's sense that I was immortal anyway, so I never felt like anything bad would happen to me. I *loved* the city. . . . The city was a place where everything happened on the street. People selling scraps of poetry. People playing music on every corner. People selling their art. People selling clothes. There were endless amounts of things. There was a sense you'd walked into the world, out of your sheltered little noplace into the world of everyplace." Gladstone also had a passion for politics during her adolescence and early teens. At the age of 12, she went to New York City with a group of friends to collect cans and tins so they would have money to send to the people of Biafra, a secessionist state within Nigeria that was in turmoil in the late 1960s. She would even skip school to protest the war in Vietnam. But by 1973, after the Republican Richard Nixon had resoundingly defeated the Democrat George McGovern in the presidential election, Gladstone's interest in politics had started to wane. Because McGovern was ahead in the New York polls, Gladstone had assumed he would win. "Like I said, I was pretty stupid," she said, smiling. "After that point I became disenchanted with politics for a long time."

Reading was a more enduring interest for Gladstone. "I did have the quirky thing of becoming obsessed with particular writers," she said. "So I would set myself a goal—this summer I will read everything Dostoyevsky ever wrote, this summer I will read everything Aldous Huxley ever wrote. I became particularly obsessed with one Aldous Huxley novel, *Point Counter Point*, and I started collecting editions of it whenever I saw it. . . . It was supremely—and this may relate to my later life—comforting to see somebody who was so smart and so cynical." Gladstone was also developing an interest in theater; she acted in several community-theater productions on Long Island. Her intellectual leanings had an aesthetic counterpart: "Like all pretentiously bright kids of my generation, I was heavy into the Existentialists and wore black all the time."

The Gladstone family's financial troubles soon forced them to leave Long Island and sell their home. Gladstone's father had worked for his own father's wholesale-textile business, then gone back to school in the mid-1960s to become a stockbroker; then, in 1971, the nation's economy took a sharp turn for the worse. "The bottom dropped out," Brooke Gladstone recalled. "My parents kept us in the dark about how financially wiggy things were—until it became obvious to all of us. Certainly it became obvious when my father started driving a truck and then sold the house and moved us to Vermont." The family arrived in Morrisville, Vermont, before the start of Gladstone's senior year of high school. The public high school she attended had 60 seniors, which allowed her to "win awards that I never would have won in my much bigger class of 1,500 in Long Island. So that was fun."

After graduating from high school, Gladstone attended the University of Vermont, where she majored in theater and minored in the classics—Greek and Roman history and the Greek language, in which she "didn't do well." She also studied psychology and "a lot" of English. Because she spent so much time in the theater—acting, designing sets, and handling the lighting—she had little time for most of her other subjects. By the time she graduated, she had participated in 45 productions. (The musical *Candide* was one of her favorites. She loved to sing.) After finishing college Gladstone wanted to be a theater actor, or thought she did. "Maybe I used it as a default mode," Gladstone recalled, "because I didn't know what I was going to do." She took part in a few theater festivals and dinner-theater productions before her acting work tapered off; soon afterward she joined the food-service workforce. "And I have the hairnets and nametags to prove it, to quote *Wayne's World*," Gladstone said. "I was pretty lost for a while. It started to dawn on me that I didn't have the versatility or the intestinal fortitude to pursue an acting career."

Trying to escape her frustration, Gladstone left Vermont for Washington, D.C, where a friend of hers had an available bedroom in an apartment she was subletting. She got a job as a waitress in several restaurants and diners. One of her regular customers, named Fred, took an interest in her. One day in 1978, when she and Fred discussed the U.S. missile-defense system, it became apparent that Gladstone had an interest in the issue. "You should write about this," he told her. "He thought that I could write," Gladstone recalled. "He thought any smart person could write." Fred got her an assignment to write about the topic and provided her with research material and the phone numbers of several sources. A month later her story was published in *Inquiry*, a left-leaning libertarian magazine. Gladstone ended up marrying Fred—the journalist Fred Kaplan, who at the time was a correspondent for the *Boston Globe* and now writes for the on-line magazine *Slate*. After publishing her first article, Gladstone landed a few more writing gigs—writing pamphlets for the group Americans for SALT (Strategic Arms Limitation Treaty) and contributing articles to the trade-association magazine of the strip-mining industry—but could not find work as a journalist. Gladstone wanted to write for the State News Service wire, which would not give her even unpaid work.

After working at a bookstore for "a while," in 1981 Gladstone got a job at *Current*, a biweekly newsletter that covers the public-broadcasting industry. "This was a big time for me," she recalled, "because it was during NPR's big financial scandal, when there were $9 million that were basically squandered—not stolen, just sort of badly handled. And because *Current* was the only way the public broadcasting industry talked to itself, I was suddenly somebody that people wanted to talk to, like the *Philadelphia Inquirer*, *Washington Post*, even the [Senate] subcommittee people wanted to talk to me, because I had bunches of documents people had given me. I was sort of feared and sought after, and that was a very strange experience for somebody as young as I was. The vice presidents of NPR—there were a lot of them at that point—felt they had to talk to me, because if I said something bad then it would alienate them within the system." During her time at *Current*, Gladstone decided that she wanted to pursue journalism as a career. "That was where I was finally developing some skills. I was able to use writing, analysis, and a consciousness of the world around me, and apply it in a way that was satisfying. I did know then I was going to be a journalist." After three years at *Current*, Gladstone joined the staff of *Washington Weekly*, where she wrote the entertainment column and edited the back-page listings. The paper folded after a year.

One day, at an event at which the jazz great Dizzy Gillespie donated his trumpet to the Smithsonian Institution, Gladstone's husband happened to see Scott Simon, who knew Gladstone from the time she was at *Current* and he was covering public broadcasting at NPR. Simon told Kaplan about *Weekend Edition*, a new NPR show he was hosting; his editor, he said, had to take a few weeks off. "What's Brooke doing?" Simon asked Kaplan. At that point Gladstone had not done any radio work, and the only editing she had under her belt was for print publications, but she was intrigued by the idea. After contracting meningitis and spending nine days in the hospital, Gladstone took on what she thought would be a temporary gig at NPR. Then the editor whom she replaced decided to stay in California, and a career opportunity opened for Gladstone. The year was 1987; Gladstone stayed on as senior editor of *Weekend Edition* for three years, during which she received, in her capacity as editor, a Peabody Award and the Ohio State award. She then became the senior editor of NPR's *All Things Considered*, a daily show that combines news, commentary, interviews, and analysis. For her work as senior editor, she received the Overseas Press Club Award. "I think one reason I was a good editor—and I moved up quickly at NPR—was because I had a very acute sense of pacing," Gladstone said. "I could tell when things were dragging. I could tell when the ideas slip off the track or become muddied."

Gladstone's husband, who was working for the *Boston Globe* at the time, was expecting to be offered the position of Moscow, Russia, bureau chief for the paper. Gladstone was happy for her husband, but her excitement was qualified: "I said we couldn't go," she recalled, "unless I got this fellowship [a Knight Fellowship from Stanford University], because I didn't want to go [to Russia] and be one of those spouses who didn't know how to speak or how to report and didn't understand what I was doing. I said, 'If I get this fellowship, I will focus on all things Russian.' I already knew a lot of Russian literature, because I was really fond of it, but I didn't know much about Russian political theory, art, architecture, Russian Orthodoxy. I was the one who was really pushing Fred to apply for the bureau job. Both of our decisions were contingent on the other person getting what they wanted." What Gladstone remembers as "one of the greatest moments of our married life" occurred when her husband landed the Moscow bureau-chief position on the same day that she was awarded the fellowship. The *Globe* gave Kaplan a year to study, so the couple moved to Palo Alto, California, where they both attended Stanford University. A year, it turned out, was a short time in which to master a language as difficult as Russian. "My reading was never very good, and my writing was almost non-existent," Gladstone said. "But my speaking, I became functional and conversational. But I would always have a translator with me when I did an interview for NPR." The couple, along with their six-year-old twin girls, Sophie and Maxine, moved to Moscow in the summer of 1992, less than a year after the collapse of the Soviet Union.

For the next three years, Gladstone served as NPR's Moscow reporter, focusing mostly on cultural stories. "There was a great deal of tension . . . ," she said, recalling her first impression of Moscow. "But there was a crazy sense of possibility—a new country being created every day. One day, a great story: the legalization of homosexuality. Another day, a terrible story: people being killed for their apartments by the rising organized crime. Then there would be an amazing story, like rewriting the [Soviet era] history textbooks. And then there would be a terrible story about how inflation is turning everybody's pensions to valueless paper." Among other subjects, Gladstone reported on bathhouses, communist summer camps, and the 1993 insurgency on the part of the Russian Parliament, which saw "sniper fire crisscrossing the streets around the Russian white house." While "we couldn't always get in to see the bureaucracy," she found that there was "absolutely no hesitation on the part of ordinary people, business owners, even members of the government" to talk to an American journalist. One of Gladstone's favorite stories was about a man called Doctor Zolotov (*zoloto* is Russian for gold). Zolotov, Gladstone explained, was said to "induce orgasms in his female followers just through the power of his mind." That story, she said, was an example of how people "start looking for guidance and salvation" during uncertain times. That period was a very fertile one for journalism in Russia, as President Boris Yeltsin had allowed independent journalism to flourish. "There was no nervousness about speaking to Americans," she said, "except among people of organized crime. They weren't that receptive to media scrutiny—naturally." That did not stop Gladstone from filing stories about such people and their impact on the country. Those stories illustrated some of the moral gray areas in Russian life, including the ways in which business, government, and organized crime overlapped. "I talked to people who opened kiosks, and they said they preferred to deal with the mafia because the mafia had an interest in their success. But the constant fees that were being exacted by level upon level of government bureaucracy were driving them into bankruptcy, and the government didn't care; so if they paid off the mafia, the mafia would pay off the bureaucracy and protect them from this ever-changing constellation of fees. The official structures were in such disarray that, in some ways, the structures within organized crime were more dependable." Those conditions, Gladstone added, were "emblematic of the chaos all around us, which made it a fantastic story for a reporter who got to parachute into people's lives from time to time, live them for a matter of hours, or a matter of days, or even a matter of weeks, and hop out again. I mean, it's a lot easier to cover these things with a sense of fascination when you have nothing personally at stake." But over time Gladstone developed a connection to the turbulent country. So when, after three years, it came time to leave, "I felt like I was abandoning the friends that I had made and that I was abandoning a story that I had, over time, developed a stake in."

After returning to the U.S., Gladstone became NPR's media correspondent. She reported for WNYC, the network's New York City affiliate. She had mixed feelings about her beat. On the one hand, it allowed her the pleasure of covering nearly unbelievable events, including "one of my favorite stories that I've ever done: There was this one local gallery that was doing an exhibit of this guy who made blueprints of the houses of sitcom families. Then I found out that this guy had been obsessed with sitcoms as a kid in the early '60s. He would cut school and would draw Lucy's house, Mary Tyler Moore's house, and the place where the Addams Family lived, and the *Brady Bunch* house—in such detail. Eventually he figured out that these homes were not coherent—they were just sets—he created blueprints of how these places would be if they were laid out. This was before VCRs, so it was only from repeated viewing. He was socially dysfunctional. And when I talked to him, he told me he had been clean and sober from television for three years. That is a story that says so much about American culture—not that all of us are like that, but in this extreme example, in this story of an obsessive, is writ large the story of all of us. I got a lot of mail after that story." On the other hand, Gladstone admitted, during the five years that she covered the media, she grew tired of her job at times. "What I didn't like about the media beat at NPR was that I would be asked to do a three-and-a-half minute piece every time Tina Brown [who was then the editor of the *New Yorker*] passed wind (or so it seemed to me)," Gladstone wrote for transom.org, a Web site that covers public radio.

As someone who was "sick to death" of the media beat, Gladstone was reluctant to join National Public Radio's weekly magazine-style program *On the Media*. But Dean Cappello—*On the Media*'s executive producer and the vice president for programming and operations at WNYC, where the show was broadcast—wanted her help in reviving the show, which was understaffed, uneven in quality, and underfunded. Gladstone accepted the offer. "So, in the end, I thought if I'm going to cover media for the rest of my life, I might as well cover it the way I want." *On the Media*, with Gladstone as managing editor and co-host with Bob Garfield, relaunched in January 2001. "The program," Gladstone explained, "tries to function as an outsider's in into how the media are created, how stories are chosen, how things are presented. We also try and pick apart cultural trends that are reflected by the media. We also, especially in the last few years, have worked very hard to do stories on what we call 'the conditions that enable us to do journalism'—so we talk a great deal about First Amendment issues, secrecy issues, freedom of information issues, whistle-blower issues, privacy issues. All of these things that could impinge upon the free flow of information." *On the Media*, Gladstone said, also "holds up the mirror" to society by discussing the meanings, uses, and implications of frequently used words, such as "marriage," "pro-life," "elite," "recession," and "torture." In addition, the show has discussed, with the help of media experts and scientists, how people process information, especially when it contradicts their worldviews. "You have to trust your audience," Gladstone said. "You present the story as you see it, but you present it fairly, and you don't just present one side. That doesn't mean you create a false equivalency. And then you let your audience take this information in, and they may come to a different conclusion."

Even though Gladstone had been a journalist for nearly 20 years by the time the program relaunched, she felt—and still feels—like a bit of an outsider, "a mediator between the journalism world and the world of people who consume journalism." The paradox is that while, as a journalist, she often feels like an outsider, as a private person she craves a journalistic approach to life. For example, after the September 11, 2001 terrorist attacks on the U.S., *On the Media* had to go off the air for a week. "I found it excruciating that I couldn't report the story. I don't think I've ever gotten over it—not because I wanted to be on the air so much as that I can't process information that well anymore unless I'm interpreting it for people outside myself. It just goes in there in a congealed mass and I can't sort through the strands unless I have the assignment of making it understandable to somebody else. So in that sense, I feel like I have journalism now sort of worked into my bones and mutating my DNA somehow. . . . That's not about me identifying with a community (i.e. journalists) so much as it is about my way of dealing with the entire outside world of ideas and emotions."

Gladstone lives in Brooklyn, New York, with her husband. In addition to her work for NPR, she is currently writing a graphic novel, tentatively titled "The Influencing Machine," about media history, in collaboration with the artist Josh Neufeld. She is also a big fan of science fiction; her cell-phone ring tone is the theme from the TV series *Star Trek: The Next Generation*.

Gordon, Wycliffe

May 29, 1967– Jazz trombonist

Address: c/o Coup de Cone Music Inc., 126 W. 121st St., Suite 4, New York, NY 10027

Nicknamed "Pine Cone" by his peers for his rotund frame and Georgia roots, Wycliffe Gordon is a leading player of arguably the most overlooked instrument in jazz: the trombone. Widely regarded as the greatest trombonist working in jazz today, Gordon has drawn comparisons to such legendary players as Tommy Dorsey and J. J. Johnson. Gordon, who has performed with jazz luminaries including Dizzy Gillespie, Joe Henderson, Lionel Hampton, Tommy Flanagan, and Shirley Horn, established his reputation with his work alongside Wynton Marsalis, as a member of the Lincoln Center Jazz Orchestra (LCJO) and the Wynton Marsalis Septet. His playing displays a wide range of influences, from big band to swing to straight-ahead jazz to gospel. Ben Ratliff, a jazz critic for the *New York Times* (July 6, 2003), wrote that Gordon "can outperform nearly anyone playing jazz. He's masterful with mutes, but on the deeper levels of music-making, he has an amazing capacity for playing bravura passages quietly." Nate Chinen, writing for the same publication (January 19, 2007), called him "a superior technician with a gift for buoyant swing." Gordon has enjoyed a thriving solo career and gained a reputation as a skilled composer, arranger, performer, and jazz educator, as well as a multi-instrumentalist proficient on the didgeridoo, trumpet, tuba, and piano. His discography includes 13 solo albums and nine as co-leader of a band; he has also been a featured guest performer on numerous recordings with the Wynton Marsalis Septet, Lincoln Center Jazz Orchestra, and many other groups. In addition, Gordon has lent his musical talents to a variety of other projects, which include a reorchestration of the theme song for National Public Radio's popular news program *All Things Considered*; a musical tribute to Muhammad Ali, titled *I Saw the Light* (2004); and scores for classic silent films, among them D. W. Griffith's *Intolerance* (1916) and Oscar Micheaux's *Body and Soul* (1925). He received the Jazz Journalists Association Award for Trombonist of the Year in 2001 and 2002, the Jazz Journalists Association Critics' Choice Award in 2000, and a nomination for the Jazzpar Award in 2003. On the subject of the trombone's being one of the more underappreciated instruments in jazz, Gordon told Wayne Bledsoe for the Knoxville, Tennessee, *News Sentinel* (April 14, 2006), "The voice of the trombone is a force to be reckoned with. . . . I feel it can hold its own with the trumpet and saxophone. It just so happens that the trombone is the hardest to master."

Wycliffe Gordon was born on May 29, 1967 in Waynesboro, Georgia, a small town 30 miles south of Augusta. He was raised in a religious household; his introduction to music was through the gospel performed at Waynesboro's Springfield Baptist

Church. Gordon's late father, Lucius, was a classically trained pianist and the church's resident organist; his influence helped further spark Gordon's interest in music. His father "was always playing classical music at home," Gordon noted to Mike Hughes for the *Lansing State Journal* (November 10, 2004). Wanting at first to play drums, Gordon turned to the trombone after his older brother, Lucius Jr., began playing the instrument in his junior-high-school band. When the family got a trombone for Lucius Jr., "they took it out of the case, and it was shining and beautiful. I knew that's what I wanted," Gordon recalled to Hughes.

Gordon became interested in jazz at the age of 13, when his aunt gave the family a five-disc set of jazz recordings. The collection introduced him to the music of Louis Armstrong, Dizzy Gillespie, and Sonny Rollins as well as the big bands of the 1930s and 1940s. "I would just listen to that over and over," Gordon recalled to Wayne Bledsoe. "The one that really got me was Louis Armstrong's 'Keyhole Blues.'" His passion for jazz developed quickly, and he started playing the trombone in his high-school band. He has credited his high-school band director and his mother, Lena, with giving him the encouragement and support necessary to take his musical pursuits to the next level. He noted to T. Ballard Lesemann for the *Charleston City Paper* (May 20, 2009, on-line), "They made sure I was available to try out for all-county band, all-state band, the McDonald's All-American High School Band . . . they were always there to support me, and always told me I could do it, rather than what I couldn't do." While in high school he won awards for music.

Gordon enrolled at Florida's Agricultural and Mechanical University (Florida A&M), in Tallahassee, where he studied music. As a sophomore he caught the attention of a visitor to the school, the trumpeter Wynton Marsalis, who was leading a national revival of traditional or "straight-ahead" jazz. After hearing Gordon play, Marsalis introduced him to his pianist, Marcus Roberts; Gordon and Roberts went on to have several discussions. As time went on, though, Gordon found himself discouraged by jazz's lack of popularity, the Marsalis-led movement notwithstanding. Shortly after graduating, in 1989, he was working at a Pizza Hut restaurant, having more or less given up on music, when Marsalis invited him to join the Wynton Marsalis Septet. As posted on the University of Scranton Web site, Gordon recalled, "I didn't learn as much about the instrument until I started with Wynton. He introduced me to trombone players on the road, including cats with symphonies who came to concerts, and I picked up tips from them." He added, "Being in the band was like music heaven."

Along with the septet, Gordon joined the Lincoln Center Jazz Orchestra, also led by Marsalis, and David Ostwald's Gully Low Jazz Band. He played with the septet until it disbanded, in late 1994, and remained with the LCJO until 2002. Gordon contributed to Marsalis's celebrated band as both musician and composer. His albums with Marsalis's band include *Crescent City Christmas Card* (1989); the original soundtrack from the film *Tune In Tomorrow* (1989); *Blue Interlude* (1991); *Citi Movement* (1992); *In This House, On This Morning* (1992); *Joe Cool's Blues* (1994); *Big Train* (1999); *Live at the Village Vanguard* (1999); *Marciac Suite* (1999); and *Reeltime* (1999). He was also featured on recordings by the LCJO, including *Blood on the Fields* (1997) and *Jump Start & Jazz* (1997). During his time in both outfits, Gordon developed his melodic approach to playing and performed alongside some of jazz's greatest virtuosos. He also got his start in composing and was commissioned to reorchestrate the theme song for the popular National Public Radio show *All Things Considered* in 1993. (His is the third version of the theme, penned by Don Voegeli in 1976.)

For the 1996 album *Bone Structure*, Gordon served as co-leader with his fellow trombonist Ron Westray; the two performed 12 tunes they had written separately or together. The album also featured the work of Marcus Roberts, the bassist Reginald Veal, and the drummer Herlin Riley. In a review for the All Music Guide, Scott Yanlow wrote, "The music sometimes looks toward the swing tradition but also has some post bop and fairly free selections. The extroverted personalities (and occasional humor) of the co-leaders make this often-rambunctious set of strong interest." Gordon's next recording as bandleader, *Slidin' Home* (1999), displayed a variety of styles and influences, from big band to gospel. The album featured other top jazz performers, including Riley, the saxophonist Victor Goines, the pianist Eric Reed, and the bassist Rodney Whitaker. Commenting on the album's wide range of styles, Dave Nathan wrote for the All About Jazz Web site, "Gordon runs the gamut from blues to gospel, from swing to Latin, from classical sounding to bop, often employing more than one of these genres on the same tune." He added, "Gordon can swing, slide, and tongue with the trombone. . . . This is a very interesting, attention-keeping album and is highly recommended."

In 2000 Gordon was commissioned to write a score for Oscar Micheaux's *Body and Soul*, a silent film, starring Paul Robeson, about religion, duplicity, and small-town life in the 1920s-era South. (The film was sometimes screened with the accompaniment of jazz bands at the time of its initial release.) For the score, performed with the Lincoln Center Jazz Orchestra, Gordon drew on his southern roots, with nods to church music, work songs, and early jazz. The score included vocal arrangements sung by Gordon himself. Also in 2000 Gordon released the eclectic solo effort *The Search*, on the Nagel-Heyer label. That album showcased Gordon's proficiency on other instruments in addition to the trombone, such as the tuba and didgeridoo (a long wind instrument normally used in the playing of Australian aboriginal music), on songs including "Sign Me Up" and "Blues for Deac'n

Cone." In 2001 he released, on the Criss Cross label, *What You Dealin' With*, which was made up of four original compositions and six jazz standards by masters including Duke Ellington, John Coltrane, and Dizzy Gillespie. Among Gordon's albums released over the next couple of years were *We* (2002) and *The Joyride* (2003), both on the Nagel-Heyer label. On the former he collaborated with Eric Reed on jazz and gospel songs, and on the latter he sang and demonstrated his talents on trombone, tuba, trumpet, piano, and other instruments. In a review of *The Joyride*, Ben Ratliff wrote for the *New York Times* (July 6, 2003), "[Gordon] creates music so tight and light that it seems to float."

Other recordings that Gordon has released on the Criss Cross label include *United Soul Experience* (2002), *Dig This!!* (2003), *In the Cross* (2004), and *Cone's Coup* (2006). In 2006 he recorded *Standards Only*, for the Nagel-Heyer label. That year he also served as co-leader on the album *This Rhythm on My Mind* (2006), a BluesBack Records release that evoked the vocal styles of Louis Armstrong and Fats Waller. On the album Gordon served as co-leader with the acoustic bassist Jay Leonhart and was joined by the tenor saxmen Wayne Esocoffery and Harry Allen and the percussionist Jim Saporito. In 2007 Gordon was commissioned by Harlem in the Himalayas Jazz Series, a project of the Jazz Museum in Harlem, to create a jazz score for D.W. Griffith's silent-film masterpiece *Intolerance.* Composing music for each of the film's four stories, he later recalled to Rom Scott for the *New York Amsterdam News* (February 22–28, 2007) that his work on that project "was the hardest I've played in some time." Two of Gordon's latest solo albums, *Boss Bones* and *You and I*, were released on the Criss Cross and BluesBack labels, respectively, in June 2008.

Gordon, who has five children, lives and works in New York City. He has taught at Michigan State University, the Juilliard School, and the University of North Carolina at Greensboro and currently teaches in the Jazz Arts Program at the Manhattan School of Music, in New York. Among jazz's most committed educators, Gordon has presented master classes, clinics, workshops, children's classes, and lectures in numerous venues around the world. He has been working on a collection of trombone quartets, trios, and duos, collectively titled "Trombone Majesty," and on a book on trombone methodology, titled "Basic Training, Exercises, and Suggested Studies," both of which were scheduled to appear in 2009. Gordon's *I Saw the Light*, a musical tribute to the boxer Muhammad Ali, commissioned and premiered by the Brass Band of Battle Creek in March 2004, was also scheduled for release on DVD in 2009. Gordon is the youngest member of the U.S. Statesmen of Jazz and serves as a musical ambassador for the U.S. State Department. His compositions have been performed in programs throughout the U.S. and abroad, including concert halls in New York City; Los Angeles, California; Aspen, Colorado; and cities in Germany, England, Finland, and Switzerland.

Gordon-Reed, Annette

Nov. 19, 1958– Historian; lawyer; writer; educator

Address: New York Law School, 57 Worth St.,
New York, NY 10013

In 2009 the historian, lawyer, and educator Annette Gordon-Reed won the Pulitzer Prize in history for her fourth book, *The Hemingses of Monticello: An American Family.* The book concerns Thomas Jefferson, the third president of the United States, Sally Hemings, his slave and mistress, and the children Hemings bore Jefferson—as well as Hemings's parents and siblings and the two surviving daughters from Jefferson's union with his wife, Martha, who was Sally Hemings's half-sister. In its examination of the complex familial relationships that existed between the Jeffersons and the Hemingses, Gordon-Reed's 800-page book also sheds light on the relationships between other blacks and whites and on the plantation system that thrived in the American South before the abolition of slavery. *The Hemingses of Monticello*, in the words of the National Book Award citation, is a "mesmerizing narrative" that offers "the steady accretion of convincing argument" and is "at once a painstaking history of slavery, an unflinching gaze at the ways

Courtesy of Annette Gordon-Reed

Annette Gordon-Reed

it has defined us, and a humane exploration of lives—grand and humble—that our 'peculiar institution' conjoined. . . . More than the story of Jefferson and Hemings, it is a deeply moral and keenly intelligent probe of the harsh yet all-too-human world they inhabited and the bloodline they shared." *The Hemingses of Monticello* was published 11 years after *Thomas Jefferson and Sally Hemings: An American Controversy*, Gordon-Reed's first book, which, in its preface, she described as "a critique of the defense that has been mounted to counter the notion of a Jefferson–Hemings liaison." In presenting her critique, Gordon-Reed made use of her skills as a lawyer to analyze an enormous quantity of evidence, much of it previously disregarded or interpreted from perspectives radically different from her own. "This story has totally taken over my life," she told Vicki Hambleton for *Footsteps* (on-line), a now-defunct magazine devoted to African-American heritage, after the publication of her first Jefferson/Hemings book. "It's amazing to me that something that I have been interested in since I was a kid should come to this, but it is wonderful." Gordon-Reed worked for a corporate law firm for three years in the 1980s, then as an attorney with the New York City Board of Correction for four years. She has taught at the New York Law School, in Manhattan, since 1992 and at the Newark, New Jersey, campus of Rutgers University since 2006. She co-wrote the award-winning *Vernon Can Read!* (2001), a memoir by Vernon Jordan, the onetime president of the National Urban League, prominent businessman, and adviser to President Bill Clinton, and she edited *Race on Trial: Law and Justice in American History* (2002), for which she wrote one chapter and the introduction.

Gordon-Reed's short biography of President Andrew Johnson, which she has referred to as a "side trip" from her main interests as a historian—Jefferson, slavery, and the newly independent United States—will be published in 2009. She is also working on another book about the Hemingses, a chronicle that will continue their story into the early 20th century. After that she intends to write a two- or three-volume biography of Jefferson. "I've thought for a long time that we are overdue for a complete overhaul," she commented to David Liebers for the History News Network (November 24, 2008, on-line)—an "overhaul" that will reflect what she and others have learned and deduced about his life and times, unhampered by the desire to present Jefferson as a godlike figure who would never have acted upon or even felt carnal desire for a woman of color. Any biography, she said in an interview conducted for Amazon.com, is "a combination of what people said about their lives, inferences from the actions they took, and a consideration of the context in which they were living. Some people have problems with the use of 'inferences.' I don't, so long as they are reasonable. In fact, I would trust the reasonable inferences from a person's repeated behavior through the years over what they say any day, because people can say anything."

Gordon-Reed was born Annette Gordon on November 19, 1958 and grew up in the small town of Conroe, Texas, about 50 miles north of Houston. Her father, Alfred Gordon Sr., owned a funeral parlor and a store; her mother, Bettye Jean Gordon, was a high-school English teacher. Segregation was a part of daily life in Conroe during her girlhood; at the local health clinic, for example, blacks and whites sat in separate waiting rooms, and in the movie theater, blacks were relegated to the balcony. Gordon-Reed told David Schulman for the public-radio program *Weekend America* (December 13, 2008, on-line) that although blacks and whites now mix freely in her hometown, and white grandmothers can be seen with their mixed-race grandchildren in the local Wal-Mart—a sight that "would have been unheard of back in the 60s and 70s"—the distribution of power and the economic divisions in the town "are pretty much the same." Gordon-Reed attended kindergarten in a segregated school. Then, at age six, she became the first African-American to be admitted to a previously all-white public elementary school. "I was a bit on display," she told Deborah Solomon for the *New York Times Magazine* (December 5, 2008). "I can remember adults looking into my classroom and thinking: See? The books have not exploded. There's nothing weird going on here." As a child Gordon-Reed was a voracious reader, and she especially loved history. She has traced her interest in Thomas Jefferson to a juvenile biography of him that she read as a third-grader. The book depicted Jefferson as a child and was narrated by a fictional slave, a boy his age; bosom buddies when the story begins, they drift apart as Jefferson turns toward intellectual pursuits. "It was my first take on how black people were presented in history books," Gordon-Reed told Daryl Royster Alexander for the *New York Times* (June 29, 1997), "and my first major annoyance at the way that black people were portrayed. Why did the slave have to be shown to be stupid and unimportant in order to make Jefferson look good?" The characterization of the black boy as "a person of no consequence and no curiosity," Gordon-Reed recalled to Patricia Cohen for the *New York Times* (September 19, 2008), further dismayed her because she regarded him as a "stand-in" for herself and feared that any of her white classmates who read the book would do so as well.

At 12 Gordon-Reed read the 1969 National Book Award winner, *White Over Black: American Attitudes Toward the Negro, 1550–1812* (1967), by the historian Winthrop D. Jordan. A chapter in the book about Jefferson and Hemings sparked her interest in their connection. Two years later, lying about her age, she joined the Book-of-the-Month Club and bought *Thomas Jefferson: An Intimate History* (1974), in which the historian Fawn Brodie wrote about Jefferson and Hemings's 38-year-long affair. Gordon-Reed was particularly intrigued by the contradictions evident in Jefferson's life and work. A book lover who was "curious about the world," as Gordon-Reed described him to Schulman, Jefferson was the principal author of the Declaration of Independence, which states that "all men are created equal"; yet, as was usual for landed gentry in Virginia at that time, he owned many slaves—about 100. He considered people of African descent mentally and physically inferior to whites, and for that reason he disapproved, at least publicly, of interracial unions. He also thought that freed blacks should be shipped back to Africa. (As Gordon-Reed later learned, he felt otherwise about Sally Hemings, her siblings, and her children.)

Gordon-Reed majored in history at Dartmouth College, in Hanover, New Hampshire. In classes about the history of the South and slavery in the U.S., she was the only black student. She earned a B.A. in 1981 and then entered Harvard Law School, in Cambridge, Massachusetts, where she was a staff member of the *Harvard Law Review.* While there she audited an undergraduate class about the Reconstruction era and again found herself surrounded solely by whites. She later learned that her black peers avoided courses in African-American history because many pre– or post–Civil War accounts by whites regarding blacks were colored by their writers' contempt for or condescension toward blacks, making them painful to read. After Gordon-Reed received a J.D. degree, in 1984, she was hired as an associate at Cahill Gordon & Reindel, a well-established New York City firm specializing in corporate law and litigation. Cahill actively sought to make its workforce racially and ethnically diverse, and its employees performed an unusual amount of pro-bono work. In 1987 Gordon-Reed left the private sector to serve as counsel to the New York City Board of Correction, a watchdog group that monitored conditions in the city's prisons. In that position she learned firsthand about racial biases that persist in the American criminal-justice system.

Such biases are the subject of the essays in the book *Race on Trial: Law and Justice in American History* (2002), which Gordon-Reed edited. *Race on Trial* contains 12 original essays by Gordon-Reed and 11 other professors of political science, history, and/or law, including "The Impact of the *Amistad* Case on Race and Law in America (1841)," by Howard Jones; "The Dred Scott Case (1857)," by Xi Wang; "Celia's Case (1857)," by Gordon-Reed; "Race, Identity, and the Law: *Plessy v. Ferguson* (1896)," by Thomas J. Davis; "Jack Johnson versus the American Racial Hierarchy (1913)," by Denise C. Morgan; and *Black and White: The O. J. Simpson Case* (1995), by Walter L. Hixson. In her introduction Gordon-Reed noted that Winthrop Jordan, in *White Over Black*, "wisely suggested caution when studying the operation of law—created, practiced, and administered as it is by elites—as a firm guidepost to what is actually going on in a culture. Legislation and the outcomes of legal cases tell us a lot but not everything about the way people in a given society think, thought, or, most important, actually behave." Nevertheless, she continued, legal cases—"trials in particular—provide critical insights into the values, mores, obsessions, and aspirations (lived up to and not) of members of the community at particular moments in history. It is with this knowledge that the essays in this volume use legal disputes in which the concept of race plays a central role to explore American attitudes . . . about the proper boundaries between the races."

Gordon-Reed's essay in *Race on Trial* is about a slave called Celia, whose master, a recently widowed grandfather, raped her on the day he bought her, when she was 14, and forced himself upon her repeatedly during the next five years, impregnating her at least twice. One day, at the urging of a male slave with whom she had become intimate, Celia attempted to repel her master's advances. When that failed, she struck him with a large stick; the second blow killed him, and she burned his body in her fireplace. The master's family requested that she be tried, and her lawyers—unusually for that time—mounted a carefully constructed defense. As Gordon-Reed wrote, "They relied on a Missouri statute that allowed 'any woman' to use deadly force to protect her honor. Celia's counsel argued that 'any woman' was meant to include slave women as well." Guided by the judge's bias—he invariably ruled in favor of the prosecution—the all-male jury rejected that argument and found her guilty, as did the Missouri Supreme Court when Celia's lawyers appealed the verdict. In concluding her essay, Gordon-Reed wrote, "Celia's story should be remembered . . . because it shows without equivocation the ultimate meaning of slavery in America. Celia's body, like that of all slaves, was a form of property. An appeal that rested on the value of her soul had no place in a legal system devoted to protecting the right of men like [her master] to enjoy their property as they saw fit. As history bears out, the law was simply not the vehicle for resolving the injustices made so clear by Celia's unhappy life."

Earlier, in 1991, years before *Race on Trial* was published, Gordon-Reed had left her job with the board of corrections. The next year she joined the faculty of the New York Law School, the second-oldest independent law school in the U.S., as a professor. During her 18 years at the school, Gordon-Reed has taught courses in American slavery and the law, American legal history, investigation in criminal cases, the legal profession, and property law. At Rutgers University she teaches undergraduate courses in the American republic and graduate courses in topics in American political and legal history.

Gordon-Reed's first book, *Thomas Jefferson and Sally Hemings: An American Controversy*, was published in 1997. In that work Gordon-Reed offered no definitive judgment as to whether Jefferson had had sexual relations and sired children with Sally Hemings, a house slave who became his mistress—or concubine, as her son Madison Hemings and others have labeled her, regarding that word as implying bondage as well as cohabitation. Instead, Gordon-Reed illuminated the ways in which historians had treated that matter, particularly the attempt by many of them to ignore or dismiss historical evidence that bears directly on the close connections between Jefferson and Hemings. Such evidence includes the recollections of Madison Hemings, which was published in 1873, and a written account by Israel Jefferson, a former slave at Monticello. In her book Gordon-Reed noted that shortly before Jefferson's wife, Martha, died, in 1782, when he was 39, he promised at her request never to remarry. He was not obliged to remain celibate, however. Sally Hemings, who was born in about 1773 to Martha's father, Thomas Wayles, and his slave Elizabeth "Betty" Hemings (whose father was white), reportedly resembled Martha strongly and was similarly beautiful. After Wayles's death, in 1773, Betty and some of her children, including Sally, came to Monticello, Jefferson's Virginia home, to live and work as slaves. During his years as the U.S. ambassador to France (1785–89), Jefferson brought not only his two surviving daughters to Paris with him but also Sally Hemings and her brother James, who trained as a chef there at Jefferson's expense. The first of Hemings's children, a boy who died soon after birth, when Sally was 17, and all of her subsequent children were conceived during periods when Hemings and Jefferson were together; seven-eighths white, all were said to look strikingly like Jefferson. All bore the names of people among Jefferson's family or friends; none were named for any of their Hemings antecedents. Moreover, like Jefferson, Sally's sons, Beverley, Madison, and Eston, all played the violin—Eston professionally—and all became skilled woodworkers; her daughter, Harriet, learned spinning and weaving. Gordon-Reed told the Amazon.com interviewer that "the Hemings children were trained to leave slavery without ever developing the sensibilities of servants." Furthermore, the few slaves whom Jefferson freed during his lifetime (among them Beverley and Harriet) or in his will (Madison and Eston) were all Hemingses. (After Jefferson's death Sally, with the permission of Jefferson's daughter Martha, left Monticello to live with Madison and Eston.) Jill Lepore, writing for the *New Yorker* (September 22, 2008), described *Thomas Jefferson and Sally Hemings: An American Controversy* as "as much a painstaking investigation of the documentary record as a devastating brief on standards of evidence in historical research."

During a conference held at the University of Virginia and Monticello in 1999, Gordon-Reed said, as quoted by Lepore, "It is true that we do not and will never have the details of what went on between Jefferson and Hemings and their children. This does not mean that we have nothing to go on. Perhaps the most persistent, and ultimately damaging, feature of the original debate over whether the relationship existed at all was the tight rein placed upon the historical imagination. One was simply not to let one's mind wander too freely over the matter. Brainstorming, drawing reasonable inferences from actions, attempting to piece together a plausible view of the matter were shunted into the category of illegitimate speculation, as grave an offense as outright lying."

In her preface to *Thomas Jefferson and Sally Hemings*, Gordon-Reed wrote, "It is not my goal to prove that the story [of their affair] is true or that it is false. I suspect that if that is ever done, it will be the result of the miracles of modern science and all the wonders of DNA research, and not because of any interpretation of documents and statements." In the November 5, 1998 issue of *Nature*, Eugene A. Foster, a pathologist, and two other scientists reported that analyses by British geneticists of DNA samples taken from a descendent of Eston Hemings (who took the surname Jefferson as an adult) and the descendants of Field Jefferson, a paternal uncle of Thomas Jefferson's, showed with more than 99 percent certainty that Eston was the president's son. "If people had accepted this story [decades ago], [Jefferson] would never have become an icon," Gordon-Reed said to Dinitia Smith and Nicholas Wade for the *New York Times* (November 1, 1998) after the new evidence became public. Referring to the scholars who had dismissed the possibility of Jefferson's fathering a child with Hemings, she continued, "All these historians did him a favor until we could get past our primitive racism. I don't think he would have been on Mount Rushmore or on the nickel. The personification of America can't live 38 years with a black woman." For Princeton University Press, Gordon-Reed is compiling a collection of Jefferson's writings about race.

When David Liebers asked her what drew her to write *The Hemingses of Monticello* (2008), Gordon-Reed responded, "While finishing my first book, it occurred to me that there was a lot of information about the Hemingses that could be put in narrative form. I thought it would be useful to tell the family story, as a story. Sally Hemings . . . has been seen as a symbol, or as a 'problem.' She has been divorced from her context. It's hard to get a handle on her without putting her in context, just as it is hard to get a handle on [Jefferson]'s life without putting him in his context as a slaveholder who had a particular relationship with this family." In carrying out her research for the book, she said, she discovered new material as well as material that had been "overlooked," and she "looked at things in a different way. For example, I traveled to London and to Preston, Lancashire to ferret out information about John Wayles, [Sally Hemings's] father and Jefferson's father-in-law. That's all new stuff. The section on France contains new information, along with material that has been there all along, but not looked at or treated as important. Then there are unpublished letters as well."

"Gordon-Reed's genius for reading nearly silent records makes this an extraordinary work," according to a review of *The Hemingses of Monticello* for *Publishers Weekly* (July 14, 2008, on-line). The reviewer also wrote, "This is a scholar's book: serious, thick, complex. It's also fascinating, wise and of the utmost importance. Gordon-Reed . . . brings to life the entire Hemings family and its tangled blood links with slave-holding Virginia whites over an entire century. Gordon-Reed never slips into cynicism about the author of the Declaration of Independence. Instead, she shows how his life was deeply affected by his slave kinspeople: his lover . . . and their children. Everyone comes vividly to life, as do the places, like Paris and Philadelphia, in which Jefferson, his daughters and some of his black family lived. So, too, do the complexities and varieties of slaves' lives and the nature of the choices they had to make—when they had the luxury of making a choice." In a critique for the *New York Review of Books* (October 9, 2008), the historians Edmund S. Morgan and Marie Morgan described *The Hemingses of Monticello* as "a brilliant book. It marks the author as one of the most astute, insightful, and forthright historians of this generation." Some interested parties, however, maintained that the DNA evidence does not prove that Jefferson fathered all seven of Hemings's children. In his review of *In Defense of Thomas Jefferson: The Sally Hemings Sex Scandal* (2009), by the historian and foreign-affairs specialist William G. Hyland Jr., for the *Wall Street Journal* (August 28, 2009), Thomas Lipscomb wrote: "[Hyland] concludes, emphatically, that the male Jefferson family member who fathered Eston Hemings could have been any one of at least seven males. There were, he notes, 'two dozen-plus Jefferson males (with DNA markers in common) roaming Virginia at the time.' The seven include Jefferson's younger brother, Randolph, who had already fathered slave children and who had been invited to Monticello nine months before Eston's birth. Mr. Hyland does not exclude Thomas Jefferson as a possible father of Eston. But he deplores the false assumption that today's limited DNA evidence can answer the question one way or another."

In addition to the Pulitzer Prize, *The Hemingses of Monticello* brought Gordon-Reed the 2008 National Book Award for nonfiction, the 2009 George Washington Book Prize, the 2009 Anisfield-Wolf Book Award, and the 2009 Frederick Douglass Book Prize.

Gordon-Reed has been married to Robert Raymond Reed, a New York City civil-court judge, since 1984. The couple, who live in New York City, have a daughter, Susan Jean Gordon Reed, and a son, Gordon Penn Reed. Gordon-Reed dedicated *The Hemingses of Monticello* to her husband and children.

Greenwald, Julie

Sep. 30, 1969– Chairman and COO of Atlantic Records Group

Address: Atlantic Records, 1290 Ave. of the Americas, New York, NY 10104

In February 2009, after 17 years in the industry, the music executive Julie Greenwald was named chairman and chief operating officer (COO) of the Atlantic Records Group. Greenwald had never listened to hip-hop music when, in 1992, Lyor Cohen, then president of Def Jam Records, hired her as a temporary assistant. She soon fell in love with hip-hop and developed a passion for the music business. She set up Def Jam's marketing department and was instrumental in building the careers of LL Cool J, Jay-Z, and DMX. "Some people said rap was just a fad. We knew better," Greenwald told Barbara Kantrowitz and Holly Peterson for *Newsweek* (October 15, 2007). "It was us against the world and we were on the cusp of greatness. We hadn't yet become mainstream, but we were the most significant brand name in urban culture. I was working

Julie Greenwald

with some of the greatest rappers ever." The rap artist and entrepreneur Sean "Diddy" Combs, whose Bad Boy Records label is distributed by Atlantic Records, told Karen Schoemer for *Elle* (July 2009) that Greenwald "grew up on tour buses with LL Cool J and Public Enemy and Run-DMC. She's one of the reasons why hip-hop is where it's at today. She's probably the coolest white Jewish girl in history." Greenwald next became the president of Island Records and executive vice president of the Island Def Jam Music Group. She oversaw Island Records' rock and pop division, helping to promote Kanye West, the Killers, Sum 41, Mariah Carey, and Bon Jovi. When she was named president of Atlantic Records, in 2004, she became one of the few women to head a major label. Since then Greenwald has advanced the careers of many additional top-selling artists, among them T.I., James Blunt, Lupe Fiasco, Jason Mraz, and Missy Elliott. Thanks in part to her foresight and marketing skills, within four years of her appointment, Atlantic had become the number-one-selling record label in the nation.

Various forms of music piracy, combined with the exponential growth of electronic downloading, has led to widespread fears that "the music business is over," Greenwald told Barbara Kantrowitz and Holly Peterson. On the contrary, she continued, "that couldn't be farther from the truth. We've just had to transform ourselves to meet the new ways people are experiencing music. Mobile, digital, songs on TV, strategic licensing—our tools have changed but our outcome is still the same. People will always buy great music and support their favorite artists." Greenwald has topped *Billboard*'s "Women in Music" list twice (2006 and 2008); been named among *Crain's New York Business*'s "40 Under 40" (2005) and "100 Most Influential Women in New York City Business" (2007); and been included among *Hollywood Reporter*'s "Top Women in Entertainment." Lyor Cohen, who now serves as vice chairman of the Warner Music Group and chairman and chief executive officer (CEO) of Warner's U.S. recorded-music division, told Steve Israel for the Middletown, New York, *Times Herald-Record* (December 16, 2007) that Greenwald's "work ethic and drive alone are enough to justify her rise to the top levels of the music industry, but it is her aggressive, cutting-edge approach to A&R [artists and repertoire], marketing and promotion that has kept her there."

The third of four sisters, Julie Ilana Greenwald was born on September 30, 1969. She and her siblings—Ellen, Jodi, and Seena—grew up in Wurtsboro, a village in the Catskill Mountains of New York. Her father, Dennis Greenwald, was a town supervisor and businessman; her mother, Elsa (Konigsberg) Greenwald, was heavily involved in community service and served as a town deputy supervisor. Her parents also owned and operated pharmacies in Wurtsboro and Middletown, New York. (Dennis Greenwald sold their remaining pharmacy in 2003, following the death of his wife in a car accident.) "My parents were very community-oriented," Greenwald told Barbara Kantrowitz and Holly Peterson. "I grew up volunteering at food drives, day camps and food shelters." Greenwald attended Monticello High School, in nearby Monticello, New York, graduating in 1987. She then enrolled at Tulane University, in New Orleans, Louisiana, where she studied English and political science. During those years she was a fan of rock bands, mainly 10,000 Maniacs and the Smiths. After obtaining a B.A. degree, in 1991, she spent a year teaching in the B. W. Cooper Apartments neighborhood of New Orleans as an employee of Teach for America, a nonprofit organization that hires recent college graduates and professionals to teach in urban and rural public schools, with the aim of expanding educational opportunities for underserved children. (At that time the B. W. Cooper Apartments, more commonly known as the Calliope Projects, were notorious for their high rates of violent crime and rampant drug dealing.)

With the intention of soon moving to Washington, D.C., to become an education lobbyist, Greenwald returned to New York for the summer when the school year ended in June 1992. She landed a temporary job as a personal assistant to Lyor Cohen, the president of Def Jam Recordings. Founded in the mid-1980s by the producer Rick Rubin and the entrepreneur Russell Simmons, Def Jam had by the early 1990s become the premier independent hip-hop label in the U.S.; its roster included such celebrated rap artists and groups as Run-DMC, the Beastie Boys, LL Cool J, and Public Enemy. In addition to her role as Cohen's assistant, Greenwald worked with Rush Management, the management division of Def Jam and its umbrella company, Rush Associated Labels; she managed several groups, including A Tribe Called Quest, EPMD, and Brand Nubian.

Cohen soon moved Greenwald to Def Jam Recordings' promotions department, with the title of promotions coordinator. "I didn't know anything about record-company promotions . . . ," she admitted to Kantrowitz and Peterson. "I programmed the fax machine, created itineraries, launched concert events, anything I set my mind to. I would literally get locked in the office, working around the clock, plotting and scheming. It was the most amazing time of my life. I would dream up hundreds of ideas, some good, some bad, some laughed at, but always encouraged by Lyor. Ignorance was bliss, and my out-of-the-box thinking was rewarded with a huge promotion to start our own marketing department at Def Jam."

Greenwald abandoned her dream of becoming an education lobbyist and remained in New York City. "I loved my new life. I loved hip-hop and everything about it," she told Kantrowitz and Peterson. "I could be as creative as I wanted, writing ads for [the hip-hop magazine] *The Source*, treatments for music videos, multi-artist campaigns—the opportunities were endless. Def Jam was at the top of its game and I was one of the big players behind the scenes." Greenwald designated September through November 1994 the "Month of the Man" to promote the rappers Redman and Method Man. To gain wide acceptance for them and some of Def Jam's other hard-core rappers, she masterminded the 1998 national tour "Survival of the Illest," featuring DMX, Onyx, and the Def Squad. Rather than removing sexual, violent, and other possibly offensive material from the raps, she and her colleagues decided, "'We're bringing the streets back,'" as she told Karen Schoemer. "We came up with a campaign that let [consumers] know that we were dealing with the streets, with the danger, which was what made hip-hop so exciting." The tour generated sales of more than four million records. In 1998, the label's most profitable year up to that point, Def Jam garnered an estimated $176 million in sales and around $40 million in profits.

Earlier, in 1993, Russell Simmons had sold a 60 percent stake in Def Jam to the Universal Music Group, for $33 million. Six years later Universal paid $100 million for the remaining 40 percent. Greenwald, who had been given a stake in the label four years before, became a millionaire. Universal merged Def Jam with its labels Island Records and Mercury Records, creating the Island Def Jam Music Group (IDJ). Despite the merger, Def Jam and Island continued to operate as separate imprints under the IDJ umbrella. (Mercury was dismantled, and most of Mercury's artists were moved to Island.) Simmons retained his post as chairman of Def Jam, while Cohen became chairman and CEO of IDJ. Greenwald was named senior vice president of marketing for IDJ, with responsibility for the marketing of recordings of its entire roster of musicians; those included the popular rappers Jay-Z, DMX, and LL Cool J as well as Island's pop and rock acts—Bon Jovi, Sum 41, Nickelback, and Ryan Adams. Greenwald told Danielle Cantor for *Jewish Woman* magazine (Fall 2008) that for her, the changes were bittersweet. "I never wanted to sell Def Jam and I loved it being small and independent," she said. "But it allowed me to start a whole new chapter in my life with Island records, where I got into the rock world. I'd mastered everything there was to know about hip hop and now I had a chance to do something new—take the best of what I knew about urban music and apply it to the rock side."

In 2002 Greenwald was promoted to executive vice president of IDJ and president of Island Records. In a January 7, 2002 press release, Cohen described Greenwald as "one of the industry's most formidable music executives. She is a world-class marketer and developer of talent, and has written the rules for marketing in this industry. She is exceptionally gifted, excelling in both her creative instincts and extensive industry-wide relationships. Her well rounded understanding of the creative process is stellar, and she is an extraordinary problem solver and resourceful thinker."

Cohen left IDJ in January 2004 to become head of U.S. recorded music at the Warner Music Group, the parent company of Atlantic Records. Greenwald followed her mentor; she was named president of Atlantic two months later. Due to the consolidation of Warner's Atlantic and Elektra labels, as well as a drop in music-industry profits, one of her first tasks was to fire more than 150 people. "I came over eight months pregnant," she recalled to Karen Schoemer. "I ran around the company and had a month to interview as many people as possible, because I knew the date of my C-section. I was looking for people who weren't married to the old Atlantic. Because I was like, 'I am nothing of that. I am this new thing that grew up under this crazy man named Lyor Cohen, and I am a different type of animal.' I really needed people who were going to follow me." Greenwald also reduced the number of artists on the label by half and ended what she deemed frivolous spending, including the purchase of billboard space for ads. She applied cost-efficiency rules to herself: contrary to standard executive practice, she flies economy and rides the subway to work instead of taking taxis or using a car service.

Under Greenwald's leadership, along with that of Atlantic's chairman and CEO, Craig Kallman, Atlantic Records grew substantially. By 2006, the label, which had ranked 13th in market share (in terms of total units sold) in 2004, increased its market share by more than 14 percent and moved to third place among the nation's top-selling labels. Home to a diverse group of artists, Atlantic enjoyed success with Gnarls Barkley, T.I., James Blunt, Panic! at the Disco, Rob Thomas, and Death Cab for Cutie. Greenwald built up the label's urban-market share by signing such popular acts as Yung Joc, Cassie, Young Dro, and Danity Kane. "I love [working with] young artists—sitting down with them and figuring out their goals and objectives and fears, and how to help them achieve their dreams," she told Danielle Cantor. "The greatest thing in the world is to take a new artist and help them break into the masses. To see them change their life economically—buy themselves a home, buy their Mom a home. . . . To know that they trusted you with their livelihood and it paid off." On February 5, 2009 Kallman announced Greenwald's promotion to chairman and COO of Atlantic Records.

Atlantic Records ranked first in the nation in market share in 2008. It was also the first major record label to receive more than 50 percent of its U.S. music sales from digital products—for example, downloads on Apple's iTunes digital music store. Greenwald has been credited as one of the first music executives to embrace the digital age, selling to Sprint Nextel and other telecommunications companies the rights to use music by Atlantic artists as cellphone ring tones and using MySpace, Yahoo!, and other popular Web sites to promote artists. In Greenwald's view, the technological advances of the past few years have been both a blessing and a curse for the music industry. "It's been fantastic; we have a direct relationship with our consumers now. But it's also very problematic. It's too easy for people to download and share music now, so it perpetuates a crime that people don't think is a crime, and as a result a lot of people don't get paid," she told Cantor. "Parents teach kids not to steal— if a child walked into a store and stole a candy bar, a parent would be mortified—but now they buy a kid an iPod and don't ask where the music is coming from. It's stealing, and parents shouldn't look the other way." (Any downloading of sound recordings without permission from an artist or record label is illegal.)

Recently, Greenwald was a part of an industry coalition that successfully lobbied Apple Computer Inc. to raise the price of some music downloads on iTunes from $.99 to $1.29. The new, three-tiered price system, which places the cost of downloading more popular songs at $1.29 and less popular songs at either $.99 or $.69, officially went into effect in April 2009. Many music critics and consumers criticized the move as arising from simple greed. In light of the ongoing economic recession, Sean Daly wrote for the *St. Petersburg (Florida) Times* (April 8, 2009), "what other industry is raising prices these days?" Greenwald has been quick to defend the new pricing system, telling Karen Schoemer, "These writers are focusing on, 'Why are they going to $1.29?'. . . . My artist went into a studio and worked really hard to create something beautiful that you're going to buy for less money than a cup of coffee and have for a lifetime. . . . You think I'm getting rich off $1.29 today? Or my artist is?" (According to several sources, when Apple priced all iTunes song downloads at 99 cents, the company kept 29 cents of each sale and gave 70 cents to the labels. The labels then paid the artists, songwriters, and publishers associated with the song. Generally, an artist received between 10 cents and 20 cents per song.)

Described by Karen Schoemer as "petite and thin-framed" and as having "unruly auburn hair," Greenwald is known to pepper her speech with hip-hop slang. She is married to Lewis Largent, a former music executive who is now a stay-at-home father. The couple met in the mid-1990s, when Largent was the music director for the television network MTV. He worked with Greenwald to acquire an LL Cool J song for the 1996 *Beavis and Butthead Do America* movie soundtrack. The couple live with their two children, a 10-year-old daughter, Tallulah ("Lulu"), and a five-year-old son, Eli, in the Tribeca neighborhood of Manhattan.

Groban, Josh

Feb. 27, 1981– Singer

Address: c/o Luke Burland, Warner Bros.
Records Publicity, 3300 Warner Blvd., Burbank,
CA 91505

When he is performing at his peak, according to a writer for pbs.org, the singer Josh Groban displays a "spectacular voice that has the power of an operatic tenor but the romantic tenderness of a pop balladeer." In the decade since he launched his career, the 28-year-old Groban has sold more than 23 million albums; he has performed to standing-room-only audiences all over the world and has been featured on the PBS TV series *Great Performances* three times, the first when he was only 21. Groban is usually categorized as a baritone whose range encompasses notes more commonly associated with tenors. Although he has often been hailed as a semiclassical crossover star or as the most successful crossover artist the U.S. has ever produced, he does not fit the definition of "crossover artist"—a singer who achieves success in a genre different from the one in which he or she originally became recognized. That label has been applied to him partly because of the operatic quality of his voice and partly because his repertoire includes songs in Italian, French, and Spanish that are from operas or that many people associate with opera. In an interview with Scott Mervis for the *Pittsburgh (Pennsylvania) Post-Gazette* (August 4,

Dave Hogan/Getty Images

Josh Groban

2004), Groban himself described the songs he performs at his concerts or on his albums as "pop music with many different influences."

A protégé of the multi-Grammy Award–winning songwriter and producer David Foster, Groban came to public notice with his performances as a stand-in at the inauguration of California governor Gray Davis, in 1999; at a rehearsal for that year's Grammy Awards ceremony; and in 2001, as a last-minute replacement for an actor in an episode of the popular TV series *Ally McBeal*. Additional appearances on TV in 2002—on the newsmagazine *20/20*, *The Oprah Winfrey Show*, and the closing ceremony of the Winter Olympics—gave his career further boosts. They also propelled sales of his first album to double-platinum status that year. Groban's discography also includes four studio albums, four CD and DVD sets that contain live recordings, and a greatest-hits collection.

Some music critics have faulted Groban's style, describing it as kitschy or saccharine, and have dismissed the singer as an "adult-contemporary milquetoast," in the words of Simon Vozick-Levinson, writing for *Entertainment Weekly*'s blog "Popwatch" (December 19, 2007, on-line). But Groban has won legions of enthusiastic fans, not only with his abilities as a singer but also with the charm, friendliness, sense of humor, and willingness to poke fun at himself that he exhibits on stage. "Grobanites," as his most devoted fans are called, have launched some two dozen sites dedicated to "Grobania." Through membership fees and Internet sales of Josh Groban T-shirts, mugs, flip-flops, wallets, and other items, the organization Friends of Josh Groban (his official fan club) has raised more than $860,000 for the Josh Groban Foundation, which helps children in need worldwide.

Joshua Winslow Groban was born on February 27, 1981 in Los Angeles, California, to Jack and Melinda "Lindy" (Johnston) Groban. His father is the founder and owner of an executive-search firm; of Russian-Jewish ancestry, Jack Groban converted to Christianity when he married. Lindy Groban, whose forebears were from Norway, worked as an art teacher before becoming a homemaker; currently, she is an interior decorator. After Josh's brother, Christopher, was born, in 1985, the family moved from Malibu, California, to Los Angeles. Starting when he was young, Groban's parents often took him to concerts, operas, and musicals, the last of which he especially loved. According to David Hochman, writing for *In Style* (July 2008), he has played the piano since the age of three. For several years Groban attended the Bridges Academy, a sixth-through-12th-grade prep school in Studio City, California; he took academic classes until early afternoon and then attended school-sponsored theater classes. His first public performance came in the seventh grade, when, at the request of a teacher who had recognized his vocal talents, he sang George Gershwin's "'S Wonderful" at a school talent show. During his teens he learned how to play the guitar and drums and became interested in a range of musical genres, among them popular rock, rap, R&B, and, to a lesser extent, classical.

Groban next enrolled at the Los Angeles County High School for the Arts, with the intention of pursuing a career in musical theater. His parents supported his musical ambitions but "weren't pushy," he told Valerie Scher for the *San Diego (California) Union-Tribune* (April 6, 2007). He starred in school productions of musicals including *Fiddler on the Roof*, *Finian's Rainbow*, and his favorite, *Sweeney Todd*. He also took private voice lessons—his voice already had "a very mature timbre," he told Scher—and spent two summers studying voice at the highly respected Interlochen Center for the Arts, in Michigan. In late 1998 Groban's voice teacher at that time, Seth Riggs, sent to the Canadian-born producer David Foster a tape Groban had made. On the strength of that tape, Foster invited the 17-year-old singer to perform at the inauguration of Gray Davis as governor of California. At the swearing-in ceremony, held in early January 1999, Groban sang "All I Ask of You," from the Andrew Lloyd Webber musical *The Phantom of the Opera*. Several weeks later Foster engaged him as a stand-in for the Italian singer Andrea Bocelli at a rehearsal for the 1999 Grammy Awards ceremony, at which Bocelli was slated to sing with Céline Dion. After some hesitation because of his fear of failure, Groban agreed; at the practice session, he and Dion sang "The Prayer," by Foster and Carol Bayer Sager. "Céline had to take my hand a few times to keep me from shaking," he told Jon Bream for the Minneapolis, Minnesota, *Star Tribune* (February 6, 2004). "But it was exhilarating."

After his high-school graduation, in 1999, Groban enrolled in the musical-theater program at Carnegie Mellon University, in Pittsburgh, Pennsylvania. At Foster's urging he left the school after only one semester. "When David pulled me out of obscurity and took me out of college, he said, 'Look, you don't have to do musical theater,'" Groban recalled to Keith Spera for the New Orleans, Louisiana, *Times-Picayune* (March 11, 2005). "You don't have to play a character right now. You can play yourself. I want to make an album with your face and your name and your voice." In late 1999 Groban signed a recording contract with Foster's label, 143, a subsidiary of Warner Bros. Records. Earlier, Foster had begun to promote Groban by having him perform at benefits. At one of them Groban drew the attention of the television producer and writer David E. Kelley, who, with his wife, the actress Michelle Pfeiffer, co-hosted the event. The enthusiastic reaction of the audience, which included President Bill Clinton and Hillary Clinton, to Groban's performance led Kelley to offer him a guest spot in that season's last installment of one of Kelley's most popular TV series, *Ally McBeal*. Groban was slated to appear in a cameo role, but the arrest of the actor Robert Downey Jr., who played one of the main characters, forced Kelley and his team of writers into last-minute rewrites, and they gave Groban a major part. Groban portrayed a geeky high-school student named Malcolm Wyatt, who hires the show's title character (played by Calista Flockhart) to fill in as his prom date after his original date dumps him. During the episode, which aired on May 21, 2001, Groban sang "You're Still You," written by Linda Thompson (who was then Foster's wife) and Ennio Morricone. Within hours thousands of viewers sent e-mail messages to the station extolling Groban's performance.

That lucky break notwithstanding, sales of Groban's eponymous debut album, released in November 2001, remained modest for some months. The album received tepid critical reviews. William Ruhlmann, writing for the All Music Guide (online), described it as "an ersatz classical crossover record that won't fool the experts," but he added that the album was "enjoyable even if it doesn't live up to its pretensions." Then, on February 24, 2002, Groban performed "The Prayer," one of the songs from his album, with Charlotte Church at the closing ceremonies of that year's Winter Olympic Games, in Salt Lake City, Utah; afterward, thanks to the estimated worldwide audience of at least a billion people who watched that event on TV, Internet sales of *Josh Groban* increased significantly. Sales rose far more after his appearances on the *Today* show, the *Tonight Show*, *Good Morning America*, and, especially, in a 10-minute profile of Groban on the April 12, 2002 installment of the ABC-TV series *20/20*: within a week the album had jumped from number 121 to number 12 on the *Billboard* album chart. As of mid-2009 sales of *Josh Groban* totaled four million copies in the U.S. and more than 5.3 million copies in other countries. On July 11, 2002 Groban was a guest on *The Oprah Winfrey Show*, and the next month "To Where You Are" became the first of several of his singles to rank at the top of the "adult-contemporary" charts.

The video of a concert that Groban gave in Pasadena, California, in October 2002 aired soon afterward on the PBS television series *Great Performances*. The DVD of that show went on sale in December 2002, packaged in combination with *Josh Groban in Concert*, a CD of live Groban performances. The DVD also included footage of Groban singing duos or trios with others, among them Andrea Corr, Rhys Fulber, Lili Hayden, and Angie Stone, and glimpses of rehearsals shot by Groban's brother. The 13-track CD contained six of Groban's previously released songs; "Broken Vow," by Lara Fabian and Walter Afanasieff; "For Always," by Groban; and Groban's hit Christmas single "O Holy Night." Groban sang "O Holy Night" at the lighting of the Christmas tree at Rockefeller Center, in New York City, in early December of that year. The DVD/CD combo sold six million copies in 2003, making the DVD that year's top-selling long-form music video. Also in December 2002 Groban sang in Oslo, Norway, at the ceremony during which the Nobel Peace Prize was awarded to former U.S. president Jimmy Carter. On September 22, 2003 he performed in a one-night concert version of the unsuccessful 1988 Broadway musical *Chess*, mounted to benefit the Actors' Fund.

Groban's next studio album, *Closer*, was released in November 2003. Its 13 tracks included a cover of Secret Garden's "You Raise Me Up," which reached the top 10 on *Billboard*'s adult-contemporary chart and received a Grammy Award nomination for best male pop-vocal performance. The album also contained Groban's first contributions as a lyricist, for the songs "Per Te," "Never Let Go," "Remember When It Rained" (co-written by Eric Mouquet of the French electronic group Deep Forest), and "Mi Mancherai (Il Postino)," for the last of which he was accompanied by the violinist Joshua Bell. With sales of approximately 116,000 copies on its first day and 370,000 copies in its first week, *Closer* debuted at number four on the *Billboard* 200 album chart, then rose to first place nine weeks after its release; the album went on to sell more than five million copies. Most critics, however, greeted it with faint praise. In a representative mixed review, Scott D. Paulin wrote for *Entertainment Weekly* (November 14, 2003, online), "There's no doubt that the 22-year-old Groban can sing. His rich baritone raises the occasional goose pimples even on sentiment-resistant flesh. But he hasn't yet found the ideal direction in which to channel his undeniable talent. Though *Closer* is superior to his self-titled '01 debut, Groban still lacks the personality to transcend banal material, and all the bombastic production in the world can't win that battle for him."

"Groban is a highbrow heartthrob," Jon Bream wrote for the Minneapolis *Star Tribune* (February 6, 2004), five days after Groban performed "You

Raise Me Up" during the pregame events at Super Bowl XXXVIII, to honor the memory of the astronauts who lost their lives one year earlier, when the space shuttle *Columbia* broke apart during reentry. "He combines the striking voice of Andrea Bocelli with the boyish charm of John Mayer and the pleasing nerdiness and romantic sentimentality of Barry Manilow, all wrapped in a sheen of sophistication." Also in early 2004 Groban embarked on his first headlining tour, performing at sold-out venues all over the United States. During the international tour that followed, he performed some songs not included on his albums, among them his rendition of the hard-rock band Linkin Park's "My December." In May 2004, with an audience of 500,000 in attendance, Oprah Winfrey introduced Groban before his performance at the We Are the Future concert, held outdoors in Rome, Italy, to raise money for children in need. Later that year—by which time total sales of his recordings had reached eight million—Groban released another CD-plus-DVD set, *Live at the Greek.* The title refers to his summer 2004 concerts at the Greek Theatre in Los Angeles, California, which were taped and aired on another installment of PBS's *Great Performances* series. For one piece, "Canto Alla Vita," Groban played a drum solo; for "Remember When It Rained," he played the piano; and the banjo virtuoso Bela Fleck joined him for "Anna luce Del Sole."

Groban performed "Remember When It Rained," accompanied by a full orchestra, at the 2004 American Music Awards ceremony, where he received a nomination for favorite male artist in the pop category. His recording of "Believe" was incorporated into the soundtrack of the film fantasy *The Polar Express*, which was released during that year's Christmas season. "Believe" earned an Academy Award nomination for best song, and Groban performed it with Beyoncé at the 2005 Oscars ceremony.

In November 2006, after spending nearly two years on the road, Groban released his third studio album, *Awake.* Reflecting the effects of his experiences in South Africa in 2004, the album features collaborations with individuals and groups whom he met there: Herbie Hancock, Dave Matthews, Five for Fighting (born John Ondrasik), Imogen Heap, Vusi Mahlasela, and Ladysmith Black Mambazo. Groban co-wrote four tracks, including the melancholy "February Song." The album reached number two on the *Billboard* album chart and sold more than a million copies within a month of its release; it impressed critics favorably as well. Matt Collar, writing for the All Music Guide Web site, described *Awake* as "a grand collision of pop culture and co-opted classical themes from then and now" that "perfectly embodies everything that has made Groban so successful."

Groban spent most of 2007 and 2008 touring to promote *Awake.* In July 2007 he sang "All I Ask of You" with the British singer and actress Sarah Brightman at a benefit concert at Wembley Stadium, in London. A few months later he released his Christmas album, *Noel*, which contained duets with Brian McKnight ("Angels We Have Heard on High") and Faith Hill ("The First Noel"). *Noel* broke several Christmas-album records, selling more than 3.6 million copies within the first 11 weeks of its release. It became the first Christmas album ever to remain for four consecutive weeks at the top spot of the *Billboard* 200 album charts, breaking the three-week record set by Elvis Presley's *Elvis Christmas* in 1957, and it became the best-selling album of 2007 within 10 weeks of its release. It went on to sell a total of 4.6 million copies in the U.S. and more than five million copies elsewhere. The album earned a 2008 Juno Award for International Album of the Year. The year 2008 saw the release of *Awake Live*, another CD/DVD set, and Groban's greatest-hits album, *A Collection*, which, in addition to tracks from his previous albums, contained the song "Anthem," from *Chess.* In February 2008 Groban joined Andrea Bocelli in a performance of "The Prayer" at the Grammy Awards ceremony. A concert version of *Chess*, co-starring Groban, Idina Menzel, and Adam Pascal, which was taped in May 2008 at the Royal Albert Hall, in London, aired on the June 17, 2009 installment of *Great Performances.* At "We Are One," a concert held on January 18, 2009 at the Lincoln Memorial in Washington, D.C., to celebrate the upcoming inauguration of Barack Obama as president of the U.S., Groban sang "My Country, 'Tis of Thee" (also called "America") with Heather Headley and the Washington Gay Men's Chorus. In June 2009 Groban released another live CD/DVD set, *Soundstage Presents: Josh Groban—An Evening in New York City.* The title refers to a 2008 concert he gave during the Jazz at Lincoln Center concert series in New York City, which was filmed for PBS's program *Soundstage.* In that show Groban performed some of his best-known hits, including "You Are Loved (Don't Give Up)" and "February Song." In September 2009 Groban played himself on the new musical-comedy television series *Glee*, in an episode entitled "Acafellas."

Groban lives in Malibu, California, with his Wheaten terrier, Sweeney. His visit with Nelson Mandela in 2004 inspired him to establish the Josh Groban Foundation. Groban has expressed his desire to work in musical theater someday. He told Peter Crawley for the *Irish Times* (April 12, 2003), "The combining of a great lyric with an amazing melody, a great book, amazing acting and storytelling can touch an audience like nothing else."

Guggenheim, Davis

Nov. 3, 1963– Filmmaker

Address: Electric Kinney Films, 1661 Lincoln Blvd., Suite 101, Sonto Monica, CA 90404

"Documentaries have this unfortunate connection with activism. They can describe an issue or problem so vividly, and people can attach their agendas to them," the Academy Award–winning filmmaker Davis Guggenheim told Kevin Lally for *Film Journol Internotionol* (June 1, 2006). He added that his father, the celebrated documentarian Charles Guggenheim, "always felt that when [documentaries] get too close to a pamphlet, a political agenda, they lose what film does best, which is to tell stories. He always said that people invest in people. There are films that are tools for politics, and that's fine. But he was never interested in making those, and neither am I. I try to stay away from how [my films] will be used politically."

Guggenheim, who has directed and produced episodes of hit television series including *NYPD Blue*, *ER*, *Alias*, *24*, and *Deodwood*, is best known as the director, executive producer, and cinematographer of the 2006 documentary *An Inconvenient Truth*, about former vice president Al Gore's campaign to educate the public about global warming and climate change. Guggenheim's other documentaries include *The First Year* (2001), which follows a group of first-year teachers in Los Angeles, California, public schools, and *A Mother's Promise: Barack Obama Bio Film* (2008), a 10-minute work that premiered at the 2008 Democratic National Convention, where Obama accepted his party's nomination for the presidency. The director has also made two feature films, *Gossip* (2000) and *Grocie* (2007). Most recently he directed and produced *It Might Get Loud* (2008), a documentary that explores the history of the electric guitar and focuses on the careers of three prominent rock guitarists—Jimmy Page of Led Zeppelin, The Edge of U2, and Jack White of the White Stripes.

Philip Davis Guggenheim was born on November 3, 1963 in St. Louis, Missouri, to Marion Davis (Streett) Guggenheim and Charles Eli Guggenheim. His German-Jewish father—a distant relative of Solomon R. Guggenheim, the businessman and art collector for whom a famous modern-art museum in New York City is named—was a film director and producer. Charles Guggenheim is best remembered for his four Academy Award–winning documentaries: *Nine from Little Rock* (1964), about the desegregation of Little Rock Central High School, in 1957; *Robert Kennedy Remembered* (1968), about the U.S. attorney general and senator from New York; *The Johnstown Flood* (1989), which marked the 100th anniversary of the flood that killed more than 2,000 people in Johnstown, Pennsylvania, and resulted in the first major disaster-relief effort undertaken by the American Red Cross; and *A Time for Justice* (1994), which chronicled the civil rights movement. Charles Guggenheim was also the media director for four presidential campaigns, including Robert Kennedy's in 1968, and was a pioneer of political-campaign television commercials. "I grew up making films with my father—stringing cable for lights," Davis Guggenheim told Amy Wallace for *Los Angeles Mogozine* (September 1, 2001). "My first memory is of getting on Bobby Kennedy's campaign plane." (Charles Guggenheim died in 2002 of pancreatic cancer.)

In 1965 Davis Guggenheim's family—which included his older brother, Jonathan, and older sister, Grace—moved from St. Louis to Washington, D.C. There, Davis was a student at Sidwell Friends, a private Quaker school. Though he struggled with dyslexia, he performed well enough in his studies to enroll at Brown University, in Providence, Rhode Island, where he studied American civilization. His senior thesis argued that Jewish movie directors had forsaken their heritage in order to be successful in Hollywood. (Though Guggenheim has Jewish ancestry, he was not raised with Jewish traditions.)

Upon graduating, in 1986, Guggenheim passed up his father's offer to work with him on films and moved to Los Angeles to start his own career in the entertainment industry. As he told Ann O'Neill for the *Los Angeles Times* (July 26, 2001), his goal was to make Hollywood movies and "live the good life." Guggenheim joined the production company Outlaw Productions and began to work on feature films. His first major job was as the production coordinator for Steven Soderbergh's 1989 drama, *Sex, Lies, and Videotape*. He was next an associate producer on the 1991 comedy *Don't Tell Mom the Babysitter's Dead* and co-produced the romantic comedy *The Opposite Sex and How to Live with Them* (1992).

Throughout the 1990s Guggenheim directed episodes of television series, among them *Party of Five*, *NYPD Blue*, and *ER*. In 1999 he teamed up with his father to make *The Art of Norton Simon*, a 30-minute documentary about the industrialist and art collector, commissioned by the Norton Simon Museum in Pasadena, California. Guggenheim's father produced the film, which was directed by Davis and narrated by the actor Gregory Peck. Davis Guggenheim later directed his first feature film, *Gossip* (2000). Starring James Marsden and Kate Hudson, the movie tells the story of three college students who, for a project, spread a piece of gossip—only to find the rumors getting out of control. In 2001 Guggenheim was an executive producer on *Training Day*, a crime thriller starring Denzel Washington and Ethan Hawke.

In 1994 Guggenheim had married the actress Elisabeth Shue, who is best known for her starring roles in the films *The Karate Kid* (1984), *Adventures in Babysitting* (1987), and *Back to the Future Part II* (1989). Although Guggenheim enjoyed working on Hollywood productions, his priorities began to change after the birth of his son, Miles William, in November 1997. In preparation for Miles's future, he began to research the public-school system in Los Angeles. As quoted on the PBS Web site for *The First Year* (2001), Guggenheim said, "Suddenly, I found myself a parent living in Los Angeles. I was starting to think about sending my children to school and I was faced with some difficult questions: Do I send them to a public school that is poorly funded and understaffed, or do I send them to an elite private school and turn my back on public education?" He was soon inspired to make a documentary about teachers in public schools. "I wanted to make a *Hoop Dreams* about education," he told Amy Wallace, referring to the 1994 documentary that followed two Chicago youths determined to become professional basketball players. "[I] wanted to find out about the job by following the natural route of the teacher."

In July 1999 Guggenheim and Shue were invited to accompany President Bill Clinton to the FIFA Women's World Cup soccer finals in Pasadena, California. There, Guggenheim met Barry Munitz, then president and CEO of the J. Paul Getty Trust. One of the wealthiest philanthropic organizations in the world, the Getty Trust supports visual arts, among other cultural endeavors. Munitz, interested in Guggenheim's idea for a documentary, decided to fund the project. Guggenheim was also able to secure funding from California State University, the state's leading teacher-training institution. (Munitz had served as chancellor and CEO of the California State University system in the 1990s.) In addition, Guggenheim enlisted the Academy Award–nominated documentary producer Julia Schachter and the producer Senain Kheshgi.

The resulting documentary, *The First Year*, follows five novice teachers starting out in a Los Angeles public-school district. "Documentaries about schools had often been made from the outside in, about politics and experts and the crumbling of the schools," Guggenheim told Bernard Weinraub for the *New York Times* (September 6, 2001). "What I wanted was an intensely personal story about people who teach. And in the process, hopefully we could change the way people think about education." The project cost nearly $1 million—a pittance by Hollywood standards—and was filmed over the course of 110 days starting in September 1999. Much of the footage was shot by Guggenheim himself, with a handheld digital video camera. "There is talk about how the digital age will change how feature films will be made. I didn't realize how it would impact the documentary world," he told an interviewer for the PBS Web site. "After a half an hour of shooting, the students forgot I was there. When I shot without a crew, I got to witness extraordinarily intimate moments that I couldn't have captured with a full crew." *The First Year* focuses on the teachers—whose pupils range from kindergarteners to high-schoolers—as they deal with struggling students, uncooperative parents, and apathetic administrators. The documentary aired on PBS television stations in September 2001. In her review for the *New York Times* [September 3, 2001], Julie Salamon wrote, "[Guggenheim] . . . takes an unvarnished approach that records without dramatic flourish the frustrations and rewards of teaching." *The First Year* won a prestigious George Foster Peabody Award in 2001. A shortened, 35-minute version of the documentary, entitled *Teach*, has been used as a recruitment tool to provide prospective teachers with a realistic look at the profession.

In the early 2000s Guggenheim returned to television series, directing episodes of *Alias* (2002), *24* (2002), *The Shield* (2003), and *Numb3rs* (2005). He also produced the first season, in addition to directing four episodes, of the critically acclaimed HBO series *Deadwood*. In his interview with Kevin Lally, Guggenheim confessed, "I have to work in television to pay my habit. I love documentaries, I would make them all the time if I could. There's nothing better. It's just the question of how do you sustain your family, how do you pay your mortgage." (In addition to their son, Guggenheim and his wife have two daughters: Stella, born in March 2001, and Agnes, born in June 2006.)

In 2005 the environmentalist Laurie David (the wife of the writer and actor Larry David) and producer Lawrence Bender approached Guggenheim about making a film on former vice president Al Gore's traveling slide-show presentation about global warming. (Global warming, an increase in the average temperature of the Earth's atmosphere, is believed by most scientists to be progressing at a rapid—and dangerous—rate due to the release of carbon dioxide and other pollutants into the air.) Since the 2000 presidential election, in which Gore won the popular vote by more than 500,000 ballots but lost the Electoral College vote—and the presidency—to George W. Bush (after the U.S. Supreme Court settled the controversial Florida vote recount), Gore has dedicated himself to educating others on the issues of global warming and climate change. "I didn't see how you could make a movie about a slide show," Guggenheim told Joseph V. Amodio for *Newsday* (May 22, 2006). After attending one of Gore's shows in Los Angeles, however, the filmmaker decided that Gore's presentation "was . . . so amazing, so powerful, that I had to find a way to make a movie about it." "[Gore] goes from city to city, rolling his bag through airports. And if a Kiwanis Club invites him, or a civic club, or a Republican group, he will go and give a slide show, for free. That's what he's decided to do with his life. . . . That's as compelling a character as I can imagine," Guggenheim told the *Boston Globe* (May 28, 2006).

Shot and edited in just six months, *An Inconvenient Truth* (co-produced by David and Bender) is structured around Gore's presentation and weaves in stories about his life and family. "Running for president, [Gore] was scrutinized a lot, and criticized for bringing up a lot of his personal stories—I think unfairly . . . ," Guggenheim told Kevin Lally. "I just felt so strongly that we'd have to understand him and why he's telling this story, why he believes it so deeply. If I could show that part of his story, people would connect to him, and then they'd connect to the issue." In his review of the film for *Salon.com* (May 24, 2006), Andrew O'Hehir wrote, "More than anything I've ever seen or read about Gore, *An Inconvenient Truth* brings this notoriously awkward politician into focus as a human being, both warm and guarded, intellectually curious but not especially introspective. Guggenheim gets Gore, for instance, to discuss the two central emotional events in his life: his sister's death from lung cancer, and the near-death of his son, who was run down by a car, at age 6, in 1989. In both instances, it's clear that Gore is being as emotionally open as he can, and that behind his stilted, almost clichéd language lies a universe of painful meaning."

An Inconvenient Truth premiered at the Sundance Film Festival in January 2006 and was released in theaters in New York City and Los Angeles on May 24. As of August 2009 it was the fifth-highest-grossing documentary made in the U.S. since 1982 (when records began being kept), with domestic box-office earnings of over $24.1 million. The documentary received widespread critical acclaim and won several awards, including the 2006 Los Angeles Film Critics Association Award for best documentary/nonfiction film, the 2006 National Board of Review Award for best documentary, the 2007 special award for best nonfiction film from the National Society of Film Critics, and the 2007 Academy Award for best documentary—features. Gore, who also wrote a companion book for the film, was awarded the Nobel Peace Prize in 2007 for his commitment to the issue of global climate change. Gore said in an interview with Claudia Feldman for the *Houston Chronicle* (June 5, 2006) that he has devoted "100 percent of the profits from the book and the movie to a new bipartisan educational campaign to further spread the message about global warming." (Though Guggenheim does not consider himself an environmentalist, since he made the film he has purchased a hybrid vehicle—which uses less of the type of fuel that produce pollutants—and outfitted his home with solar panels.)

In 2007 Guggenheim returned to feature films, directing and producing the sports drama *Gracie*, which is loosely based on the lives of his wife's family. Shue's younger brother, Andrew, conceived the idea for the film as a way to tell the story of their late brother, William. The captain of a high-school soccer team that won the New Jersey state championship, William died in an accident in 1988. After Andrew approached Guggenheim about directing the project, the filmmaker shifted the focus of the story to his wife, who, as the only daughter in a family with three sons, had excelled at sports in an effort to win attention from her father. (At nine Shue was the first girl in her area to play organized soccer on an all-boys team.) Shue has said that her athletic prowess got little notice from her father. She quit organized soccer at the age of 13.

Set in New Jersey in 1978, *Gracie* follows a 15-year-old named Gracie Bowen, played by Carly Schroeder, who is coping with the sudden death of her older brother by trying to take his place on the high-school boys' varsity soccer team. Shue portrayed Gracie's mother in the film and, along with her brothers Andrew and John, served as a producer. *Gracie* received mixed reviews. Michael Phillips wrote for the *Chicago Tribune* (June 1, 2007) that the film is "a predictable but nicely acted triumph of the soccer-phenom spirit."

Guggenheim's most recent film, the rock documentary *It Might Get Loud*, premiered at the September 2008 Toronto Film Festival in Canada before its limited theatrical release in the U.S., in August 2009. The film concentrates on the relationships of three guitarists to their instrument of choice. Each guitarist represents a different generation of rock and roll: Jimmy Page, of the legendary 1970s band Led Zeppelin; The Edge, of the Irish band U2, which achieved international celebrity in the 1980s; and Jack White, whose success with the

White Stripes since the late 1990s has led to his formation of two other bands, the Raconteurs and the Dead Weather.

Thomas Tull, the chairman and CEO of the independent production company Legendary Pictures and a longtime collector of guitars, approached Guggenheim with the idea for the film in 2007. "Thomas asked me to come to his office in Burbank [California]. . . . I get there and he launches into this passionate pitch about the electric guitar and how no film has ever captured what it is that makes the instrument so great . . . ," Guggenheim was quoted as saying in the press kit for *It Might Get Loud*. "Most Rock and Roll documentaries focus on car wrecks and overdoses; or they pontificate with sweeping generalities about how this guy was 'God' and how 'music was changed forever.'. . . Thomas and I didn't want any of that. We wanted to focus on story-telling and the path of the artist, we wanted to push deeper beneath the surface."

Over the course of a year and a half, Guggenheim interviewed the guitarists and filmed each going about his daily life; in the film the guitarists recall their childhood dreams of rock stardom and discuss the writing of some of their more famous songs. The culmination of the film is a jam session among the three musicians, who had not met one another prior to the making of the documentary. *It Might Get Loud* received mostly positive reviews, though some critics felt that the film lacked a clear purpose. "Everything in [*It Might Get Loud*] is interesting. . . . But it isn't assembled well," Wesley Morris wrote for the *Boston Globe* (August 28, 2009). "Once I figured out that the movie has nowhere to go with this trio—they don't write a song together or overthrow a dictator—I started to lose interest." The *New York Times* (August 14, 2009) critic A. O. Scott, however, praised Guggenheim's film, writing, "For rock geeks of any age or taste, the lore in this documentary will be catnip. But *It Might Get Loud* is more than a narrowly focused fan artifact. It gives those of us with tin ears and clumsy fingers a chance to linger in the presence of serious artists with formidable chops and big, if not always clearly expressed, ideas about what they do. And it will put you in the mood to listen."

Guggenheim is currently working on a documentary about American public-school systems. He lives in Venice, California, with his wife, son, and two daughters.

Gunn, Tim

July 29, 1953– Chief creative officer of Liz Claiborne Inc.; fashion consultant for the TV series Project Runway *and* Tim Gunn's Guide to Style*; educator*

Address: Liz Claiborne Inc., 1441 Broadway, New York, NY 10018

The fashion consultant, television personality, and educator Tim Gunn is a member of "that rare breed of reality-TV star who is entertaining without resorting to scathing remarks," Siobhan Duck wrote for the Melbourne, Australia, *Herald Sun* (May 14, 2008). Since its debut, in December 2004, Gunn has appeared on the cable-TV series *Project Runway* in the role of fashion expert, counselor, therapist, or "den father," to cite a few of the labels that have been applied to him. At the start of each season of *Project Runway*, 12 would-be designers vie for a prize of $100,000, to be used by the winner to launch his or her first commercial clothing collection. Every week each contestant must create a particular type of garment while following rules concerning materials, cost, and time constraints. The competitors, whose numbers dwindle with each passing week, are shown in the process of designing garments, acquiring the materials to make them, and constructing them, while Gunn expresses his positive or negative reactions to their work and makes suggestions, in a manner that is unfailingly gentlemanly and encouraging. Writing for the Washington, D.C.–based *Metro Weekly* (September 27, 2007, on-line), Randy Shulman described Gunn as "instructive, authoritative, and completely, utterly accessible. He doesn't just have charm, he is charm personified. Even when Gunn shows disdain over a particular fashion option, it's with a feather's touch." Shulman continued, "True, he can be harsh, but he's no Simon Cowell–like pitbull . . ."—a reference to the acid-tongued, insult-prone judge on the TV series *American Idol*. "Gunn clearly cares about his subjects." "I want each one of them to succeed," Gunn told Shulman. "I know that someone by definition will be [voted] out, but I want all of them to have the opportunity to succeed. Sometimes my words are a little strong. . . . It's tough love because I want them to know what's on my mind. And not necessarily to change what they're doing, because I have tremendous respect for their point of view. But faulty execution is another matter." "Tim Gunn is the fairy godfather we all wish we could have—nurturing but no-nonsense, seasoned but not over it, frank but fair," Dennis Hensley wrote for the *Advocate.com* (March 15, 2006), in an article about Gunn titled "The Sanest Man in Reality TV."

Gunn comes across as a superlative educator on *Project Runway* partly because, for most of his professional life, he *was* an educator—a college teacher and administrator. Trained in architectural drawing and sculpture, he taught a course in three-dimensional design for several years at his alma mater, the Corcoran School of Art and Design. He later taught the same subject at the Parsons School of Design (known since 2005 as Parsons the New School for Design), where he also served as an associate dean (1987–2000) and chair of the Department of Fashion Design (2000–2007). "My role in [*Project Runway*] is so much like what I do at Parsons day in and day out," he told Dennis Hensley. Gunn also appears on the TV series *Tim Gunn's Guide to Style*, which debuted in 2007 and is a spin-off from his book, *Tim Gunn: A Guide to Quality, Taste, & Style* (2007), co-written with Kate Moloney. In 2007 Gunn ended his 25-year tenure at Parsons to become chief creative officer of Liz Claiborne Inc., a New York–based fashion conglomerate that generates nearly $5 billion in annual sales.

The first of the two children of Nancy Comfort Gunn and George William Gunn, Timothy Mackenzie Gunn was born on July 29, 1953 in Washington, D.C., and grew up in the Cleveland Park section of that city. His father (who died in 1995) was a special agent and writer with the Federal Bureau of Investigation (FBI) and an assistant to its longtime director J. Edgar Hoover; after he retired from the FBI, he became an editor for *Reader's Digest* and a consultant to writers on such subjects as the FBI and crime. Gunn's mother helped set up the Central Intelligence Agency (CIA) library before devoting herself to homemaking. Gunn's sister, now Kim Gunn Gundy, is three years his junior. His mother taught her son and daughter housekeeping skills to ensure that they would always be able to take care of themselves.

Gunn has traced his interest in design to his early childhood; he enjoyed constructing grand buildings out of Lego and creating outfits for his toy soldiers and his sister's Barbie dolls. He told Vicki Hyman for the Newark, New Jersey, *Star-Ledger* (February 15, 2006), "I had a Barbie obsession. I was concerned with the whole Barbie lifestyle." He also read avidly and studied piano. "I was solitary, but I was never lonely," he told Beth Perry for *People* (May 14, 2007). He was also introverted, introspective, and extremely shy and suffered from a severe stutter, which led his peers to bully him and fling "horrible slurs" at him, as he recalled to Eric Wilson for the *New York Times* (April 12, 2007). He felt so miserable that during his adolescence and teens, he repeatedly transferred from one boarding or private school to another—a dozen altogether. Adding to his unhappiness was his conviction that his father disapproved of him. "He loved me, but I knew that I wasn't quite the son he wanted; he really wanted a football jock," he told Perry. In elementary school Gunn was always last to be chosen for teams, and he joined none of the neighborhood youth teams that his father coached; as a high-school student, he excelled only at swimming—"It was nice and clean and you didn't sweat," he joked to Vicki Hyman. His limited athletic skills were, he added, "the bane of my father's existence."

After graduating from high school, Gunn entered Yale University, in New Haven, Connecticut; he concentrated first on English literature and then on architecture. He later transferred to the Corcoran College of Art & Design, in Washington, D.C., where he focused on sculpture. He was inspired by the work of the 20th-century American sculptor Joseph Cornell, famous for his boxed, compartmentalized assemblages of found objects. Commenting on Cornell's influence, Gunn told Eric Wilson, "I thought there must be a way of synthesizing all the different parts of my life in my own way. I really think it was Cornell who caused me to have the confidence to say I'm going to be an artist." Gunn has credited his teachers at Corcoran with fostering his creative impulses. One of his professors, William Christenberry, remembered him as "one of the most dedicated, passionate students" he had ever taught, as quoted in a Corcoran press release (April 23, 2009, on-line). According to Wilson, Gunn had an epiphany regarding his future when a professional artist who was assessing some of his student pieces told him, "I'd rather look at the space this work displaces than look at this work." Gunn graduated from Corcoran in 1976 with a bachelor of fine arts degree.

Gunn spent the next several years building models for architectural firms. He then returned to Corcoran to take a job as assistant director of admissions and to teach a course in three-dimensional design. Before the first day of classes, he vomited in the school parking lot from nervousness, but he soon grew to love teaching and interacting with students, and "the element of surprise when they set about doing their project assignments thrilled him even more," Robbie Daw wrote for *Instinct Magazine* (November 1, 2006, on-line). In the early 1980s a love affair in Washington led Gunn to reject an offer to teach at Parsons; after the painful breakup of the six-year relationship, he accepted a second offer from the school, in 1983. As a member of Parsons's admissions-office staff, he interviewed prospective students and evaluated their portfolios. He also taught three-dimensional design. During that period, in an environment in which many were deeply interested in fashion-related matters, he learned a great deal about the fashion industry. In 1989 Gunn was appointed Parsons's associate dean of academic affairs. In that capacity he collaborated on modernizing various curriculums and strengthened Parsons's affiliations with schools overseas, in France, Japan, South Korea, and the Dominican Republic. He also served as the school's resident fashion expert and engaged in many interviews for the print and broadcast media.

In about 1999 Gunn headed a committee charged with finding a successor to the soon-to-retire Frank Rizzo, the chairman of Parsons's Department of Fashion Design. (The first of its kind in the U.S., it was founded in 1906.) After an extensive search Gunn himself was appointed to the post, even though, unlike Rizzo, who had made his name as a designer of bridal gowns, he had never designed any clothing or studied fashion design. Assessing the fashion-design curriculum from the perspective of a Parsons insider who was also a fashion-department outsider—but one well-versed in design—Gunn concluded that it needed a major overhaul. "This famous department, with all of its great graduates, was really suffering from atrophy," he told Robbie Daw, referring to such former students as Tom Ford, Donna Karan, Marc Jacobs, Isaac Mizrahi, Anna Sui, Alexander Wang, and Jason Wu. "It was so caught up in its own success that it was afraid to change the formula. Basically the curriculum had remained unchanged for 48 years."

Gunn assumed his new post in the fall of 2000. Among other changes, the curriculum he introduced emphasized critical thinking and a broader and deeper study of both fashion history and the commercial aspects of the fashion industry. In a step that proved to be controversial, Gunn moved from the senior year to the junior year a program in which students designed and constructed apparel under the guidance of noted fashion designers, in what were termed internships. Now, to fulfill the requirements of what would be analogous to senior theses at other colleges, seniors had to design and produce seasonal collections without the direct influence of highly opinionated, strong-minded guest mentors, in the hope that the students' own design sensibilities would be strengthened. As before, the best of those collections would be shown in an end-of-year exhibition and runway show at Parsons. Many of Gunn's colleagues at Parsons and some of the famous designers who had worked with Parsons students took a dim view of the junior year/senior year change; some designers told him that he was "driving the American fashion industry into the ground," he recalled during a talk at the 92nd Street YM-YWHA in 2008, as quoted on jezebel.com (March 12, 2008). Parsons administrators stood by Gunn, and their confidence in him bore fruit when, after the senior show mounted in the spring of 2002, Julie Gilhart, the women's-fashion director at Barneys New York, bought the entire collection designed jointly by Lazaro Hernandez and Jack McCollough, who chose their mother's maiden names, Proenza and Schouler, for their label. Proenza Schouler apparel is now sold in dozens of high-end retail stores worldwide.

In 2004, when Bravo executives asked Gunn to join in the creation of a reality show devoted to fashion design, the premise of such a show struck him as "terrible," as he recalled to Randy Shulman. But after several meetings with the executive producers of the proposed show, Gunn agreed to work as an off-camera consultant. For the next six months, he helped to pin down various details, including characteristics to look for in potential contestants and whether or not those chosen should sew their own creations or have others sew them. Before long the producers decided that Gunn's role should be expanded to that of an on-camera mentor who would critique the would-be designers' work and offer advice. *Project Runway* debuted on the Bravo cable network on December 1, 2004. While the show initially attracted few viewers, for the season-one finale, it drew an audience of 2.5 million, making it the highest-rated telecast in Bravo history up to the time. Meanwhile, Gunn's appearances on the show had made him a cultural icon. Gunn, who has admitted to appearing too stiff when the show debuted, quickly emerged as an endearing fashion adviser, and he has been widely credited—along with the show's host, the supermodel Heidi Klum—with contributing greatly to the series' success. Some of his pet phrases—"Make it work," "Carry on," and "This worries me"—have caught on with the public. He told a *Time* (November 5, 2007) interviewer that in the classroom he always used the directive "Make it work": "It came about from having students who are much more inclined to start a project over rather than accept the challenge and try to fix it," he explained. *Project Runway* has earned 12 Primetime Emmy nominations and a 2007 Peabody Award for excellence in television broadcasting. Unlike most reality shows, *Project Runway* has never been faulted for sensationalism, and it has been generally well-received by the fashion industry. It has also been credited with renewing interest in fashion-design education; since the show's inception, applications and enrollments have increased dramatically in schools that offer programs in design and other aspects of fashion. (Applications to Parsons have risen by 30 percent.) According to Vicki Hyman, *Project Runway* "is smarter than your average reality show. In a genre that esteems deceit and champions ego, *Project Runway* is about talent and vision, whether it's constructing a new outfit by deconstructing a contestant's own ensemble or assembling a garden party dress made entirely from leaves and buds. . . . There is some ego . . . and some apparent maneuvering to keep the more ratings-friendly personalities in play . . . but the silver-haired, Banana Republic–clad Gunn elevates the proceedings with his dry wit and candid, though rarely condescending commentary." On *Larry King Live* (September 2, 2006, on-line), Gunn told King, "Fashion is so fully embedded in our culture today that there are mythologies about it. And if anything, this show demystifies much of that and really makes fashion very, very accessible to the public at large." Designers whose appearances on the show launched their careers—even if they were not the winners—include Jay McCarroll, Kara Saun, Wendy Pepper, Chloe Dao, Santino Rice, Jeffrey Sebelia, Uli Herzner, Christian Siriano, Kelli Martin, and Leanne Marshall. *Project Runway* now airs on the Lifetime Television network. Its sixth season began in August 2009.

In 2007 Gunn left Parsons to take the job of chief creative officer of Liz Claiborne Inc., one of the nation's largest apparel companies. Claiborne's chief executive officer, William L. "Bill" McComb, created the position specifically for Gunn, who serves as a creative guide for the hundreds of employees who design for Claiborne brands—Kate Spade, Lucky Brand Jeans, Juicy Culture, Mexx, Liz Claiborne New York (in partnership with its creative director, Isaac Mizrahi), Axcess (sold only at Kohl's department stores), Claiborne by John Bartlett (a menswear collection), Kensie, and KensieGirl, among others. "The easiest thing in the world for me would have been to stay at Parsons," Gunn told Randy Shulman. "I was very comfortable there and very proud of my achievements. I loved my work. I really thought I would retire there."

Tim Gunn: A Guide to Quality, Taste, & Style (2007) was co-written by Kate Moloney, the assistant chairperson of Parsons's Department of Fashion Design. Penelope M. Carrington wrote for the Richmond, Virginia, *Times Dispatch* (June 24, 2007), "The book is conversational and full of Gunn's sharp-witted prose that endeared him to TV viewers. The book expounds on his trademark 'Make it work' phrase and is more introspective than other books that link fashion success to knowing your body type." The spin-off reality series *Tim Gunn's Guide to Style* premiered on the Bravo network in September 2007.

In 2009 Gunn was featured in the first issue of Marvel Comics' sartorially themed miniseries *Models Inc.*, which went on sale during New York's Fall Fashion Week. Gunn was portrayed as a crime fighter, dressed in an Iron Man suit, who teams up with several Marvel heroines to help solve a murder committed during Fashion Week. Gunn will also appear in a cameo in the movie *Sex and the City 2*, which will be released in 2010.

Gunn lives in a condominium on the Upper West Side of New York City, in a duplex that houses his 10,000 books. He enjoys walking in the city, watching TV, and playing cards and the board game Trivial Pursuit. Openly gay, he is currently single. "I'd have to give something up to have a relationship, and I don't want to," he told Beth Perry. "I'm having the best time of my life."

Halladay, Roy

May 14, 1977– Baseball player

Address: Toronto Blue Jays, 1 Blue Jays Way,
Rogers Centre, Toronto, Ontario, Canada 0N
M5V 1J1

The Toronto Blue Jays' pitcher Roy Halladay, Alan Schwarz wrote for the *New York Times* (April 5, 2009), is "the kind of professional most young pitchers want to become." "While his peers consider him the game's best starting pitcher," Schwarz noted, "the public cannot instantly see why. While holding best-pitcher status in past years, Randy Johnson had his left-handed slingball, Pedro Martinez had that changeup and flair, Greg Maddux his stiletto control. Halladay is just really good at everything, a high, quiet plateau camouflaged by others' peaks and valleys. It is the difference between being great and [being] remarkable." Halladay joined the Blue Jays' organization imme-

Roy Halladay

diately after his high-school graduation, in 1995. He made a big splash when, in his second appearance in Major League Baseball (MLB) as a starter, in 1998, he pitched a near no-hitter. Demoted to the minor leagues because of his egregiously poor performance in 2000, he undertook a rigorous training and fitness regimen and became a keen student of the mental aspects of the game. He returned to the Jays the next year with newfound control, outstanding game-management skills, and "an array of pitches with more plane changes than a platinum-level frequent flier," Michael Farber wrote for *Sports Illustrated* (April 16, 2007). "All his pitches start in the same place and end in a different place," the Yankees' first baseman Mark Teixeira told Schwarz. A six-time All-Star selection, Halladay pitched for more innings than any other player in the American League (AL) in 2002, 2003, and 2008, and he has pitched more complete games (46) than anyone else in the majors since 2002. In 2003 he won the AL Cy Young Award for best pitcher. As of the end of his 12th season with the Jays, in 2009, he had posted a career winning percentage of .661, which ranks among the top 15 winning percentages ever among pitchers. In 2009 a panel of 100 baseball experts, many of them members of the Baseball Hall of Fame and winners of prestigious prizes in the sport, ranked Halladay seventh among the *Sporting News*'s choices of the 50 greatest current players of the game.

The second of the three children of Linda and Harry Halladay Jr., Roy Halladay was born Harry Leroy Halladay III on May 14, 1977 in Denver, Colorado, and was raised in Arvada, a Denver suburb. He has two sisters, Merinda and Heather; he and Heather, who is four years his junior, have been very close since childhood. Halladay's family began calling him "Roy" early on; his current nickname, "Doc," refers to the 19th-century Western dentist turned gunfighter John Henry "Doc" Holliday. Halladay's father worked as a private pilot for Stearns-Rogers Engineering and then the cheesemaker LePrino Foods; his mother was a homemaker. "We never had problems with Roy . . . ," Linda Halladay told Bob Elliott for the *Toronto (Ontario, Canada) Sun* (May 20, 2006), as posted on slam.canoe.ca. "He grew up wanting to please people." Both of Halladay's parents instilled in him a strong work ethic. Halladay began playing catch with his father at the age of three and joined a T-ball team at five. His intensity and competitive nature soon set him apart from his peers.

At Arvada West High School, Halladay made all-conference teams in both basketball and baseball. Already taller than average, he excelled in basketball with his "ability to dunk over most opponents with relative ease," Jeff Blair wrote for the Toronto *Globe and Mail* (June 27, 2003, on-line). He shone even more on the baseball diamond, where, when he was not pitching, he played first base. His high-school coach, Jim Capra, told Paul Willis for the *Rocky Mountain News* (July 4, 2007), "His freshman year during tryouts, you could tell he was going to be real good. He was throwing 82–84 [miles per hour]. . . . He had good size and good character. He was a good hitter." Relying on an overpowering fastball, as a pitcher Halladay posted a career high-school record of 25–2, with an astonishing 0.55 earned-run average (ERA), while leading Arvada West to a state championship in 1994 and a second-place finish in 1995. He was also an All-Conference and All-State selection for three years and was named the league and state Most Valuable Player during his junior and senior seasons. His senior-year statistics were outstanding: he allowed only 24 hits and five earned runs in 63 innings, with 105 strikeouts. He was an academic standout as well, graduating with a 3.6 grade-point average. By that time Halladay had become one of the most heavily recruited pitchers in the U.S. He signed a letter of intent to attend the University of Arizona but then chose to forgo college to enter the MLB draft. In a deal orchestrated by his longtime mentor, the legendary Colorado pitching coach Robert "Bus" Campbell (whom he had known since the age of 11, thanks to a meeting his father arranged), the Toronto Blue Jays selected Halladay with the 17th pick in the 1995 amateur draft. The Blue Jays' deal also included an $850,000 signing bonus, $11,000 of which Halladay used to buy a wooden fence for his high school's outfield.

By the time he entered the Blue Jays' farm system, Halladay had reached his full height—six feet, six inches—and had added a devastating curveball to his pitching arsenal. In the summer of 1995, he reported to the Blue Jays' Rookie League team in Dunedin, Florida. In 1996 he was assigned to the advanced class-A affiliate in Dunedin. He was named to the Florida State League's All-Star team and was ranked by the magazine *Baseball America* as the best all-around player in the Jays' farm system. During his time in Dunedin, Halladay started experimenting with a changeup, which soon became one of his staple pitches. Halladay spent the first half of the 1997 season with the Knoxville Smokies of the Southern League, then the class-AA affiliate of the Jays. Although he performed poorly the Jays sent him to the class-AAA Syracuse Chiefs (later renamed the SkyChiefs) partway through that season, as his last stop in preparation for the majors.

Halladay made his major-league debut on September 20, 1998, in a game against the Tampa Bay Rays. At 21 he was the third-youngest pitcher ever to start for the Blue Jays. He pitched five innings and racked up five strikeouts, while allowing two earned runs and two walks. He earned a no-decision in a 7–5 win for Toronto. In his second career MLB start and first MLB win, Halladay recorded a near no-hitter: in a game against the Detroit Tigers on the final day of the 1998 regular season, after throwing 73 strikes and no walks in 94 pitches, with two outs in the ninth inning, he surrendered a home run to the outfielder Bobby Higginson. (In baseball history there have been only two no-hitters pitched on the final day of the regular season: a combined no-hitter by four Oakland Athletics pitchers in 1975 and a perfect game thrown by the California Angels pitcher Mike Witt in 1984.) Halladay's performance helped to secure him a permanent spot on the Blue Jays roster for the 1999 season. That year he started in 18 of the 36 games that he pitched and ended the season with a record of 8–7, with a 3.92 ERA. He also garnered his first save as a relief pitcher, in a game against the Twins, and scored a complete-game shutout in a contest with the Tigers. By then it had become evident that Halladay was a strong starter who could go the distance, and that keeping him in the bullpen half the time to protect his throwing arm, as the Blue Jays' management had done, had not been necessary.

In 2000 Halladay performed poorly. In 19 game appearances, 13 of them starts, at the beginning of the season, he compiled a 4–7 record and posted a 10.64 ERA. He also allowed 80 earned runs, 107 hits, and 42 walks in 67$^2/_3$ innings, while opponents had a scorching .350 batting average against him. By that time opposing batters had caught on to his mostly conventional four-seam fastball, which normally reached 95 miles per hour but with little to no movement up, down, or sideways. He also had problems with his knuckle curve, a slight variation of the standard curveball that he had developed under the tutelage of Bus Campbell. Halladay's difficulties led the Blue Jays to send him back to the class-AAA Syracuse team, on which he continued to struggle. In the spring of 2001, the Blue Jays demoted Halladay to class-A Dunedin in the Florida State League. There, he began working with the Blue Jays' pitching specialist Mel Queen, who immediately ordered him to abandon the four-seam fastball. Queen then trained him to change his stance to the three-quarters position, so as to generate more movement; he had previously hurled the ball with a standard over-the-top motion. Halladay also sought the counsel of the sports psychologist Harvey A. Dorfman, whose book *The Mental Game of Baseball* (1989), co-written with Karl Kuehl, is widely considered to be the standard text on sports psychology. Halladay read that book and Dorfman's *The Mental ABC's of Pitching* (2000) and began a daily routine that included running, weight training, and figuring out Sudoku puzzles to sharpen his concentration. To further rid Halladay of bad habits and improve his frame of mind—he had been contemplating retiring from baseball—Dorfman persuaded him to move with his wife from Arvada to Florida. Halladay later recalled to Mike Klis, "Looking back, I really had no idea what I was doing. Even with the near no-hitter, I just reared back and fired. Just relied on stuff. I always had confidence, even when I was a young kid, and all the sudden I'd go out for my second full year in the big leagues and I was getting hit around. You lose that confidence, and it's amazing how fast things snowball on you when you don't know how to handle it."

During that period Halladay was transformed from a power pitcher into a finesse pitcher—one whose greatest strength is not speed but control and accuracy. He now had mastery in three types of fastballs (split-fingered and two-seam as well as an improved four-seam), two types of curveballs, and a changeup. His new stance enabled him to throw with more movement and deception. (For example, Halladay's two-seam fastball normally sinks to the right, and his four-seam fastball cuts away from batters.) In a matter of months, Halladay had earned promotions from class-AA Knoxville to class-AAA Syracuse before rejoining the Blue Jays' starting rotation in July 2001. In his first game after his return to MLB, against the Montreal Expos, in which he was given a no-decision, he struck out a then-career-high 10 batters. He finished the season with a 5–3 record and 3.16 ERA, while making 16 starts in 17 game appearances. Commenting on his turnaround, the Blue Jays' then–general manager, J. P. Ricciardi, told Jeff Blair, "What Roy did that year was save his career, nothing less."

In 2002 Halladay had a breakout season, compiling a 19–7 record. (His 19 wins were the most by a Blue Jays pitcher since David Wells, in 2000.) He posted a 2.93 ERA with 168 strikeouts in 239.1 innings, placing him fifth, sixth, and first in those categories, respectively, in the AL. He also played in an All-Star Game for the first time.

In 2003 Halladay led the majors and set a franchise record with 22 wins. He also led the AL in innings pitched (266) and tied for the league lead in games completed (nine), while posting a 3.25 ERA and a then-career-high 204 strikeouts, placing him fifth and third in the AL in those categories, respectively. One of his more remarkable achievements that season was allowing only 32 walks, which resulted in an astonishing ratio of strikeouts per walk of 6.38. He participated in his second consecutive All-Star Game and helped lead the Blue Jays to 86 wins (nine too few for a wild-card spot). At the end of the season, the *Sporting News* named Halladay the AL Pitcher of the Year, and he won the AL Cy Young Award, receiving 26 of 28 first-place votes.

Injuries plagued Halladay for most of the 2004 season. Shoulder tendinitis twice forced him to go on the disabled list. He pitched for only 133 innings—half as many as the year before—going 8–8 with a 4.20 ERA, giving up 39 walks. He later attributed his mediocre performance to a "tired throwing arm," which had been overworked from excessive conditioning during the preseason. The season ended even more poorly for the Blue Jays, who won only 67 games and lost 94. That year Halladay agreed to a five-year extension of his contract, closing the door on becoming a free agent after the next season. In 2005 he was selected for the AL All-Star team for the third time and posted a 12–4 record and a 2.41 ERA in 19 games. Then, on July 8, a week before the All-Star break, a line drive hit by the Texas Rangers' outfielder Kevin Mench slammed into his left leg, fracturing the tibia and keeping him out of play for the rest of the season. Nevertheless, he led the AL that year in complete games, with five. In the spring of 2006, Halladay signed a $40 million contract that would keep him in Toronto through the 2010 season.

Halladay had recovered fully by the start of the 2006 season. In 32 starts he posted a 16–5 record with a 3.18 ERA in 220 innings, second- and fourth-best in the league, respectively. He also finished second in the majors in winning percentage (.762) and tied for second in complete games (four) and was again named to the All-Star team. The Blue Jays improved their record to 87–75 but missed out on a wild-card berth once again. Halladay opened the 2007 season in top form and compiled a 4–0 record in April, for which he was named AL Pitcher of the Month. In May he underwent an appendectomy, returning to action two weeks later to record his 100th career victory, in a game against the Chicago White Sox. He compiled a 16–7 record for the season and led the majors in complete games (seven). He was also among the AL leaders in wins, winning percentage (.696), and innings pitched (225.1). One of his complete games that season included a 10-inning win against the Detroit Tigers, which further solidified his reputation as one of the most durable pitchers in the game. The Blue Jays, however, were plagued with injuries throughout the 2007 season and missed out on the play-offs again, finishing with 83 wins and 79 losses.

In 2008 Halladay had one of his best all-around seasons. He recorded 20 wins for the second time in his career and was named to the AL All-Star team for the fifth time. He also set a then–career high 206 strikeouts and led the league in innings pitched (246), complete games (nine), and shutouts (two). He allowed only 39 walks, making him only the second pitcher in MLB history to post 200 strikeouts and fewer than 40 walks in each of two seasons. Only Cliff Lee of the Indians, who posted 22 victories and a 2.54 ERA, bettered Halladay's record of 20 wins and 2.78 ERA in 2008. Halladay also finished second to Lee in the voting for that year's AL Cy Young Award. The Blue Jays finished the season fourth in their division, with an 86–76 record.

In 2009 Halladay appeared in his seventh straight opening-day start for the Blue Jays (a team record) and achieved his first win of the season, against the Detroit Tigers. Going into the All-Star break, he was among the league leaders in wins, innings pitched, complete games, and ERA, despite his spending two weeks on the disabled list with a strained groin muscle. He was the starting AL pitcher in the All-Star Game. While Halladay was the subject of numerous trade rumors going into the MLB trade deadline of July 31, he remained with the Blue Jays. Though he struggled during the month of August, in which he posted a 2–4 record and lost three consecutive games, he returned to form in September, pitching two consecutive complete-game shutouts. That month he recorded his second career one-hitter, when he shut out the New York Yankees, 6–0, in another complete game victory. In 32 starts he posted a 17–10 record with a 2.79 ERA in 239 innings, third- and second-best in the league, respectively. He also managed a league-low 39 walks and led the majors in complete games (nine) and shutouts (four). In addition, with 208 strikeouts, he surpassed his career-high total from the previous year, making him the only pitcher in Blue Jays history to record 200 or more strikeouts in three consecutive seasons. The Blue Jays again finished the season fourth in their division, with a 75–87 record. Halladay's contract with the team will end in 2010.

Halladay and his wife, Brandy, are members of the Mormon Church (formally, the Church of Jesus Christ of Latter-day Saints). The couple live in Odessa, Florida, with their two young sons, Braden and Ryan. Halladay and his wife are active supporters of the Jays Care Foundation, which helps children in need. Each year since 2005 they have paid for a private luxury suite in Rogers Centre, the Blue Jays' home stadium, for use by youngsters under treatment at the Hospital for Sick Children in Toronto, and on an occasional Sunday they join that day's young guests in the suite; they have also provided funds to improve facilities at the hospital. In 2008 Halladay was named the George Gross/*Toronto Sun* Sportsperson of the Year (named for the *Sun*'s first sports editor).

Hass, Amira

1956– Israeli journalist

Address: Ha'aretz, *21 Schocken St., Tel Aviv 61001, Israel*

"My task as a journalist is to monitor power," the Israeli reporter Amira Hass told Robert Fisk for the London *Independent* (August 26, 2001). "I'm called 'a correspondent on Palestinian affairs,' but it's more true to say that I'm an expert in Israeli occupation." Hass, who reports on Israeli-Palestinian issues for the liberal Israeli newspaper *Ha'aretz,* is known for being the only Jewish Israeli journalist to live in Gaza and, subsequently, the West Bank, which have been home to Palestinian refugees since 1948 and have been under Israeli military occupation since 1967. Having lived among the Palestinian populations since the Oslo Accords of the early 1990s, Hass has documented the Palestinians' daily lives and hardships in reports that regularly contradict official Israeli accounts. Joel Schalit wrote for the leftist American magazine *Tikkun* (June 30, 2004) that Hass's reporting is "stunningly clear, concise, and unabashedly moralistic," adding, "one cannot walk away from any of Hass' writings on the subject without having learned what it really feels like to live under Israeli military rule." For the last two decades, Hass has written about Israeli policies with regard to Jewish settlements in Gaza and the West Bank and the severe restrictions placed on Palestinians in the occupied territories. "In the end, my desire to live in Gaza stemmed neither from adventurism nor from insanity, but from that dread of being a bystander, from my need to understand, down to the last detail, a world that is, to the best of my political and historical comprehension, a profoundly Israeli creation," Hass wrote in her book *Drinking the Sea at Gaza.* "To me, Gaza embodies the entire saga of the Israeli-Palestinian conflict; it represents the central contradiction of the state of Israel—democracy for some, dispossession for others; it is our exposed nerve." Hass has often said that her decision to report on the plight of Palestinians was inspired largely by her mother's recollection of being marched to a Nazi concentration camp while German women looked on indifferently. "While most people go through life fearful of being victims," Michael Fox wrote for the *Jewish Bulletin* (July 26, 2002), "[Hass's] nightmare scenario is to be a bystander." In her column in *Ha'aretz* (August 30, 2006), Hass explained her work as stemming from a sense of responsibility: "As Jews we all enjoy the privilege Israel gives us, what makes us all collaborators. The question is what does every one of us do in an active and direct daily manner to minimize cooperation with a dispossessing, suppressing regime that never has its fill. Signing a petition and tutting will not do. Israel is a democracy for its Jews. We are not in danger of our lives, we will not be jailed in concentration camps, our livelihood will not be damaged and recreation in the countryside or abroad will not be denied to us. Therefore, the burden of collaboration and direct responsibility is immeasurably heavy." The American writer and activist Susan Sontag, in praise of *Drinking the Sea at Gaza* (as quoted on the publisher's Web site, semiotexte.com), wrote that "a particular debt of gratitude is owed to courageous Israeli Jews such as Amira Hass who have born witness to the increasingly cruel terms of Israeli military occupation and settler annexation. Amira Hass speaks on behalf of justice; in speaking of the sufferings and the rights of people in despair, she defends the true interests of Israel."

The history of the Jews and that of the Arab peoples date from Old Testament times. For many centuries the two groups lived in relative harmony. The radical change in their relations has been traced to the late 19th century, which marked the birth of Arab nationalism and the beginning of Zionism, a movement whose aim was the establishment of a Jewish national state in Palestine. The determination of the precise boundaries of Palestine, which passed from Turkish rule to British rule after World War I, is but one of the many immense, and so far insurmountable, problems underlying the almost unceasing conflict that has raged in the Middle East for many decades. Contributing to the complexities in the question of who owns what land in Palestine are significant differences among the parties to the conflict, not only in the interpretations of events and historical documents but also in the accounts of what precisely happened on countless occasions; thus, the histories of Palestine according to Arabs, on one side, and Jews, on the other, bear little resemblance to each other. Among the key documents whose meanings and intentions are in dispute are the Balfour Declaration of 1917, which stated that the British government "view[ed] with favour the establishment in Palestine of a national home for the Jewish people," and United Nations Resolution 181, by which the General Assembly in 1947 called for the partition of British-ruled Palestine into an Arab state and a Jewish state. Among the many crucial events whose chronologies in Jewish and Arab accounts differ markedly is the Six-Day War, in which, in June 1967, the Israeli army defeated the armies of Egypt, Jordan, and Syria. Moreover, neither Jews nor Arabs form a cohesive group; rather, each has always been represented by several or many factions, all of which have distinctive ideas and agendas. Virtually no descriptions of armed conflicts or other events in the Middle East, whether published or broadcast from Israel or its Arab neighbors or from the United States, Western Europe, or elsewhere, are received dispassionately by those favoring one side or another; almost invariably, they are viewed as biased, inaccurate, and incomplete. "The Israeli-Palestinian conflict is a war of dueling narratives about who is the aggressor, who is the victim and who is the rightful heir to the land . . . ," Marjorie Miller wrote for the *Los Angeles Times* (March 15, 2002). "Language is a weapon in all wars, and no less so in the Israeli-Palestinian conflict."

While Hass is not the only dissident Israeli journalist—Tom Segev and Gideon Levy, both of whom also write for *Ha'aretz*, are among several others—she has often been the only correspondent in the territories when they have been under siege. Through her proximity to the subjects of her reports, Hass has exposed the shortfalls of the Israeli-Palestinian peace process, portrayed oppressive conditions on the ground as being among the causes of continued violence, and served as one of the few links between two populations who often view each other with fear, hatred, and distrust. While she is seen by some as an embodiment of the Israeli national conscience, others have called her a traitor to Israel. Her reports have functioned as counter-narratives to the official versions of both the Israeli and Palestinian authorities, and she has been criticized and threatened by individuals on both sides of the region's political spectrum. While condemning the policies of the Israeli leadership, Hass has also contrasted the privileges of some members of the Palestinian Authority with the poverty of the people they represent, shone a light on corruption in the occupied territories, and been a harsh critic of various factions in the Palestinian leadership, seeing them as often more focused on controlling the people they claim to speak for than on freeing them. Contrary to some people's views about her, Hass believes in the right of Israel to exist. "If a State is not allowed to exist because of the injustices it placed on others then tell me one that has a right to exist," Hass told Catherine Taylor for the *Australian* (March 22, 2001). "I can see how lives were torn apart by the creation of Israel. As a result I live in a contradiction and I have no way to solve it. All I can do is look for ways to stop the injustice now."

Amira Hass was born in 1956 in West Jerusalem, the only child of Hannah Levy, who came from Sarajevo, in what was then Yugoslavia, and the Romanian-born Avraham Hass, Holocaust survivors who later became longtime members of the Israeli Communist Party. "There are three things I always knew about," Hass told Chris Kutschera for the *Middle East* (January 1, 2008), a monthly headquartered in London, England. "My name. . . . Then communism: all our friends were communist. For me the world was communist . . . And finally, the Holocaust: I do not know when I first heard about it, I always knew." Her mother had joined Marshal Tito's partisans against the German occupation of Yugoslavia. Forced to surrender to the Nazis, she survived nine months in 1944–45 in the Bergen-Belsen concentration camp, in Germany. While in captivity, at great peril to her own life, her mother wrote a diary of events in the camp (published in 1982 as *Inside Belsen*) and taught children there. "To her it was a way of fighting, for sure, to have these most forbidden activities," Hass told Harry Kreisler of the Institute of International Studies at the University of California–Berkeley, as part of the Conversations with History series (October 24, 2003, on-line). Hass's father, meanwhile, had survived three to four years under Romanian fascists in the Jewish ghetto in the Nazi-occupied Transnistria region of the Ukraine. Hass has described her parents' lives as containing contradictions after they arrived as refugees in Israel: having been oppressed in Europe, they felt they had found sanctuary in a country whose government oppressed others.

After the establishment of Israel, in 1948, hundreds of thousands of Palestinians fled the new state of their own accord or were forced from their homes and settled as refugees in both Gaza and the West Bank. After Israel annexed those territories (as well as the Sinai peninsula of Egypt and the Golan Heights of Syria) in the 1967 war, the Palestinian refugees came under direct Israeli military oversight. Following the first *intifada* (or uprising against the occupation) in the late 1980s and early 1990s, the Oslo Peace Accords, announced as a step toward Palestinian self-determination, were signed. Hass's work, documenting daily life in the occupied territories, began in earnest after the signing of the accords. As a child of Holocaust survivors, Hass told Sylvain Cypel for the London *Guardian Weekly* (January 3, 2001), "I have an aching sensitivity to any dehumanisation that is typical of some survivors' children." A legacy of being the child of refugees, she told Fox, is that she identifies "with what I call the permanent temporaries."

Hass attended the Hebrew University of Jerusalem and then Tel Aviv University, where she pursued a master's degree but became frustrated by her thesis subject, which focused on the history of Nazism and the reaction of the European left to the Holocaust. "When you go deeply into the history of Nazism you begin to wonder how humanity could have reached such a point," she told Taylor. "The subject became too autobiographical and I knew I could not go on." After traveling and working at jobs that included teaching and cleaning, she took advantage of a connection to get a copy-editing position at *Ha'aretz* in 1989. Later that year, when a violent revolution took place in Romania, Hass asked her new editors to send her there. (She had spent several months in Bucharest in the late 1970s.) Her editors agreed, and she covered the revolution for two weeks before returning to her copy-editing job in Israel. While still at *Ha'aretz*, desiring "something more meaningful in life," as she told Taylor, she volunteered for the group Workers' Hotline, helping Palestinian workers who had complaints against Israeli employers. Hass's work with that group coincided with the first Palestinian intifada, which lasted from 1987 to 1993. Her experience with Workers' Hotline proved formative for her, as previously Hass had felt that her anti-occupation activism could be confined to Israel and that she did not need to interact with the Palestinians or to see how they lived. "During the Gulf War, I reached Gaza under curfew—I'd gone to give Palestinians their checks from Israeli employers," she told Fisk. "That's when my romance with Gaza started. No Israeli journalist knew or covered Gaza."

Hass began writing articles regularly for *Ha'aretz* from the occupied territories in 1991. "My heart would break when I'd talk to old women who still had the keys to the homes they were forced to leave [in 1948]," she told Taylor. She began staying at the homes of friends, among them the Palestinian leader Haidar Abdel-Shafi, which was an important step in establishing trust with the people she was sent to cover. After the Oslo Peace Accords were signed, in 1993, *Ha'aretz* assigned her to cover Gaza full-time. Although her editors advised her against moving there, especially as a single woman, "I knew at once that I wanted to live there . . . ," she told Fisk. "I really wanted to taste what it means to live under occupation—what it is like to live under curfew, to live in fear of a soldier." While many Israelis questioned her desire to live among the Palestinians, Hass saw the move as a necessity. "I think it's so natural for a journalist to do so," she told Kreisler. "If I were asked to cover French affairs, I would go and live in Paris, and travel a lot in France, not write about France from Germany." Similarly, she told Taylor that "Israel's colonialist thinking had seeped so deeply into people's minds that it was accepted to write about Palestinians but not to live with them." Renting an apartment with roommates in the Rimal neighborhood, she stayed in Gaza for three years, filing reports that detailed what she saw as the failure of the peace process. "I referred to Israel's policies on the ground, which were at stark contrast with [the] concept of peace: such as settlements, such as the developing policy of closure, which is the Israeli version of the apartheid pass system," she said in 2004 in Stockholm, Sweden, in accepting an award for journalistic courage. Hass has described Gaza since 1993 as a cramped area that most have not been allowed to leave; where borders have been shut down for weeks at a time, with resulting damage to the fragile economy; and where people sometimes do not know from day to day whether their electricity, gas, medicine, food, or water will be cut off by a blockade that, she told *Democracy Now* (December 2, 2008), "reduces people's lives . . . to basic concern[s]. . . . People are still offended by the very need to be preoccupied all the time by those needs." In 1996 she published her first book, *Drinking the Sea at Gaza* (published in English in 1999), a chronicle of the daily lives of Gazans since the first intifada. In 1997 she relocated to Ramallah, in the West Bank, where she remains today and which she has called a "five-star prison" in comparison with Gaza. While the West Bank was generally much safer than Gaza, in 1998 Hass and a photographer—while reporting on an attack by Jewish settlers on Palestinian farmers in the West Bank—were shot at by the settlers. In 2003 Hass published *Reporting from Ramallah: An Israeli Journalist in an Occupied Land*, translated by Rachel Leah Jones, an anthology of selected *Ha'aretz* articles printed from 1997 to 2002. The book chronicles the breakdown of the peace process, which preceded the second intifada, also commonly referred to as the Al Aqsa Intifada.

During an interview with Amy Goodman for the radio program *Democracy Now!* (April 12, 2005), Hass said that in Israel and the occupied territories, "There are two sets of laws which apply to each separate people. There are two—there are privileges and rights for the one people, for the Israeli people, and mostly for the Jews among . . . the Israeli people, and there are restrictions and decrees and military laws which apply to the other people, to the Palestinians. The Palestinians, as a people, are divided into subgroups, something which is reminiscent also of South Africa under apartheid rule. You have the Palestinians, the Israeli Palestinians who are citizens, but . . . seventh-rate citizens. You have the Palestinians of Gaza, and you have the Palestinians of the West Bank, and now you have Palestinians in every different enclave. There are different restrictions and different decrees which apply to these different enclaves. . . . So all these subdivision[s] of the other people, which disconnects them, which fragments them as a people. And then you have one government, which is elected, which actually decides about the future of both peoples, the scope of development of both peoples, but it is being elected only by one people. For me, this is a form of apartheid, of demographic separation which is meant to improve the conditions and the well-being and the future of one people on the account of the other." While some point to the 2005 Israeli withdrawal from Gaza as a step toward a two-state solution to the region's conflict, Hass, who has since found it increasingly difficult to travel there, has written that Israel still controls and polices Gaza and that the territory effectively remains under occupation. At the same time, Hass has been documenting the expansion of colonial settlements in the West Bank, which, she has argued, furthers the fragmentation of the Palestinian population there.

Some have described Hass's writing style as both passionate and, at times, scientific and observational. She told Kreisler, "I'm trying to avoid slogans as much as possible, because I live in a society, both Israeli and Palestinian, that is really overcrowded with slogans and one-sentence exclamations. And . . . I'm appalled by it." Hass, who rejects the notion of journalistic objectivity, has famously said that the social role of the journalist is to monitor, and be skeptical of, those in power. She has said that with regard to the occupation, Israeli journalists, while ostensibly free of censorship, are still faced with a dilemma of having to monitor the powerful figures who ensure their privileges—resulting in a reluctance to challenge official versions of events. Hass has repeatedly expressed the fear that her work amounts to, as the saying goes, preaching to the converted. She told Angel Ricardo Martinez for the *Palestine Chronicle* (December 28, 2008, on-line), "It's not that there is official censorship, it's just that there is an unwillingness of most Israelis to know."

Hass, who was named a Press Freedom Hero by the International Press Institute in 2000, has received numerous awards for her reporting. In 2002 she won a Bruno Kreisky Human Rights Prize. The following year she won the UNESCO/Guillermo Cano World Press Freedom Prize, which honors people who have advanced the cause of freedom of expression in the world at great personal risk. The award is named for the Colombian journalist Guillermo Cano, who was murdered in the 1980s for his critical reporting on the country's drug cartels. In 2004 Hass received the first Anna Lindh Award, named for the murdered Swedish foreign minister and given in honor of those who have fought against prejudice and oppression. In 2009 Hass received a Lifetime Achievement Award from the International Women's Media Foundation. In introducing Hass at the award ceremony, the CNN reporter Christiane Amanpour described her as "one of the greatest truth-seekers of them all," according to a transcript posted on the Web site Democracy Now (October 21, 2009). "Some call her a traitor. It is uncomfortable to hear the truth; it's very uncomfortable to tell the truth. Some say that she is the only voice of truth in a polarized conflict. For twenty years, she's paid no attention to either of these camps, choosing instead to follow her own path. Amira knows . . . that dictators do not like journalists, but more than that, democracies often don't like journalists either." Hass, in her acceptance speech, called the award a recognition of her failure rather than success as a journalist. "It's not about achievement that we should be talking here, but about a failure," Hass said, according to the Democracy Now transcript. "It is the failure to make the Israeli and international public use and accept correct terms and words which reflect the reality, not the Orwellian Newspeak that has flourished since 1993 and has been cleverly dictated and disseminated by those with [vested] interests. The peace process terminology, which took reign, blurs the perception of real processes that are going on: a special Israeli blend of military occupation, colonialism, apartheid, Palestinian limited self-rule in enclaves, and a democracy for Jews."

Hass is the subject of a documentary, *Between the Lines*, directed by Yifat Kedar, as well as a play, *Wall Whispers*, by the French playwrights Ariel Cypel and Gael Chaillet. The latter, about the life of Palestinian prisoners in Israel, centered on the relationship between Hass and a prisoner. A young militant sentenced in 1990, at 23, to almost three decades in prison for throwing Molotov cocktails at Jews during the first intifada, Mahmud Al Safadi began to read Hass's columns while incarcerated and started writing letters to her. Soon they were speaking regularly on a smuggled mobile phone, and Hass began recording his descriptions of daily life behind bars in Israel. In 2006, after 17 years, he was released on parole. *Wall Whispers* was first produced in Paris in 2008 and is scheduled to be shown in Israel and the West Bank.

In the fall of 2008, Israeli authorities declared Gaza off-limits to journalists and closed its borders in response to rocket attacks from Hamas, the governing body in Gaza; the attacks, which killed three Israeli civilians, had followed an Israeli-imposed, several-months-long, intermittent blockade of funds, food, water, electricity, and aid. Despite the closing of the borders, Hass entered Gaza by boat with peace activists but was told by Hamas to leave on November 30, because they could no longer guarantee her safety. Upon her return to Israel, she was detained by Israeli authorities; *Ha'aretz* later secured her release. Subsequently, Israel launched an attack on Gaza, killing at least 1,300 people and injuring thousands more. Hass's *Ha'aretz* column on January 7, 2009, was entitled "Lucky My Parents Aren't Alive to See This." "Even before the language laundromat developed to its current sophistication," she wrote, "my parents were nauseated by phrases like the 'the war for peace in the Galilee' or 'disturbances of public order' when the public order was the occupation and the disturbance was resistance to it. When order is preventing the Palestinians from having what the Jews have a right to and demand. . . . Because of my parents' history they knew what it meant to close people behind barbed-wire fences in a small area. . . . How lucky it is that they are not alive to see how these incarcerated people are bombarded with all the glorious military technology of Israel and the United States."

In May 2009, according to *Ha'aretz* (May 12, 2009), Hass was again arrested by Israeli authorities upon exiting the Gaza Strip, "for violating a law which forbids residence in an enemy state." She was later released on bail.

Hass lives in Ramallah.

Hathaway, Anne

Nov. 12, 1982– Actress

Address: Creative Artists Agency, 2000 Ave. of the Stars, Los Angeles, CA 90067

The actress Anne Hathaway emerged as a teen icon when, at 19, she starred in the popular fantasy film *The Princess Diaries* (2001), and she solidified her appeal as a bankable young star in the 2004 movies *Ella Enchanted* and *The Princess Diaries 2: Royal Engagement*. Concerned that she would be typecast if she continued to portray sweet, klutzy young women in family films, she fought to secure roles in more adult-themed projects; as Mal Vincent put it in the Norfolk *Virginian-Pilot* (January 13, 2006), "Now, she's accepting only roles that don't require her to wear a tiara." When she appeared as the emotionally disconnected wife of Jake Gyllenhaal's character in the award-winning 2006 film *Brokeback Mountain*, audiences and critics alike recognized her potential as a dramatic performer. She came into her own as the star of the 2006 fashion-industry satire *The Devil Wears Prada*, following up that hit film with the lead role in *Becoming Jane* and a major part, opposite Steve Carell, in the 2008 comedy *Get Smart*. She also won praise and a Golden Globe Award nomination for her role as a recovering addict in *Rachel Getting Married* (2008). On her ability to avoid typecasting, Hathaway told Vincent, "I had to find myself as a woman before I could leave those girl-finds-a-woman stories. I used to worry about the wrong things—like how I looked and things. Now, I worry only about the character."

Anne Jacqueline Hathaway was born on November 12, 1982 in Brooklyn, New York. Her father, Gerald, is a lawyer; her mother, Kate McCauley, is an actress who played the character Fantine in a national tour of the highly popular musical *Les Misérables*, based on the novel by Victor Hugo. When Hathaway was five years old, her family moved from Brooklyn to the New York suburb of Millburn, New Jersey. Hathaway developed a taste for acting at a young age. "The day we moved from Brooklyn, my parents gave my brother [Michael] and me a video camera and told us to keep busy by making a movie," she told Stephen Whitty for the Newark, New Jersey, *Star-Ledger* (April 11, 2004). She noted that in the resulting footage, "I'm 5 years old, sitting on this cocktail table in an empty room, improvising a 15-minute monologue about being on the beach with my cat, and acting my heart out."

When Hathaway was seven or eight, she traveled with her mother on the *Les Misérables* tour and was inspired to become an actress. Although her parents supported her decision, they encouraged her to wait until she was in her teens before going on auditions. "I was champing at the bit to start earlier, honestly, but my parents insisted the career aspect could wait," Hathaway told Whitty. "It sounds like such a cliché, but you can have a career at any age. You can't relive your childhood." Taking her parents' advice, she focused on common childhood activities, excelling at schoolwork and playing soccer. In middle school she began to act in local plays at the Paper Mill Playhouse in Millburn, and at 14 she had a starring role in Millburn High School's production of the musical comedy *Once Upon a Mattress*. She was the only teen accepted to study for six months with the prestigious Barrow Group, a theater company in the New York City borough of Manhattan. At 15 Hathaway went on her first audition for a commercial. "I'd take a train, go into the city and smile for a Cheez Whiz commercial," she told Jesse McKinley for the *New York Times* (February 18, 2002, on-line) of such experiences. "I really didn't find it fulfilling." Raised as a Roman Catholic, Hathaway also considered becoming a nun when she was 15. When she later learned that her older brother was gay, she decided against that path, given the church's stance against homosexuality. In addition to acting, Hathaway had a talent for singing; a soprano, she honed her voice through training with vocal coaches and choral groups, culminating in her performance in 1999 at New York's Carnegie Hall as a member of the All-Eastern United States High School Honors Chorus.

Three days after singing at Carnegie Hall, Hathaway auditioned successfully for a role on the Fox television network's family drama *Get Real*. In that series, which proved to be the 16-year-old actress's big break, she played Meghan Green, a high-school overachiever struggling to decide if she wants to attend college immediately after graduation. The show lasted for only one season but provided Hathaway with enough exposure to secure roles in other productions. She co-starred in the independent film *The Other Side of Heaven* (2001) and, on her way to New Zealand for the shoot, stopped in Los Angeles, California, to audition for a role in the Disney comedy *The Princess Diaries*. During the audition Hathaway accidentally fell off her chair, endearing her to the film's director, Garry Marshall, who had been looking for an actress capable of a comedic performance as a clumsy young woman. "She didn't have to act to play the klutzy princess. She is authentically awkward," Marshall told Vincent. "I'm a big, fat, sloppy, messy, get-in-the-dirt, rip-your-clothes-up kind of klutz," Hathaway told the *Grand Rapids (Michigan) Press* (August 13, 2004). "I knock over lamps. I have bruises in the oddest places."

The Princess Diaries was a box-office success. In the film, based on Meg Cabot's 2000 novel of the same name, Hathaway played Mia Thermopolis, a socially inept teenage girl who discovers that she is a princess and heir to the throne of the (fictional) European country Genovia. The film followed Mia's struggle to balance her normal high-school life with her training at the hands of the queen (played by the veteran actress Julie Andrews) to become a princess. Although many critics pointed out the film's teen-drama clichés, most found Hathaway's performance a standout. "If Andrews oozes regal poise and Hathaway radiates movie star allure—and they do—credit the actresses, not this flimsy fairy tale," Christine Dolen wrote for the *Miami Herald* (August 3, 2001, on-line). The film's popularity elevated Hathaway to teen-idol status; she was named one of the "25 Most Intriguing People" by *People* and appeared as a guest on MTV's music-video show *Total Request Live* and the TV comedy show *Politically Incorrect*. Due to her acting work, Hathaway missed her first semester at Vassar College, in Poughkeepsie, New York, where she worked toward a degree in English with a minor in women's studies. She transferred to New York University in 2005; she has yet to finish her degree.

The Other Side of Heaven, filmed before *The Princess Diaries* but not released until 2002, opened to mediocre reviews. The film chronicles the adventures of the real-life Mormon missionary John Groberg (played by Christopher Gorham), who leaves his home and his girlfriend, Jean (Hathaway), to operate a mission on a remote island. In the film Hathaway's performance took a backseat to Gorham's, and Scott Foundas wrote for *Variety* (January 27, 2002, on-line) that her role "consists of little more than occasional voiced-over readings of Jean's love letters." That year Hathaway also had a small role in the film adaptation of Charles Dickens's novel *Nicholas Nickelby*, which focuses on the adventures of the young title character, whose father has left the family penniless. The film won a Golden Globe nomination for best picture, which helped Hathaway gain further recognition.

Hathaway made her Broadway debut in 2002, appearing in the musical play *Carnival* as the orphan Lili. Many critics were taken with her singing and dancing; the theater critic Ben Brantley wrote for the *New York Times* (February 9, 2002, on-line) that her status as a novice helped to project the innocence of the character she portrayed: "Somehow [she] makes unspotted purity look like the latest fashion. This is essential, since the appeal of *Carnival*, a show of strangely polarized sensibilities, lies in the balance of a slightly smirky cynicism and the unquestioned innocence of its leading lady. Ms. Hathaway, best known for the *Cinderella* fantasy film *The Princess Diaries*, has a flutish, frill-free soprano that is the opposite of show-biz brass and a pretty, open face that looks as if it had never raised an eyebrow."

Hathaway returned to teen-fantasy fare with *Ella Enchanted*, a modern take on the Cinderella fairy tale. While the film received mixed reviews, several critics commended Hathaway's performance. David Rooney wrote for *Variety* (April 4, 2004, on-line), "While the mix is as uneven as the performance styles, the glue that holds the sweet teen-fantasy together is star Anne Hathaway, who continues to evolve into a luminous young lead." Writing for *TVguide.com* (2004), Angel Cohn noted that "Hathaway's infectious charm and easy chemistry with the attractive [Hugh] Dancy more than compensate for minor liabilities like the uneven tone director Tommy O'Haver establishes. Audiences, especially preteens, will be enchanted by Ella." Also that year Hathaway starred in *The Princess Diaries 2: Royal Engagement*. The film finds Mia, now a recent college graduate, searching for a husband so that she can assume the throne of Genovia. Most critics found *Royal Engagement* to be little more than a more elaborate version of the original film; Claudia Puig wrote for *USA Today* (August 10, 2004, on-line), "*The Royal Engagement* seeks to plump up its thin plot with sentimentality, trotting out many of the original cast members in an attempt to remind audiences of what they liked in the first place."

Although she was now a bankable star with a growing fan base, Hathaway was concerned about being typecast in teen and family fare. "I'm a 21-year-old in a G-rated movie," she told the *Grand Rapids Press*. "This isn't exactly the kind of artistic choices that I want to be making right now, but at the same time, I'm grateful to be able to make them." She said in an interview for the Web site iVillage, "By the end of *Princess Diaries 2*, I was ready to do something completely different. I got into this not to typecast myself. I got into it to be an actress, to scare the sh*t out of myself, and force myself into a place outside of my comfort zone."

With her next two films, Hathaway was successful in making a break from teen fare. The 2005 film *Havoc*, which went straight to DVD, found the actress playing an affluent Los Angeles teenager who flirts with a dangerous inner-city gang to escape her safe suburban lifestyle. Hathaway also appeared that year in the Ang Lee–directed critical and box-office success *Brokeback Mountain*. Starring Heath Ledger and Jake Gyllenhaal, the film explored the ill-fated romance of two male ranch hands who fall in love while working together in the mountains of Wyoming. Confronted by the antigay prejudices of the rural Midwest of the 1960s and 1970s, Ennis (Ledger) and Jack (Gyllenhaal) pursue their love affair in secret. In the film Hathaway played Lureen Newsome, the rodeo queen Jack marries in order to give the appearance of living a "normal" life. Michelle Williams played the wife of the Ledger character; Jack Garner wrote for the Rochester, New York, *Democrat and Chronicle* (January 6, 2006) that Hathaway and Williams were "excellent as the emotionally abandoned women." The film won four Golden Globe Awards, including best motion picture in the drama category, and was nominated for an Academy Award for best picture.

Hathaway returned to the screen as the star of the hit comedy *The Devil Wears Prada*. The film was directed by David Frankel and adapted from Lauren Weisberger's best-selling, same-titled book, a roman à clef rumored to be about Weisberger's tenure under Anna Wintour, the editor of the fashion magazine *Vogue*. In the film Hathaway played Andrea, the assistant of the cold-hearted fashion mogul Miranda (Meryl Streep), the editor of the fictional magazine *Runway*. While enduring Miranda's malicious barbs, Andrea finds herself becoming more like her reprehensible boss. Writing for *Variety* (June 22, 2006, on-line), Todd McCarthy observed, "Hathaway is fine as the smart but green young woman who finally becomes so good at her thankless job that she comes perilously close to going over to the 'dark side' [represented] by Miranda." Some felt that Hathaway was not the best choice for the role. David Edelstein wrote for *New York* (June 25, 2006, on-line), "It's bizarre when all the *Runway* employees wrinkle their noses at Andrea instead of realizing that, with her long legs and neck and skinny face and big, dark eyes, she's pure *Runway*. Hathaway overdoes the girlish wonderment and isn't up to her big, to-hell-with-the-devil scene, but she certainly carries off the clothes."

In 2007 Hathaway starred in *Becoming Jane*, based on the life of the English novelist Jane Austen. The film—which featured Hathaway as a young, yet-to-be published Austen—met with mixed reviews but was given credit for its imaginative interpretation of the novelist's early life. According to Kyle Smith, writing for the *New York Post* (August 3, 2007, on-line), "Instead of trying to make Austen's life entertaining by pretending it was just like her work . . . *Becoming Jane* has a more astute appreciation of how Austen, or any fiction writer, works. There's a bit of stealing from life, lots of exaggeration, some wish fulfillment, mix-and-match character assembly." Critical reaction to Hathaway's performance was varied. Claudia Puig wrote for *USA Today* (August 2, 2007, on-line), "Hathaway is terrific as Austen. Not only does she nail the British accent, but her subtle mannerisms and expressions speak volumes. She delivers the sparkling dialogue, by screenwriter Kevin Hood, with just the right nuance and verve." Others felt that she did not capture the essence of Austen; Richard Shickel wrote for *Time* (August 3, 2007, on-line), "Hathaway never makes us think the woman could write anything more complex than a diet book. The real novelist must have been, even at the tender age she is supposed to be in this film, a much more ferocious creature, determined to make her way as a writer, certain that love . . . must prove a distraction from writing."

Hathaway appeared alongside the comedic actor Steve Carell in the 2008 adventure comedy *Get Smart*, an adaptation of the 1960s television series of the same name. Playing the seductive Agent 99, she won some critics' praise for her gift for slapstick. Lisa Schwarzbaum wrote for *Entertainment Weekly* (June 20, 2008, on-line), "The unexpected star is Hathaway, looking cool as a runway model in the role originated by Barbara Feldon, lithe as a (pink) panther, and displaying great comic timing." Despite that film's top box-office rankings, the June arrest of the Italian real-estate developer Raffaello Follieri—with whom Hathaway was romantically involved from 2004 until June 2008—quickly overshadowed her performance in the film. Follieri was charged with multiple counts of fraud, conspiracy, and money laundering after posing as a Vatican official looking to sell church-owned real estate. The couple's subsequent break-up became fodder for the press, and in October 2008 Follieri was sentenced to four and a half years in prison (Hathaway was not charged with any crimes). Although she has not commented directly on Follieri during interviews, Hathaway told David Carr for the *New York Times* (January 4, 2009, on-line), "I have not made perfect choices by any stretch of the imagination, but I think by and large I've managed to avoid making foolish decisions. I've never lost custody of myself. I know who I am." Hathaway is currently dating the actor Adam Shulman.

In 2008 Hathaway appeared in Jonathan Demme's film *Rachel Getting Married* as Kym, a recovering drug addict who attends her sister's wedding and stirs up family tensions. The film received positive reviews from many critics, and Hathaway's performance was praised. Owen Gleiberman wrote for *Entertainment Weekly* (October 1, 2008, online), "The last actress you'd expect to see cast as a self-loathing, frayed-nerves drug casualty is a red-carpet blossom like Hathaway. Yet from the moment she shows up, her eyes peering with a junkie's paranoid radar from beneath her Louise Brooks-helmet-slashed-with-a-straight-razor hair, the actress wires you right into her rage and awareness. Kym is a walking disaster, but a disaster with feelers, and the effect she has upon her family is to electrify them with the dreaded truths she calls up. Hathaway is a revelation: She makes toxic narcissism mesmerizing, but she also gives Kym a desperate confessional ardor." For her role in the film, Hathaway was nominated for a Golden Globe Award. Rachel Abramowitz wrote for the *Los Angeles Times* (November 13, 2008, on-line) that Hathaway's involvement with Follieri and emotional performance in *Rachel Getting Married* was a "double whammy of on-screen and off-screen despair [that] has curiously combined to give Hathaway heft and maturity, making her more than just another pretty face."

In 2008 Hathaway also appeared in *Passengers* as a young therapist hired to counsel the survivors of a plane crash. When her new patients begin to disappear, Hathaway's character is forced to uncover the truth behind the crash. In a representative, unenthusiastic assessment, Stephen Holden wrote for the *New York Times* (October 25, 2008, on-line), "With her wide, frightened Judy Garland eyes, Ms. Hathaway lends *Passengers* a frisson of anxiety. But how much emotional zing can be extracted from lifeless dialogue whose sole purpose is patching together 100 minutes of clichés?"

In 2009 Hathaway appeared alongside Kate Hudson in the romantic comedy *Bride Wars*. The film centers on two best friends, played by Hudson and Hathaway, as they prepare for their weddings. Critics responded negatively to the movie. Nathan Rabin, for example, wrote for the *A.V. Club* (January 8, 2009, on-line), "After her revelatory performance in Jonathan Demme's *Rachel Getting Married*, Anne Hathaway will have a much harder time getting away with pandering dreck like *Bride Wars*, which takes the burgeoning Anne Hathaway wedding-movie subgenre from the sublime to the despicable. An air of cynical commercial calculation hangs over the film, which witlessly explores two preeminent American obsessions: planning and executing the perfect wedding, and winning at all costs." That year Hathaway also lent her voice to episodes of *The Simpsons* and *Family Guy* and appeared as Viola in the New York Shakespeare Festival summer production of *Twelfth Night*. After seeing her in that role, Charles Isherwood wrote for the *New York Times* (June 26, 2009, on-line), "Among the many pleasures of her performances is [their] effortless modesty. On screen or onstage Ms. Hathaway possesses the unmistakable glow of a natural star, but she dives smoothly and with obvious pleasure into the embrace of a cohesive ensemble cast."

Hathaway's upcoming films, scheduled for 2010 release, include the Tim Burton–directed version of *Alice in Wonderland*, which will also star Johnny Depp; the comedy *Valentine's Day*; and the drama *Love and Other Drugs*. She is also slated to play the singer and actress Judy Garland in adaptations for the stage and screen of Gerard Clarke's biography *Get Happy: The Life of Judy Garland*. She has been cast in additional films that were in development in late 2009: *The Opposite of Love, Get Smart 2, Tokyo Suckerpunch*, and *The Greatest Showman on Earth*.

Hathaway has said that she would like to perform in more stage roles, telling the Associated Press (June 27, 2006), "I don't feel comfortable doing movies. It's not what I trained to do. I trained to be a theater actress. You put me on a stage in front of 2,000 people, I know what to do. You put me in front of a camera, I'm like, 'Duh.' . . . Although I'm still terrified of it —and I freely admit that I am—I've kind of grown to love it, and it is its own art form." Hathaway, a vegetarian, lives in New York City.

Peter Higgs

Higgs drew a great deal of media attention. That is because the primary goal of those who designed the collider and the more than 100 nations that paid for its construction is to produce evidence that Higgs's theories—actually, hypotheses—are correct. A crucial portion of what is known as the standard model of particle theory, his hypotheses are expressed in mathematical terms; Higgs formulated them during the decade after he earned his doctoral degree, in 1954, in an attempt to answer two questions about the nature of the universe: why do some elementary, or fundamental, particles have mass while others do not, and how did those that have mass acquire it? The answers to those questions will shed light on what happened in the infinitesimally tiny fraction of a second following the Big Bang—the moment when, theoretically, the universe, including time as well as space and matter, came into existence, 10 billion to 20 billion years ago. Higgs has proposed that, in addition to the electromagnetic and gravitational fields (whose existence has been proved experimentally or through observation and can be expressed mathematically as well), there exists a mass-generating field that pervades the whole universe. Associated with that field, he has suggested, is a particle that generates mass; that particle was dubbed (not by Higgs) the Higgs boson. The validity of Higgs's equations and the others connected with the standard model depends upon the existence of that particle, but no one has ever detected its physical presence; that is because the only way of doing so is by means of a particle accelerator, and even the most powerful accelerators that have been operating in recent years are insufficiently powerful to detect it. Higgs and the many physicists who believe that Higgs's theories are correct hope that the LHC, near Geneva, Switzerland, will provide proof that the Higgs boson is real. In an interview with Richard Wilson for the London *Sunday Times* (June 15, 2008), the theoretical physicist John Ellis said, "All this is important because it tells us how the universe works. People have been trying to figure out how the universe works ever since they noticed that there is a universe out there. Without Peter's work, we wouldn't have theories that made any sense." In a video of Higgs posted on YouTube.com (2009), Higgs echoed Ellis's words; if the Higgs boson turns out to be a chimera, he said, a huge body of work in contemporary physics would have to be discarded as erroneous. "Detecting the Higgs boson would represent an enormous breakthrough in particle physics," Peter Rodgers, the editor of *Physics World*, declared in that publication (July 10, 2004, on-line). Proof of the boson's existence will require the painstaking analysis of an enormous amount of data produced by the LHC—as well as the repair of that machine: the collider, a project overseen by CERN, the European Organization for Nuclear Research, functioned for only two weeks before a series of technical problems forced it to be shut down. Operations were not expected to resume until the end of 2009 at the earliest. Some scientists predict that it could take years before the device can run at full strength.

Higgs taught at the University of Edinburgh, in Scotland, for 36 years, until his retirement, in 1996. In 2004, when Rodgers talked with him, he seemed "embarrassed by the fame that his eponymous boson has brought," as Rodgers wrote. "In conversation he talks about 'the so-called Higgs field' and the 'so-called Higgs model,' and is keen to give credit to a host of other physicists whose work has led to our current understanding of the generation of mass within the Standard Model"—physicists including Abdus Salam, Sheldon Glashow, Steven Weinberg, Philip Anderson, Jeffrey Goldstone, Yoichiro Nambu, François Englert, Robert Brout, Gerald Guralnik, Carl Hagen, and Tom Kibble. (Englert, Brout, Guralnik, Hagen, and Kibble are widely considered to be co-discoverers of the boson on which the Dutch theoretical physicist Gerardus 't Hooft conferred Higgs's name in 1971.) "I get very uneasy when people try to attach too much importance to me," he said to James Morgan for the Glasgow, Scotland, *Herald* (April 7, 2008). His modesty notwithstanding, Higgs has won or shared a bevy of honors, among them the Rutherford Medal (1984) and the Paul Dirac Medal (1997), both from the Institute of Physics, the main professional body for physicists in Great Britain and Ireland, for "outstanding contributions to theoretical (including mathematical and computational) physics," and the Wolf Foundation Prize in Physics (2004), considered among physicists second in prestige only to the Nobel Prize.

Peter Ware Higgs was born to Thomas Ware Higgs and Gertrude Maude Higgs on May 29, 1929 in Newcastle upon Tyne (commonly referred to simply as Newcastle), a city in northeastern England. His father's job, as a sound engineer for the British Broadcasting Corp. (BBC), forced the family to move repeatedly. For that reason Higgs missed some of his early schooling. As a youngster he developed asthma; after he suffered a bout of pneumonia, his mother home-schooled him for a while. "She was very motivated to push me," Higgs told Ian Sample for the London *Guardian* (November 17, 2007). "My father, I think he was just rather scared of children." When the BBC sent his father to work in Bedford, Higgs and his mother moved to Bristol, more than 100 miles distant, in the southwestern part of the country.

In Bristol Higgs attended Cotham Grammar School, where science was emphasized, and he excelled at math. The German air force's heavy bombings of Bristol during World War II sometimes interrupted his schooling, and he once broke his arm when he fell into a bomb crater near the school. Cotham was the alma mater of Paul Dirac (1902–84), a Nobel Prize–winning theoretical physicist who was a pioneer in the fields of quantum mechanics and quantum electrodynamics. Complex mathematical calculations, not physical experiments or observations, led Dirac to predict—correctly, as later discoveries proved—that for every subatomic particle, there exists a mirror twin, an antiparticle, with the same mass but opposite charge. Dirac's work inspired Higgs to study theoretical physics. "It's about understanding!" Higgs exclaimed to Sample. "Understanding the world!"

When he was 17 Higgs enrolled at the City of London School, an independent day school known both for its diverse student body and its strong science and mathematics curricula. During his high-school years (and later at college), he much preferred, and was far more skilled at, grappling with mathematical formulas than handling equipment and chemicals or other materials in science labs. Having accepted his parents' contention that Great Britain's most prestigious universities—Oxford and Cambridge—"were all very well for the children of the idle rich to go and waste their time and that of their tutors" and that "if you were serious about university, you went somewhere else," as he recalled to Sample, Higgs opted to attend King's College London, a division of the University of London. He earned a B.S. degree with first-class honors in physics in 1950 and an M.S. degree, also in physics, the following year. He worked toward his doctorate under the supervision of two theoretical chemists—Charles Coulson and H. Christopher Longuet-Higgins, a former student of Coulson's. Higgs was awarded a Ph.D. in 1954. His thesis was entitled "Some Problems in the Theory of Molecular Vibrations"—"work which signalled the start of his life-long interest in the application of the ideas of symmetry to physical systems," according to a 2008 profile of him on the Web site of the School of Physics and Astronomy of the University of Edinburgh. In particle physics, "symmetry" has special meanings. One of them is "invariance," the property of remaining unchanged when certain conditions change, among them time, orientation in space, charge (positive or negative), and parity.

For two years after he completed his graduate studies, Higgs worked at the University of Edinburgh. He had grown fond of Edinburgh during his youth, when he had hitchhiked to the Edinburgh Festival (the umbrella name for several cultural festivals that occur concurrently every summer). He spent the next year at University College London (part of the University of London) and the following year at Imperial College, also in London. From 1958 to 1960 he taught mathematics at University College London. He then returned to the University of Edinburgh, where he held the title of lecturer at the Tait Institute for Mathematical Physics for the next 10 years. He was promoted to reader (an academic position in Great Britain) in 1970 and named to a "personal chair" in theoretical physics in 1980.

Meanwhile, in addition to his classroom duties, Higgs had become fascinated with quantum field theory, which describes the characteristics and behavior of atoms and subatomic particles and the forces that act on them, and he began to contemplate the origins of mass. A fundamental concept of physics, mass is the amount of matter that makes up anything that has substance, everything from atoms to parts of atoms and congregations of atoms: gases, liquids, and solids, the last including everything from grains of sand, animals and plants, and manmade objects to meteors, planets, moons, and stars. In physics, mass is not the same as weight, which is a measurement of Earth's gravitational pull on anything that has mass; according to the physicist Albert Einstein's famous equation $E=mc^2$—where "E" represents energy, "m" is mass, and "c" is the speed of light (186,000 miles or just under 300,000 kilometers per second)—energy also has mass. In the first scientific description of mass, the British mathematician and physicist Isaac Newton (1642–1727) wrote about it in terms of the force needed to move and accelerate a stationary object. According to Ian Sample, for several centuries "scientists were happy to think of mass as something that simply existed," but in the 20th century, as more was learned about subatomic particles as well as the probable origins of the universe, they began to wonder where mass had come from.

Carried out mathematically rather than experimentally or through observation of astronomical phenomena, Higgs's work was based on research that other physicists had been conducting, some of it beginning in the 1950s. In the course of performing his calculations, Higgs manipulated equations of the physicists Abdus Salam and Sheldon Glashow. When he "added in his own field equations (and thus the Higgs bosons) to equations somewhat analogous to those of Salam or Glashow," Charles C. Mann wrote for *Smithsonian* (March 1, 1989), "he found that certain particles in the original equation behaved in an astonishing fashion. They began with zero mass and then mathematically 'ate up' other, unwanted particles in the field (ones that had made a mess of the mathematics in the theory he was investigating), emerging with mass." In interpreting that outcome, Higgs came up with the idea that at the moment the universe came into being, particles had no mass. Then, a minuscule fraction of a second later, as a result of what became known as the Higgs mechanism, an all-encompassing force field was formed and some particles acquired mass. In Sample's words, "Higgs's theory showed that mass was produced by a new type of field that clings to particles wherever they are, dragging on them and making them heavy. Some particles find the field more sticky than others. Particles of light are oblivious to it. Others have to wade through it like an elephant in tar. So, in theory, particles can weigh nothing, but as soon as they are in the field, they get heavy"—that is, they acquire mass and weight.

Discoveries in physics are often derived from analyses of broader phenomena. That was true of what Higgs has called his "one important idea," the crux of which came to him during a single weekend, as James Morgan reported, when he was thinking about the work of the physicist Jeffrey Goldstone. The first mention of his idea appeared in a communication published in *Physics Letters* (Volume 12, September 1964), a CERN journal, in which Higgs questioned conclusions drawn by Goldstone regarding "the nature of relativistic field theories with spontaneously broken symmetries," according to a brief biography of Goldstone on the Web site of the Massachusetts Institute of Technology, where he is now professor emeritus. Higgs's letter—before the age of the Internet, such letters were the fastest way for scientists to share their discoveries—attracted scant attention. Higgs next sent another letter to the same CERN publication, elaborating on his findings and noting the possibility of the existence of a never-before-described, massive boson, but it was rejected "on the grounds that it did not warrant rapid publication," according to an article entitled "A Brief History of the Higgs Mechanism" posted in 2008 on the Web site of the School of Physics and Astronomy at the University of Edinburgh.

Higgs then sent his second letter to *Physical Review Letters*, a publication of the American Physical Society, where its worthiness for publication was reviewed by Yoichiro Nambu, whose discovery of the mechanism of what is called spontaneous broken symmetry earned him the Nobel Prize in physics in 2008. Higgs's missive had reached *Physical Review Letters* on August 31, 1964, the same day that the journal had published, in its 13th volume, a paper on work (about which Higgs had been unaware) conducted by the Belgian physicists François Englert and Robert Brout, in which Englert and Brout, through very different calculations, had presented a hypothesis similar to his. At Nambu's request, Higgs added to his letter material about Englert and Brout's findings, after having discussed their work and that of others with two American particle physicists—Gerald Guralnik, of Brown University, and Carl R. Hagen, of the University of Rochester—and a Briton, Tom Kibble, of Imperial College London. Higgs's revised second letter, entitled "Broken Symmetries and the Masses of Gauge Bosons," as well as two letters by Guralnik, Hagen, and Kibble, appeared in a subsequent issue of Volume 13 of *Physical Review Letters* in 1964. "I don't know why I separated the work into two pieces," Higgs told Peter Rodgers for the London *Independent* (September 1, 2004). "Maybe if I had written it as one continuous paper, they would have rejected the lot."

Higgs's second paper sparked some discussion among physicists. On a lecture tour of the U.S. in the mid-1960s, Higgs talked about his hypotheses at universities including Harvard and at the Institute for Advanced Study, at Princeton. "I was facing audiences who at first thought I was a crackpot . . . ," he recalled to Rodgers. "They didn't realize that you could do something useful with the work." That realization came when Steven Weinberg and Abdus Salam used Higgs's equations to identify new particles, called W and Z, and demonstrated that those particles could combine two of the universe's four forces—the electromagnetic force and the weak force—into what was named the electroweak force. After Weinberg, Salam, and Glashow received the 1979 Nobel Prize in physics for their discoveries, "the Higgs boson became part of the furniture in particle physics," as Rodgers wrote.

If particle physics is thought of as a room, as in Rodgers's analogy, it is a room that in the 20th century grew increasingly crowded with furniture but still lacked some important pieces and failed to present a unified whole—a situation that was still true in early 2009. Scientists now know that every atom—the smallest particle whose composition can be changed by chemical means—has a nucleus composed of one or more protons orbited by one or more electrons, and that, except for one form (or isotope) of the hydrogen atom, every atom contains one or more neutrons. (Protons have a positive charge; electrons have a negative charge; and neutrons are either totally or virtually charge-free.) The nature of every chemical element on Earth—oxygen, nitrogen, carbon, gold, mercury, iodine, and uranium are among the 92 naturally occurring elements—is determined by the number of protons in their atoms. Electrons are elementary, or fundamental, particles—that is, they have no component parts and therefore cannot be subdivided; protons and neutrons are composed of other fundamental particles—quarks, which are 100 million times smaller than the average atom (whose diameter, in turn, is smaller than a billionth of a meter). Scientists have identified six kinds, or flavors, of quarks:

up, down, charmed, strange, top, and bottom. The top quark, which is the largest, is 4,400 times bigger than the smallest, the up quark; three of the quark types have an electric charge of +2/3 each, while the electric charge of each of the other three is –1/3. Every proton consists of one down quark and two up quarks; every neutron consists of one up quark and two down quarks. The other fundamental particle is the lepton. There are six types of leptons—the electron, the muon, and the tau particle, each of which has an associated neutrino. Furthermore, all fundamental particles can be categorized as either fermions or bosons, depending on their spin, a highly complex, intrinsic property associated with the angular momentum of the particle, and on their "quantum state," which in the theory of quantum mechanics is expressed in statistical, rather than absolute, terms. Bosons can co-exist with one another in the same state at the same time and location; fermions (which include quarks and leptons) cannot co-exist in the same state at the same time and location. Bosons may be fundamental particles or composite particles; the fundamental bosons are called gauge bosons (which include the photon, the fundamental unit of light and every other form of electromagnetic radiation; the W and Z particles; gluons; and, hypothetically, the Higgs boson). Scientists have further separated the approximately 200 known fundamental or composite particles into three families. Only those in the first family exist for more than a fraction of a second; they make up the atoms of matter that we are familiar with in our everyday lives. Evidence for those in the second and third families has come from experiments conducted in atom smashers. All particles composed of quarks are called hadrons—hence the name of the LHC. There are two types of hadrons: those containing three quarks, which are called baryons, and those containing one quark and one antiquark (one of the antiparticles predicted to exist by Paul Dirac), called mesons.

According to the standard model of particle theory, there are also four fundamental forces in nature: the electromagnetic force, which acts between atomic particles carrying an electrical charge; the strong nuclear force, which acts between quarks and holds atomic nuclei together; the weak nuclear force, which operates between leptons and is associated with particle emission and nuclear decay (the processes that provide the basis for carbon dating, by which geological ages or the ages of fossils or other ancient materials are estimated); and gravitation, which operates on cosmic levels. Each of the forces is "carried" to subatomic particles, atoms, or congregations of atoms by a particular "messenger" particle, also called a force carrier or mediator. The carrier of the electromagnetic force is the photon, which has no mass and no charge; the carrier of the strong nuclear force is the gluon, of which there are eight kinds, each of which has a large mass and what is called a "color" charge; the weak force has three carriers—the positive and negative W particles and the neutral Z particle, which have large mass; that of gravitation is the graviton, which has no charge and no mass (and exists only hypothetically; no physical evidence for it has been found). Carriers with no mass move at the speed of light and act over long distances; those with large mass move only over short distances and at less than the speed of light.

The existence of the Higgs mechanism, Higgs field, and Higgs boson provides the only plausible explanation in the standard model of particle theory for the existence of mass. According to John Ellis, in an article entitled "Into a New World of Physics and Symmetry," posted on-line in the magazine *Symmetry: Dimensions of Particle Physics* (August 2006), most theoretical and particle physicists (one notable exception is Stephen Hawking) feel confident that the LHC will provide proof of their existence. Under construction since 1994 at a cost of $8 billion, the LHC is located 300 to 570 feet below ground. The creation of some 10,000 scientists from many countries, it is far more powerful than what until now had been the world's most powerful atom smasher—the Tevatron collider at the Fermi National Accelerator Laboratory (Fermilab), near Chicago, Illinois. In a ring 17 miles long surrounded by thousands of supercooled magnets (their temperature is near absolute zero: –459.67 degrees Fahrenheit, –273.15 degrees Celsius) in the LHC, beams of protons moving in opposite directions at 99.999999 percent of the speed of light will collide, reproducing conditions similar to those immediately after the Big Bang. The LHC will be "the world's most powerful microscope," John Ellis wrote, "with a resolution thousands of times smaller than the diameter of a proton. The high energies and small distances accessible with the LHC will be similar to the conditions of the very early universe, shortly after the big bang, turning the collider into a telescope and a time machine that will reveal the physics that underlies the world around us." Those revelations may include evidence of new types of symmetries or of supersymmetry, which implies, as Brian Greene wrote for the *New York Times* (September 11, 2008), that "for every known species of particle (electrons, quarks, neutrinos, etc.)" there exists not only an antiparticle but "a partner species," or "sparticle"—selectrons, squarks, sneutrinos—or a fermion associated with every boson. The LHC may also produce never-before-seen particles and the answers to questions about the nature of dark matter, why there are so many different kinds of particles, why the number of particles in the universe is many magnitudes greater than the number of antiparticles, why the gravitational force is so much weaker than the other fundamental forces, and whether the universe contains dimensions other than the three we know.

Higgs's work is the subject of several books, among them *Reflections on the Higgs System* (1997), by Martinus Veltman; *Search for the Higgs Boson* (2006), edited by John V. Lee; *Perspectives on Higgs Physics* (2008), edited by Gordon L. Kane;

and *The Quantum Frontier: The Large Hadron Collider* (2009), by Don Lincoln. The title of another book, *The God Particle: If the Universe Is the Answer, What Is the Question?* (1993), by the Nobel Prize–winning experimental physicist Leon Lederman, led some people to refer to the Higgs boson as the God particle. "I wish [Lederman] hadn't done that," Higgs has said, as quoted by Richard Wilson. "I have to explain to people it was a joke. I'm an atheist, but playing around with names like that could be unnecessarily offensive to people who are religious."

Higgs will not be directly involved in the operation of the LHC or the analyses of the data that it produces. More than a decade before he retired, he had begun to decrease the amount of energy he devoted to research and focus more on teaching. He has attributed that change to problems in his personal life. "After the break-up of my marriage, I think I just lost touch with the things I should have been learning about just to follow up my own work. I couldn't keep up," he told a reporter for *Scotland on Sunday* (September 14, 2008). Higgs and his wife, an American linguist named Jo Ann (nicknamed Jodie), divorced in the early 1970s; the two had met in the 1950s when both were members of the Campaign for Nuclear Disarmament, a network of British organizations opposed to the spread of nuclear weapons. A fellow of the Royal Society and the Royal Society of Edinburgh, Higgs lives in Edinburgh. A shy man who treasures his privacy, he enjoys walking, listening to music, and swimming. He has two children—Chris, a computer scientist, and Jonny, a jazz musician—and is a grandfather.

Hirschhorn, Thomas

1957– Installation artist

Address: c/o Barbara Gladstone Gallery, 515 W. 24th St., New York, NY 10011-1104

The Swiss-born conceptual artist Thomas Hirschhorn is on a mission to turn his creative energy into art—works that have stirred critics to describe them as provocative, disturbing, sick, farcical, or tragic. Hirschhorn's self-proclaimed emphasis on energy, as opposed to quality, is more than an aesthetic; it is a philosophy, one that he regards as the primary goal of his art, which is aimed at making viewers think. Hirschhorn uses such materials as cardboard, tape, and foil, not "because they are cheap, but because they are available, nonexclusive, and not intimidating," as he wrote in an e-mail interview with *Current Biography*, the source of quotes in this article, unless otherwise noted. He has often incorporated those materials into collages of photographs, books, printed texts, and videos. In the late 1990s he started to create large-scale collages that featured graphic images of war and turmoil but no specific messages or calls for action; rather, the artist hoped to inspire viewers to come up with their own interpretations of what they were seeing. Although Hirschhorn received a formal education in graphic design, he insists that it has had no measurable impact on him as an artist. "No training helps you make your work as an artist," he told Mark Rappolt in 2003 for *Tate Magazine* (now called *Tate Etc.*), published by the organization that manages the Tate museums, in London, England. "No training helps you to take decisions. No training helps you to make a choice. I decided to work as an artist because only as an artist can I be totally responsible for what I do. The decision to be an artist is the decision for freedom. Freedom is the condition of responsibility. To be an artist is not a question of form or content; it is a question of responsibility."

Thomas Hirschhorn was born in 1957 in Bern, Switzerland. (A few sources note May 16 as the date.) He was raised in Bern by his adoptive parents, an accountant and a homemaker. In his teens Hirschhorn was fascinated by the works of Kazimir Malevich, Alexander Rodchenko, and other Russian avant-garde artists. "I wanted to do work like them," he said. At the age of 21, he enrolled at the School of Graphic Design in Zurich, Switzerland, where he studied for five years, graduating in 1983. He later moved to Paris, France, where he was briefly associated with a workshop of communist graphic designers. "In the collective I realized I was not interested in doing [advertising or propaganda] even though I agreed with the human ideas," Hirschhorn told Alan G. Artner for the *Chicago Tribune* (February 6, 2000). "I didn't want to do work that was in the service of an ideology. So I had to make the choice to be an artist. I was always against it before, but it was an error of mine. It was a political error because I had felt an artist was somebody who didn't care about society. I was concerned with social ideas. That was always true. It's what for me makes the work. I cannot understand how an artist can work with no critical position."

By the mid-1990s Hirschhorn was making a name for himself in Europe, where his work was exhibited not only in museums and galleries but also in parks and other public spaces. He used inexpensive, familiar materials—cardboard, packing tape, aluminum foil, and inexpensive lumber—to create complex collages of books, photographs, printed materials, and videos. In his exhibition One Artwork: One Problem (1998), mounted at the Portikus gallery in Frankfurt, Germany, the artist intended to overwhelm the viewer with a large collage of newspaper and magazine clippings about many of the world's troublespots and problems—the conflicts in Kosovo, in the former Yugoslavia, and in the Middle East, for example. In another move that would develop into a Hirschhorn trademark, he attached two wings (that is, rooms) to the gallery, thereby expanding the space in a way he felt would best suit his purpose. "The title, *One Artwork, One Problem*, refers to the fact that each of the 'problems' is linked to a 'sculpture' via a network of veins made of aluminium foil," Verena Kuni wrote for *Frieze* magazine (March/April 1999). "The aesthetic of these cardboard forms (tightly covered with blue bin-bags) is suspiciously reminiscent of the public sculptures that populate parks and pedestrian areas all over postwar Europe. These were intended to honour democracy, rediscover pride, or express guilt-ridden dismay—whichever was appropriate. Hirschhorn's parodies seem to feed on the 'problems' through their foil extensions, as if through umbilical cords. The work of art as a vessel for all the thoughts we can't deal with?"

In 2000 Hirschhorn's Jumbo Spoons and Big Cake went on view at the Art Institute of Chicago, in Illinois, marking his first solo exhibition at a museum in the U.S. The exhibition featured a pink cake, 12 meters by 17 meters (about 39 feet by 57 feet) made out of cardboard and decorated with books on globalization, economics, and philosophy; photographs showing scenes of war, famine, and genocide; video monitors, some showing images of hardworking farmers and others showing gourmet chefs on a TV cooking show; and pieces of broken mirrors. Around the cake stood 12 cardboard, foil-wrapped spoons, each between eight and 12 feet high, meant to symbolize a failed utopian ideal (which was left to the viewer to identify). "I am interested in giving an image of the world like I feel it—in fragmentation," Hirschhorn told Artner. "The world is very, very complex, too complex for me, and I try to understand the complexity. My contribution as an artist is to link things together that I can't understand. I deal with contradictions, confusions. I try to give the world in my head a physical aspect in space. I know I have too much information [in each piece] but I will not make a selection. . . . You, the spectator, have to make such a judgment for yourself because I have not understood the whole. I've only understood what's important for me."

Most important to Hirschhorn are the ideas embedded in his art (as opposed to its perceived physical or aesthetic qualities) and its power to provoke thought, but not necessarily to inspire social or political action. One of his artistic guidelines is: Quality = No! Energy = Yes! "Energy is what really counts today," he said. "Energy is what I can reach. Energy is what I can struggle with. Energy is what owns the capacity to implicate the other. Energy is what possesses the faculty to cut an opening toward the non-exclusive public." He told Artner, "I am very optimistic about the human capacity to reflect. . . . Obviously, you have to look first, but then I want people to think about [what they've seen]. I believe in the spectator's capacity to reflect. It's the one thing that is human. That's why I give all this information."

Also in 2000 the exhibition World Airport, adapted from Hirschhorn's show at the 1999 Venice Biennale, in Italy, opened at the Renaissance Society, in Chicago. It featured an enormous runway with 24 large model airplanes that Hirschhorn had painted with real airline logos and national symbols. Near the planes were kiosks stocked with photographs and news clippings that told stories of corporate greed and regional conflicts. The show, which also included four altars each dedicated to a philosopher whose ideas had influenced Hirschhorn (he has named Baruch Spinoza, Gilles Deleuze, Félix Guattari, Friedrich Nietzsche, Antonio Gramsci, and George Bataille among his major influences), filled the entire space of the gallery—as has been true of many other Hirschhorn exhibits.

By the winter of 2000, Hirschhorn had begun to receive increasing recognition in the press and the art world; in December of that year, he attracted additional attention, when he was named the first winner of the Prix Marcel Duchamp, which the Association for the International Diffusion of French Art has awarded annually since then to pioneering contemporary artists living in France. He won approximately $30,000 in prize money and was honored with a show that ran for two months in 2001 at the Centre Pompidou, the best-known modern-art museum in Paris.

Meanwhile, Hirschhorn was continuing to express his views in novel ways. For the exhibition Laundrette, held in the Stephen Friedman Gallery in London in 2001, he created a brightly lit, vinyl-floored laundromat in which video screens in 16 foil-covered, cardboard-and-duct-tape models of washing machines showed raw images of war and death. "I am watching real-life executions and a dead face being peeled off a mutilated skull then replaced, again and again," Adrian Searle wrote for the London *Guardian* (July 3, 2001). "Rotted bodies pulled out of shallow graves, a severed head carried like a teapot through a house, a corpse anointed with quicklime. The dead grin back, in the video screens in the portals where the washing should be. This collision between knockabout display and absolute horror is more than bad taste. I find it appalling, terrible and deeply depressing, not least because I realize part of me is already inured to the shocking images. My eye scans the screen where people are being tied to a row of posts on some sunny African shoreline. The soldiers are nervous and excited. The officers swank about, issuing orders. The victims slump in the smoke as the shots ring out. I can't watch. I watch it again." The videos also contained a few common images: hands washing off a red substance that covers them and hands reaching for French fries covered in ketchup. Hirschhorn "tries to work with what he knows is too much unstable, indigestible stuff," Searle wrote. "But he is not, he insists, a chaotic artist; nor is he simply mirroring the chaos of the world, or playing a private language game. *Laundrette*—with its obvious references to ethnic cleansing and to washing the world's dirty linen—risks an insulting banality. But Hirschhorn's work is more complex and finely tuned than it looks. It has its own kind of rigour. It is farce and tragedy, all at once."

Few people took notice when, in 2003, Hirschhorn decided not to exhibit his work in Switzerland as long as the conservative, ultranationalist politician—and billionare industrialist—Christoph Blocher held the leadership position in the Swiss Parliament as the leader of the right-wing populist People's Party, which gained a majority of seats in 2003. That inattention ended the following year, when Hirschhorn's exhibition Swiss-Swiss Democracy opened at the Swiss Cultural Center in Paris. For that multimedia exhibit Hirschhorn painted graffiti on walls from which hung photographs, official documents, and newspaper clippings. The show included a one-hour lecture by the philosopher Marcus Steinweg, who collaborated with Hirschhorn on half a dozen map-like pieces; a daily newspaper published by Hirschhorn; and, most controversially, a play inspired by the story of the 14th-century Swiss folk hero William Tell. The play, adapted and directed by Gwenael Morin from Friedrich Schiller's version of the tale, questioned not only Switzerland's isolationism but also its commitment to democracy. Blocher, who had become the Swiss minister of justice and police early in 2004, "is not a dictator," Hirschhorn told Alan Riding for the *New York Times* (December 27, 2004), "but he legitimizes Swiss xenophobia, isolationism, nationalism; he legitimizes the feeling in Switzerland that all these foreigners want to come and take their money. He is a dangerous populist." Swiss conservatives' harsh criticism of Pro Helvetia, a Swiss-government-run cultural foundation (which owns the Swiss Cultural Center), for funding the Hirschhorn show led the nation's Parliament to cut Pro Helvetia's funding by nearly 3 percent, on the grounds that it had misused public money. Meanwhile, the exhibition attracted more than 30,000 visitors in eight weeks—a far greater number than the cultural center typically recorded.

Hirschhorn returned to New York City in 2006 to exhibit his new work, Superficial Engagement, at the Gladstone Gallery, where he had exhibited another installation four years earlier. Hirschhorn created four platforms—on which stood a monument, a mosque, a museum, and a morgue, respectively—each containing a collage of hundreds of wartime photos, shot in Iraq and Afghanistan, showing heads and limbs no longer connected to their owners; alongside those images were pictures of cheerful, 1960s geometric art. The show, Ken Johnson wrote for the *New York Times* (February 7, 2006), is "hands down the most disturbing and provocative art exhibition in town right now. . . . With this show Mr. Hirschhorn evidently decided to take off the gloves. He has crammed into the gallery a series of sculptural tableaus that resemble parade floats constructed by a gang of neo-punk high school anarchists. With mannequins studded with screws like African fetishes, fake coffins, video monitors, photocopied newspaper headlines and articles, Oriental carpets, hand-painted banners and photocopies of geometric artworks, the installation is almost overwhelmingly congested. But one element stands out clearly: thrusting at you from every direction are images copied from the Internet and other international news sources showing human bodies mangled, burned and dismembered by bombs in Iraq, Afghanistan and other theaters of war and terror." While the photos illustrated the effects of a U.S.-led war, for the most part they showed the corpses of Arabs rather than Americans, which, Jerry Saltz suggested in the *Village Voice* (February 7, 2006), might make them less horrifying to Americans. What sort of reaction would the artist have provoked, Saltz wondered, had he used images of the victims of the terrorist attacks in New York City in 2001 or in London in 2005? If he had done that, blame for the attacks would be reversed—pointed toward Muslim fundamentalists—and the detachment significantly reduced, or perhaps even missing.

The content of Hirschhorn's Universal Gym, mounted at the Gladstone Gallery in the spring of 2009, is distinctly different from that of Superficial Engagement and of most of Hirschhorn's other installations. Using his usual materials—wood, tape, and cardboard—Hirschhorn constructed models of machines for weight training, exercise balls, mats, free weights, and mirrors and also a few life-size mannequins with holes in their chests in the areas where their hearts should have been. The exhibit is "bland by the standards of his previous New York show," Roberta Smith wrote for the *New York Times* (March 27, 2009). Writing for *Time Out New York* (April 2, 2009), Joshua Mack agreed: the artist's ideas in Universal Gym are "simplistic and stale at best, especially given the wealth of art and political commentary parsing the same turf of late."

Hirschhorn's next U.S. exhibition, titled Abstract Resistance, will take place at the Walker Art Center, in Minneapolis, Minnesota, in 2010.

Hirschhorn lives in Paris.

Holder, Eric H. Jr.

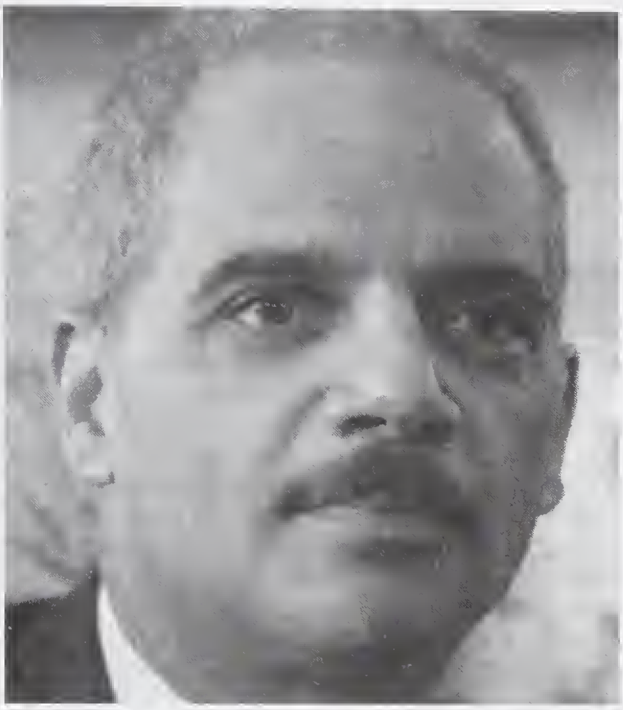
Jan. 21, 1951– Attorney general of the United States

Address: U.S. Dept. of Justice, 950 Pennsylvania Ave., N.W., Washington, DC 20530-0001

On February 2, 2009, with 75 "yes" votes and 21 "no's" cast by those present on the floor of the United States Senate, Eric H. Holder Jr. was confirmed as the nation's 82d attorney general. He was sworn in on the same day, thus becoming the first African-American to head the U.S. Department of Justice (DOJ). "The confirmation of Eric Holder as our new Attorney General is a momentous day for the rule of law," Senator Russ Feingold, a Wisconsin Democrat, declared after the vote, as quoted by Stephen C. Webster on the Raw Story Media Web site (February 2, 2009). "During his confirmation hearings, Eric Holder clearly and unequivocally stated that no one, including the president, is above the law. Those were welcome words after eight years of Bush Administration policies that undermined our Constitution and damaged the integrity of the Department of Defense." Foremost among those policies, promulgated from 2001 to 2009 by Republican president George W. Bush and his vice president, Richard B. "Dick" Cheney, were those that had permitted the use of torture in interrogation of suspected terrorists or other detainees; the years-long holding at Guantánamo Bay, Cuba, of people who were described as enemy combatants but had not been charged with terrorist acts or any other crimes; the wiretapping of U.S. citizens and others without warrants; the rejection of DOJ job applicants deemed to be insufficiently supportive of President Bush and the Republican agenda; and the firing of nine federal prosecutors for what appeared to be partisan political reasons.

The office of attorney general was established not by the United States Constitution but by the Judiciary Act of 1789. As the head of the DOJ, Holder is considered the federal government's chief law enforcer. Some of the DOJ's 110,000 employees work in sections of the department that are relatively familiar to the public, including the Civil Rights Division; the Antitrust Division; the Federal Bureau of Investigation (FBI); the Bureau of Alcohol, Tobacco, Firearms, and Explosives; the Bureau of Prisons; the Drug Enforcement Division; and the United States Marshals Service. Other DOJ divisions are less well known: the Office on Violence Against Women; the Office of Dispute Resolution; the Tax Division; the U.S. Parole Commission; the Environment and Natural Resources Division; the Foreign Claims Settlement Commission; and many others. Holder has more than three decades of experience in law; "by all accounts," as Carrie Johnson wrote for the *Washington Post* (February 3, 2009, on-line), he is "among the most credentialed lawyers ever to become attorney general." He began his professional life as a federal trial attorney; after eight years at that job, he spent five years as an associate federal court judge, then four years as a United States attorney, another four as the deputy United States attorney general, and, most recently, eight years as an attorney for a private firm, Covington & Burling, where he dealt with "complex civil and criminal cases, domestic and international advisory matters and internal corporate investigations," according to the firm's Web site. When he greeted DOJ employees on his first day as attorney general, Holder said in part, as quoted on the DOJ Web site (February 3, 2003), "Citizens from across this nation look to us as the standard bearers of justice, fairness, and independence. At all times, and in all ways, we must demonstrate that we merit their confidence. We must fulfill our duties faithfully, and apply the law evenhandedly, without regard to politics, party or personal interest."

Eric Himpton Holder Jr. was born on January 21, 1951 in the New York City borough of the Bronx. His father was a real-estate agent who had emigrated from Barbados; his mother, Miriam (Yearwood)



Alex Wong/Getty Images

Eric H. Holder Jr.

Holder, was a telephone operator and church secretary whose parents were natives of the same Caribbean island, in the British West Indies. Holder and his younger brother, William, were raised in the New York City borough of Queens, in the neighborhood of East Elmhurst, where many people of West Indian descent lived. Holder attended regular classes in a Queens public school until the fourth grade, when he was placed in a program for intellectually gifted children. Thereafter, most of his schoolmates were white, and young Eric lost his closeness to his neighborhood peers. The high school he attended, Stuyvesant, is among the nation's most competitive public secondary schools; admission is based on results of an entrance exam. Holder commuted an hour and a half from his home to the school, which is in the borough of Manhattan, and one year he was the captain of its basketball team. He found his course work very demanding, and at home he spent much of his time studying. He attended Columbia University, also in Manhattan, his costs paid for in part by a New York State Regents Scholarship. As a freshman he played basketball with the college team. On Saturdays, according to biography.com (2008), he mentored children living in the low-income area surrounding Columbia, and he participated in civil rights activities. After he earned a B.A. degree, in American history, in 1973, he entered Columbia's law school. "The law inevitably is wound up with some great political movements, social movements," he told Javier C. Hernandez for the *New York Times* (November 30, 2008, on-line). "I wanted to be a part of that."

While at law school Holder clerked for attorneys at the National Association for the Advancement of Colored People (NAACP) Legal Defense Fund and at the DOJ's Criminal Division. After he earned a J.D. degree, in 1976, Holder was accepted in the U.S. attorney general's highly selective honors program for promising young attorneys. As a member of the department's newly formed Public Integrity Section, he investigated and prosecuted corruption by local, state, and federal officials. In cases he handled, the defendants included a Florida state treasurer, FBI agents, the U.S. ambassador to the Dominican Republic, a Philadelphia, Pennsylvania, judge, and an organized-crime boss.

In 1988 President Ronald Reagan nominated Holder as an associate judge on the Superior Court of the District of Columbia; he was confirmed by the U.S. Senate. He presided over hundreds of civil and criminal trials in his five years there. In 1993, when Bill Clinton was in the White House, the Senate confirmed Holder as the U.S. attorney for Washington, D.C., the largest such office in the country. During his four-year tenure in that position, Holder created a unit to more aggressively prosecute cases of domestic violence; pushed for more forceful enforcement of hate-crime laws; set up Operation Ceasefire, a program designed to lessen violent crime by reducing the number of guns in criminal hands; devised a strategy to get better results in cases involving abused children; and launched a project whereby members of communities and local government agencies worked with law-enforcement authorities to make neighborhoods safer.

In 1997 President Clinton appointed Holder to be the deputy to Attorney General Janet Reno; confirmed unanimously by the Senate, he became the highest-ranking African-American in law enforcement in the nation's history. In that position he oversaw civil and criminal litigation, enforcement, and administrative activities. He launched the Children Exposed to Violence Initiative, which aimed, as the president said, "to combat violence against children [and] to prevent children who are exposed to violence from being victimized a second time by the justice system," according to the *Weekly Compilation of Presidential Documents* (January 4, 1999). At Clinton's request Holder created Lawyers for One America, a program with both public and private components whose aim is to promote diversity within the legal profession and increase the quantity of pro bono work being performed nationally. In addition, Holder issued guidelines for handling health-care fraud, computer-related crimes, and software piracy. He also drew up what is now known as the Holder Memorandum, a guide to be used by the DOJ in determining whether to indict corporations or corporate employees suspected of illegal activities. A major factor to be considered was the degree to which corporate executives were "cooperating" with the DOJ in its investigations. "Put simply, the Holder Memo suggested that, by facilitating the ability of employees to continue working and to vigorously defend themselves, the company was demonstrating a noncooperative attitude that could get it indicted," Harvey Silvergate wrote for the *National Law Journal* (December 8, 2008, on-line). In Silvergate's opinion, the memo "was a serious affront to the basic adversarial and rights-driven structure of the American legal system." Aspects of Holder's memorandum were criticized in a case involving former employees of KPMG, a huge, international, Swiss-owned firm whose specialties include audits and tax preparation. To avoid being deemed "noncooperative," KPMG had refused to advance money for legal assistance to employees under investigation by the DOJ. The presiding judge in that case, Lewis A. Kaplan of the Southern District of New York, wrote in his decision (June 26, 2006), as quoted by Silvergate, that the government had "let its zeal get in the way of its judgment. It has violated the constitution it is sworn to defend."

From January 20 to February 2, 2001 Holder was the acting attorney general under President George W. Bush; he stepped down after the confirmation by the Senate of Attorney General John Ashcroft. After leaving his government post, Holder joined the law firm of Covington & Burling, which has five offices in the U.S. and three overseas. As a litigation partner, Holder represented major clients, among them the National Football League (NFL), Chiquita Brands International, and the pharmaceuticals company Merck. In May 2008 the *National Law Journal* named Holder among the 50 most influential minority lawyers in the U.S., and in the same month, *Legal Times* included his name in its list of the greatest Washington lawyers of the past 30 years.

In late 2007 Holder joined Barack Obama's presidential campaign as a senior legal adviser. He was a member of the committee that recommended Senator Joseph Biden of Delaware as Obama's running mate. On December 1, 2008 Obama nominated Holder for the post of U.S. attorney general. During Holder's confirmation hearings before the Senate Judiciary Committee, in January 2009, Republican members expressed their disapproval of his calls for stronger gun controls, such as requiring background checks for purchasers of guns at trade shows and licensing of all owners of handguns. They also tried in vain to extract from Holder a promise that he would not pursue prosecutions of anyone who used torture during interrogations at Guantánamo Bay or elsewhere as part of the Bush administration's "war on terror" or of anyone directly involved in warrantless surveillance operations; Senator Tom Coburn of Oklahoma cited Holder's stands on those issues as evidence that he was not fully committed to fighting terrorism. The most serious questions that arose during the hearings, however, involved Holder's role in several pardons granted by Bill Clinton on his last day in the White House. Most prominent—or notorious—among them was the president's pardon of the billionaire commodities trader Marc Rich. In 1983 Rich had fled to Switzerland after his indictment on multiple charges, including failure to pay millions of dollars in taxes—indeed, at that time it was the biggest tax-fraud case in American history—and illegally conducting business with Iran in 1979 and 1980. That pardon sparked an outcry from attorneys who had worked on the indictment against Rich; many columnists and others also condemned it, accusing Clinton of acting as he had because the scofflaw's former wife had contributed a lot of money to the Clinton Presidential Library, to be constructed in Little Rock, Arkansas. In the following weeks Holder had said that he had felt neutral about the pardon but somewhat "favorable" about its being granted; that he had not examined papers about the case in detail; and that his role in it had been peripheral. Investigations into the matter in 2001 and 2002 by the House Committee on Oversight and Government Reform, however, revealed that Holder, through a third party, had recommended a lawyer for Rich; that he had communicated with that lawyer at least a half-dozen times; and that he had not alerted prosecutors about the paperwork that the lawyer had submitted to the White House requesting a pardon. According to the report that the House committee made public in early 2002, Holder had played a major role and had been a "willing participant in the plan to keep the Justice Department from knowing about and opposing the pardon," as quoted by Alison Leigh Cowan in the *New York Times* (March 13, 2002). At his confirmation hearing Holder admitted that he had "made mistakes" in the Rich matter, primarily by not making sure that he was fully informed and by not consulting with other lawyers who had firsthand knowledge. The Judiciary Committee voted 17–2 in favor of his confirmation. In the full vote in the Senate, all 21 "no" votes were cast by Republicans, while 18 Republicans joined 57 Democrats to approve the nomination. Holder was sworn into office on February 2, 2009.

In his first major speech as attorney general, made on February 18, 2009 in honor of Black History Month, Holder surprised many when he expressed the view that the nation has yet to confront the issue of race openly and honestly. "Though this nation has proudly thought of itself as an ethnic melting pot, in things racial we have always been and continue to be, in too many ways, essentially a nation of cowards," he said, as quoted on the CNN Web site (February 19, 2009). Holder also criticized past discussions of race as "too simplistic and left to those on the extremes who are not hesitant to use these issues to advance nothing more than their own narrow self-interest."

On March 2, 2009 the Justice Department released internal memos and opinions in which Bush administration officials had offered parameters delineating the legal limits of government power in combating terrorism, including justification for that administration's practice of conducting searches without warrants in cases involving suspected terrorist activities. The following month, in response to requests made under the Freedom of Information Act, the Justice Department released four secret memos used by the Bush administration to provide a legal justification for interrogation tactics—among them waterboarding, head slapping, and the slamming of suspects into walls—that violated both domestic and international law. The American Civil Liberties Union, many Democrats, and others called on Holder to appoint an independent prosecutor to investigate the interrogations of terrorism suspects under the Bush administration. They did so despite President Obama's stated opinion that while criminal acts should be prosecuted, a broad inquiry that might distract his administration from present concerns should not take place. On August 24, 2009, after reviewing classified documents from the CIA and other sources, the Justice Department's Ethics Office announced its recommendation that several prisoner-abuse cases be reopened. On August 25, five years to the day after the CIA made public a report containing graphic accounts of interrogations in which Americans had used threats of violence and sexual assault, mock executions, and other unlawful tactics, Holder appointed the independent prosecutor John H. Durham to investigate the CIA's destruction of certain interrogation videotapes, in order to determine whether a full criminal investigation of such conduct was necessary. The CIA's 2004 report also described the ways in which the information obtained from the interrogations supposedly helped to derail terrorist plots. "As attorney general, my duty is to examine the facts and to follow the law," Holder said, as quoted in the *New York Times* (August 25, 2009). "Given all of the information currently available, it is clear to me that this review is the only responsible course of action for me to take."

Holder has also announced a number of broad changes in Justice Department policy, including reinstituting a ban on assault weapons, revitalizing the Justice Department's Civil Rights Division, which had been downsized during the Bush administration, and ceasing the Bush administration's policy of prosecuting distributors and purchasers of marijuana used for medical purposes in states where that practice is legal. In late October Holder announced that authorities had arrested 303 people and confiscated illegal drugs, weapons, and millions of dollars obtained through illegal activities linked to a major Mexican drug cartel.

In December 2004 Racine Tucker-Hamilton, of the George Washington University School of Business, interviewed Holder for a two-hour videotape for HistoryMakers, an archive of African-American oral histories. In February 1997 Holder was the keynote speaker at a Library of Congress celebration of African-American History Month; his address was titled "African American Civil Rights: A Reappraisal."

Holder and his wife, Sharon Malone, an obstetrician, have two daughters, Maya and Brooke, and one son, Eric.

Honderich, Ted

(HAHN-der-ik)

Jan. 30, 1933– Philosopher; educator

Address: 66 Muswell Hill Rd., London N10 3JR, England

The philosopher Ted Honderich is widely known for his writing and research on the subjects of determinism, consciousness, the justification for punishment, human equality, terrorism, democracy, and the tradition of conservatism. Honderich has been described as a "consequentialist" philosopher, for his belief that the appropriateness of actions is determined not by intentions but by consequences. Honderich has published dozens of academic papers and authored or edited more than 15 books on philosophy, including *A Theory of Determinism: The Mind, Neuroscience and Life-Hopes* (1988), an influential manifesto reconciling the seemingly contradictory ideas of determinism and free will, and the intimate autobiography *Philosopher: A Kind of Life* (2000). But it is Honderich's writing on such subjects as the rationale for political violence and the responsibility of individuals to resolve the world's inequalities that has drawn the most attention and ignited the most controversy. He received particularly widespread criticism, as well as accusations of anti-Semitism, for his book *After the Terror: A Manifesto* (2002), in which he asserted that the world's vast inequalities are the fault of privileged individuals in the Western world and that, given those inequalities, certain acts of politically motivated terrorism may be "morally justified." Honderich, a mischievous man who is "always up for a ruck," as John Crace put in the London *Guardian* (March 22, 2005), has defended his theories with colorful and often acerbic responses to his detractors. Writing for the London *Independent* (August 27, 1995), Ian Parker described Honderich as "witty, and passionate, and cruelly inclined to give his ideologic opponents all the intellectual space they might want, feigning

Ted Honderich

surprise that they then seem to have nothing sensible to say."

The youngest of six children, Edgar Dawn Ross Honderich was born on January 30, 1933 in Baden, in southwestern Ontario, Canada, a town that he described in his autobiography as "a filthy peasant village." His father, John William Honderich, was a German descendant of Mennonites; his mother, Rae Laura (Armstrong) Honderich, was a Scottish Calvinist. Robert Fulford wrote for the Canadian *National Post* (November 11, 2005, on-line) that Honderich's father, who took on several occupations unsuccessfully, "dreamed ineffectual dreams while his mother kept the family alive" by running Baden's telephone exchange. Honderich's father and grandfather were excommunicated from their church for visiting one of a different denomination. Perhaps in part for that reason, Honderich never had much interest in religion. Even as a child, "I could see that nothing in religion could possibly be true," he told Crace. With the family facing tough times during the Great Depression, Honderich's brother Beland—15 years his senior—left school after eighth grade to work as a correspondent for the *Kitchener Record*, a Canadian newspaper. Honderich attended high school at the Kitchener-Waterloo Collegiate Institute and then, at age 16, when his mother fell ill, moved to Toronto to live with siblings. He studied at the University of Toronto while working as a journalist at the *Toronto Star*, where Beland had become editor in chief; Honderich became editor of the *Star*'s literary page. Meanwhile, his first year at the university was disastrous, largely because he was distracted from his studies by the bohemian lifestyle that he encountered in the city. He also had dreams of being a playwright, possibly "another Arthur Miller," as Martin Levin reported for the Toronto *Globe and Mail* (March 17, 2001)—which, Levin wrote, "is why it took him seven years to graduate from university." Honderich graduated with B.A. degrees in philosophy and English literature in 1959. Eventually realizing that he had a desire to "get things of importance straight," as he told Levin, and deciding that that goal would be better pursued through logic than literature, he decided to further his study of philosophy.

In 1959 Honderich left Canada for England to pursue a graduate degree at University College London (UCL). One of his instructors was A. J. Ayer, an eminent British philosopher whom Honderich particularly admired. As a graduate student Honderich was proud to join the philosopher Bertrand Russell and other protesters in an antinuclear sit-in in Parliament Square in the early 1960s. He earned his Ph.D. degree in the philosophy of logic and the mind in 1968, meanwhile spending two years teaching at the University of Sussex. He then became, successively, a lecturer, reader, and professor at UCL. In 1988 he was named Grote professor of the philosophy of mind and logic, the position he held until his retirement, in 1998.

In Honderich's first book, *Punishment: The Supposed Justifications* (1969), he analyzed a number of traditional justifications of state-sanctioned punishment—reform, retribution, and deterrence—finding each one insufficient in that it does not aim at consequences that "maximize the equalization of happiness," or result in the greatest happiness for the greatest number of people. Honderich concluded that the best justification of punishment is "the reduction of distress at an economical rate" and "the avoidance of greater inequality," as Jonathan Glover put it in his review of the book, which is posted on Honderich's Web site. Representing the general critical response, Glover described Honderich's writing as "cumbersome and at times ungrammatical" and faulted the book for "the total absence of argument in support of Honderich's own views of justice as equality." Glover nonetheless called the work a "sane, thorough, and socially radical book." *Punishment* was published in five subsequent editions, most recently in a greatly revised version titled *Punishment, the Supposed Justifications Revisited* (2006). In 1976 Honderich published *Three Essays on Political Violence*, a collection of articles on the subjects of causation, determinism, justice, and various ideas explored by the 19th-century liberal British philosopher John Stuart Mill. The book was expanded and republished in 1989 under the title *Violence for Equality: Inquiries in Political Philosophy*.

A Theory of Determinism: The Mind, Neuroscience and Life-Hopes (1988), published shortly after Honderich's promotion to the Grote professorship, is considered his magnum opus. In it Honderich discussed determinism—the belief that every event, including each process of human cognition and decision-making, is causally determined by a chain of prior occurrences. The traditional philosophical question of determinism is whether or not it is compatible with the notion of free will. In general, the answer to that question depends on a person's definition of freedom. If freedom comprises "the idea of action as voluntary and unconstrained," in Honderich's words, as paraphrased by Justin Broackes in the London *Times* (June 5, 1988), then philosophers deem determinism and free will as compatible, because even if a given choice has been predetermined by a chain of events since the beginning of time, in most cases that choice is still voluntary, since no one else is forcing it to be made. However, if freedom is defined as "the idea of self lying outside the realm of cause and necessity," then the two are not thought to be compatible. Those two schools of thought are called, respectively, compatibilism and incompatibilism. The notion of incompatibilism is accompanied by questions of accountability. For instance, if individuals are not responsible for their actions, what are the implications for our ideas of love, morality, and society? Honderich asserted that both views—compatibilism and incompatibilism—are wrong, arguing instead for a mixture of the two, in which we both accept the existence of determinism as a force with major consequences for our lives and, as Mark Thornton, a philosopher at Victoria College, put it in his review for the *Toronto Star* (November 12, 1988), "affirm what can be retained in our present personal, moral and social attitudes alongside a belief in determinism." To illuminate his point, Honderich asked the question, "What but an uncaused and unsuperfluous self could rescue us from the situation in which our actions are simple products of our environments and the manifold of our dispositions?" Thornton concluded that Honderich's approach is "Incompatibilist about the past and Compatibilist about the future," adding, though, that that view failed to resolve "the traditional battles between Incompatibilists and Compatibilists." Honderich's practical approach to the question of determinism has been adopted by many philosophers. Honderich further discussed those ideas in the book *How Free Are You? The Determinism Problem*, published in 1993 and in an expanded version in 2002, and in the textbook *On Determinism and Freedom* (2005).

Honderich ventured into the realm of politics when he published *Conservatism* (1990), in which he analyzed and harshly criticized the conservative movements in both Britain and the United States. In each chapter Honderich attempted to discredit theories regarding often-discussed themes in conservative politics—such as human nature and freedom—advanced by conservative figures throughout history, from Edmund Burke, the 18th-century Anglo-Irish statesman and founder of Western conservatism, to Margaret Thatcher, who served as British prime minister from 1979 to 1990. Honderich's central argument was that the underlying principle tying all conservatism movements together is selfishness. What distinguishes conservatives from other political ideologues, Honderich argued, is not that they are selfish but that they "are nothing else." He added, as quoted by Conor Cruise O'Brien in the London *Times* (July 11, 1990), "Their selfishness is the rationale of their politics, and they have no other rationale. They stand without the support, the legitimation, of any recognisably moral principle." While many reviewers found Honderich's criticisms of conservatism thought-provoking, others interpreted the book as less a philosophically based analysis of conservatism than a partisan attack. O'Brien called the book "a competently conducted polemic against Conservatism," while Enoch Powell wrote in his review for the London *Independent* (July 1, 1990), "His book is the work of a virulent partisan who leaves no one guessing how he intends to vote, and hopes a majority will vote, at the next general election." A greatly revised edition of *Conservatism* was published in 2005 under the title *Conservatism: Burke, Nozick, Bush, Blair?*

Honderich edited the reference book *Oxford Companion to Philosophy* (1995) for "three reasons," as he told Parker. "First I thought it would increase my fame, second I thought I'd get a lot of money, and third I thought I could do it on the side. It is that third reason that really sticks in my mind. I cannot understand how people can make such amazing blunders. I spent two years, from dawn to dusk, from five in the morning to seven at night." The 1,000-page book contains nearly 2,000 entries by 249 contributors, including, in addition to biographies of major philosophers and definitions of terms, a number of "light-hearted" entries unrelated to philosophy; those were aimed at the average reader and intended, as Honderich wrote in the introduction, to satisfy "a curiosity owed just to a page that falls open." For example, an entry under the heading "tar-water" explains that the 18th-century British empiricist Bishop George Berkeley considered a mixture of tar and cold water to be an all-purpose medicine with extraordinary powers. While some found those playful entries charming, others found them distracting and unnecessary. Honderich's *Oxford Companion* was generally well received by his peers. An updated version, published in 2005, includes 300 additional entries, such as the words "ableism" ("It basically means being condescending to cripples," Honderich wrote) and "zombies."

Shortly after Honderich retired from his teaching position at University College London, in 1998, he began to write his autobiography, *Philosopher: A Kind of Life* (2001). In the book Honderich discussed the evolution of philosophy in the second half of the 20th century, while telling the story of his academic and personal lives. *Philosopher* is remarkably candid, revealing details, for instance, about his three failed marriages and numerous infidelities and other romantic exploits, including several with married women and his students;

Honderich refers to himself several times in the book as "a man of many women." While some readers took issue with what they saw as Honderich's pompous tone, many were impressed with his apparent honesty about the details of his life, both good and bad. "Honderich has been bravely honest about the limits of attempts at autobiographical honesty," Julian Baggini wrote for the London *Independent* (October 22, 2000). "And it is the book's dual nature, as an example of and reflection on the nature of biography, which contributes most to its success. Rarely does an autobiography make you question its author and, more importantly, your judgments on him to such a degree. Like good philosophy, it's unsettling and leaves you asking questions you hadn't even thought of when you first turned to page one."

Honderich generated controversy with his book *After the Terror: A Manifesto* (2002), which he was inspired to write after the September 11, 2001 attacks on the United States. Honderich argued that the world's inequalities—such as the imbalance of power and resources—are the root causes of much of the world's violence and terrorism. According to Honderich's reasoning, the acts of terrorists such as the 9/11 hijackers and Palestinian suicide bombers who attack Israelis may actually be "morally justified," if violence is the only way to draw attention to, and thereby remedy, inequality. Honderich further argued that the world's "haves," among them wealthy members of Western European and American societies who are unwilling to make sacrifices to close gaps of inequality, are partly responsible for the inequality and thus for much of the resulting terrorist violence. "We have done overwhelming wrong . . . in failing to help those Africans who lead bad lives. . . . [That is] as indubitable as sexually abusing a child," Honderich stated during a lecture at Brown University, as quoted by Sara Perkins for the *University Wire* (September 23, 2002). "We need to escape the illusion that to be ordinary is to be innocent." Honderich also devoted part of the book to countering common arguments in favor of the capitalist system, which he identifies as the underlying cause of the world's inequalities.

Honderich's book sparked outrage from those who questioned the reasoning behind his assertion that Westerners were responsible for the world's poverty and violence. Writing for the London *Sunday Telegraph* (September 8, 2002), Noel Malcolm called *After the Terror* "one of the worst books I have ever read," adding, "The key points of the argument are as follows. There is no real difference between an act of omission and an act of commission. This means that each time I fail to give money to Oxfam to save the lives of starving Africans—for example, each time I spend money on a holiday—I am responsible for killing people. Therefore we are all, in a real sense, murderers, and the West is collectively responsible for the elimination of human life on a colossal scale. (Western interventions to help starving Africans, such as the ill-fated American operation in Somalia, naturally pass unmentioned here.)" Others, such as the linguist and left-wing thinker Noam Chomsky, found the book both brave and provocative. "It guides the reader, lucidly and forcefully, from basic ideas about a good and decent life to contemplation of concrete and immediate issues that are or should be at the center of attention," Chomsky wrote, as quoted on Honderich's Web site. "It is a compelling and impressive contribution to thinking about problems that are complex, painful, and urgent."

Still others accused Honderich of anti-Semitism, citing his argument that Palestinian terrorists who murder Israeli civilians may have a moral right to do so. Honderich denied that charge, explaining that he had also written that Israelis may have a moral right to use violence to defend their land. The debate led to a series of public controversies. After the book's publication Honderich offered to give £5,000 of his book advance to Oxfam, a nongovernmental organization that works to fight global poverty and hunger, in an effort to demonstrate the sort of giving that he intended to encourage. In October 2002 the organization turned down Honderich's offer because of its association with a book that condoned violence. (A nonprofit organization, Medical Aid for Palestinians, or MAP, later accepted the money.) One well-publicized charge of anti-Semitism against Honderich came from Micha Brumlik, the director of a Holocaust education center and a Frankfurt University professor of science education, who in August 2003 wrote an open letter to Suhrkamp Verlag, the German company that published a German translation of Honderich's book, condemning the project. In response to the letter, which appeared in the German newspaper *Frankfurter Rundschau*, Suhrkamp Verlag pulled the book from publication. Honderich then wrote an angry letter to the newspaper and made appearances on German television news programs, in which he defended his book and called for Brumlik's dismissal. Although the controversy quieted somewhat when a Jewish publisher agreed to print Honderich's book, the philosopher's first lecture in Germany following the controversy brought protests from Palestinians, neo-Zionists, and neo-Nazis (who were protesting the views of the Zionists). Honderich reinforced his conclusion that violence is justified when committed in the name of the oppressed, writing in his 2003 essay "Terrorism for Humanity," as quoted by Richard Wolin in the *Chronicle for Higher Education* (October 24, 2003), "African terrorism against our rich countries would be right if it had a reasonable hope of success." That essay was published along with Honderich's other essays on the morality of political violence in the 2004 book *Terrorism for Humanity: Inquiries into Political Philosophy.*

In 2004 Honderich published *On Consciousness*, a book of collected papers detailing his theories on the nature of consciousness. Honderich divided prior schools of thought regarding consciousness between "physicalism," which identifies consciousness as a physical presence, and "spiritualism," which defines it as a mental quality and argues that human consciousness is limited by the extent to which the human mind can comprehend itself. Honderich concluded that neither school of thought had properly addressed the subject, arguing instead that consciousness is inextricably linked to existence; a person is conscious because that person is able to perceive the existence of the outside world. Honderich called that position "radical externalism." Honderich's book, and his related publication *Radical Externalism* (2006), elicited relatively little public reaction until 2007, when Colin McGinn, a fellow philosopher who holds the theory that the nature of consciousness—like some other areas of philosophical inquiry—is beyond the scope of understanding, wrote a scathing review of *On Consciousness* for the *Philosophical Review*. "This book runs the full gamut from the mediocre to the ludicrous to the merely bad," McGinn wrote, as quoted by Stuart Jeffries in the London *Guardian* (December 21, 2007). "It is painful to read, poorly thought out, and uninformed." McGinn also called the book "radically inconsistent" and Honderich's reasoning "shoddy, inept, and disastrous." The review sparked a feud between the two philosophers that played out largely over the Web. In an interview with Jeffries, Honderich suggested that McGinn's review was motivated by a personal matter involving a comment made decades earlier. "At UCL we had a jokey locker-room relationship. But then I made a misstep. I suggested to [McGinn] that his new girlfriend was not as plain as the old one, and I could see the blood drain out of his face," Honderich told Jeffries. "That was possibly the start of our frostiness." Honderich posted a lengthy defense of his theory on a well-known philosophy blog called Leiter Reports, which in turn elicited a response on the blog from McGinn. Appearing to take joy in such bickering, Honderich has posted on his Web site in their entirety that and other, similar exchanges between him and fellow philosophers.

In his most recent book, *Humanity, Terrorism, Terrorist War: Palestine, 9/11, Iraq, 7/7 . . .* (2006), Honderich revisited many subjects that he had addressed in *After the Terror*. He rejected a number of commonly accepted guiding principles of morality, such as international law, "just war theory," conservatism, liberalism, and notions of democracy and freedom. He also dismissed the notion that nonviolence has ever been used successfully as a political philosophy. In light of what he saw as the failure of all other guiding moral systems, Honderich suggested an altogether new "principle for humanity," according to which "we must actually take rational steps to the end of getting and keeping people out of bad lives"—with a "bad life" defined as one that lacks reasonable length, quality, freedom, or power. Honderich went on to apply that principle to various global conflicts and to discuss whether the acts of the aggressors were morally just, offering the by-then familiar conclusion that violence is morally justified only in cases in which it is the sole possible means of improving lives. As with others of his works, reviewers' responses ranged from praise to strong criticism. One of Honderich's essays was included in *Israel, Palestine and Terror* (2008), a book of essays that focus on the possible moral justifications of Palestinian terrorism, edited by Stephen Law. A staff reviewer from *Publishers Weekly* (May 5, 2008) criticized the collection for lacking a single Palestinian voice and including perspectives from very few Israelis—as well as for discussing the conflict in abstract terms. The reviewer wrote: "Such a conversation might be of interest in the halls of academia, but to the extent that it can be expected to contribute meaningfully to the real-life resolution of decades of conflict, this largely aloof and oddly bloodless effort fails to engage, even though the issues raised are urgent and go the heart of what drives Western foreign policy today."

In addition to his work at University College London, Honderich has been a visiting professor at Yale University, City University of New York, Brooklyn College, and the University of Lethbridge. From 1995 to 2005 he was the vice chairman, and since 2005 has been chairman, of the Royal Institute of Philosophy. He is a member of the Garrick Club, the Aristotelian Society, and the Mind Association. According to his Web site, Honderich is currently working on a book whose title will probably be "Actual Consciousness."

In 1995 Parker described Honderich as "a very social, funny man, with a taste for gossip and wine—and for waving at girls through the windows of fast-moving trains." Honderich has two grown children, Kiaran and John Ruan, from his second marriage; as he revealed in his autobiography, he also has a third child, whom he has never met. A British citizen for many years, Honderich lived in Hampstead, a suburb of London, England, for decades before moving to Somerset. He returned in 2007 to Hampstead, where he lives with his fourth wife, Ingrid Coggin Purkiss, the secretary of the Royal Institute of Philosophy. Under "recreations" on his curriculum vitae, Honderich lists "wine, old houses, hearing all of Trollope's novels being read aloud, some more than once, decent and inexpensive restaurants."

Iijima, Sumio

(ee-ee-jee-mah, soo-mee-oh)

May 2, 1939– Physicist; electron microscopist; educator

Address: NEC Corp., R&D Group, 34
Miyukigaoka, Tsukuba, Ibaraki 305-8501, Japan

On June 23, 1991, while examining minuscule crumbs of carbon with an electron microscope, the Japanese physicist Sumio Iijima discovered what, soon afterward, he dubbed carbon nanotubes. Iijima's description of his discovery, published in the November 7, 1991 issue of the journal *Nature*, gave a tremendous boost to the fledgling science of nanotechnology. Immediately, molecular manufacturing—the fabrication of microscopically small devices for use in medicine, communications, electronics, energy production, chemical processes, and other industries—moved significantly closer to reality, as did the possibility of "extending precise control of molecular structures to larger and larger scales," as K. Eric Drexler predicted in his book *Engines of Creation: The Coming Era of Nanotechnology* (1986). "The earthshaking insight of molecular nanotechnology is that, when we reach this scale, we can reverse direction and begin building up, making products by placing individual atoms and molecules exactly where we want them," Mike Treder wrote for the *Futurist* (January/February 2004). In addition, according to a writer for *Nature*'s on-line "Physics Portal" (2001), "as a tool to test quantum mechanics and model biological systems," among other areas of basic science, "nanotubes seem to have unlimited potential." For his discovery of carbon nanotubes and other contributions to science, Iijima has earned some 40 awards and honors from schools, organizations, and governments in Japan, China, European nations, and the U.S. He received his first prize—the Bertram Eugene Warren Diffraction Physics Award, from the American Crystallography Society—in 1976, when he was a postgraduate research associate at Arizona State University. Among those he has received in recent years are the John M. Cowley Medal, from the International Federation of Societies for Microscopy, in 2006; the Gregori Aminoff Prize in crystallography, from the Royal Swedish Academy of Sciences, in 2007; the award for technical scientific research from the Prince of Asturias Foundation, in Spain, in 2008; the "No Boundaries" Innovation Award, from the British weekly the *Economist*, in 2008; and admission to the Norwegian Academy of Science and Letters, in 2009, as a foreign member. Iijima was elected a foreign associate of the U.S. National Academy of Sciences in 2007.

Named in 1974, nanotechnology involves the study, formation, and manipulation of molecules or of bits of matter only a few molecules in width. The primary unit of measurement is the nanometer: one billionth of a meter (a meter being close to 3.281 feet, or a little over a yard). The nanometer is about 10 times the radius of a hydrogen atom (the smallest atom), or about the size of one carbon atom, or approximately 1/100,000th the width of a human hair. Carbon nanotubes are seamless tubes of carbon atoms joined in a honeycomb pattern; the tubes are at most a few nanometers in diameter and a few micrometers in length. (A micrometer is one-millionth of a meter.) While scientists have found tubular structures among a few minerals in their natural state, carbon nanotubes are manmade; none have ever been detected in the natural world. The carbon nanotubes that Iijima saw on that summer day in 1991 were not created intentionally; they came into being during experiments in which carbon rods were vaporized. The products of such vaporization—spheres whose surfaces are patterned like honeycombs—had drawn the attention of Iijima's colleagues in Japan, the U.S., and Great Britain. The spheres were "not interesting for a microscopist," however, Iijima told Dennis Normile for *Science* (November 18, 1994). Rather, what captivated Iijima were the whiskery structures that had appeared on the ends of the electrodes used in the vaporization process; they reminded him of the "whisker-like" structure of silver-bromide crystals, which he had studied a quarter-century earlier, while conducting research as a graduate student, as he told Irene M. Kunii for *BusinessWeek* (July 8, 2002), and the tubular structure of chrysotile asbestos, which he had examined when another researcher in his lab studied it in the 1960s. "When I saw carbon nanotubes under the electron microscope, my old experiences came immediately to mind and helped me to figure out what they were," he wrote for a Meijo University

Sumio Iijima

Web site (nanocarb.meijo-u.ac.jp, 2007). His path as a researcher has also been influenced by his uncommon understanding of the nanoworld, which stems from skills in electron microscopy that are second to none.

Iijima's journey to success in science began in early childhood, when, "stated very simply, I loved nature," as he wrote in "About Myself," an on-line essay for the NEC Corp., in Tsukuba, Japan, where he has worked since 1987 as a senior principal researcher. "I learned many things from my experiences with nature," he wrote, "and I believe that this helped me to develop both sensitivity and insight." He also wrote, "The most important thing that I learned while in the U.S. was 'Don't do what others have done.'" Iijima "has a sense of what to look for, of what will give us the most interesting and most valuable information," Hiroyoshi Rangu (also known as Roy Lang), then the general manager of NEC's Fundamental Research Laboratories, told Normile. From 1998 to 2002, along with Christian Colliex of the French National Center for Scientific Research, Iijima co-directed research for the Nanotubulites Project, a joint venture of the International Cooperative Research Project and the Japan Science and Technology Agency. In his native land, in addition to his work with NEC, Iijima has been a professor in the Department of Materials Science and Engineering of Meijo University, in Nagoya, since 1998; the director of the Nanotube Research Center (also known as the Research Center for Advanced Carbon Materials) of the National Institute of Advanced Industrial Science and Technology, in Tsukuba, since 2001; project leader of the Carbon Nanotube Capacitor Development Project of NEDO (New Energy and Industrial Technology Development Organization) since 2006; and a distinguished invited university professor at Nagoya University since 2007. He has also held the post of dean of the Advanced Institute of Nanotechnology at Sungkyunkwan University, in Suwon, Gyeonggi-do, South Korea, since 2005. More than 482 papers published in scientific journals between 1966 and mid-2009 carry Iijima's name as author or co-author.

Sumio Iijima was born on May 2, 1939 to Fukumatsu and Take Iijima in Koshigaya, a town in the Saitama Prefecture of Japan. At the small primary school he attended—there were only three classes, with a total of 120 pupils—he had a fine science teacher "who influenced me very much," he told Irene M. Kunii. His primary interests were unrelated to book learning, though; as a boy, he recalled in his NEC essay, "I collected plants and insects, I fished, and I kept a menagerie of small animals, including pigeons, rabbits, snakes, frogs, and crabs." As a high-school student, he ranked in the "lower middle" of his class, because he did not study diligently. "You see, I had so many things to do," he explained to Kunii. "I loved sports, collecting minerals, and looking at the stars at night." He was also a member of his school's mountaineering and music clubs. Iijima failed his university entrance exams on his first try. He then spent a year learning to play the mandolin and preparing to retake the exams, which, much to his dislike, required much memorization. His retest mark was sufficient to gain him acceptance into the University of Electro-Communications in Tokyo. He concentrated in communications engineering until his final year, when he changed his major to chemistry. When he realized that he wanted to gain admission to a graduate school, he uncharacteristically applied himself to his studies wholeheartedly. He earned a B.S. degree in 1963 and then enrolled at the Graduate School of Physics at Tohoku University, in Sendai, Japan. "It just so happened that I was assigned to the laboratory of Professor Tadatoshi Hibi," a pioneer in the use of electron microscopy for research, he wrote in "About Myself." (Hibi had built Japan's first electron microscope, in 1936.) That assignment "determined the rest of my life," Iijima told Kunii. He recalled in his essay, "It wasn't that I had a particularly strong desire to do research with electron microscopes at the time, but I found that I was perfectly suited to research in this field." He also wrote that the change in the trajectory of his career, from physics to microscopy, and "the fact that I dove into new fields," were "a result of my determination to find something"—that is, something new to science. Iijima earned an M.S. degree in chemistry, in 1965, and a Ph.D. in solid-state physics, in 1968, from Tohoku University.

From 1968 to 1975 Iijima worked as a research associate at Tohoku's Research Institute for Scientific Measurements. Also during that time, for 12 years beginning in 1970, he engaged in research at the Center for Solid State Science at Arizona State

University, in Tempe, under the physicist John M. Cowley, another major figure in electron microscopy and crystallography. "It was great because I had complete freedom and a very good microscope," he told Kunii. Iijima constructed a more sophisticated electron microscope and became the first microscopist ever to capture an image of individual atoms (those of tungsten). Colleagues told him that he "had achieved the dream held by researchers since the invention of the electron microscope in 1932—that of actually seeing a single atom," he recalled in "About Myself." With Cowley, Iijima wrote a paper titled "Electron Microscopy of Atoms in Crystals," published in *Physics Today* (March 1977); according to its deck, "Now we can see atoms in crystals directly with electron microscopy, allowing us to determine structures of both ordered and disordered solids and to study the way atoms cluster around crystal defects." (Ordered solids, or crystals, have precise, regular patterns of atoms or molecules, called lattices; their lattices may have defects, but only very few, and far between. Disordered solids have random patterns or crystal lattices with many defects.) With Michael A. O'Keefe and Peter R. Buseck, members of the University of Arizona Departments of Chemistry and Geology, Iijima set out to expand the boundaries of what could be seen with electron microscopes, by improving their resolution. Their influential paper on their work appeared in *Nature* (July 27, 1978). The abstract read, "It is now possible to compute images of crystal structures corresponding to experimental images produced by using high-resolution transmission electron microscopy (HRTEM)," and it noted that the authors had used several minerals and a binary oxide in their investigations.

In 1979, as a visiting senior scientist, Iijima joined the Department of Metallurgy and Materials Science at Cambridge University, in England. While studying graphite, a form of carbon, Iijima noticed a previously undescribed spherical arrangement of carbon atoms. His article about it contained only a partial description of its structure. Six years later the British scientist Harold Kroto and the American scientists Robert Curl and Richard Smalley published in *Nature* (November 1985) a description of C_{60} (C is the symbol for carbon), in which carbon atoms are joined to form a ball. The men christened it buckminsterfullerene, because it reminded them of the geodesic dome designed by Buckminster Fuller. Iijima recognized buckminsterfullerene as the spherical structure he had seen years earlier. His second paper about the structure, "The 60-Carbon Cluster Has Been Revealed!," written at Smalley's request and published in the *Journal of Physical Chemistry* (Volume 91, 1987), provided corroborating evidence that a new form, or allotrope, of carbon had been discovered. (Kroto, Curl, and Smalley won the 1996 Nobel Prize in chemistry for their work.) Later, additional allotropes of carbon were found; they became known collectively as fullerenes (or, less commonly, buckyballs). Despite the efforts of many researchers, the anticipated practical applications of fullerenes have not yet materialized.

In the meantime, in 1982 Iijima had returned to Japan to become a group leader in the Hayashi Ultra-Fine Particle Project, an activity of the national Exploratory Research for Advanced Technology (ERATO) program. "My major task in this project was to develop a new high resolution electron microscope accessible for characterizing ultra-fine crystals without exposure to air," he wrote for nanocarb.meijo-u.ac.jp. With that tool he demonstrated, as he reported in the *Journal of Electron Microscopy* (December 1985), that ultrafine, crystalline particles of gold "move about like amoeba," in his words; both their external form and internal arrangements of atoms change continuously. He earned the 1985 Nishina Memorial Award for that finding.

In 1987 Iijima left the ERATO project and signed on as a senior principal researcher with the NEC Corp. He chose to enter the private sector for the first time, at the age of 48, partly because private facilities like NEC's "have unique materials produced using expensive equipment that cannot be made in universities, and I was sure that these materials would become the basis for exceptional research results using electron microscopes," he wrote in "About Me." In addition, NEC executives promised to give him the resources to build an ultrahigh-vacuum, high-resolution transmission electron microscope. He also liked NEC's style of management, which, he wrote, "was based on the approach of 'broad proliferation of science and technologies, and the creation of new value,' and of 'giving back to society.'"

Iijima was using not the ultrahigh-vacuum electron microscope but a standard electron microscope on June 23, 1991, when he obtained the clearest pictures yet of the structures that would come to be known as carbon nanotubes. His achievement was a combination of instinct, skill, and luck. "I emphasize that it was serendipity," Iijima told Dennis Normile, adding, "I have the best technique in microscopy." His paper about his findings, titled "Helical Microtubules of Graphitic Carbon," attracted worldwide attention among chemists, physicists, and others when it appeared in *Nature* (November 7, 1991). The first nanotubes that he detected had several concentric walls; in 1993 he discovered single-walled carbon nanotubes. In either case, because of their smallness, nanotubes "exhibit unique physical and chemical properties," as he wrote for nanocarb.meijo-u.ac.jp. "A single piece of single-wall carbon nanotube can be a transistor . . . ," he continued. "Many other industrial applications utilizing the unique properties of carbon nanotubes include the electron emitter source with high current density, highly conductive electrical wire, the high thermal conductor for the heat radiator, the probe needle for scanning probe microscopes, molecular sieves, gas absorbers, [and] carriers for drug delivery systems in nano-bio medicine." Nanotubes can be made to function either as metals or semiconductors and are the smallest known molecules to display metallic properties. The tubes' conductivity of electricity is higher than that of copper, and their conductivity of heat is higher than that of diamond (whose heat-conductivity ability is superior to that of tungsten, beryllium, aluminum, gold, copper, and silver). They are also extremely strong (reportedly, 50 times stronger than an equivalent piece of steel) and may be used to increase the strength of various materials. For example, some manufacturers of tennis rackets now incorporate carbon nanotubes in the yoke of the frame to strengthen it.

Iijima has published hundreds of papers describing his research on nanotubes. They cover subjects including nanotubes' growth and structural flexibility; their formation by such means as laser evaporation and hydrogen-arc discharge; responses of nanotube bundles to visible light; effects on them of oxygen, heat, and high pressure; techniques for opening and filling them; methods of mass-producing and purifying them; and methods of fabricating carbon-nanotube tips for use in scanning-probe microscopy or atomic-force microscopy. The titles of a handful of papers hint at the scope of Iijima's work: "A Simple Way to Chemically React Single-Wall Carbon Nanotubes with Organic Materials Using Ultrasonication" (*Nano Letters*, 2001); "Metal-Free Production of High-Quality Multi-Wall Carbon Nanotubes, in Which the Innermost Nanotubes Have a Diameter of 0.4nm [nanometers]" (*Chemical Physics Letters*, 2002); "Diameter Enlargement of Single-Wall Carbon Nanotubes by Oxidation" (*Journal of Physical Chemistry*, 2004); "Water-Assisted Highly Efficient Synthesis of Impurity-Free Single-Walled Carbon Nanotubes" (*Science*, 2004); "Synthesis of Single- and Double-Walled Carbon Nanotube Forests on Conducting Metal Foils" and "Metallic Wires of Lanthanum Atoms Inside Carbon Nanotubes" (*Journal of the American Chemical Society*, 2006 and 2008, respectively).

Iijima has also studied nanobeads and nanohorns, the latter of which resemble chubby, single-walled carbon nanotubes closed on one end with what looks like a cone-shaped cap (the horn); various sources describe them as resembling dahlias in shape. In an interview in Japanese on July 8, 2003 for nanonet.go.jp (posted in English on that site on July 22, 2004), Kuniko Ishiguro wrote that Iijima "now thinks that commercial applications of carbon nanohorns will be realized much earlier than those of carbon nanotubes." Iijima told Ishiguro, "People are exaggerating carbon nanotubes too much. However, I can say with confidence that carbon nanotubes have made great contributions to basic science." He also said, "I had conducted research using electron microscopy for 30 years before I discovered carbon nanotubes, so discovering them is just one of the results of my research based on electron microscopy." And he offered some advice to aspiring scientists: "When you do not have any clue as to how to start new research, you cannot rely on anyone but yourself. What you can rely on when you face a serious difficulty is nothing but your experience."

Iijima's name entered the *Guinness Book of World Records* in connection with a lecture he gave in May 1997 at the Friday Evening Discourse at the Royal Institution in London, England. Lectures at that event, which dates from 1825 and is open to the public, start promptly with the sound of a bell and must end—even if the speaker is in midsentence—when the bell rings again, precisely one hour later. Iijima ended his talk three seconds before the second bell rang.

Iijima's recreational interests include playing the flute, playing tennis, and skiing. He and his wife, Aida Nobuko, a professor of gerontological nursing at Nagoya University, married in 1968. The couple live in Nagoya and have two children, Masako and Arihiro.

Inskeep, Steve

1968– Radio journalist; co-host of Morning Edition

Address: National Public Radio, 635
Massachusetts Ave., N.W., Washington, DC
20001

"I love a good story and I love to write," the radio journalist Steve Inskeep told an interviewer for WEKU.FM (on-line) several years ago. "When you're lucky, you can find a story that has many layers of meaning." Since 2004 Inskeep has been the co-host, with Renée Montagne, of *Morning Edition*, the most popular program on National Public Radio (NPR) and the most-listened-to radio news program in the U.S. Inskeep, who turned 40 in 2008, covered local sporting events for his high-school and college radio stations. He worked for local radio stations in New York City and New Jersey for six years before he joined NPR, in 1996, as a political reporter. Since then he has covered hundreds of domestic and international events and phenomena, ranging from American politics, national U.S. elections, the wars in Afghanistan and Iraq, and the aftermath of Hurricane Katrina, to the presence of rats in Washington, D.C., and a West Virginia town whose population is 11. He has conducted interviews with men and women whose names are familiar worldwide and also with peo-

Donald Baxter

Steve Inskeep

ple known only to a few, among them victims of disasters, both natural and manmade, blue-collar workers, school-board members, and the mother of a fallen soldier. "I'm not a celebrity," he said after the WEKU.FM interviewer remarked that he had joined the ranks of "a distinguished list of media celebrities from Indiana," among them Ernie Pyle, Jane Pauley, and David Letterman. "I'm a reporter. I'm a writer. Sometimes I get to talk to famous or powerful people, but I never forget that they are talking to me because they want to reach the 19 million people who listen to NPR." Inskeep's honors include the National Headliner Award (2003), bestowed by the Press Club of Atlantic City, New Jersey; the Alfred I. duPont–Columbia University Silver Baton Award (2004 and 2007), which he earned with other NPR reporters for their coverage of the war in Iraq; and the Robert F. Kennedy Journalism Award (2006), given by the Robert F. Kennedy Memorial, an organization whose mission is the promotion of human rights.

Steven Alan Inskeep was born in 1968 to Roland and Judith Inskeep in the suburban town of Carmel, Indiana, near Indianapolis. His father was the athletic director of a high school; his mother was an English teacher. As a teenager Inskeep served as a sports announcer for Carmel High School's radio station, WHJE. "I learned a lot of my radio that way," he told Tony Rehagen for *Indianapolis Monthly* (April 2005). "When you're live for huge chunks of time, it's entirely up to you to paint that picture and carry that broadcast and convey the excitement of what is in front of you. If you screw up, you can screw up monstrously, and that was a great experience." As an example of such a mishap, Inskeep recalled to Rehagen that once, while he was providing commentary for a basketball game, the station's main power cord became disconnected. Unaware that the backup system had come on, he "let out a string of obscenities, many of which went out over the air." A National Merit scholar in his senior year of high school, Inskeep attended Morehead State University, in Morehead, Kentucky, on a full academic scholarship. He has described his years there as the beginning of his engagement with the larger world.

As an undergraduate Inskeep volunteered at Morehead's campus radio station, WMKY. For a small salary he worked at WMOR, a local Morehead radio station, where he gave running commentary at athletic competitions involving Rowan County, Kentucky, high-school teams. "We'd travel around to all these schools out in the hills and different places," Inskeep said about WMOR assignments to Marie Bouvier for *Kentucky Monthly* (February 2004). "We got to travel to all these old gymnasiums that were built by the WPA [Work Progress Administration, a Depression-era federal government program] in 1935 and sit in some seat where you can only see maybe two-thirds of the court. You'd kind of have to guess at what was happening in the other third." During that period Inskeep began listening to NPR broadcasts. "Sometimes I arrived [back at college] after staying up all night or sleeping only a couple of hours . . . ," he told Bouvier. "At 8 a.m., I put Scott Simon's outstanding *Weekend Edition* on the air, which meant that I was a captive audience, hearing it from beginning to end. That's how I learned to appreciate public radio."

After he graduated from college, with a B.A. degree, magna cum laude, in 1990, Inskeep moved to New York City. He worked there as an anchor and reporter for several radio stations, including WOR-AM, and wrote for various publications as a freelancer. He also took courses at Hunter College, a division of the City University of New York. Next, in 1992, he moved to New Jersey to take a job as news director at WBGO-FM, an NPR-affiliated radio station, based in Newark, that specializes in jazz standards. During his tenure there WBGO won several awards for its coverage of local news regarding poverty and crime. Inskeep married in 1993.

In 1996 NPR hired Inskeep as a political reporter, and he and his wife settled in Washington, D.C. For his first assignment he traveled to New Hampshire to cover that year's presidential primary elections. Since then, his job has taken him all over the world. In 1999 Inskeep received a Pew Fellowship in International Journalism, which is awarded to journalists in mid-career. As a fellow, he attended seminars and participated in discussion groups at the Paul H. Nitze School of Advanced International Studies, a division of Johns Hopkins University, before and after he spent five weeks in Colombia. There, he investigated the role of right-wing factions in the ongoing armed conflicts among guerrilla and paramilitary groups and other opponents of the Colombian government. When he returned to

NPR, he was named the organization's Pentagon correspondent. Among other events, he reported on the bombing of Kosovo, in the former Yugoslavia, by NATO (North Atlantic Treaty Organization) troops, to stop Serbian forces' campaign of violence against ethnic Albanians.

Inskeep left the Pentagon post in 2000 to cover that year's U.S. presidential race, in which the principal candidates were Vice President Al Gore, the Democratic nominee; Governor George W. Bush of Texas, the Republican nominee; and the social activist Ralph Nader, who ran as the Green Party's nominee and who, in the views of some people, won a crucial number of votes that otherwise would have been cast for Gore. In particular, Inskeep followed the campaign of Bush and attended the Republican National Convention, held that year in Philadelphia, Pennsylvania. On the Web site Reclaim the Media (November 15, 2003), Jonathan Lawson complained that Inskeep—in keeping with the "less edgy," "more conservative," and more risk-averse character that separated the NPR of earlier years from its 2000 incarnation—remained inside the convention center, "lamenting in detail that nothing newsworthy appeared to be happening there," instead of reporting from outside the building, where "Philadelphia police were beating and mauling protesters." On Election Day, November 7, 2000, Inskeep reported live from Bush's headquarters, in Texas, and he continued to do so for 20 straight hours, into November 8, when the results of the balloting in Florida remained in doubt. He subsequently reported on the controversy surrounding the election results in four of Florida's southern counties and on the U.S. Supreme Court's 5–4 decision, announced on December 12, 2000, that the recount of votes in those counties must end. Inskeep was present when officials in Tallahassee, Florida, certified that the state's electoral votes would go to Bush, thus giving him the presidency.

The next year Inskeep reported from Afghanistan on the early days of the U.S.–British invasion there, which was launched on October 7, 2001 in an attempt to capture Osama bin Laden, the leader of the terrorist organization Al Qaeda, and to destroy the Taliban, the Sunni Islamist group who then ruled Afghanistan and were believed to have aided Al Qaeda in the September 11, 2001 attacks on the U.S. "After Sept. 11, it was important to me to do that," Inskeep told Bouvier. "A lot of people felt like they had this horrible situation that their country was facing and they were looking for something to do. This was some small thing that I could do, to go and try to help people stay informed." Inskeep provided accounts of the war as it developed, and he later did the same in Iraq, after the U.S. invaded that country, in March 2003. In addition to reports on fighting and the activities of the U.S. military, he described the struggles of ordinary citizens to survive in war zones; later he also reported on efforts to democratize Iraq and such subjects as corruption among police officers in Baghdad, the Iraqi capital. "I think one thing to bear in mind is how people manage to go on with their lives under the most horrible of conditions," he told the WEKU-FM interviewer. "One remarkable thing about Afghanistan was that trucks drove over the blasted-out roads, past gunmen and robbers, and delivered goods to the cities, where you could buy food, and gasoline, and cassette tapes, and other items. Everything was destroyed and yet, in the cities anyway, society more or less functioned. People clearly were suffering but they had adapted to a degree that would have seemed impossible had I not seen it." Inskeep also traveled to Pakistan to keep NPR listeners abreast of important happenings there, such as the capture by Central Intelligence Agency (CIA) operatives of Abu Zubaydah, a senior member of Al Qaeda, in March 2002. Inskeep's schedule was often grueling. "One of the most interesting schedules I ever had was from November 2001 to April 2002," he told the WEKU-FM reporter. "I'd spend 35 or 40 days in Asia, working every waking hour of every day; then I'd fly home for a couple of weeks, and do absolutely nothing except spend time with my wife and sleep; then they'd send me back. I liked working hard, because I felt like the story was important to tell, and I also really liked not working at all."

In October 2002 Inskeep accepted the position of weekend host of NPR's late-afternoon series, *All Things Considered*. Public radio's longest-running national program and its second-most-popular show, *All Things Considered* offers up-to-the-minute news, updates on top news stories, features, interviews, and arts-related reviews. "We have tried over the last year to get better and better at really digging for something unique," Inskeep told Bouvier in 2004. "So when you turn on the radio on a Saturday or Sunday, you'll hear the latest news, and you'll also hear something extra. You'll hear a story that we've dug up that you won't hear anywhere else. Or a perspective on a story that you've been hearing about all week, but we'll find one more thing that's worth saying about it."

In April 2004 NPR executives, apparently in an attempt to attract more listeners to *Morning Edition*, announced that Bob Edwards's nearly 25-year-long stint as the program's host was ending. The next month, in what was termed a temporary move, Inskeep and Renée Montagne took Edwards's place, and in December of the same year, their posts became permanent.

In the aftermath of Hurricane Katrina, which struck the Gulf Coast of the U.S. in late August 2005, Inskeep hosted *Morning Edition* from New Orleans, Louisiana, talking to a wide variety of experts and survivors to convey some of the economic, social, and psychological effects of the disaster. Nearly a year later he returned to New Orleans to report on the hurricane's lasting consequences and ongoing relief and reconstruction efforts. He included vignettes that revealed ways in which people coped in the devastated city, which still lacked many amenities deemed necessities by contemporary urbanites. In the segment "A Day in the Life of New Orleans," broadcast on *Morning Edition* on August 11, 2006, Inskeep spoke with a food vendor who no longer had a bed, a man who was rebuilding his home, a young couple who were preparing to get married, a woman who had relocated to Houston, Texas, and Mark Schleifstein, a reporter with the New Orleans *Times-Picayune,* whose own house had been flooded. Schleifstein—a co-author of *Path of Destruction: The Devastation of New Orleans and the Coming Age of Superstorms*—took Inskeep to a huge drawbridge from which they could see a large swath of the city and the extent of the destruction. "From horizon to horizon, you see this city's uneven struggle to come back," Inskeep said in his broadcast, for which he had begun his investigations just after midnight. "Neighborhood by neighborhood, street by street, every wrecked home has a story." According to Mary Blue, a professor of communications at Tulane University, in New Orleans, NPR had continued to report on conditions in post-Katrina New Orleans "longer than anybody else nationally except maybe the *New York Times,*" as she told Drew Lindsay for the *Washingtonian* (March 2007).

For NPR's series "The Price of Oil," about oil-related conflicts in Nigeria, Inskeep interviewed, among others, a freed hostage, the manager of a natural-gas plant, the director of Nigeria's Economic and Financial Crimes Commission, a native king, the leader of a separatist militia, a spokesman for Nigeria's president, and a woman whose child had been killed during fighting. He interspersed in his reports verbal snapshots of the daily activities of ordinary Nigerians. Once, Inskeep and his crew were arrested by unidentified gunmen outside an oil plant owned by Royal Dutch Shell and forced to surrender their tape. (They handed over one that was blank.) On another day an armed policeman jumped into Inskeep's car and demanded money. Audio recordings of those incidents were included in NPR broadcasts. "Our Nigerian companions persuaded them to let us go, but for many Nigerians, this is the face of the government that controls so much of their country's treasure," he said in his August 26, 2005 report, as quoted on NPR on-line. "The Price of Oil" earned Inskeep the 2006 Robert F. Kennedy Journalism Award.

Inskeep edited and can be heard on the audio compilation *NPR Driveway Moments: All About Animals: Radio Stories That Won't Let You Go* (2007). ("Driveway moments" refers to occasions on which a driver has arrived at his or her destination while an NPR animal story is on the air and remains in the car until the story ends.) Inskeep appeared in the televised documentary *Without Fear or Favor: The Best in Broadcast Journalism* (2004).

Inskeep and his wife, the former Carolee Gabel, live in the northwest section of Washington, D.C., with their daughter, Ava, who was born in 2005. Carolee Inskeep is a genealogy expert and the author of reference books about the New York Foundling Hospital, the Children's Aid Society, and New York City cemeteries. The Inskeeps do not own a car. For years one of their main leisure-time activities was their do-it-yourself renovation of their old house. Steve Inskeep enjoys reading, watching movies, and listening to old jazz and blues, alternative country music, and Bruce Springsteen albums. He told Tony Rehagen, "I'm perfectly willing to spend five minutes going all the way down the [radio] dial to avoid commercials."

Jacir, Emily

(JAH-ser)

1970– Artist

Address: c/o Alexander and Bonin, 132 10th Ave., New York, NY 10011

In the past decade Emily Jacir, a Palestinian-American, has become one of the most highly regarded of contemporary artists. Deeply political, she uses a variety of mediums—photography, sculpture, video, drawings, and performance—to address issues that have affected the Palestinian community, such as displacement from their homes in Israel, human-rights abuses, and restricted movement within the Israeli-occupied Palestinian territories, the Gaza Strip and West Bank. Her works include *Memorial to 418 Palestinian Vil-*

lages Which Were Destroyed, Depopulated and Occupied by Israel in 1948, a refugee tent covered with the names of Palestinian villages that were destroyed during the Arab-Israeli War; *Crossing Surda (A Record of Going to and from Work)*, a film chronicling Jacir's daily journey through checkpoints in the West Bank; and *Material for a Film*, a collection of documents, photographs, and other materials examining the assassination of the Palestinian intellectual Wael Zuaiter by Israeli intelligence agents in 1972. The artist's work has angered members of Israeli groups, who criticize Jacir for presenting only one side of the enormously complex Israeli-Palestinian conflict. Jacir, however, believes that her work helps to give a voice to the Palestinian people. "Our narrative, our story is absent from history books," she told an interviewer for the Web site of the Institute for Middle East Understanding (IMEU) in 2008. "When I made *Memorial to 418 Palestinian Villages Which Were Destroyed, Depopulated and Occupied by Israel in 1948* I chose [to write the village names in] English not only because the piece was made with 140 people in New York but because I wanted people to be able to read the names and say them out loud and question why they had not heard them before and why that history is not in their books."

Jacir's work has been featured in several biennials, including the 2003 Istanbul Biennale, in Turkey; the 2005 Sharjah Biennial, in the United Arab Emirates; the 2006 Sydney Biennale, in Australia; and the 2007 Venice Biennale, in Italy. She is the recipient of the 2007 Golden Lion Award, the 2007 Prince Claus Award, and the 2008 Hugo Boss Prize, one of the most prestigious honors in the contemporary art world. Most recently Jacir, who divides her time between the U.S. and the Palestinian territories, was short-listed for the 2009 Deutsche Börse Photography Prize.

Jacir was born into a Palestinian family in 1970. Though her birthplace is most often cited as Bethlehem, in the West Bank, other sources claim that it was elsewhere, reporting it variously as Chicago, Illinois; Baghdad, Iraq; and Houston, Texas. Jacir seems intent on keeping her origins shrouded in mystery; when asked by Michael Z. Wise for the *New York Times* (February 1, 2009) where she was born, she replied, "No comment." Her father, Yusuf Nasri Suleiman Jacir, who was born and raised in Bethlehem, is descended from a once wealthy and well-known family. In 1910 his grandfather, Suleiman Jacir, built Jacir Palace with the hope that his and his brothers' families would live together in the large house. The family lost their fortune, as well as the palace, in the 1930s, and the former Jacir Palace is now the largest hotel in Bethlehem.

When Emily Jacir was a young girl, her family, including her younger sister, Annemarie, moved to Saudi Arabia. There, her mother became the first teacher of Arabic at the American School in Riyadh. At 14 Jacir left her family to attend high school in Rome, Italy. She knew at an early age that she wanted to become an artist. When she was growing up in Saudi Arabia, whose society was particularly repressive with regard to women, "art was the one place where I could speak," she explained to the IMEU interviewer. Her parents, however, worried that their daughter's desire to become an artist would be dangerous, even deadly. (In retaliation for the 1972 Olympic Games massacre in Munich, Germany, during which 11 Israeli athletes and coaches were killed by the Palestinian militant group Black September, a number of Palestinian artists and intellectuals, with sometimes doubtful connections to the murders, were imprisoned, deported, or killed by Israeli agents during the 1970s and '80s.) Discussing her decision to focus her art on the plight of her people, Jacir said, "[Palestinians] are probably amongst the most discussed, yet most misrepresented people in the world. We are constantly dissected by foreign 'experts.' People have no problem claiming agency to speak on our behalf." Following high school Jacir moved to the U.S. to attend college. She received her B.A. degree in fine art from the University of Dallas, in Irving, Texas, in 1992, and went on to earn her M.F.A. degree from Memphis College of Art, in Tennessee, in 1994, the same year she received the Presidential Purchase Award from the school.

Jacir produced her first major work in 1998, while a resident at the Cité Internationale des Arts in Paris, France. For the work, titled *Change/Exchange*, Jacir traded $100 in U.S. currency for French francs, losing a bit of her money due to the exchange rate. She then exchanged the francs for American dollars and continued to trade the money back and forth until she was left with a few coins that could no longer be converted. For the exhibit she framed 60 photographs of the currency and exchange booths, along with the receipts of each transaction. "[*Change/Exchange*] might be read as an empiricization of the metaphysics of travel, since Jacir plays with travel's curious economy—the floating daily exchange rates, the loss or gain of hours crossing time zones—while also suggesting a race against mortality itself, the frantic struggle to preserve eroding value," Tom Vanderbilt wrote for *Artforum International* (February 1, 2004). Jacir next delved into her past to create *From Paris to Riyadh (Drawings for My Mother)*, first exhibited in 2000. During Jacir's childhood, whenever her family returned to Saudi Arabia from a trip abroad, her mother used markers to cover the exposed skin of models featured in their newly acquired fashion magazines. (Otherwise, airport censors would confiscate them.) For her project Jacir collected copies of *Vogue* magazine and drew clothing, reminiscent of the clothes made for paper dolls, on each photograph of otherwise scantily dressed models. Jacir has said that the piece is as much a criticism of Saudi Arabia's oppression of women as of the objectification of women in other countries.

Jacir moved to New York City in 1998. She participated in the Whitney Museum of American Art's Independent Study Program (1998–99), the Lower Manhattan Cultural Council's Studio Residency Program (1999–2000), and the National and International Studio Program at P.S. 1 Contemporary Arts Center (2000–01). During her residency at P.S. 1, Jacir created *Memorial to 418 Palestinian Villages Which Were Destroyed, Depopulated and Occupied by Israel in 1948.* Though Jacir had intended to do all of the sewing for the tent herself, it turned out to be an overwhelming task, and she soon sought help. Friends and strangers alike visited her studio every day and night to lend a hand. "Eventually the piece took on a new, more social dimension," the artist and writer John Menick wrote for his Web site, johnmenick.com (July 1, 2008, on-line). "On some nights, over a dozen people would participate in order to sew the letters. A few of those who showed up wanted to find the villages where their families came from; several people learned of the expulsion for the first time. Palestinians, Israelis, Americans, Egyptians, Syrians, Yemenis, Spaniards, and others sewed, told stories, joked, and gossiped." (More than 700,000 Palestinians fled or were forced out of their villages by Israeli forces during the creation of the state of Israel and the Arab-Israeli War that followed, in 1948.) *Memorial to 418 Palestinian Villages*, which was not finished at the time of its unveiling, was included in P.S. 1's May 2001 exhibition. Next to the tent Jacir displayed a record book in which she logged the names of people who had helped with the sewing. The work has since been acquired by the National Museum of Contemporary Art in Athens, Greece. It remains unfinished, with many of the village names simply penciled on the tent; Jacir has said that its incompleteness reflects the ongoing nature of the Palestinian people's struggle. In 2002 Jacir created and co-curated the first Palestine International Video Festival, held in Ramallah, Palestine.

For *Where We Come From* (2001–03), Jacir asked 27 Palestinians living away from the West Bank and Gaza and unable to return to those territories, "If I could do something for you, anywhere in Palestine, what would it be?" Jacir, who is able to move freely in and around the territories with her U.S. passport, fulfilled their wishes, which included eating one person's favorite food, placing flowers on a mother's grave, saying a prayer at a certain mosque, and playing soccer with neighborhood children. The exhibit comprised photographs documenting the events and texts explaining why the people she had interviewed were unable to perform the acts themselves. "The work is so personal and autobiographical in the sense that it is coming from my experience of spending my whole life going back and forth between Palestine and other parts of the world," Jacir told Chris Shull for the *Wichita (Kansas) Eagle* (January 16, 2005). "I am always taking things back and forth for other people. Because I have been going back and forth continuously my whole life, I have seen the deliberate fragmentation of our lands and the isolation of our people from each other by the Israelis."

Where We Come From, which was displayed at the Ulrich Museum of Art at Wichita State University, in Kansas, also became Jacir's first solo exhibit in New York, when it was shown as part of the 2004 Whitney Biennial at the Whitney Museum of American Art. Blake Gopnik wrote about the exhibit for the *Washington Post* (March 14, 2004), "Jacir's project bears eloquent witness to the effects that strife and politics can have on the most basic aspects of people's lives." Holland Cotter raved for the *New York Times* (May 9, 2003), "An art of cool Conceptual surfaces and ardent, intimate gestures, intensely political and beyond polemic, it adds up to one of the most moving gallery exhibitions I've encountered this season." The exhibit was protested by Israeli groups in New York and Kansas who felt that their side of the conflict was not represented fairly. Ted Bonin, of the New York gallery Alexander and Bonin, which represents Jacir, defended the piece, telling Chris Shull, "[Jacir's] work is not, in any way, propaganda. *Where We Come From* is a good example of how she presents the desires and losses of a group of people. It does not make a declaration of what has or should happen but rather draws our attention to human needs and conditions."

Jacir also created a 130-minute film, *Crossing Surda (A Record of Going to and from Work)* (2002–03), often paired with *Where We Come From* at exhibitions. Jacir conceived the work after she had been mistreated and threatened by an Israeli soldier while trying to film her feet at a West Bank checkpoint. She then hid a camera in her purse, filming through a hole in it, to document her daily travels over an eight-day period through the checkpoints between her home in Ramallah, in the West Bank, to Birzeit University, where she was teaching at the time. For another of her video installations, *From Texas With Love* (2003), Jacir asked Palestinians what music they would listen to if they were able to drive for an hour unrestricted by the checkpoints and roadblocks common in their homeland. Jacir compiled the songs, which ranged from traditional Arab music to American pop tunes, onto a soundtrack and paired it with film shot during a drive she had taken through Texas.

Jacir's 2005 gallery show Accumulations featured two new pieces by the artist. The first, *Inbox*, consisted of more than 40 small paintings depicting e-mail messages Jacir had received since 1998. (For the oil-on-wood paintings, each the size of a standard, 8 1/2-by-11-inch sheet of paper, Jacir painstakingly painted each letter of the messages, complete with dates, underlined links, and ads.) The e-mails chronicle the communication among a group of friends and among members of Palestinian/Arab-American communities; they include correspondence about the September 11, 2001 terrorist attacks on the U.S. and the resulting hate crimes against Arab-Americans. Also included in the show was *Ramallah/New York* (2005), a two-channel (or split-screen) video displaying footage taken of Palestinian businesses, including hair salons, delis, and coffeehouses, in both of the title cities. As the images run side by side, it is often hard to tell which footage was taken where.

One of Jacir's most lauded works has been *Material for a Film* (2005–), which tells the story of the assassination of the Palestinian poet and writer Wael Zuaiter. In 1972 Zuaiter was shot in Rome, Italy, by Israeli agents who alleged that he was linked to the massacre of Israeli athletes by Black September. (Zuaiter's supporters maintain that there is no evidence that he was involved with the Munich massacre.) His was the first in a series of assassinations of prominent Palestinian figures by Israeli agents that occurred during the early 1970s. "Since I was a teenager I have been haunted by the Mossad massacres of Palestinian intellectuals, poets and politicians," Jacir told Michael Z. Wise. "Back in 1998 I began collecting as much information as I could on the Palestinians who were murdered on European soil. Initially my plan was to make a project about all of them. The more I researched, however, the more compelled I became with Wael's story in and of itself. . . . I felt connected to him in that I lived in Rome and had moved there from the gulf as he did. He was also a pioneer in trying to tell our story to the outside world. Wael Zuaiter was a poet and a translator who despised all forms of violence." Inspired by a chapter in the 1979 book *For a Palestinian: A Memorial to Wael Zuaiter*, edited by Zuaiter's longtime companion, Janet Venn-Brown, Jacir decided to collect material in order to make a film about Zuaiter's life. She traveled to Rome, talking to Zuaiter's family and friends and even forming a friendship with Venn-Brown.

In 2005 Jacir used some of the material she had collected over the years to create an exhibit. *Material for a Film* includes photographs of Zuaiter, letters he wrote, photographs of the covers of books he had kept in his library, a recording of Gustav Mahler's Ninth Symphony (a favorite work of Zuaiter's), and a clip of the 1963 film *The Pink Panther*, in which Zuaiter made a brief appearance as an extra. Jacir also included photos she had taken of places Zuaiter frequented in Rome, as well as written accounts of her travels and of her encounters with people who had known the writer. After Jacir was invited to display her work at the 2006 Sydney Biennale, she learned to shoot a .22 caliber pistol, the same kind of weapon that had been used to kill Zuaiter. She then added a separate piece to the exhibit, *Material for a Film (Performance)*, which consisted of a room of shelves filled with 1,000 small, white books, each of which had been shot by Jacir. "This [performance] piece is based on one element of Wael's story that I discovered during my research, which was that he was killed by 12 bullets at close range to his body, but there was a 13th bullet which struck his copy of *A Thousand and One Nights*. Wael's dream had been to translate *A Thousand and One Nights* directly from Arabic into Italian . . . ," Jacir explained to Wise. "The books [I shot] were white, and they were blank and symbolized the thousands of stories that have not been written and will not be written." (Although there have been Italian translations of *A Thousand and One Nights* from other languages, there has not yet been a translation directly from Arabic to Italian.)

Material for a Film was later featured in the 2007 Venice Biennale. At the biennale Jacir won the prestigious Golden Lion Award, presented to artists under 40. In 2007 she was also presented with the Prince Claus Award from the Prince Claus Fund for Culture and Development in Amsterdam, the Netherlands. According to the organization's Web site, Jacir received the award "for the quality of her intensely evocative artworks that transcend the national framework and resonate with exiles around the world, for her resistance to injustice, and for her attempts through cultural actions to heal the wounds of conflict." Jacir's work on *Material for a Film* earned her a nomination for the 2009 Deutsche Börse Photography Prize.

In November 2008 Jacir was selected to receive the prestigious Hugo Boss Prize from a shortlist of finalists that included Christoph Büchel, Patty Chang, Sam Durant, Joachim Koester, and Roman Signer. The biennial award, established by the German fashion house Hugo Boss and the Solomon R. Guggenheim Foundation, recognizes significant achievements in contemporary art and carries a $100,000 prize. In their statement, the jury, which consists of museum directors and curators from around the world, said of their selection, "Emily Jacir's rigorous conceptual practice—comprising photography, video, performance, and installation-based work—bears witness to a culture torn by war and displacement. As a member of the Palestinian diaspora, she comments on issues of mobility (or the lack thereof), border crises, and historical amnesia through projects that unearth individual narratives and collective experiences. Jacir combines the roles of archivist, activist, and poet to create poignant and memorable works of art that are at once intensely personal and deeply political. It is the refined sophistication of Jacir's art and the relevance of her concerns—both global and local—in a time of war, transnationalism, and mass migration that led us to award her the 2008 Hugo Boss Prize."

Jacir lives and works in Ramallah and New York City. Since 2007 she has been a full-time digital-video instructor at the International Academy of Art Palestine, in Ramallah. Her sister is a filmmaker.

Jamison, Kay Redfield

June 22, 1946– Psychologist; educator; writer

Address: Meyer 2-181, The Johns Hopkins Hospital, 600 N. Wolf St., Baltimore, MD 21287

"I was used to my mind being my best friend; of carrying on endless conversations within my head; of having a built-in source of laughter or analytic thought to rescue me from boring or painful surroundings," the clinical psychologist Kay Redfield Jamison wrote in *An Unquiet Mind: A Memoir of Moods and Madness* (1995), about her struggles with manic depression. "I counted on my mind's acuity, interest, and loyalty as a matter of course. Now, all of a sudden, my mind had turned on me." Manic depression, also called bipolar disorder, is a widely misunderstood mental illness affecting some two million people in the United States. It is characterized by cycles of extreme moods, from "high," manic periods of extraordinary elation, energy, and rapid-fire thought processes, to "low," depressed periods, marked by such disabling symptoms as persistent sadness, greatly decreased energy, and a loss of interest in life. Often, the "high" and "low" periods overlap. Although she had experienced depression since childhood and mania since her mid-teens, Jamison was not diagnosed with manic depression until age 26, during her graduate studies in psychology at the University of California at Los Angeles (UCLA). While working to understand her illness and struggling to comply with her prescribed medical regimen—daily doses of lithium, a mood-stabilizing drug—Jamison became one of the world's foremost experts on manic depression. In 1978 she founded UCLA's mood-disorders clinic, which she ran for the next decade. She has held the title of professor of psychiatry at Johns Hopkins University School of Medicine since 1987. With Frederick K. Goodwin, a professor of psychiatry at George Washington University, she co-wrote the definitive scholarly text on the disorder, *Manic-Depressive Illness* (1990). Her next book was the controversial *Touched with Fire: Manic Depressive Illness and the Artistic Temperament* (1993), which offered reasons for the prevalence of mental illness in artistic and high-achieving individuals. With the publication of the best-selling and critically acclaimed *An Unquiet Mind*, Jamison gained nationwide attention. *Night Falls Fast: Understanding Suicide* (1999) is Jamison's comprehensive resource on suicide and its relationship to mental illness; her book *Exuberance: The Passion for Life* (2004) sheds light on what life is like for a person with an "exuberant temperament." Jamison's unusual perspective on mental illness, that of someone with both personal experience and medical expertise, has made her a popular speaker. Since she revealed publicly her history as a manic depressive, she has dedicated her career to reducing the stigma attached to mental illness and suicide. Her memoir *Nothing Was the Same* was published in September 2009.

The youngest of three children—she has a sister and a brother—Jamison was born on June 22, 1946. She also has a half-sister. Her father, Marshall Jamison, was a meteorologist and an officer in the U.S. Air Force; her mother, Dell Temple Jamison, was a teacher. While Jamison has recalled her father as being "gregarious," he also suffered from manic depression, a hereditary disorder, and experienced fits of deep depression and mania throughout Jamison's childhood. Jamison's half-sister, Danica, has been diagnosed with the same condition. Throughout high school Jamison was often moody and was given to long bouts of depression. As she recalled in *Night Falls Fast*, she began to consider suicide; she would fantasize about throwing herself down a flight of stairs, and she studied morning traffic patterns in her neighborhood to determine the best time to jump in front of a truck. At 16 Jamison experienced the highs of mania for the first time. "I raced about like a crazed weasel, bubbling with plans and enthusiasms, immersed in sports, and staying up all night, night after night, out with friends, reading everything that wasn't nailed down, filling manuscript books with poems and fragments of plays, and making expansive, completely unrealistic, plans for my future . . . ," she wrote in *An Unquiet Mind*. "I felt great. Not just great, I felt *really* great."

An excellent student, Jamison earned her B.A. and M.A. degrees in psychology in 1971 from UCLA, where she was a National Science Foundation research fellow and a John F. Kennedy scholar. She remained at UCLA to pursue a doctorate in psychology, which she earned in 1975; meanwhile, the previous year, she had begun teaching at UCLA. While pursuing her doctoral degree, she spent a year studying zoology and neurophysiology at the University of St. Andrews, in Scotland; she has described that time as an "Indian summer" of her life, one of the longest periods in which she experienced no psychological disturbances. With that exception, throughout her 20s Jamison's condition worsened, and her highs and lows became more intense. In 1974, while working as an adjunct professor of psychiatry at UCLA, she experienced a major psychotic breakdown, in which she hallucinated, spent far too much money, and humiliated herself in front of her peers, giving in to inappropriate impulses and speaking illogically and overexcitedly. She was admitted to a hospital, where doctors diagnosed her with manic depression and prescribed lithium. She responded well to the treatment, but when she began to feel better, she stopped taking her medication—not because of the side effects she had experienced, as she explained in *An Unquiet Mind*, but because she was afraid to lose the feeling of exhilaration and the heightened creativity that had accompanied her manic states; as she put it, she had become "addicted to the highs": "I could fly through star fields and slide along the rings of Saturn," she wrote. Because she did not take her medication, she entered a period of severe depression at age 28 and then ingested an overdose of lithium, in a failed attempt at suicide. That event marked a turning point in her life. She recognized that she needed lithium to function, and she committed herself to the study of manic depression and other mood disorders.

While conducting her postdoctoral research at UCLA, Jamison founded the school's affective-disorders clinic, in 1978, and became its director. In that position she treated many patients who suffered from manic depression. In 1987 she left UCLA and joined the faculty of the Johns Hopkins University Medical School. In 1990 Jamison co-wrote *Manic-Depressive Illness* with the psychiatrist Frederick K. Goodwin, who later (1992–94) directed the National Institute of Mental Health and hosted (1998–2008) the National Public Radio series *The Infinite Mind*. The culmination of about 10 years of research, the book discusses historical and contemporary treatments for manic depression and includes accounts of the highly varied experiences of sufferers of the disease. Named the best medical book of the year by the Association of American Publishers, it became known as the definitive textbook on manic depression. In 2007 Jamison and Goodwin published a second edition of their textbook, *Manic Depressive Illness: Bipolar Disorders and Recurrent Depression*, a 1,262-page compendium of medical knowledge about bipolar disorder.

For her book *Touched with Fire: Manic-Depressive Illness and the Artistic Temperament* (1993), Jamison drew on research that she had conducted while at Oxford University, in England, in 1989, while she was on a sabbatical leave from UCLA. For that work she surveyed culturally influential and creative Britons, including renowned artists, poets, and playwrights, with the goal of determining their mental states. While major depression affects between 5 and 15 percent of the general population in Great Britain at some point in their lives, Jamison found that about 38 percent of those in her sample had been treated for some kind of affective illness, a mental disorder that has a consistent, pervasive effect on a person's thoughts, emotions, and behaviors. Rates of such mood disorders were highest among playwrights and poets—63 percent and over 50 percent of them, respectively, reported having experienced depression or having been treated for mood disorders. In *Touched with Fire*, Jamison used scientific studies and personal accounts, in the forms of diaries, essays, poems, and other writings, to analyze the mental states of artists and writers including Robert Lowell, Gerard Manley Hopkins, and Lord Byron, all of whom suffered from bipolar disorder. Jamison described the discovery that, particularly during the manic stages of bipolar disorder, which bring periods of unusually creative thought processes and elevated energy levels, the chemistry of the brain is altered. *Touched with Fire* was met with great interest and acclaim and, from some, the criticism that the book glorified mental illness. "It's a fact that a disproportionate number of artists appear to have the disease compared with the general population," Jamison told Anastasia Toufexis for *Time* (September 11, 1995). Pointing out the way in which her findings were being misconstrued, Jamison went on to explain that she was in no way trying to show an inextricable link between mental illness and creativity. "You don't have to have manic depression to be creative. In fact, most creative people don't."

Jamison's next published work, *An Unquiet Mind: A Memoir of Moods and Madness* (1995), is both a detailed clinical analysis of manic depression and a candid first-person account of her agonizing battle with the illness. In it Jamison explained that while symptoms of manic depression vary among individuals, in the early stages of the disease they often include poor performance in school and excessive use of alcohol or drugs, and they often remain undetected or misunderstood; in young children, the malady is frequently confused with attention-deficit/hyperactivity disorder. When left untreated, manic depression usually worsens, as episodes of mania and depression become more severe. Jamison explained that while manic depression is highly treatable—80 percent of its victims respond well to medication—manic depressives are notorious for their inconsistent compliance with recommended drug regimens or their refusal to take any medicine. In Jamison's case, while she tried to reconcile her image of herself with the evidence of her affliction, she resisted turning her back on her exhilarating periods of mania. While Jamison has often insisted that manic depression has no redeeming features, she has also acknowledged that, were it not for her disease, "I would not have accomplished the same things." Although an article in which Jamison had revealed her problem had appeared in the *Washington Post* shortly before the publication of *An Unquiet Mind*, very few of Jamison's colleagues had known, until the book was reviewed and became the focus of news stories, that she suffered from manic depression. While most of her co-workers continued to treat her with respect, she was occasionally subjected to patronizing comments and sometimes heard people express doubts about her ability to handle her job. Taking all those things into account, Jamison gave up her practice at Johns Hopkins but continued to teach there.

Listed among *New York Times* best-sellers for five months, *An Unquiet Mind* drew rave reviews, as well as more than 10,000 letters of thanks from readers. "*An Unquiet Mind* is an honest and beautifully written book about a life-destroying illness experienced by both clinician and patient . . . ," K. D. Hopkins wrote for the *Lancet* (August 3, 1996). "[Jamison] has opened a door through which we can take a look—if we want—providing a remarkably honest, but at times frightening, account of this condition." Those who found fault in her efforts to destigmatize the illness included Peter Kramer, a psychiatrist and author of the best-seller *Listening to Prozac* (1993), who, in an article for the *New York Times* (April 7, 1996), described Jamison's book and other recent first-person accounts of mood disorders as "autopathographies." While acknowledging that such books helped to combat the stigma associated with mental disease, Kramer suggested that the book's publishers exploited the writers, who in turn manipulated readers, for entertainment purposes. Jamison dismissed Kramer's and other, similar criticisms as "ridiculous."

Following the publication of *An Unquiet Mind*, Jamison embarked on a speaking tour devoted to the topic of manic depression, schizophrenia, and other mental illnesses. In light of the frequent emergence of such disorders in early adulthood, she gave talks at many colleges and universities. As Jamison explained in her lectures, the stressful habits and lifestyles of many undergraduates, who have poor diets, lack sufficient sleep, and indulge or overindulge in alcohol and drugs, often trigger first episodes of mental illness. Jamison encouraged students to be vigilant for symptoms of depression and mania and to seek treatment as soon as possible. "These are such important years of life," Jamison said, as quoted in the Bergen County, New Jersey, *Record* (May 19, 1997). "To lose them to this intermittent illness, it's so unnecessary."

Jamison told one audience of her experiences with depression, as quoted by Thrity Umrigar in the *Akron (Ohio) Beacon Journal* (May 25, 1999), "I nearly died from it. It is total, complete despair, a sense of futility, marked by an emotional shutting down." At the end of her talks, Jamison was often approached by people who had lost a mentally ill friend or relative to suicide. Some of those who had died had "made serious attempts on their lives" before they succeeded in killing themselves, "and their parents had no idea," Jamison explained to Patricia Meisol for the *Baltimore Sun* (December 12, 1999). "Something about the sheer numbers hit me." They also inspired her to research and write her next book, *Night Falls Fast: Understanding Suicide* (1999), which explores the psychological, physiological, and other aspects of suicide through accounts of suicides and suicide attempts, including her own. *Night Falls Fast* "is at once the most relentless and the most sympathetic book she has produced, written with an edifying urgency that surpasses her previous volumes," Andrew Solomon wrote in a review for the *New York Times* (October 24, 1999). In it Jamison argued that suicide has been largely mischaracterized or even ignored by the medical establishment, romanticized by the media, and stigmatized by a society—that of the U.S.—that is uncomfortable with mental illness. She maintained that suicide's link to mental distress rather than physical problems (which can contribute to despair) should not lead medical practitioners and public-health officials to separate it from other kinds of illnesses. Rather, it should be considered the result of real illness and recognized as a virtual epidemic. As of 1999, the year that *Night Falls Fast* was published, about 31,000 Americans died by their own hands every year—the equivalent of one every 17 minutes. Suicide was the third-leading cause of death among adolescents in the U.S. and the second-leading cause among college students. "Where is the public concern and outrage?" Jamison wrote in the epilogue to *Night Falls Fast*, as quoted by Meg Kissinger in the *Milwaukee (Wisconsin) Journal Sentinel* (November 7, 1999). Countering the common perception that many suicides occur for no discernible reason, Jamison contended that the road to suicide is actually "well marked" and predictable. She cited studies suggesting that 90 to 95 percent of all suicides can be attributed to mental illnesses—bipolar disorder, depression, schizophrenia—that can be diagnosed and treated. In part because of her own experience, she supports the use of drug therapy in conjunction with psychotherapy. She also advocates the passage of laws that would decrease the accessibility of guns, which are used in 60 percent of suicides in the U.S. She encourages parents to talk to their children about depression and thinks that universities should take steps to try to prevent suicides.

In her 2004 book, *Exuberance: The Passion for Life*, Jamison expressed the view that neither science nor society has placed enough value on exuberance, which Jamison loosely defined as "an abounding, ebullient, effervescent emotion. It is kinetic and unrestrained, joyful, irrepressible." "I've always been interested in highly energized and higher mood states . . . ," she told Marina Pisano for the *San Antonio Express-News* (September 13, 2005). "I'm interested in what's a normal mood and what's an exceptionally productive creative mood—what are the layers of it but also what's the overlap with psychopathologies." Jamison wrote that about one in 10 individuals is born with an exuberant temperament. She offered examples of exuberant individuals from the past, among them the environmentalist John Muir, who founded the Sierra Club; the showman P. T. Barnum, who founded the Barnum and Bailey Circus; the politicians Theodore Roosevelt and Winston Churchill; and the photographer Wilson Bentley, who captured on film the images of more than 5,000 snowflakes to prove that no two are alike. Jamison also analyzed such fictional characters as Tigger, from the Winnie-the-Pooh books, and the dog Snoopy, from the *Peanuts* comic strip, who, according to Jamison, has "an extraordinary capacity for celebration." In each profile Jamison described discoveries or other results of unusual degrees of curiosity, energy, creativity, and passion. She also discussed hypomania, a milder form of the "high" experienced by people with manic depression, and noted that in some people, exuberance can lead to a dangerous lack of judgment and even—as in the case of Churchill—bouts of deep depression.

The *Washington Post*, the *Seattle Times*, and the *San Francisco Chronicle* selected *Exuberance* as one of the best books of 2004, and *Discover* magazine selected it as one of the best science books of the year. Most reviewers called Jamison's subject matter unique and her writing style captivating. Jacob Stockinger, in an assessment for the Madison, Wisconsin, *Capital Times* (January 14, 2005), called *Exuberance* "a fascinating and inspiring book that, one hopes, will serve as the opening shot in a campaign to explore our positive and constructive moods that, when closely looked at, yield their own mysteries and wonders." Some others criticized her account as vague. In a review for the *New York Times* (December 5, 2004), for instance, Daphne Merkin wrote that Jamison's book "is marked by a besetting critical haziness, blurring terms of definition that should be rigorous and shrugging off qualifications that need to be more thoroughly addressed."

Jamison believes that education is the key to changing the cultural perception of mental illness. She commended David Satcher, the U.S. surgeon general under President Bill Clinton, when, in 1999—for the first time—his office published a report on mental illness. She also praised the Republican U.S. senator Gordon Smith of Oregon, who, after the suicide of his son Garrett, sponsored a bill (signed into law by President George W. Bush in 2004) providing funding to colleges, universities, and American Indian organizations for suicide education and prevention. At Harvard University, Jamison and another mental-health professional set up the Vincent Prize, which finances proposals for projects on changing attitudes and increasing awareness of mental illness on the campus; the first prize was awarded in 2000. In 2001 Jamison received a MacArthur Fellowship, also known as a "genius grant," which includes a no-strings-attached $500,000 award distributed over five years. Jamison told Lisa Allen-Agostini for the *Washington Post* (October 24, 2001) that she planned to use the grant to establish programs similar to Harvard's at other universities. A supporter of genetic research into mental illness, Jamison was a member, in 2005, of the first National Advisory Council for Human Genome Research, a federally chartered committee that advises the National Human Genome Research Institute, a branch of the National Institutes of Health that works to improve health through genetic research. She is currently the senior scientific consultant to the Dana Foundation and chair of the Genome Action Coalition. Still, as she recently told Karen R. Long for the *Cleveland Plain Dealer* (March 16, 2008), Jamison believes that the public-health community is not doing "nearly enough" to address mental illness and suicide.

Jamison's memoir *Nothing Was the Same* (2009) focuses on her relationship with her late husband, Richard Wyatt, who overcame childhood dyslexia and went on to become the chief of the neuropsychiatry branch at the National Institute of Mental Health and a pioneer in schizophrenia research; Wyatt died in 2002 from lung cancer. Throughout the book, which delves into Jamison and Wyatt's shared research and their struggles with mental illness and cancer, respectively, Jamison draws comparisons between grief and madness. "The great gift that Jamison offers here, beyond her honesty and the beauty of her writing, is perspective: a clear-eyed view of illness and death, sanity and insanity, love and grief . . . ," Reeve Lindbergh wrote in her glowing review for the *Washington Post* (September 6, 2009, on-line). "Once again, Jamison seems to be telling the truth, no matter how difficult it may be, in a way that avoids self-pity and inspires courage. To write the truth with such passion and grace is remarkable enough. To do this in loving memory of a partner is tribute indeed."

In addition to the MacArthur Fellowship, Jamison's many honors include the National Mental Association's William Styron Award, the American Suicide Foundation Research Award, the Community Mental Health Leadership Award, the Endowment Award from the Massachusetts Genetics Hospital/Harvard Medical School, the Fawcett Humanitarian Award from the National Depressive and Manic-Depressive Association, the Steven V. Logan Award for Research into Brain Disorders from the National Mental Health Association, the Falcone Prize for Research in Affective Illness from the National Alliance for Research on Schizophrenia and Depression, and the Yale University McGovern Award for excellence in medical communication. She has been named a "hero of medicine" by *Time* and was one of five people profiled in the 1999 public-television series *Great Minds of Medicine*. Jamison was a distinguished lecturer at Harvard University in 2002 and the Litchfield lecturer at the University of Oxford in 2003. She has written and produced a series of award-winning public television specials about manic depression and the arts.

Described by Meisol as "animated and friendly, a thin, tousled blond [who] wears a large smile often painted coral," Jamison is currently a tenured professor of psychology at the Johns Hopkins University School of Medicine. She is also an honorary professor of English at the University of St. Andrews, where she teaches undergraduates for three weeks every fall. Her first marriage ended in divorce. From her eight-year marriage to Richard Wyatt, she has two stepsons, Christopher and Justin, and a stepdaughter, Elizabeth.

"Every successful politician, monarch or business tycoon needs someone like [Valerie] Jarrett," Don Terry wrote for the *Chicago Tribune* (July 27, 2008), "a straight-talking, fiercely loyal, well-connected, discreet, disciplined, protective confidant/friend/sounding board/surrogate sibling who has known the candidate since before he or she became the next big thing." Valerie Jarrett—a lawyer, real-estate developer, former member of the Chicago, Illinois, city government, and one-time chairman of the Chicago Stock Exchange—was a senior adviser to Barack Obama in his campaign for the U.S. presidency, and, with John Podesta, she co-chaired Obama's transition team, which smoothed the handover of power from the administration of President George W. Bush to that of the new chief executive. In the White House she serves as senior adviser to the president for intergovernmental relations and public engagement. A resident of Chicago since early childhood, Jarrett has also been a close friend of Barack Obama and his wife, Michelle, since before their marriage. In the summer of 1991, when Jarrett was the commissioner of the Chicago Department of Economic Development and Planning, Michelle Obama, then surnamed Robinson, applied for a job in the office of Chicago's mayor, Richard M. Daley, and Jarrett interviewed her. After Jarrett offered her the job, Robinson asked her to have dinner with her and Barack

Obama, who was then a community organizer in Chicago and Robinson's fiancé, so that all of them could discuss the position. Barack Obama "was worried about the same things that I worried about when Daley first got elected," Jarrett told Michelle Cottle for the *New Republic* (August 27, 2008). "Would [the mayor] be sufficiently progressive? Would Michelle get caught up in the Democratic machine? . . . If she disagreed with something the mayor wanted to do, would she be forced to do it?" At the end of the evening, Jarrett asked Obama if her responses to his questions had been satisfactory—if she had "passed the test." "Yeah, you passed the test," Obama said, smiling, as quoted in the *Chicago Tribune* (April 22, 2007). Jarrett and the Obamas have maintained a close personal and professional relationship ever since. Michelle Obama left the mayor's office in 1993 to work under Jarrett in the Department of Economic Development and Planning. Later, Michelle Obama worked at the University of Chicago and the school's medical center during Jarrett's tenure on both boards. At the start of Barack Obama's political career, Jarrett, a third-generation member of Chicago's black community leaders, introduced him to people of influence in that city and helped him organize fundraisers. During his campaign for a seat in the U.S. Senate, in 2004, Obama named Jarrett his financial adviser, and in February 2007, when he announced his candidacy for president, he appointed Jarrett as his senior adviser. Don Terry described Jarrett as "the other side of Obama's brain," and Michelle Cottle, in a profile of her for the *New Republic* (August 27, 2008), wrote that Jarrett is "an extension of the candidate. She is Obama's eyes and ears at meetings and events. When she speaks, it is in his voice." "I trust her completely," Obama has said of her, as quoted by Terry.

Characterized by Terry as "soft-spoken" but "steely willed," Jarrett served as the chair of the Chicago Transit Authority (CTA) from 1995 to 2003, when she left the public sector to join the Habitat Co., a Chicago-based real-estate company charged with overseeing the construction and management of Chicago's public housing. She held the titles of executive vice president and managing director of Habitat until 2007, when she was promoted to chief executive officer. One of her missions in that capacity was to integrate greater numbers of public-housing units in white or mixed neighborhoods, to end the de facto segregation of most low-income or welfare-dependent black Chicagoans, who live in virtually all-black public housing in virtually all-black neighborhoods. "Like Obama, she does not seek to fight the system so much as infiltrate it, scale it, and make it work for her," Cottle wrote. "It is a quieter, less dramatic form of activism that can cause friction with some of Jarrett's more traditional liberal allies—much the way Obama's post-racial positioning has raised eyebrows among older-generation black leaders. . . . For Jarrett, however, unifying people behind the system rather than against it has become something of an art form."

The only child of James Bowman and the former Barbara Taylor, Jarrett was born Valerie Bowman on November 14, 1956 in Shiraz, Iran, where her mother and father were working. Her parents are both internationally known experts—her mother in early childhood development and her father in hematology and pathology. Barbara Bowman was a co-founder, in 1966, of the Chicago School for Early Childhood Education (now known as the Erikson Institute) and currently serves as chief officer of the Chicago Public Schools' Office of Early Childhood Education. James Bowman, a physician, was the first African-American to be accepted into a residency program at St. Luke's Hospital in Chicago, in 1947, and before he retired he taught in the Departments of Pathology and Medicine at the College of Medicine at the University of Chicago. Both of Jarrett's parents have earned many honors. Jarrett's great-grandfather Robert Robinson Taylor was the first African-American to graduate from the Massachusetts Institute of Technology and was among the first to earn accreditation as an architect. Jarrett's maternal grandfather, Robert Rochon Taylor, was a Chicago community leader and onetime member of the board of the Chicago Housing Authority (CHA); what was once the world's largest public-housing development, the Robert Taylor Homes, was named for him. (The last of its 28 buildings was demolished in 2007.) Vernon Jordan, a onetime executive director of the United Negro College Fund, former president of the National Urban League, and close adviser to President Bill Clinton, is one of her great-uncles.

In Iran Jarrett and her parents lived near a local hospital in a community of Americans and Iranians. Its residents included participants in a program in which physicians and agricultural experts from the U.S. helped developing countries' health and farming efforts. "I remember how welcoming everyone was to the many Americans who were there," Jarrett told Terry. "We were viewed by the Iranians as Americans—not black Americans—so I had no awareness of race until we returned to the United States." In 1962 the Jarretts moved to London, England, where they lived for a year while Jarrett's father studied genetics. In 1963 they returned to the States and settled in the Hyde Park neighborhood of Chicago. Young Valerie attended a local elementary school until fourth grade, when she transferred to the University of Chicago Laboratory School. She spent the last two years of high school (1972–74) as a boarding student at the Northfield Mount Hermon School, a preparatory school in Massachusetts.

Jarrett graduated from Stanford University, in California, in 1978 with a B.A. degree in psychology. In 1981 she received a J.D. degree from the University of Michigan Law School and took a job at Pope, Ballard, Shepard & Fowle, a corporate law firm in Chicago, where she specialized in commercial real-estate law. She worked there for three years before moving to the firm of Sonnenschein, Carlin, Nath & Rosenthal. In 1983 she married a physician, William Robert Jarrett, a son of the pioneering Chicago journalist, television talk-show host, and radio commentator Vernon Jarrett, and within two years the couple became the parents of a daughter. By 1987 Jarrett had separated from her husband; they divorced the next year. (William Jarrett died in 1993.) Determined to pursue a career that she would find more meaningful, Jarrett consulted her friend Elvin Charity, a lawyer, who told her about his positive experience working in the city's legal department under Mayor Harold Washington. An outsider to Chicago's Democratic political machine, Washington, who took office in 1984, was the city's first African-American mayor. His election had largely been the result of the registration and mobilization of a record number of African-Americans and liberal whites.

Jarrett went to work in the office of the Chicago corporation counsel (which handles civil cases involving the city) in 1987, at the beginning of Washington's second term. In November of that year, Washington died of a heart attack. His successor, Eugene Sawyer, who was also black, was chosen by members of the city council and served as mayor for two years. In 1989 Richard M. Daley, the son of Richard J. Daley—the well-known (some would say notorious) boss of Chicago's Democratic political machine in the 1950s, '60s, and '70s—defeated Sawyer in the Democratic primary and went on to be elected Chicago's mayor. Many liberal idealists who had taken government jobs under Washington left the mayor's office, fearing that Daley would abandon the reforms that Washington had planned. Determined to maintain her progressive perspective and retain a chance to improve conditions in the city in a hands-on fashion, Jarrett stayed with the Daley administration. She soon became one of the mayor's most trusted advisers. In June 1991 she was promoted to deputy chief of staff. In that position she became skilled at negotiating the divides between competing interest groups.

In October 1991 Jarrett was named commissioner of the recently created Department of Economic Development and Planning. In a position that Steven R. Strahler, writing for *Crain's Chicago Business* (September 11, 1995), characterized as "the nearly indispensable bridge between go-go developers, slow-go community organizers and no-go preservationists," Jarrett was charged with renewing the city's efforts to facilitate industrial development in Chicago by means of financial and other incentives—a responsibility that, in the past, was widely thought to have been mishandled. Jarrett focused her efforts on bringing small and medium-size businesses to Chicago, attracting them not only with promises of tax credits but also by locating sites for development and pushing for improvements in infrastructure. Jarrett described her approach to the job to Alf Siewers for the *Chicago Sun-Times* (February 9, 1993) as "community-driven"; she also sought community input on questions such as the appropriate businesses for particular areas, and she worked to create public–private partnerships. She made it her business to visit communities to observe the progress being made. Paul Vallas, the city's budget director at the time, described Jarrett to Terry as "tough as nails [and always] one of the smartest, if not the smartest person in the room in terms of judgment, in terms of knowledge." By September 1993 the efforts of Jarrett and her staff had helped to keep thousands of jobs in Chicago, at companies including Tootsie Roll Industries; Luster Products Inc.; Bankers Life and Casualty Co.; Culinary Foods and Convention Exhibits Inc.; Chas. Levy Circulating Co.; Marshall Field's warehouse division; and Moo and Oink, a popular South Side meat retailer. In an article for *Crain's Chicago Business* (March 28, 1994), Mark Veverka named other large retailers with plans for development in Chicago, among them Kmart, Home Depot, Target, Menard, and Wal-Mart.

In 1995 Jarrett resigned from the Department of Economic Development and Planning and accepted a position as the executive vice president and managing director of the Habitat Co., a for-profit Chicago-based real-estate company that was commissioned by the city in 1987 to oversee all of Chicago's public housing. She also became the board chairman of the Chicago Transit Authority, a part-time job. At that time the CTA was facing problems including a budget deficit and low ridership. One way in which Jarrett cut costs was to end the use of city resources by many CTA attorneys who were practicing law privately on the side. Under Jarrett the CTA increased security in rail cars and buses and purchased new fleets of buses and subway cars. To stay in touch with the Chicago community, Jarrett oversaw a telephone hotline, organized annual public hearings, and regularly conducted customer surveys. At public lectures she often emphasized the importance of embracing Chicago's diversity. "Our philosophy and our vision and our mandate are to make sure our workforce and the resources we spend are allocated in a way which represents the diversity of our service area," she told a writer for the *Chicago Defender* (May 25, 2002). Under Jarrett fares remained relatively low, service was improved on half of the bus routes and all of the rail routes, and ridership increased annually for five years in a row (1997 through 2001). Jarrett announced her resignation from the CTA on April 1, 2003 but remained active in the position until the following August.

At the Habitat Co. Jarrett faced other problems. Habitat had been charged with overseeing the construction and management of public housing in Chicago as a result of a lawsuit known as the Gautreaux case, filed in 1966. In 1976 the case reached the U.S. Supreme Court, which ruled that the Chicago Housing Authority had for years located public housing in predominantly or almost completely black neighborhoods but none in white neighborhoods and had limited the number of blacks permitted to live in mixed-neighborhood projects. As a result the city had become increasingly racially segregated and public housing concentrated in low-income, high-crime African-American neighborhoods. Earlier, to remedy that situation, in 1969 a federal judge had ordered the CHA to replace the old public-housing projects—many of which were tall towers that held hundreds of apartments—with mixed-income housing on sites scattered throughout the city, especially in mostly white neighborhoods. The CHA had never taken the required steps, however. In 1987 a federal judge appointed the Habitat Co. to manage the construction of public housing under the scattered-site plan. Rather than attempt to construct tall buildings that contained only public-housing units, Habitat aimed to build townhouses having both government-subsidized and market-rate apartments. In order to integrate low-income residents into the surrounding community, Jarrett limited the number of government-subsidized units to one third of the total in the townhouses. That policy angered many low-income residents and housing advocates, who wanted the majority of units to be set aside for the poor. "We looked for a balance, with the goal being a healthy community, and we were extremely cognizant and mindful of not wanting to recreate horizontally what we had torn down vertically," Jarrett told Jason Grotto and Laurie Cohen for the *Chicago Tribune* (July 6, 2008).

Despite Jarrett's passionate commitment to the project, Habitat has encountered many difficulties in its attempts to remake Chicago's public-housing system. Some resident-advocacy groups have accused the CHA and Habitat of allowing the deterioration of properties they are managing so that those buildings can be condemned and the sites redeveloped. Since 1987 more than 13,000 public-housing units have been demolished to make room for new developments, which have taken years to build; in the meantime, many people have been forced to move into temporary housing, which has not been easy to find. Other problems have included missed construction deadlines, culture clashes between new residents and their communities, and a lack of meaningful integration. Despite Jarrett's efforts, most of the new mixed-housing projects have been built in predominantly black neighborhoods. In addition, in 2006 the renovation of the subsidized-housing-project Grove Parc Plaza was removed from Habitat's purview after it deteriorated so badly that federal inspectors rated conditions as 11 on a 100-point scale. Jarrett, who became CEO of the Habitat Co. in 2007, was pleased with much of the progress, while admitting that it had been slower than anticipated. "In the end," she told Terry, "I think some things take time because they should."

Also in 2007 Barack Obama announced his candidacy for the Democratic nomination for president of the United States. Obama had served as an Illinois state senator from 1997 to 2004 and as a U.S. senator since 2005. In his campaign for the U.S. Senate seat, Jarrett had served as Obama's finance chair. In his quest for the presidency, Obama gave Jarrett the official title of senior campaign adviser. Jarrett "participates in every conversation we have in the campaign," Obama told Terry. "She is involved in broad strategic decisions about our message and how we approach the campaign, and she's involved in the details of managing the organization. She's really a great utility player." One of Jarrett's responsibilities was to help improve Obama's standing among African-Americans. Early in the campaign Obama trailed one of his Democratic opponents, New York senator Hillary Clinton, in polls among African-American voters. Additionally, many black leaders were reportedly hesitant to support Obama because, unlike some African-American politicians, he avoided engaging in explicit discussions of race, opting for what many called a postracial attitude, in which he emphasized the shared concerns of all Americans and encouraged cooperation rather than confrontation. Obama's biracial background and Ivy-league education also led some to accuse him of not being "black enough." Jarrett assembled a task force to reach out to black leaders. Her well-known record as a Chicagoan as well as her ability to reduce discord among groups with divergent interests helped her gain for Obama the support of both traditional and nontraditional black leaders. "Part of what moved me from, 'Who is Barack Obama and what is he really about?' to 'Yes, this is a guy who can help make changes even if we're not on the same page in terms of style and approach'—a lot of that came from talking to her," the clergyman and political activist Al Sharpton told Cottle. "Sometimes I've called into the campaign with an issue I thought was upsetting . . . [and] she's so calm herself that you find yourself fighting to stay calm as well, trying to even out your tone."

Later in the campaign, in March 2008, excerpts of what were judged to be anti-American and anti-white statements in sermons by Obama's longtime pastor, Jeremiah Wright, became headline news; Obama was accused of harboring such attitudes himself and faulted for not distancing himself from Wright. When Obama convened his top advisers to decide how to handle the issue, Jarrett encouraged him to follow his gut and confront the issue of race head-on. "I knew that because of Barack's life experiences and many of our conversations, he had given a great deal of thought to the topic of race," Jarrett told Terry. "He had mentioned earlier in the campaign that he thought he could provide a framework for a conversation about race in a way that could bring the American people together and heal so many wounds. My advice was to seize this opportunity, speak honestly, directly from his heart, and I had every confidence that his message would resonate broadly with the American people." Acting on that advice, Obama addressed the controversy about Reverend Wright in a speech, entitled "A More Perfect Union," that he gave at the National Convention Center in Philadelphia, Pennsylvania, on March 18, 2008. Although his words did not completely quell the uproar surrounding Reverend Wright's remarks, it effectively communicated Obama's complex perspective on the role of race in the U.S., and it was generally well-received. Jarrett "is always very insistent on me trusting my instincts," Obama told Terry. "One of the dangers in running for high office is you get so much chatter in your ear that you stop listening to yourself."

On June 2, 2008 Obama earned the necessary number of pledged delegates to secure the Democratic presidential nomination. During the next five months, Jarrett served as one of Obama's closest advisers, frequently accompanying him on the campaign trail and serving as a liaison with both African-American leaders and business leaders. On the night of the general election, November 4, she appeared on television to respond to minute-by-minute reports of results of the ballot counting. After Obama's victory the president-elect assigned Jarrett to lead his transition team, along with John Podesta, President Clinton's last chief of staff, and Peter M. Rouse, Obama's chief of staff when he was a U.S. senator. In the months leading up to the election, Democratic Party leaders had discussed the possibility of Jarrett's filling the Senate seat vacated if Obama won the presidency, a notion that gained support from quarters of the Democratic Party over the following months. A few days before the election she discussed her future with the Obamas; later, she told Robert Draper for the *New York Times* (July 26, 2009, on-line) that Michelle Obama was adamant that Jarrett work in the White House. "You have to understand," Jarrett said. "This is right before the election. We're all really nervous. We knew by that point that chances are he's gonna win. [Michelle Obama is] about to embark on this entirely new episode in her life. And her attitude was like: 'You've come all this way, and you thought this was a good idea, and now you're gonna bail on me? No way!'"

Ultimately both the president and the First Lady decided that Jarrett's guidance was indispensable. On November 15, 2008 President Obama announced that Jarrett would serve in the White House as a senior adviser and an assistant to the president for intergovernmental relations and public liaison. Jarrett's official duties in the latter role include acting as a liaison between the White House and state and local officials and the White House and the public. In May 2009 Obama announced that the Office of Public Liaison would be renamed the Office of Public Engagement and, along with the Office of Intergovernmental Affairs, would engage more actively with ordinary Americans. Jarrett has been particularly helpful in reaching out to the segments of the population whom she courted during the campaign: minorities and business leaders. She also regularly accompanies the president and the First Lady to events and meetings; in September 2009, for example, she flew with Obama to Copenhagen, Denmark, to lobby for Chicago, Illinois's bid to host the 2016 Olympics. That same month she was sent by the White House to visit the Dalai Lama, in Dharamsala, India, along with Maria Otero, an undersecretary of state for global affairs; the visit was meant to convey the president's respect for the Dalai Lama despite Obama's decision not to meet with him during the religious leader's October visit to the States. Jarrett's role as both a close friend and senior adviser to the Obamas is unique and reportedly has led to minor clashes with other senior staff members. When Draper asked the president whether he consults with Jarrett on every decision he makes, Obama replied: "Yep. Absolutely."

From 2004 to 2006 Jarrett chaired the Chicago Stock Exchange. As of mid-January 2009, she served on the board of directors of the USG Corp., the Metropolitan Planning Council of Chicago, and the Local Initiative Support Corp., which operates nationally. She became a member of the board of trustees of the University of Chicago in 2001 and vice chair of the school's hospital board in 2002. When the name of the latter board was changed, to University of Chicago Medical Center board, in 2006, Jarrett was named its chair; at the same time she became vice chair of the university's board of trustees. She was also a trustee of Chicago's Museum of Science and Industry and has served on the boards of directors of Navigant Consulting Inc., RREEF America II, the Joyce Foundation, and the Federal Reserve Bank of Chicago. She was the vice chair of the Chicago 2016 Olympic Committee until late 2008. Jarrett lives in the Kenwood section of Chicago, just north of Hyde Park, where the Obama family maintains a residence. She also has an apartment in Washington, D.C. Her daughter, Laura, is a student at Harvard Law School. In 2008 *Newsweek* listed Valerie Jarrett among the "global elite."

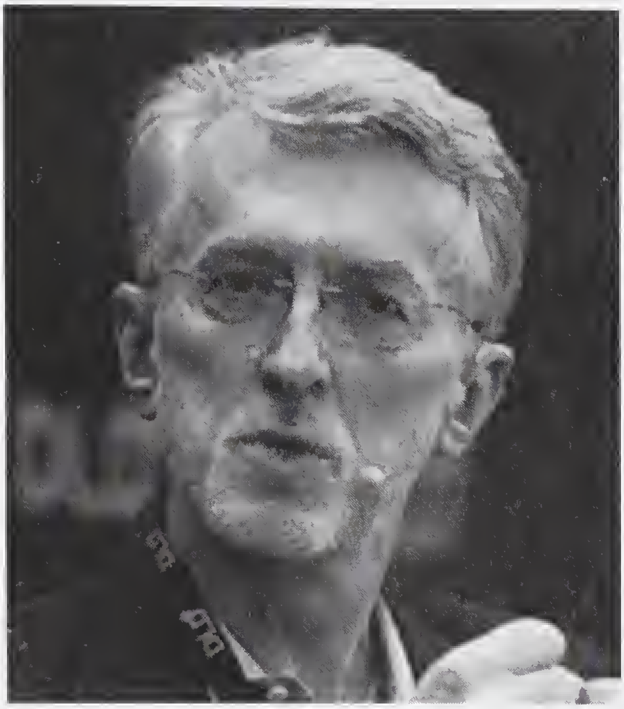
Jarvis, Jeff

July 15, 1954– New-media consultant; writer; educator

Address: City University of New York, Graduate School of Journalism, 219 W. 40th St., New York, NY 10018

"Jeff Jarvis is the very model of a modern new-media guru," Ron Rosenbaum wrote for *Slate.com*



Sean Gallup/Getty Images for Burda Media

Jeff Jarvis

(November 12, 2008). "If you work in media, you probably know his work. If you consume media, you probably should. He's one of the leading Web futurists, one of the few new-media consultant types who came over from old media." For the first two decades of his professional life, Jarvis was a full-time print journalist: he worked variously as a researcher, columnist, critic, editor, and assistant publisher at the *Chicago Tribune*, the *San Francisco Examiner*, *People* magazine, the New York *Daily News*, *TV Guide*, and *Entertainment Weekly*, the last of which he founded. In the mid-1990s he became the president and creative director at Advance.net, the arm of Advance Publications that oversaw its Internet activities, where he managed the expansion of the company's newspapers to the Web. Jarvis's desire to share his thoughts and feelings about his experience in Lower Manhattan on September 11, 2001, when Al Qaeda terrorists attacked the World Trade Center, led him to start his own blog, called buzzmachine.com. He has described the comments and discussions prompted by his and others' blog entries, and the entries posted in response, as part of an evolving process—one whose value and importance are greater than those of the information and opinions conveyed day to day. Jarvis has become a highly sought-after adviser and speaker on journalism and the new media. He serves as a consultant to the New York Times Co. regarding its subsidiary About.com; an associate professor at the Graduate School of Journalism at the City University of New York; and a columnist for the London *Guardian*.

In his articles and blog entries, Jarvis has placed the blame for newspapers' decline in readership and profitability largely on journalists. "It is our fault that we did not see the change coming soon enough and ready our craft for the transition," Jarvis wrote for his blog (October 8, 2008). "It is our fault that we did not see and exploit—hell, we resisted—all the opportunities new media and new relationships with the public presented. It is our fault that we did not give adequate stewardship to journalism and left the business to the business people. It is our fault that we lost readers and squandered trust. It is our fault that we sat back and expected to be supported in the manner to which we had become accustomed by some unknown princely patron." Not surprisingly, some journalists have rejected his argument, in whole or in part. According to Ron Rosenbaum, for example, "Firing people on the writing side because of the incompetence of the business side is a long tradition in the media business." Rosenbaum also contended that Jarvis's "pretensions to guru-hood" are not backed up by enough original, substantive ideas. Nevertheless, he described Jarvis as being "among the most rational of the new thinkers." In his first book, *What Would Google Do?* (2009), Jarvis argued that Google's reliance on innovation, collaboration, and experimentation should become a new model not only for newspapers but for book publishers, car manufacturers, hospitals, universities, airlines, and movie studios.

The second of two children, Jeffrey A. Jarvis was born on July 15, 1954 in Oak Park, Illinois. His sister, Cynthia A. "Cindy" Jarvis, is the minister of a Presbyterian church in Philadelphia, Pennsylvania. His mother stopped working to raise her children. His father's job, as an electronics salesman, required a series of moves to locations in Iowa, Illinois, New York, and New Jersey. For that reason Jarvis attended four elementary schools and four high schools in succession. He studied philosophy and political science at a California college, with the goal of becoming a lawyer, but after a year he abandoned that plan. "I wouldn't be able to say, 'Yes, your honor,'" he told *Current Biography*, the source of all quotes for this article unless otherwise noted. "I looked around and wondered, 'What the heck could I do?' I had been on the high school and college papers for years and decided I enjoy doing that." He next enrolled at Medill, Northwestern University's school of journalism, in Chicago, Illinois. Jarvis graduated from Northwestern after three years, in 1974.

After he earned his bachelor's degree, Jarvis got a job on the midnight shift of the *Chicago Tribune* as a rewrite person—someone who records the news reports called in by journalists in the field, taking down and organizing the most important information. Next to the typewriter on his desk stood a machine that, at that time, seemed foreign to many reporters and almost frightening to some: a personal computer. Jarvis used the computer to record the stories called in. Because typing them was much faster than writing them by hand, he had time to edit them as well. Within a year, at the age of 21, he had been promoted to assistant city editor. As one of the very few people in the newsroom who knew how to use computers, he started training others on the staff in their use.

After two years with the *Chicago Tribune*, Jarvis returned to California, where he was hired as the Sunday news editor at the *San Francisco Examiner*. A caption that he wrote soon after his arrival particularly pleased the paper's publisher, who promoted him to gossip columnist—a position newly created to provide competition for the popular gossip column in the *Examiner*'s chief rival, the *San Francisco Chronicle*. Jarvis could never obtain what he described as the "juiciest" gossip, because he did not know celebrities or anybody else who would provide such material. Instead, he usually wrote about politics and local happenings. He would frequently criticize then–San Francisco mayor Dianne Feinstein in terms that the publisher would often tell him to soften. He could not tolerate the publisher's intervention, so in 1981 he left the *Examiner* and moved to New York City.

In New York he found a job at *People* magazine as a rewrite person. After a few years he was promoted to television critic. "I didn't know what the hell I was doing," he said. "But I loved it." One day, just as he was about to go on the air on a CBS morning show to talk about TV ratings, the show's producer told him that he expected Jarvis to say that "the American people have taste." "I would *never* say that," Jarvis replied. The producer countered, "But you've said that the shows at the top of the ratings are good and the shows at the bottom are not. Then aren't you saying that American people have taste?" After a few moments' thought, Jarvis agreed. He regards that conversation as a life-changing moment, because "it taught me to be a populist. It taught me to have faith in the people. It taught me that when given a choice, people will gravitate toward the good stuff"—though there are always exceptions. Jarvis introduced a grading system, A through F, for the programs he reviewed for *People*. His fellow critics at other publications disapproved of it, because, they believed, readers would skip reviews of programs with low grades. Jarvis would counter that people are busy and should not have to waste time reading about shows that are not worth watching, but that a review graded "F" would draw their attention because it would probably be entertaining.

While at *People* Jarvis came up with an idea for a new magazine, to be called *Entertainment Weekly*. Six years passed before Time Warner, which owns *People*, approved it. With Jarvis as the founding managing editor, the first issue of *Entertainment Weekly*, with an image of the singer k. d. lang on its cover, went on sale in February 1990. Jarvis remained at that job for only half a year, because of what, in an interview with a *USA Today* (June 12, 1990) reporter, he described as "creative differences over the direction of the magazine." Time Warner, for example, criticized the first issue's cover photo, maintaining that Jarvis should have picked a far better-known entertainer. But the publisher had failed to inform him that the magazine was going to be sold primarily at newsstands rather than through subscriptions, Jarvis said, and initial newsstand sales were extremely low.

Jarvis next worked for a year and a half for the New York *Daily News*, as the Sunday editor and associate publisher. He then joined *TV Guide* as a TV critic. For the most part he worked from home, watching tapes of TV shows that came in the mail and then writing reviews. "A critic should basically start by liking what they're covering," he said. "If you have a TV critic who thinks all TV is crap, that's no service to the reader. A critic should start with the assumption [that TV is] basically good"—an assumption that Jarvis made.

Jarvis left *TV Guide* in 1994 to take on a managerial and consulting role, as the president and creative director of Advance.net, the on-line arm of Advance Publications, which at the time owned Condé Nast. (Condé Nast publishes two dozen magazines and newspapers in 29 markets and, at that time, owned the book publisher Random House.) The year 1994 marked an "incredibly important moment" in Internet history, according to Jarvis, because that is when the first commercial browser, Netscape, made its debut. Its arrival transformed the publishing industry in two ways: first, Internet links—direct connections from one Web site to others—"changed the essential economics of media." Thus, instead of striving to include content that might appeal to the greatest number of people, a publication could concentrate on what it did best and link to the rest. Second, Netscape and other browsers eventually allowed anyone to create content on-line—initially only text, but later photos, videos, and audio material as well. Instead of being merely passive media consumers, people could also be active media creators. At Advance, Jarvis was responsible for technological matters and the content of the company's newspaper and magazine Web sites. "We were creating sites from scratch," he recalled. "A lot of newspapers were trying to recreate the newspaper on-line. They had a pride in the product they put out." But focusing on content was misguided, in Jarvis's opinion; content has value, but "the real value" is the community—the people who connect through any particular site.

On the morning of September 11, 2001, Jarvis, as usual, took a New Jersey PATH train to New York City. His train arrived in Lower Manhattan just as Al Qaeda terrorists flew the first plane into the south tower of the World Trade Center, at 8:46 a.m. At that moment Jarvis was still below ground, in the train station, unaware of what had happened. He took an escalator onto another underground platform, where he and a few others discovered not the usual hustle and bustle but an eerie silence and women's shoes strewn everywhere on the floor. (When those who had arrived on the previous train heard about the attack, they had discarded their high heels and other shoes not designed for running and fled as fast as they could.)

As soon as Jarvis emerged onto the street, a policewoman yelled to him, "Run! Run!" He ran across the street, where he began talking to people and writing down his observations. He was there when the second set of hijackers flew their plane into the north tower. When the first tower started to collapse, Jarvis was only a block away. Along with everybody else he ran, his vision becoming clouded by the dust that had billowed during the collapse. When he reached his Condé Nast office, a few miles north, he called in reports to several Advance-owned local newspapers.

Days later, feeling that he wanted to communicate more about what he had witnessed and experienced, Jarvis started his blog, buzzmachine.com. He soon linked up with two bloggers in Los Angeles, California, who had happened upon it. "That was another *ding!*" Jarvis said, snapping his fingers. "That's when I saw the power of the link. I got to know these people [the Los Angeles bloggers] and did business with them later on, all because of the link." The realization of blogging's potential ended any thoughts Jarvis had had about shutting down buzzmachine.com after a few weeks. After several months of blogging about 9/11, he shifted his focus to the subject that is his specialty—the media. "Journalists, the straight-news reporters, often have problems writing in a voice because we are told not to," he said. "But having been a columnist, I already had the obnoxious habit of using the first person and writing in my own perspective. But it was not a column. It was a conversation. And I had to learn that." On buzzmachine.com Jarvis writes primarily about the media, journalism education, free speech, technology, and, to a lesser extent, politics.

On June 21, 2005 Jarvis posted what is still one of his most influential entries. Titled "Dell lies. Dell sucks," it conveyed his irritation and frustration with the deficiencies of his Dell laptop and the company's customer service. The entry drew responses from thousands of like-minded consumers. Two months later Jarvis returned his Dell computer, bought a Mac, and, on his blog, wrote an open letter to Dell's founder and chief executive officer, Michael Dell, inviting him or a Dell representative to "join the conversation your customers are having without you," so as to improve Dell products and service. The following year Dell did just that. For an article he wrote for *BusinessWeek* (October 29, 2007) two years after the blog post, Jarvis conducted a cordial interview with Michael Dell and wrote that the company and its customers are "collaborating on new forms of content and marketing." As of late 2009 Jarvis's June 21, 2005 post appeared in the top 10 Google search results for "Dell sucks."

Since 2006 Jarvis has written a biweekly column for the London *Guardian* about the subjects he discusses on his blog. In his September 1, 2008 *Guardian* column, he criticized the 15,000 journalists—and the publications that employed them—who covered the national Democratic and Republican presidential conventions. "Nothing happens at the conventions," Jarvis wrote. "They are carefully staged spin theater. . . . The attention given to the conventions and campaigns is symptomatic of a worse journalistic disease: we over-cover politics and under-cover the actions of our governments. We over-cover politicians and under-cover the lives and needs of citizens." That criticism relates to one change that Jarvis believes the Internet has made in journalism. Like it or not, Jarvis has argued, it is no longer necessary for newspapers and magazines to be "all things to all people." For example, not every newspaper in America needs to report on the latest golf tournament: the Internet makes it possible for anyone to read about it in the *New York Times*, in an on-line golf magazine, or on a golf Web site. Instead, according to Jarvis, each publication should figure out what makes it special and what it alone can provide. When a small local newspaper dedicates space to something that is plentifully available in bigger—and perhaps better—publications, it leaves out news or reports more essential to its community.

Jarvis opened his August 18, 2008 *Guardian* column with the provocative question, "Do we need editors?" In other words, in the age of new media, are editors "a luxury that we can do without"? Not quite, he wrote. There is still a role for editors, but it has changed: "As news becomes collaborative, editors will need to assemble networks from among staff and the public; that makes them community organizers. I also believe editors should play educator, helping to improve the work of the network." In large part because of new technologies, non-journalists can perform what Jarvis calls "acts of journalism"—for example, taking digital photos at the sites of disasters or analyzing on-line government reports. It is part of the new responsibilities of editors to collaborate with and, in some cases, train such contributors, Jarvis believes.

Jarvis also believes that there is still a role for professional journalists. Otherwise, he asks rhetorically, why would he be teaching journalism? In 2006 Jarvis joined the newly founded Graduate School of Journalism at the City University of New York (CUNY), as an associate professor and director of the Interactive Journalism program. He teaches a course entitled "Entrepreneurial Journalism," in which students aim to create sustainable journalistic businesses. On his blog Jarvis has often expressed his views about the journalism school's programs, events, and approach to teaching. Jarvis's entries and readers' responses to his ideas about where journalism is heading became the rough draft of his first book, *What Would Google Do?* (2009). (The title is a play on the question "What would Jesus do?," often used by groups that want to insert Christian values into individuals' choices and national policy.) The book, Bruce Manuel wrote for the *San Jose (California) Mercury News* (March 13, 2009), "makes a provocative case for why Google ought to become a new model for not just business but the wider culture too." Jarvis also cited Amazon.com, Craigslist, Twitter, and Facebook as useful models, but found none to be the equal of Google, whose innovative ideas and business practices, including collaboration with customers, have made its continuing growth possible. Jarvis argued that practically all businesses—media, advertising, energy, real estate, health care, education, automobile manufacturers—should emulate Google. "I sat in Detroit some time ago and suggested heresy: I urged the car people to open up their design process and make it both transparent and collaborative," Jarvis wrote in an excerpt from his book that appeared in *BusinessWeek* (February 9, 2009). "Car companies have no good way to listen to customers' ideas. If they had opened up, years before, I would have been among the legions who'd have gladly told them to invest 39 cents for a plug-in car radio so we could connect our iPods. . . . What if just one model from one brand were opened up to collaborative design? I don't suggest that design should be a democracy. But shouldn't design at least be a conversation?" As for newspapers, ideally, each "will be more of a network with a smaller staff of reporters and editors still providing essential news and recouping value for that," Jarvis wrote. "Paper 2.0"—the future newspaper—"will work with and support collections of bloggers, entrepreneurs, citizens, and communities that gather and share news. . . . It could be bigger than papers have been in years, reaching deeper into communities, having more of an impact, and adding more value." Despite the serious financial hardships many newspapers and magazines are now experiencing, "journalism will survive," Jarvis told *Current Biography*. "I'm an optimist to a fault." Jarvis has contributed articles to publications including *BusinessWeek*, *Advertising Age*, *Newsday*, the *New York Post*, *Rolling Stone*, the *Nation*, and the *Huffington Post*.

In August 2009 Jarvis announced on his blog that he had been diagnosed with prostate cancer. Afterward, in an unusually forthcoming, unsentimental way, he wrote about the surgery he underwent in September and its effects. The surgery was successful, and Jarvis was expected to make a full recovery.

Jarvis and his wife, Tammy, live in New Jersey with their two children, Jake and Julia, both of whom are very tech-savvy.

Jealous, Benjamin Todd

Jan. 18, 1973– President of the NAACP

Address: NAACP National Headquarters, 4805
Mt. Hope Dr., Baltimore, MD 21215

Jeffrey MacMillan, courtesy of the NAACP

In September 2008 Benjamin Todd Jealous, a former newspaper-industry executive, activist, and Rhodes scholar, was sworn in as president of the National Association for the Advancement of Colored People (NAACP), the oldest and most prominent civil rights organization in the United States. In assuming his post Jealous became, at 35, the youngest president in the organization's 100-year history. (The NAACP was founded in 1909 by W.E.B. DuBois, Ida B. Wells-Barnett, and others, largely as a response to the widespread lynching of African-Americans. Today it boasts roughly half a million members in hundreds of branches.) While his election rankled some NAACP board members who saw him as inexperienced—he was chosen the previous May in a divisive 34–21 vote—Jealous brought a fresh voice to an organization that has sought to regain the relevance it enjoyed during the height of the civil rights era, nearly a half-century ago, when African-Americans struggled successfully for integration and voting rights. "He's a young man with great training," Amos C. Brown, an NAACP board member, told Sumathi Reddy for the *Baltimore Sun* (September 28, 2008). "He's had experience in various areas, and coupling that experience with the needs of the NAACP, I think we'll have the best of both worlds in moving forward." Prior to his arrival at the NAACP, Jealous served as president of the Rosenberg Foundation, a private institution devoted to civil and human rights advocacy. He has also served as director of the U.S. Human Rights Program at Amnesty International and as executive director of the National Newspaper Publishers Association (NNPA). Many hope that Jealous's youth will help to draw a new generation of supporters to the NAACP. Commenting on his leadership style, Jealous, a fifth-generation NAACP member, explained to Hazel Trice Edney for the *New York Beacon* (May 22–28, 2008), "I'm a team player. I believe that in order to lead in the game, you've got to be completely in the game, that in order to have people to follow you, they need to know that you're willing to follow them. This isn't a new industry to me if you will. This is the family, the movement that I was raised in. So, I expect to have nothing but success."

Benjamin Todd Jealous was born on January 18, 1973 in Pacific Grove, a coastal town in Monterey County, California, known for its liberal politics. His mother, Ann Todd Jealous, an African-American psychotherapist, had met his father, Fred Jealous, a white education administrator, while teaching junior high school in her hometown of Baltimore. (As a boy Jealous spent his summers with his grandmother there.) Both of Jealous's parents had participated in Baltimore's desegregation movement during the 1960s. Jealous became conscious of his mixed race at a young age. He explained to Reddy, "The issue of race was always there. When your mom's black and your dad's white and it's the 1970s, it's in your face all the time. . . . I can remember getting into a fight with a kid . . . because he said I was rich because I had a nanny. He assumed the black woman [Jealous's mother] who picked me up every day was my nanny." Jealous's awareness of race, and his parents' backgrounds in activism, led him to become socially conscious early on. When he was in first grade, he complained to his school librarian about the scarcity of books on African-Americans. At seven he told his family of his desire to become a civil rights lawyer.

Jealous attended York School, a private Episcopal institution in Monterey, where he developed a passion for learning about history and economics. When he was 14, after accompanying his father to an event promoting the civil rights activist Jesse Jackson's candidacy for president, Jealous organized a youth voter-registration drive. His efforts contributed to Jackson's strong showing in Monterey County. "I was raised by my parents in a community during a time when social justice issues were taken very seriously," Jealous recalled to Sylvia Moore for the *Monterey County Herald* (February 10, 2003). "I believe there's no better way to spend one's life working to make this world better than when you found it than serving others." Also during his high-school years, he spent a semester in Washington, D.C., working for two U.S. congressional Democrats from California—as a page for Leon Panetta and an intern for Sam Farr.

In 1990 Jealous graduated from York and enrolled at Columbia University, in New York City. As an undergraduate he co-founded a group that provided low-income housing and free child care to residents in the largely black community of Harlem. That helped catch the attention of the NAACP Legal Defense Fund, which hired him to organize Harlem citizens to oppose the closure of a local hospital. Jealous's outspokenness got him suspended from Columbia for a semester, after he staged a student protest to stop the university from turning the Audubon Ballroom—where the black nationalist leader Malcolm X was assassinated, in 1965—into a biomedical research center. In response, Jealous decided to leave the university for good. (Columbia later reached a compromise with local community groups, agreeing to restore a portion of the original façade of the ballroom and to build a museum inside honoring Malcolm X; the museum opened in 2005.) "[Jealous's] leadership qualities have always stood out," Judith Russell, who taught and advised Jealous at Columbia, recalled to Reddy. "Not in an impulsive or rowdy or boisterous way. He just has a quality for measured evaluation, and he has a lot of passion."

Upon leaving Columbia Jealous moved to Mississippi to work for the American Federation of Labor and Congress of Industrial Organizations (AFL-CIO). While there, he helped organize a campaign to stop the state from closing two historically black universities, Alcorn State and Mississippi Valley State. He also opposed efforts to convert another school into a prison. Jealous, who received death threats for his work, noted to Sylvia Moore, "I was a bit of a controversial person in the state. There aren't very many light-skinned black people in [Mississippi]. I was often referred to as 'high-yellow carpetbagger from New York City.'" Despite such challenges, Jealous remained in Mississippi, where he entered the field of journalism. Initially applying for a graphic-designer position at the *Jackson Advocate*, an African-American weekly newspaper, Jealous soon became a reporter at the urging of the paper's publisher. He wrote a series of articles about alleged corruption at the Mississippi State Penitentiary in Parchman; state and federal investigations were conducted as a result. Another story he wrote, about a black farmer wrongfully accused of arson, led to the farmer's acquittal. Jealous later became the paper's managing editor.

Returning to Columbia to complete his studies, Jealous graduated with a degree in political science in 1997. He then attended Oxford University, in England, on a Rhodes scholarship—becoming, in the process, the only person from Monterey County ever to do so—and earned a degree in comparative social research. In 1999 he returned to the United States to become the executive director of the National Newspaper Publishers Association, a federation of more than 200 black-community newspapers. During his three-year tenure in that position, he tripled the organization's budget and staff and initiated changes that helped usher the NNPA into the information age. In addition, he introduced training programs that helped improve the professional skills of NNPA journalists and pressed reporters to serve their communities by writing about important matters regarding race, including prisoners' rights and the plight of black farmers. Hazel Trice Edney, the first female Washington correspondent in the NNPA and now the editor in chief of the group, explained to Sumathi Reddy, "[Jealous] is a person who is able to . . . get people to come together even though they might not necessarily agree to come together for the cause of justice. His heart is really toward human and civil rights in America. It's not a job for him. It really is a mission."

In 2002 Jealous left the NNPA to join the human rights advocacy group Amnesty International, where he headed the U.S. human rights program. While there he successfully lobbied for federal legislation against prison rape, rallied public opposition to racial profiling in the wake of the September 11, 2001 terrorist attacks, and called for a halt to the widespread sentencing of adolescents to life in prison without the possibility of parole. In 2004 he served as the lead author on a report entitled "Threat and Humiliation: Racial Profiling, Domestic Security, and Human Rights in the United States," which garnered national and international media attention upon its publication. The 50-page report, based on a series of hearings on discrimination across the nation and a yearlong analysis of racial-profiling practices by law-enforcement officials, argued that racial profiling ultimately undermines national security. As noted by a writer for the *New York Beacon* (September 22, 2004), the report stated, "Prior to 9/11, racial profiling was frequently referred to as 'driving while black.' Now, the practice can be more accurately characterized as driving, flying, walking, worshipping, shopping, or staying at home while Black, Brown, Red, Yellow, Muslim, or of Middle-Eastern appearance." Jealous noted to the same writer, "During our research, we collected testimony from Native Americans who were profiled going to and from religious ceremonies, Hispanics who were profiled while in the sanctity of their homes, African Americans who were profiled walking down the street, and a Boy Scout, who happens to be Muslim, constantly being subjected to airport searches. Racial profiling is so pervasive and widely accepted that it has become a corrosive acid on this nation's spirit of unity."

In 2005 Jealous became president of the California-based Rosenberg Foundation, a private grantmaking organization that supports civil and human rights advocacy. He succeeded the organization's longtime president Kirke Wilson, who retired that February after 31 years at the helm. As president Jealous was in frequent contact with some of the state's most powerful philanthropists and corporate donors. He expanded the foundation's support of groups working to create greater employment opportunities for ex-prisoners and to make new businesses in the Bay Area more resident-conscious.

Jealous's reputation caught the attention of the NAACP's search committee, which had formed shortly after its president, Bruce Gordon, resigned unexpectedly in March 2007, after 19 months on the job. When Gordon, an African-American business executive and former high-ranking official in the telecommunications company Verizon, was unanimously selected to head the NAACP, in June 2005, he had expressed excitement and optimism about moving the organization in a new direction. (Gordon's appointment was regarded as highly unusual at the time, since most of the group's past presidents had been prominent figures in politics, religion, or the civil rights movement before holding the office.) However, his efforts to steer the group toward more humanitarian endeavors, rather than focusing solely on civil rights advocacy, met with resistance from board members, who were also dissatisfied with Gordon's level of fundraising. Internal squabbles eventually resulted in his early exit.

After Dennis Hayes, the NAACP general counsel, stepped in as interim president and CEO, the group's officers began an intensive search for their next leader. They hoped to find a person who could bring new life to an organization that had seen waning influence and a steep decline in membership over the years. A search committee submitted to a three-member executive committee the names of Jealous and two other candidates drawn from a pool of roughly 200: the Reverand Frederick Haynes, a pastor based in Dallas, Texas, and Alvin Brown, a former White House adviser. Despite the efforts of board members in the weeks leading up to the selection to change the standard selection process, so that they could interview all three finalists, the executive committee unanimously selected Jealous in May 2008 over the other two candidates. The final vote, however, revealed division within the board, with 34 in favor of Jealous's appointment and 21 opposed; several sources reported that "no one clapped or celebrated" after the meeting. Some NAACP board members from the West Coast, who were unable to attend the meeting in Baltimore, also complained about not being told that they could have voted by phone. Speaking in support of Jealous, Julian Bond, chairman of the NAACP board, explained to Brennen Jensen for the *Chronicle of Philanthropy* (May 29, 2008), "Mr. Jealous was the only one of the candidates we saw who has spent his entire professional life working on the issues we work on. He is philosophically attuned to who we are and what we do. . . . He has spent almost all of his life in the nonprofit world, and in most of those positions he has shown a proven ability to raise money from a variety of sources: foundations, corporate donors, and individuals. We think he can do that for us."

In September 2008 Jealous was officially sworn in as president. In the process he became, at 35, the youngest leader in the NAACP's 100-year history. Jealous made fund-raising his main priority and called on the network of foundation leaders with whom he had forged relationships. He also worked to recruit more NAACP members, particularly among those between the ages of 20 and 50, and led efforts to strengthen the organization's on-line presence, which has included building a database for tracking acts of racial discrimination and hate crimes. In addition, he launched an aggressive civil rights agenda and a campaign to reshape the national office to make it more effective in helping local chapters. "This is the century when white people will become a minority in this country," Jealous said, as noted by a writer for the *Californian* (May 19, 2008). "What that means is right now, we need to have a clear picture of where we're headed and work together diligently with Latinos, Native Americans, Asians and progressive white groups as if our collective future depends on it. I'm committed to that."

Following the presidential election on November 4, 2008, in which Barack Obama became the first African-American to win the nation's highest office, Jealous—who had led vigorous efforts to ensure a high voter turnout among African-Americans—wrote in an article for *U.S. News & World Report* (November 6, 2008, on-line), "A moment 232 years in the making—from the end of chattel slavery to today—we are witness to the most inclusive election enjoyed by the largest, best-informed, motivated electorate in our nation's history. Consider that some African-American precincts saw the number of registered voters swell to 95 percent of those eligible. In some locations, more than 90 percent of those registered actually voted, many for the first time and others for the first time in years. They turned out because it finally mattered. . . . As we bask in the glow of Obama's stunning victory, the battles are still many. Racial and gender-based discrimination continue to warp our housing, employment, and credit markets. Nearly 50 million Americans are without health insurance. Foreclosures spiral upward. Racial profiling persists. No Child Left Behind has abandoned hundreds of thousands of children in underfunded schools. Wars rage on two fronts. Still, we have proof through the night that an engaged, inspired nation can come together across racial, cultural, and generational boundaries to bring about change. Real change can happen as we harness the energy that enables us to achieve the extraordinary, even as we fight for simple justice and basic opportunities. These things can propel us forward as we step out into the dawn's early light."

Since the inauguration of Obama as president, on January 20, 2009, Jealous and the NAACP have urged the White House and Congress to allocate more federal funding for education. They have also focused on matters related to the economic crisis that began in the fall of 2008. Among other actions, they called for the establishment of a nine-month moratorium on foreclosures and worked to ensure that President Obama's $787 billion stimulus package was distributed equitably.

The NAACP became heavily involved in the internationally publicized matter of the arrest, on July 16, 2009, of the Harvard professor and prominent African-American literary critic Henry Louis Gates Jr. Gates was arrested for disorderly conduct at his own home in Cambridge, Massachusetts, after his confrontation with a local police officer, James Crowley. Crowley had responded to a 911 call from one of Gates's neighbors, who had noticed two men trying to force open Gates's front door and feared that a burglary might occur. One of the men was Gates, and the other was the driver of the car that had just brought Gates from the airport; the neighbor had not recognized Gates, who had enlisted the driver to help him open the door, which was stuck shut. When Crowley followed Gates into his kitchen, Gates showed him his driver's license and a Harvard identification card as proof of his legal residence in the house. Later Crowley and Gates offered different accounts of the heated conversation that ensued and what happened next, when Gates stepped onto his porch. The arrest and the photo of Gates in handcuffs that appeared in many newspapers sparked widespread discussion of whether events might have progressed differently if Gates were white and whether the professor had been a victim of racial profiling. (Crowley had taught a course on racial profiling, and how to avoid it, to other Cambridge police officers for several years.) On July 22, 2009 President Obama, a close friend of Gates's, declared during a nationally televised, primetime press conference that Crowley had acted "stupidly," a remark that angered Crowley's many supporters. In response to the incident, the NAACP began working closely with police departments across the country to address the issue of racial profiling; it has also called for passage of the End Racial Profiling Act, which was introduced in Congress by Representative John Conyers Jr. of Michigan in 2007. In an interview with Deborah Solomon for the *New York Times Magazine* (July 30, 2009), Jealous said, "Racial profiling is a constant drumbeat in this country. It's a form of humiliation that strikes lightning on a daily basis, and that is part of what Professor Gates was responding to. It's hard to be in your house, told you're a burglary suspect and then when you are no longer a suspect, told you are the problem." On July 30, 2009 Gates, Crowley, President Obama, and Vice President Joseph R. Biden discussed the incident outdoors at the White House while having beers. (The meeting has been widely referred to as the White House "beer summit.")

Jealous lives in Alameda, California, with his wife, Lia Epperson, a professor of constitutional law at Santa Clara University and a civil rights attorney with the NAACP Legal Defense and Educational Fund. The couple have a daughter, Morgan.

Jealous is a board member of the California Council for the Humanities, PowerPAC, the Association of Black Foundation Executives, and the Asia Society.

Jean, Michaëlle

(zhon, mee-kah-el)

Sep. 6, 1957– Governor general of Canada; broadcast journalist

Address: Rideau Hall, 1 Sussex Dr., Ottawa ON
K1A 0A1, Canada

When she was named governor general of Canada, in 2005, at the age of 47, Michaëlle Jean became one of the youngest people—and the first black person—ever named to the vice-regal post. "I have come a long way," she said at a news conference covered by the *Nelson (British Columbia) Daily News* (August 5, 2005). "My ancestors were slaves, they fought for freedom. I was born in Haiti, the poorest country in our hemisphere. I am a daughter of exiles driven from their home by a dictatorial regime." Indeed, from her youth in Haiti, spent under the thumb of François Duvalier, to her later success as a host on Radio-Canada, a television news reporter for the Canadian Broadcasting Corp. (CBC), and a documentary filmmaker, Jean's ascent is undeniably inspiring. Her unexpected appointment to the governor-general post initially caused some rumblings of disapproval, however, when allegations emerged that she had supported the Quebec sovereignty movement, whose members have sought independence for the francophone province. Although she has denied ties to the movement, those allegations, as well as her frequent outspokenness, have made her a controversial figure in Canadian politics.

As governor general, Jean is the representative in Canada of the queen of England. (Since the Canada Act of 1982 was implemented, Canada has been a fully sovereign state, with the ability to amend its own constitution; Queen Elizabeth II nonetheless remains Canada's official head of state.) Although the governor general operates independently of the British government, the queen, as explained on the official Web site of the British monarchy, "maintains direct contact with the Governor-General, although she delegates executive power to the Governor-General in virtually every respect." The governor general is appointed by the British monarch on the recommendation of Canada's prime minister. The duties of the post include summoning, opening, and ending sessions of Parliament; reading prepared speeches; giving "royal assent" to legislation passed by the Canadian House of Commons and the Senate; signing state documents; dissolving Parliament for elections; swearing in government officials; and representing Canada abroad. Since she took office, on September 27, 2005, Jean has been active as Canada's international representative, traveling to Europe, Africa, and Afghanistan, and has committed herself to bridging the cultural divide between English- and French-speaking Canadians.

Michaëlle Jean was born on September 6, 1957 in the Haitian capital of Port-au-Prince and spent her first 11 years in Bois Verna, a middle-class neighborhood. Her father, Roger, was the principal and a philosophy teacher at a prestigious Protestant preparatory school, and her mother, Luce, stayed at home to care for Michaëlle and her younger sister, Nadège. As a young child Jean was educated at home because her parents did not want her to be forced to pledge allegiance to Duvalier, as children at the local schools were required to do. Known as "Papa Doc," Duvalier rose to power in 1957 with army backing and, through his secret police force—the ruthless Tonton Macoutes—ruled the country with an iron fist until his death, in 1971; his son, Jean-Claude, immediately succeeded him. In 1965 Jean's father was arrested and tortured by Duvalier's police force, and the Jean family waited for several days before he was returned. Fearing for his life, Roger Jean used underground connections to escape to Canada, in 1967.

When violence under the regime escalated a year later, the rest of the family followed. "I remember my last day in my native land," Jean wrote in the preface to her book *Tout quitter pour la liberté* (*Leaving Everything for Freedom*), as quoted by Kate Jaimet and Neco Cockburn for the *Ottawa Citizen* (September 26, 2005). "The day of uprooting seemed to us the Day of Judgment. The day that we buried our old life. The day that we escaped from the usurping men who guarded our land like a prison. The day that we flew in an airplane toward the unknown." The family arrived in Thetford Mines, an asbestos-mining town south of Quebec City, where Roger Jean had found a job at a local college. Jean recalled in her book, "I remember the February night, so dark and so icy, when we arrived at [the airport in] Dorval, my mother, my sister and I, to join my father. . . . I don't remember the questions of the immigration officer, but I remember how I trembled at the sight of his uniform and the tone of suspicion in his voice. Was this a new torturer? I remember the soft replies of my mother, bewildered and exhausted, who only wanted to save her children and keep them safe and sound."

Once settled in Thetford Mines, Jean faced new challenges. As part of a very small black population in the town, she frequently heard racial taunts directed at her as she walked to the local school. Meanwhile, her parents' marriage began to dissolve; her father, apparently affected by the torture he had endured, had grown violent toward Jean's mother. As a result Luce Jean soon moved with her daughters to the city of Montreal, where she struggled to put the girls through school. (In 2003, after being out of touch for many years, Jean and her father re-established contact.) Jean and her mother and sister lived in a basement apartment, and Luce worked at a clothing factory and later as a night orderly in a psychiatric hospital. Despite the hard times, Jean managed to make friends in the new city and excelled in her classes. She graduated from the Marguerite-de-Lajemmerais girls' school and the CEGEP de Rosemont (a post-secondary school) and enrolled at the University of Montreal, earning an undergraduate degree in Spanish and Italian. Jean returned to the university to pursue a master's degree in comparative literature and obtained scholarships to study at the University of Perouse, in France, in 1982; the University of Florence, in Italy, in 1984; and the Catholic University of Milan, also in Italy, in 1985. When not studying overseas she lived in Montreal and volunteered at Auberge Transition, a shelter for battered women. She went on to volunteer at other shelters and later sat on the executive board of a shelter network. (She did not complete her master's degree.)

A meeting with Ghila Sroka, an ambitious doctoral student, helped give direction to Jean's career. Sroka had recently started a feminist journal called *Paroles Métèques* and was interested in visiting Haiti to conduct interviews for an article. She asked Jean for assistance, and in 1986 the two left for Haiti. There, Jean was able to employ her native Creole to conduct interviews and translate them into French. Her work with the journal eventually caught the eyes of a producer for the National Film Board of Canada, who hired her to work as a researcher and interviewer in Haiti for a film about the 1987 elections there, which followed the previous year's ouster of Jean-Claude Duvalier. The documentary was later shown on *Le Point*, a newsmagazine program on Radio-Canada Television. Radio-Canada officials were impressed with Jean and hired her in 1988 to host the news show *Actuel*, making her the first black person on French television news in Canada. She later hosted *Virages*, from 1991 to 1992, and *Le Point*, from 1992 to 1995. She initially faced skepticism from some colleagues. In an interview with the magazine *Chatelaine*, quoted by Jaimet and Cockburn, she said, "People I worked with said: She was hired by affirmative action, because she's young and pretty and black. She's never done television before and she's going to fall on her face." Jean also noted, "The pressure was incredible. I worked like crazy, knowing I didn't dare to make a mistake. I was trapped. I knew I was kind of a pilot project, and that if I failed, the door would close."

Jean met her husband, the filmmaker Jean-Daniel Lafond, while working at Radio-Canada; the two married in 1992. Lafond, a native of France who had moved to Canada in 1974, had asked for Jean's assistance on a documentary he was making about the Martinique poet Aimé Césaire. When they journeyed to Haiti to conduct research, they formed a connection. "When I saw this man tread on the soil of my childhood with such delicacy, and welcome my country, it's as though he was welcoming me," she told *Chatelaine*. "With him, I had a real dialogue." The two also formed a professional bond, and Jean has since worked with her husband on several of his documentary projects, including *Tropique Nord* (*Tropic North*, 1994), which chronicles the black experience in Quebec; the award-winning *Haiti dans tous nos rêves* (*Haiti in All Our Dreams*, 1995); and *L'Heure de Cuba* (*Last Call for Cuba*, 1999), a film about the 40th anniversary of the Cuban revolution.

In 1995 Jean took a position at Réseau de l'information (RDI), a Canadian French-language news channel run by CBC-Radio Canada, where she served as both a host and reporter on shows including *Le Monde ce soir*, *L'Édition Québécoise*, *Horizons francophones*, *Le Journal RDI*, and *RDI à l'écoute*. She also hosted specials, including a debate about the Catholic Church called *Le Pape en France* and a program on pedophilia entitled *L'Enfance volée*. She hosted shows aired in English Canadian markets as well, including the CBC Newsworld documentary shows *The Passionate Eye* and *Rough Cuts*, both in 1999. In 2004, by then a fixture on Quebec news, Jean was given her own RDI show, *Michaëlle*.

In August 2005 Prime Minister Paul Martin announced Jean's appointment as governor general. Canada's first governor general of Caribbean origin, she was preceded by two others with journalism backgrounds—Romeo Leblanc and Adrienne Clarkson. The term of office, which is not fixed by law, has generally lasted for five years. "I want this office to continue to have life to it and connect with people from all walks of life, all backgrounds and circumstances," Jean said at the August news conference in Ottawa, as quoted by Sandra Cordon for the *Pembroke Observer* (August 5, 2005). While many praised Jean's appointment, others were skeptical; she had no record of public service, and the choice of Jean was perceived by some as a move by Martin to garner support for his Liberal Party in Quebec, the province where Jean had lived. The biggest challenge to Jean's appointment, however, was the claim that she and her husband had ties to Quebec separatists. An article in the publication *Le Québécois* reported that in Lafond's 1991 documentary, *La Manière nègre*, Jean was heard saying while participating in a toast with sovereigntist hardliners, "You don't give independence, you take it." The news sparked controversy and debate. "I want to tell you unequivocally that both [Lafond] and I are proud to be Canadian and that we have the greatest respect for the institutions of our country," Jean declared in a statement released the next day, as quoted by Jack Aubry in the *Ottawa Citizen* (August 18, 2005). "We are fully committed to Canada. I would not have accepted this position otherwise." Although the statement satisfied some, others remained suspicious of Jean, and a poll in late August revealed that public support for her had dropped by 20 percent. In response to the poll, Montreal's Haitian community rallied behind the governor general–designate with special church services that brought out 300 supporters. Two days before Jean took office, she also renounced her French citizenship, which she had been granted upon marrying Lafond. That act quelled minor controversy over her dual citizenship.

Jean was sworn in on September 27, 2005 and delivered a speech that Elizabeth Thompson described for the *Montreal Gazette* (September 28, 2005) as one that "[set] aside the usual patriotic platitudes" and "was both passionate and surprisingly political, sending a clear message that she intends to be an activist vice-regent." During the speech she spoke of aiding youth and the disadvantaged and expressed her hopes for a unified Canada, imploring the audience to look past the division between English and French Canadians. "The time of the 'two solitudes' that for too long described the character of this country is past," she said, as quoted by Thompson. "The narrow notion of 'every person for himself' does not belong in today's world." Jean has since made it her stated mission to bridge the French-English divide in Canada, a goal symbolized in the words *Briser les solitudes* (Breaking down the solitudes), visible on the coat of arms she chose.

In her first few months in office, Jean traveled to several Canadian provinces, and in 2006 she embarked on an international tour. She visited Africa that year, highlighting Canada's commitment to assisting the struggling countries of that continent. The media noted that she was personally affected by observing the remaining signs of the former slave trade there. "[Enslaved Africans were] stripped of themselves, of their language, their name, their memory, their history, of their basic dignity as women and men, and were reduced to slavery and deported to the Americas," she said in a speech quoted by Alexander Penetta in the *Vancouver Sun* (November 21, 2006). "This trip is especially meaningful and emotional for me. And I am delighted that my first state visits have brought me to this continent—to which I feel forever bound by history, by heart and by blood." In March 2007 Jean visited Afghanistan to show support for the Afghan people and the Canadian troops fighting there as part of the multinational antiterrorism effort. She planned the visit for March 8—International Women's Day—to emphasize her concern for the treatment of women in that country, where religious fundamentalism has severely limited the rights of females. According to a press release on the governor general's Web site (March 8, 2007, on-line), she said, "The women of Afghanistan may face the most unbearable conditions, but they never stop fighting for survival. Of course, we, the rest of the women around the world, took too long to hear the cries of our Afghan sisters, but I am here to tell them that they are no longer alone. And neither are the people of Afghanistan."

Although the role of governor general is largely symbolic (political power is exercised by the prime minister), Jean has nonetheless been visibly active since she assumed office. She has even been criticized for "wading uncommonly deep in political territory," as Chantal Hebert wrote for the *Toronto Star* (September 27, 2006). At a 2007 event celebrating the 25th anniversary of the Canadian Charter of Rights and Freedoms, for example, a speech given by Jean was perceived by some to be a subtle stab at the government's decision to end the Courts Challenges Program, which allocated money to nonprofit groups to use in legal challenges against the government. "That is a constitutional no-no, obviously," Robert Finch, chairman of the Monarchist League of Canada, told Campbell Clark for the Toronto, Canada, *Globe and Mail* (April 25, 2007). "You can't have a Governor-General making speeches that run contrary to government policy of the day."

In 2005 Jean offended several politicians with a joke she made at a National Press Gallery dinner, an event at which politicians and reporters poke fun at themselves. While discussing André Boisclair, then a contender for the leadership position in the separatist Parti Québécois, she made a reference to his admitted cocaine use. Some, including Jean's sister, deemed the joke inappropriate. She has also fallen into disfavor with separatists for criticizing them; in September 2006 she drew fire for saying publicly that residents of Quebec "are sometimes very disconnected from the rest of Canada," according to the *Globe and Mail* (September 25, 2006). She later explained that she meant that all Canadians were disconnected from other parts of the country, and that she was attempting to point out that citizens should take an interest in provinces beyond their own. An editorial in the *Toronto Sun* (September 27, 2006) agreed with her, saying, "The idea of encouraging Canadians to get to know their whole country—and each other—better is an altogether healthy and sensible one, and fully appropriate for the Governor General."

In October 2008 the Conservative Party politician Stephen Harper was reelected prime minister; his party, though, failed to win a majority of seats in the Canadian Parliament. In December 2008 Harper's administration announced plans to cut public subsidies for political parties, angering opposition parties in Parliament whose existence depended on them. That move, along with several other unpopular proposals, led three of the opposition parties—the Liberals, the New Democrats, and the Bloc Québécois—to form a majority coalition and schedule for December 8 a vote of no-confidence in Harper. Harper persuaded Jean to shut down the Parliament (called "prorogue," that function is one of Jean's powers as the queen's representative); all parliamentary activities stopped until January 26, 2009, and Harper thus avoided the no-confidence vote. According to a profile of Harper on the *New York Times* Web site, prorogues "are not unprecedented"—they are "used routinely to break off sessions [of Parliament], for elections, for example. But this is the first time any members could recall the maneuver being used in the midst of a political crisis." The crisis passed after Harper unveiled a new budget "promising tens of billions of dollars in new spending, much of it in areas like housing that the party had never previously championed," according to the *Times* profile. With the Liberal Party's support of the budget, the three-party coalition opposing Harper disbanded, and Parliament passed the budget on February 3, 2009.

In May 2009 Jean took part in a traditional Inuit meal in the Nunavut, a federal territory, where she helped skin a seal and consumed a slice of its heart. The feast occurred not long after the European Union (E.U.) voted to impose a ban on seal products (the ban contained limited exemptions for Inuit in Canada and Greenland), and Jean won praise from Canadian Inuit leaders, who expressed their appreciation for her support for their traditional culture and food. Nonetheless, the E.U. and several animal-rights groups criticized the governor general for her actions. When asked if her actions constituted a message to Europe, Jean responded, "Take from that what you will," according to the CBC (May 26, 2009, on-line).

In June 2009 the public learned that Jean will officially open the 2010 Winter Olympics in Vancouver. She will also lead the Vancouver 2010 Olympic Truce, a program created by the Vancouver Organizing Committee for the 2010 Olympic and Paralympic Winter Games; according to the committee's Web site, the program aims to "encourage individuals to create everyday peace at home, schools, work, and in the community, based on the belief that lasting peace starts at the local level." In October Jean riled Canada's monarchists when she referred to herself in a speech as Canada's "head of state," even though the governor general is officially designated as the "Queen's representative in Canada." Officials at Rideau Hall (the official residence of the governor general) noted that the governor general carries out the duties of head of state as the queen's representative, an explanation that drew further criticism from the Monarchist League of Canada. Later in the month, in another speech, Jean referred to herself only as the governor general, and her official Web site, www.gg.ca, no longer refers to the governor general as "head of state."

Jean's honors include the Amnesty International Journalism Award in 1995 for a 15-part series on women; the 1994 Anik Prize for reporting; the French Médaillée de l'Ordre des Chevaliers de La Pléiade des Parlementaires de la Francophonie in 2003 for her contributions to francophone culture; and the 2000 Galaxi Award for best information-program host. In 2000 she also accepted the Raymond-Charrette Award for the quality of her French in broadcast journalism.

Jean and Lafond have an adopted daughter, Marie-Eden, who is the first child to live at Rideau Hall since the family of Edward Schreyer resided there, in the early 1980s. The family also includes Lafond's two daughters from a previous marriage, as well as his two grandchildren.

Simon Johnson

Fund (IMF), and founder of the popular blog the Baseline Scenario—has acquired a celebrity status unusual for anyone in his field. "The global economic crisis has produced far more villains than heroes among the economic experts in academia, journalism and business," Tim Fernholz wrote in an article entitled "The Unlikely Revolutionary" for *American Prospect* (April 22, 2009, on-line). "Nonetheless, a few outspoken economists have become central to the national conversation. . . . None, though, have created such a stir as Simon Johnson." Johnson's fame has spread in large part because of his widely read and cited blog, which carries the tagline: "What happened to the global economy and what we can do about it."

In the Baseline Scenario Johnson offers an accessible and highly critical analysis of the crisis, which he views as the result of the unchecked empowerment of the U.S.'s financial oligarchy. One of his central arguments has been that over the past several decades, the financial elite on Wall Street have grown disproportionately wealthy and powerful, co-opting the political process through personal connections, the revolving door between government and the financial sector, and the practices of financing political campaigns and lobbying. In order to truly reform and revitalize the economic system, Johnson believes, financiers' damaging hold on the political process must be broken. "Economists don't usually talk like that about policy making unless they're in political economy departments," Martin Wolf, a former World Bank economist who is now the chief economics commentator at the London *Financial Times*, told Fernholz. "That might change the way the debate goes and might delegitimize, if [Johnson] is successful, some of the policies promoted by the banking system and indeed the current administration."

Johnson has been so influential, in part, because he is neither a leftist nor a populist—he is instead a mainstream insider, a policy expert with years of experience. "No other economist of Johnson's credentials has stepped forward to call the United States a financier-run oligarchy," Fernholz wrote. "It's a charge that's attracted a lot of attention coming from an MIT professor and former chief economist at the International Monetary Fund, an institution that is normally a bête noire of the left." Johnson, who has increasingly been called upon to defend himself against charges of extremism and sensationalism, told Fernholz, "I'm not a populist. . . . I'm interesting to people on the left in part because I really am a very centrist-type character who is completely agreeing with, and in fact going further than, many left-type people."

Johnson's experiences at the IMF, working with post–Cold War Eastern European countries as well as nations in East Asia, Africa, and Latin America, have led him to conclude, as he wrote for the *Atlantic*, that the U.S. now resembles an emerging-market banana republic, hijacked by the wealthy. He has contended that if the crisis had originated in any other country, there would be no doubt as to the prescriptions needed: for the government to take insolvent banks into receivership, dismantle them, and implement a heavily regulated financial sector small enough to control. Unlike other countries, however, the U.S. effectively controls the IMF and World Bank, since it is their dominant shareholder. Johnson has pointed out that the U.S. remains wealthy enough to avoid needing loans or aid from those institutions, and the members of the country's financial ruling class are powerful enough to dictate not only the laws that regulate—or deregulate—their behavior but also to direct the national discourse, immediately disqualifying as radical or potentially disastrous any approach that might be detrimental to them. "This is about power, and this is about telling the financial sector that they do not run this country," Johnson told Terry Gross on the National Public Radio (NPR) program *Fresh Air* (April 15, 2009, on-line). "The country is run by people who have been elected to run the country, and having the financial sector build up massive vulnerabilities, create enormous dangers, generate big, big costs for the taxpayer and then walk away as if nothing had happened . . . that to my mind is not acceptable."

Like some of his colleagues, Johnson has maintained that the Barack Obama administration is too deferential to financial interests and has acquiesced to them by socializing losses and privatizing gains. In searching for solutions, Johnson believes, the president should look not only to President Franklin D. Roosevelt's New Deal but also to President Theodore Roosevelt's trust-busting. "The Quiet Coup," an article Johnson wrote for the *Atlantic* (May 2009, on-line), summarized many of the arguments he had put forward in the Baseline

Scenario in the preceding months and concluded, "Anything that is too big to fail is too big to exist." "Few magazine articles in recent memory have excited as much econo-blogospheric commentary as . . . Simon Johnson's 'The Quiet Coup,'" Andrew Leonard wrote for the on-line magazine *Salon* (March 31, 2009). "For good reason: Johnson's elucidation of how four decades of deregulatory ideology placed the interests of Wall Street 'oligarchs' above the interests of the general public is magisterial and convincing."

Simon Johnson was born on January 16, 1963 in Great Britain. He studied economics and politics at the University of Oxford, graduating with a B.A. degree in 1984. Two years later he earned a master's degree in economics from the University of Manchester. Johnson then moved to Boston, Massachusetts, and studied at MIT, receiving a Ph.D. degree in 1989. He next embarked on a career that has included academic appointments, stints as a consultant for various economic think tanks, and work in the private sector, in addition to his tenure at the IMF.

As an assistant professor of economics at Duke University's Fuqua School of Business, in Durham, North Carolina, during the early 1990s, Johnson focused on the causes of economic crises, corporate-governance issues, and the centrality of property rights in private-sector growth, among other issues. He also studied Eastern European countries that had just emerged from communist rule and were undergoing intense shock therapy—the overnight replacement of a controlled, centralized ecomony with a free-market system. Johnson managed the Fuqua School of Business Center for Manager Development, a research center in St. Petersburg, Russia, and spent much of his time tracking economic development in the former USSR. In 1995 Johnson co-authored the book *Starting Over in Eastern Europe: Entrepreneurship and Economic Renewal*, which stressed the importance of the private sector in Eastern Europe's post–Cold War economic recovery and examined Poland's prosperity following the application of shock therapy. In the book's foreword, Jeffrey Sachs, the American economist who is credited with much of the groundwork for shock therapy, called the book, as quoted by Dave Savona in *International Business* (July 1995), an "incomparable record of the early years of Poland's economic reform." While Gross Domestic Product (GDP) growth and other measures of economic well-being have been impressive, Savona maintained, "watching unemployment figures climb steadily from 0.3 percent all the way to the 16 percent range speaks volumes as to just how painful shock therapy can be."

In addition to his academic work, beginning in the early 1990s Johnson worked as a policy adviser in emerging and developing markets for the IMF, an institution whose origins can be traced back to World War II. With the U.S. emerging from that conflict as the dominant economic and political power in the world, its leaders set out to institutionalize the rebuilding of postwar Europe in order to prevent another Great Depression, stop the advance of communism, and open the continent's markets to trade. The IMF was established as a financial-oversight organization focused on maintaining the stability of the global economy; it was also heavily involved in development and aid issues. Some of its critics have seen the organization as being under the control of the U.S.—essentially as an arm of that country's Treasury Department, advancing its ideology and interests. When countries saddled with insurmountable debt and bankruptcy came to the IMF for aid—particularly during the tenures of U.S. president Ronald Reagan and British prime minister Margaret Thatcher and then in the aftermath of the fall of communism—the organization promoted what has come to be known by some critics as the Washington Consensus: an ideological economic policy that advocates free-market fundamentalism, small government, fewer social programs, deregulation, privatization, unrestricted movement of capital, and lower taxes. Typically, according to those critics, the experiments with shock therapy in post–Cold War Eastern Europe and in Latin America, while advancing the interests of international corporations and foreign investors, did little to help the underprivileged people of those countries. "One thing you learn rather quickly when working at the International Monetary Fund is that no one is ever very happy to see you," Johnson, who ultimately rose to the rank of chief economist at the organization, wrote in his *Atlantic* article. "Typically, your 'clients' come in only after private capital has abandoned them, after regional trading-bloc partners have been unable to throw a strong enough lifeline, after last-ditch attempts to borrow from powerful friends like China or the European Union have fallen through. You're never at the top of anyone's dance card. The reason, of course, is that the IMF specializes in telling its clients what they don't want to hear. I should know; I pressed painful changes on many foreign officials during my time there. . . . And I felt the effects of IMF pressure, at least indirectly, when I worked with governments in Eastern Europe as they struggled after 1989, and with the private sector in Asia and Latin America during the crises of the late 1990s and early 2000s." In exchange for the badly needed loans, the IMF imposed major structural changes on the countries' economies. As Johnson wrote in his controversial *Atlantic* article comparing the current U.S. to an emerging market, "The biggest obstacle to recovery is almost invariably the politics of countries in crisis. Typically, these countries are in a desperate economic situation for one simple reason—the powerful elites within them overreached in good times and took too many risks." He continued, "Emerging-market governments and their private-sector allies commonly form a tight-knit—and, most of the time, genteel—oligarchy, running the country rather like a profit-seeking company in which they are the controlling shareholders. . . .

Squeezing the oligarchs, though, is seldom the strategy of choice among emerging-market governments. Quite the contrary: at the outset of the crisis, the oligarchs are usually among the first to get extra help from the government. . . . From long years of experience, the IMF staff knows its program will succeed—stabilizing the economy and enabling growth—only if at least some of the powerful oligarchs who did so much to create the underlying problems take a hit. This is the problem of all emerging markets."

While at the IMF Johnson held other positions. In 2000 and 2001, for example, he served on the U.S. Securities and Exchange Commission's Advisory Committee on Market Information, and his strong recommendation for enhanced market regulations was included in the published findings of the committee. He has also been a fellow of the Center for Economic and Policy Research, established in 1999, and he has been an affiliate scholar at the Bureau for Research and Economic Analysis of Development (BREAD). He has served on the Advisory Group at the Center for Global Development and on the advisory board of Duke's Center for the Advancement of Social Entrepreneurship, in Poland, as well as being a research fellow at the Asian Institute for Corporate Governance at Korea University. At the Washington-based Center for Global Development, Johnson co-chaired a task force on Latin American economic reforms. Johnson also served on the global advisory board of Endeavor, a group that supports entrepreneurship in emerging markets in Latin America, the Middle East, and Africa, and he worked as a global-strategy consultant to the Brattle Group, which provides regulatory and economic expertise to the private sector. In 2006 Johnson became a visiting fellow at the Peterson Institute for International Economics, a research organization focused on global economic policy issues, and in 2008 he became a senior fellow.

Concurrently, Johnson taught at various institutions, and since 2004 he has held the position of Ronald A. Kurtz professor of entrepreneurship at MIT's Sloan School of Management. At MIT he co-founded the university's Global Entrepreneurship Laboratory, through which students collaborate with the heads of start-up businesses worldwide.

After working as an assistant director in the IMF's research department from 2004 to 2006, Johnson was named the organization's chief economist and director of the research department in early 2007. He took a leave of absence from MIT to fill the post. He has said that he had an epiphany upon becoming head economist, and he soon began warning that a "perfect storm" was looming. Although he had pushed market liberalization on developing countries for years, "now [since the economic crisis began], that's not my view," he told Fernholz. "We should go back and look at everything, and wonder . . . if anybody has the regulatory structures able to withstand what happens when you liberalize." He conceded, however, "You can say, look, that Simon has a hammer and everything's a nail. Maybe I'm wrong; maybe the banking system isn't too big, too powerful, or fundamentally bad for us."

In May 2008 Johnson announced that he would be leaving the IMF the following September to devote more time to research and teaching. (Some observers theorized about another motivation: a week earlier the IMF had announced that a significant number of its employees had applied for buyout packages in response to the fund's plan to slash its budget and cut jobs.) As the economic crisis came to a head in the fall of 2008, Johnson began to make public pronouncements with increasing frequency—on blogs, on the radio (particularly NPR's *Planet Money*), and in the op-ed pages of major newspapers.

In September 2008, along with James Kwak, Johnson co-founded the Baseline Scenario, a blog dedicated to elucidating, analyzing, and proposing solutions to issues related to the current economic situation. (Peter Boone of the London School of Economics also contributes to the blog.) "We believe that everyone should be able to understand how the financial crisis came about, what it means for all of us, and what our options are for getting out of it," the authors wrote.

The ideas expressed in the Baseline Scenario quickly gained currency. As Robert Teitelman wrote for TheDeal.com (March 20, 2009), Johnson and Kwak have employed "every channel available to them to transmit and amplify their positions." They send out e-mail alerts for breaking news and are linked to dozens of other widely read blogs and respected institutions. (In August 2009 Johnson began contributing a weekly post to the *New York Times*'s Economix blog.) They have also used the social-networking and micro-blogging tool Twitter, and Johnson has continued to appear on such traditional media outlets as NPR's *Fresh Air* and, on TV, the *Bill Moyers Journal*. Johnson's effort to inform the discussion about the economy "is working pretty well if Johnson's increasing ubiquity is any measure," Teitelman wrote.

While some activist groups have been inspired at least in part by Johnson, he has also had his share of critics. Many on the left are skeptical that an IMF economist whose free-market ideology greatly aided Wall Street could suddenly experience such an about-face. Many on the right have been equally skeptical. "Simon's account is based on a very simple, and I believe misguided, theory of politics and economics," the Harvard economist Dani Rodrik wrote on his own blog, according to Leonard. "It is an odd marriage of populist and technocratic visions. Countries fail because political elites always end up in bed with economic elites. The solution, apparently, is to let the technocrats (read the IMF) run your affairs. Among the many lessons from the crisis we should have learned is that economists and policy advisors need greater humility. Too many of us thought we had the right model when it turned out that we didn't. We pushed certain policies with much greater confidence than we should have. . . . Do we really want to exhibit the same self-confidence and assurance now, as we struggle to devise solutions to the crisis caused by our own hubris?"

Johnson's most vociferous detractors use the words "socialism" and "nationalization" to discredit his ideas. "You know, this socialism discussion is a complete red herring," Johnson told Gross on *Fresh Air* (March 3, 2009). "My view is the offense against American capitalism was committed by the big banks who brought us to this point: Their mismanagement, their compensation schemes, their . . . attitude towards the public."

In opinion pieces published in major newspapers including the *New York Times* and the London *Sunday Times* in 2009, Johnson—often in collaboration with Peter Boone—continued to question the U.S. government's response to the financial crisis. In several articles in the fall, he warned that because regulators and bankers had essentially learned nothing from the recession and bankers had gone unpunished, the failure of the government or any other entities to introduce meaningful regulations and reforms was paving the way for future meltdowns. "This policy of responding to bursting bubbles, rather than using regulation to deflate them before they start growing, has become the standard procedure of most central banks," Johnson and Boone wrote for the Sunday *Times* (September 13, 2009). In a *New York Times* (September 20, 2009) op-ed piece, the pair wrote, "The details of who makes which crazy loans to whom will no doubt be different from what they were from 2002 to 2007, but the basic structure of incentives in the system is unchanged."

Johnson's papers have been published in the *American Economic Review*, the *Journal of Political Economy*, the *Quarterly Journal of Economics*, and the *Journal of Finance*, among others. He sits on the editorial board of several publications, including the *Journal of Financial Economics*, the *Review of Economics and Statistics*, and the *Journal of Comparative Economics*.

In late April 2009 Johnson was named an adviser to the Congressional Budget Office, a nonpartisan agency that examines legislation affecting the federal budget. He continues to research and teach at MIT while overseeing his blog.

Jolly, Alison

May 9, 1937– Primatologist; writer; lecturer

Address: The Old Brewery House, 32 Southover
High St., Lewes BN7 1HX, England

Alison Jolly is a zoologist, renowned author, and pioneer in the study of primate behavior and the evolution of social intelligence. More specifically, she is the world's leading authority on lemurs—furry primates that are native only to Madagascar, the world's fourth-largest island, in the Indian Ocean, about 185 miles off the coast of southeastern Africa. As members of the prosimian family, lemurs are the most primitive of all primates. In other parts of the world, over the course of millions of years, natural selection led lemurs' ancestors to be displaced by larger primates, such as monkeys and apes. The lemurs on Madagascar, however, were safe from competition and predators and thus differentiated into 12 species and more than 40 subspecies (more than a dozen of which are known only from fossils). Lemurs range in size from the six-inch mouse lemur—the world's smallest primate—to the endangered indri, which resembles a three-foot long, black-and-white teddy bear. Fossil evidence indicates that lemurs reached Madagascar—possibly by rafting—after the island broke away from Africa, about 100 million years ago. Because it was so isolated, Madagascar became what Jolly described in her conversation with Michele Landsberg for the *Toronto Star* (January 5, 1991) as an "alternate world," in which thousands of unique animal, plant, and insect species evolved separately from those on the rest of the planet. Lemurs are the closest living approximations of the ancient ancestors of all modern primates—including humans—which makes them valuable subjects for scientists studying human ancestry. They can provide "a clue to the moment when our own ancestors began to specialize in monkey sociability and monkey cleverness," Jolly wrote, as quoted by Eric Eckholm in the *New York Times* (June 16, 1987). In addition to lemurs, approximately 98 percent of the island's palm-tree species, 80 percent of its flowering plants, and more than 95 percent of its reptiles are found nowhere else in the world.

Since she first visited Madagascar (known geopolitically as the Republic of Madagascar), in 1962, Jolly has written dozens of scientific articles and authored or edited nine books on lemurs, Madagascar, and the evolution of cognition in primates. Among Jolly's main arguments is that cooperation and social interaction are the foundations of intelligence and cognition in animals. Her research in Madagascar has drawn the attention of internation-

al agencies, which are now cooperating with the Malagasy (pronounced "Malagash") government in long-term plans to address the environmental threats that face Madagascar. Such threats are caused by overpopulation and the farming practices of the impoverished Malagasy people, which include cutting and burning down forests—the natural habitat of lemurs—to clear land for crops and grazing cattle. The conditions there constitute "a tragedy without villains," Jolly wrote of the environmental crisis in Madagascar, in an essay that was published in the photographer Frans Lanting's 1990 book, *Madagascar, A World Out of Time*. Because of the island's rich biological diversity, scientists have identified Madagascar as an environment as crucial to the world's ecosystem as South America's Amazon rainforests.

The only child of Morris G. Bishop and Alison K. Bishop, Alison Jolly was born on May 9, 1937 in Ithaca, New York, where her father was a professor at Cornell University. Her interest in animals began with her experience of owning several cats as a child. If she had not been drawn to study lemurs, she told Anusha Shrivastava for the *Wire* (March 20, 2004, on-line), she might have made gorillas the focus of her research, "because their calm intelligence makes them very therapeutic companions." She earned a B.A. degree from Cornell University in 1958 and her Ph.D. degree in zoology from Yale University, in New Haven, Connecticut, in 1962. It was while researching sponges at Yale that Jolly had begun to yearn for a more exciting research subject; she settled on the topic of lemurs in Madagascar, visiting that country for the first time shortly after completing her dissertation on those primates. She stayed on the estate of the powerful de Heaulme family, descendants of the aristocratic French colonizers of Madagascar, who had ruled the island for decades during the 19th century. On the estate the de Heaulmes maintain an area of about 650 acres, known as the Berenty Reserve, which consists of forests of ancient tamarind trees as well as "spiny forests," which are desert-like ecosystems that host a wide array of animals and spiny plants, such as cacti, and are unique to Madagascar. The reserve is home to six or so species of lemur, 103 bird species, and the largest colony of Madagascar fruit bats. While at Berenty, Jolly focused her studies on the ring-tailed lemur, a species known for its gregariousness and unusually long black-and-white striped tail. The Berenty Reserve—and the ring-tailed lemur—would become the focuses of Jolly's studies for the next 40 years. At the time of Jolly's initial visit, the plantation was also the home of many members of the Tandroy, tribes of native Malagasy people who arrived about 1,000 years ago from mainland Africa. The Tandroy live in traditional villages on the property and work in the de Heaulme family's fields of sisal, a plant fiber used in rope-making, in a system reminiscent of feudalism.

From 1963 to 1965 Jolly served as a research associate at the New York Zoological Society, headquartered in the Bronx Zoo, in New York City. Around that time she married an Englishman, moved to England, and started a family, which would come to include four children. Unable to travel to Madagascar with young children, Jolly began writing a book on her observations at Berenty—"in frustration at not doing more fieldwork," as she told Frank Diller for *American Scientist* (2004, on-line). In 1966 she published *Lemur Behavior: A Madagascar Field Study*, in which she argued that intelligence in both male and female primates is a consequence of social relationships, not a byproduct of using tools, as scientists had long thought. Jolly's arguments served as the foundation for what would become known as the "social intelligence hypothesis," a widely influential theory that was later applied to animals other than primates. Another of Jolly's early discoveries was that, contrary to the theories advanced by (predominantly male) scientists for years, communities of lemurs were not male-dominated in the way that other primate communities appeared to be. Rather, Jolly observed, female lemurs take precedence in the feeding order, a practice that protects the health of females, who can give birth to only one baby a year. Those two findings by Jolly initiated major paradigm shifts in primatology.

Jolly was a research associate at Cambridge University, in England, from 1966 to 1968, and held the same position at the University of Sussex from 1971 to 1981. As her children grew older she often returned to Madagascar to observe the lemurs and conduct studies; since 1990 she has returned every year for the lemurs' "birth period," in September and October. In 1972 she published the textbook *The Evolution of Primate Behavior*, which was immediately acknowledged as one of the most important works in primatology up to that time; it remains a benchmark in the field. In 1976 Jolly edited, along with Jerome S. Bruner and Kathy Sylva, the biology textbook *Play: Its Role in Development and Evolution.* Four years later Jolly published *A World Like Our Own: Man and Nature in Madagascar,* which she followed with *Madagascar* (part of a series called *Key Environments*), co-edited with Philippe Oberle and Roland Albignac.

In 1987 Jolly became a visiting lecturer at Princeton University, in New Jersey. By then she had gained an international reputation as an authority on lemurs; her work had opened the gates for researchers and tourists to visit and learn about Madagascar to an extent they never had before. While studying at the Berenty Reserve, Jolly gave tours and allowed visitors to participate in her research. Jolly and other researchers, including Russell A. Mittermeier, then the director of both the World Wildlife Fund's primate program and the Primate Specialist Group, an arm of an organization now known as the IUCN-World Conservation Union, aimed to bring attention to the rapid deterioration of the natural habitats of Madagascar's plants and animals. (Around that time a World Bank report identified Madagascar as the most eroded place on earth, due in part to the sparse distribution of trees, which exacerbated the problems caused by deforestation.) Jolly and Mittermeier predicted, as quoted by Henry Mitchell for the *Washington Post* (November 28, 1986), that if significant action was not taken, the island's "biological richness" could disappear within the next 15 years. "A very great deal can be saved," Jolly told Mitchell, "once people decide it is really worth saving. The tragic thing is we do not know the value of life forms that may be casually destroyed before we even understand them."

In 1986 French biologists captured three specimens of a species of lemur that was long thought to be extinct or confined to a small area of northeastern Madagascar: the aye-aye. The species was the sole surviving member of its family; the larger relatives, the Daubentonia robusta, had become extinct on Madagascar approximately 1,500 years earlier. The aye-aye is a medium-sized lemur with black fur, bat-like ears, large incisors, a large, bushy tail, and third and fourth fingers that are significantly longer than its other fingers. "Aye-ayes are really weird," Jolly told told Jeffrey Cohn for *BioScience* (November 1, 1993). "They don't fit our idea of what animals are. They are put together with things no one animal should have." The aye-aye's long fingers are used in ways similar to the way a woodpecker uses its beak—to tap the trunks of trees or vines in order to locate hollow areas where larvae may be hiding, then scoop them out. The native Malagasy people have long thought the presence of an aye-aye to be a bad omen, representing impending death. Jolly wrote in a 1988 article that appeared in *National Geographic,* as quoted by the *San Diego Union-Tribune* (August 19, 1988), "In much of the country tradition decrees that [the aye-aye] be slain on sight, lest it uncrook its skeleton finger to point out a victim for death." That belief has over time likely contributed—though not as much as other factors—to the dwindling population of aye-ayes. After the French biologists' discovery, a few aye-ayes were kept in captivity, where scientists conducted research into their biology and behavior, while a number of zoos and research facilities around the world launched collaborative captive-breeding programs for aye-ayes. The animals have since been sighted in more places on Madagascar than most other lemurs. "Aye-ayes are becoming a symbol of wildlife conservation in Madagascar," Jolly told Cohn. "They are not just another animal trying to make a living. It is a very exciting animal for scientists and ordinary people. It can be a flagship species for lemur conservation."

Along with the British researcher John Mack, Jolly contributed essays to *Madagascar, A World Out of Time,* Frans Lanting's book of photographs of Madagascar's people and wildlife. "Alison Jolly's articles and books about Madagascar are written with poetic intensity and an explorer's immediacy," Michele Landsberg wrote. "She can make you hold your breath when she describes her first sighting of the ghostly, mysterious little aye-aye." Among the subjects of Jolly's essays are the plight of Malagasy villagers, who, out of desperation, cut and burn forests to clear land for crops and livestock. In one essay she expressed both concern for the island's deteriorating ecosystem and sympathy for the people there. "Extraordinary for an impassioned ecologist," Landsberg wrote of Jolly's essay, "Alison writes with sensitivity and respect about the Malagasy villagers, despite their destruction of the rain forests."

In 1999 Jolly published *Lucy's Legacy: Sex and Intelligence in Human Evolution,* a book that explores the way in which cooperation among primates has shaped their minds and social patterns. The book takes its name from that given to the ancient hominid whose partial skeleton was discovered in Ethiopia by Donald Johanson and Tom Gray in 1974. The book covers four major areas: the general history of evolution; primate behavior; the evolution of human cognition; and the ways in which humans have created culture. To demonstrate her assertion that, throughout evolution, cooperation underpins much of human cognition and behavior, Jolly provided a number of examples of complex ways that animals work together. For instance, the male of a certain kind of African tick secretes a protein that blocks the host's immune system so that a nearby female tick can consume more blood. Jolly pointed out that in primates, sexual favors are the foundation of many successful alliances. She asserted, however, that female primates do not play—and have never played—simple, submissive roles; they do not, for example, merely use sex to buy protection from males. Rather, females give birth to a male's young—thereby passing his genes to the next generation—in exchange for the males' "egalitarian, energetic investment" in family life. Jolly also showed that throughout evolutionary history, mothers have been helped with child-rearing, and that there is no evolutionary basis for monogamous relationships. Jolly's focus on cooperation between the sexes deconstructs both the popular male-centered portrait of the evolution of sexuality—which positions the male as dominant actor—as well as the revisionist perspective of evolution, which focuses only on the female. "Her book is full of wry, ironic humour, as well as knowledgeable remarks about the way science works," Adrian Barnett wrote for the *New Scientist* (December 18, 1999). A reviewer for the London *Guardian* (April 22, 2000) criticized the book for its lack of scientific specificity but also predicted that it would be highly enjoyable for the average reader. "This is not what anyone would call headline science," the reviewer wrote; "it's just well-written, witty, thought-provoking and full of fascinating detail. You don't learn from it how to do primatology, but you do learn what sort of primate you are, which is, for most people, more valuable."

In her 2004 book, *Lords and Lemurs: Mad Scientists, Kings with Spears, and the Survival of Diversity in Madagascar*, Jolly wrote about the primates of Madagascar, the scientists who study the island, and the country's history, politics, and native population. She used specific examples from her own experiences at the Berenty Reserve to explain the history of French colonization that lies behind the complicated political relationships between the de Heaulme family and the Tandroy tribe members who live and work on their land. As Jolly explained in her book, Henry de Heaulme bought land bit by bit to found Berenty in 1936 and opened up a sisal plant, where he employed members of the local Tandroy tribes. The de Heaulme family protected the Tandroys when the French crushed the Madagasy people's fight for independence in 1947, so that they could continue to work on his farm. When sisal became unprofitable, Berenty became a destination for researchers and ecotourists. Jolly described Madagascar as a world in which people, the economy, and the natural world all support one another. "In the year 2000 Berenty and its lemurs are still flourishing because the de Heaulme family are still here," Jolly wrote, as quoted by Peter Rowe in the *San Diego Union-Tribune* (May 2, 2004). "And vice versa. Forest and family saved each other." Jolly also described in great detail the culture of the female-dominated ring-tailed lemur communities that she has spent decades studying. Giving the lemurs such names as "Cream Puff," Jolly told of the soap opera–like feuds that take place among the powerful bands of females. The writer Dale Peterson described the book as a "bright and loving story of a strange land, and a special people, and a few exotic tribes of primates and primate watchers," as quoted on the publisher Houghton Mifflin's Web site. Rowe, however, criticized the book for attempting to cover too much ground at once. "I had a swell time traveling with Alison Jolly," he wrote, "but, on returning home, wasn't sure what I had seen."

Jolly has written two illustrated children's books: *Ako the Aye-Aye* (2005), a story about a forest in Madagascar and its inhabitants, and *Bitika the Mouse Lemur* (2007). Both books are designed to teach the importance of science and conservation. "It is heart-warming to have a tiny animal alert the world to a large conservation issue," Lee Durrell, of Durrell Wildlife Conservation Trust, wrote in a review of *Bitika the Mouse Lemur* that was posted on amazon.com. "The charming 'Bitika' will draw much-needed attention to the exquisite, but heretofore neglected, western forests and wetlands of Madagascar and their rare and unusual inhabitants." Jolly co-edited, with Robert W. Sussman, Naoki Koyama, and Hantanarina Rasamimanana, *Ringtailed Lemur Biology: Lemur Catta in Madagascar* (2006).

Since 2000 Jolly has held the position of visiting scientist in the Department of Biology and Environmental Science at the University of Sussex. She has delivered numerous lectures and continues to conduct research on lemurs in Madagascar; she has been credited with enormous contributions to the study of evolution and to the environmental conservation effort in Madagascar. In June 2006 a new species of mouse lemur was discovered in the Madagascar provinces of Mananjary and Kianjavato. The lemur, which is reddish-brown with a white patch on its nose and a gray belly, was named Microcebus jollyae, to honor Jolly's research. The Oxford Brookes University has established the Alison Jolly Prize, which honors outstanding performance in the university's primate-conservation course.

In 1991 Landsberg wrote that Jolly "has the calm, blue-eyed gaze of a genuine American aristocrat." From 1992 to 1996 she served as the president of the International Primatological Society; she has been named an Officer of the National Order of Madagascar. She has four grown children—Margaretta, Susan, Arthur, and Richard—with her husband, Richard Jolly, a British economist, formerly a deputy executive director of the United Nations Children's Fund (UNICEF), and currently an honorary professor and research associate at the Institute of Development Studies at the University of Sussex. Many have credited Jolly as an inspiration to female scientists who wish to raise children while pursuing academic careers. "She wouldn't be as original and perceptive a scientist if she weren't a mother," Landsberg wrote, "[and] she might not have raised such interesting children if she hadn't always had her suitcases packed for Madagascar."

Jones, Tayari

(tee-AH-ree)

Nov. 30, 1970– Writer

Address: Rutgers/Newark Dept. of English, Hill Hall, Rm. 504, 360 Dr. Martin Luther King Jr. Blvd., Newark, NJ 07102-1801

"There are gushers and ekers," the novelist, short-story writer, and blogger Tayari Jones said to Richard Nilsen for the *Arizona Republic* (July 7, 2003), referring to different kinds of writers. "I am a gusher." In the last few years, Jones has "gushed" two critically acclaimed novels: *Leaving Atlanta* (2002), whose coming-of-age story is set in the era of the infamous murders of children in Atlanta, Georgia, from 1979 to 1981; and *The Untelling* (2005), about a young woman trying to cope with her tragic past, her current life in a decaying Atlanta neighborhood, and a painful secret. *Leaving Atlanta* won the 2003 Zora Neale Hurston/Richard Wright Foundation Legacy Award for Debut Fiction and was named as one of the best novels of 2002 by the *Atlanta Journal-Constitution* and *Washington Post*. *The Untelling* received the Lillian C. Smith Award for New Voices from the Southern Regional Council and the University of Georgia Libraries in 2005. Proclaimed by the *Atlanta Journal-Constitution* as "one of the best writers of her generation," Jones has woven elements of her own life into particular moments in history to address issues of human nature, society, and African-American tradition and experience. Her writing focuses largely on the urban centers of the American South, where she grew up. Jones explained to Nilsen, "Novels provide for a culture what a photo album does for a family; it is a freeze frame for history and lives." While recognizing the significance of race in African-American life, Jones has refused to define characters solely, or even chiefly, by their color. She explained to Nilsen, "I've come to see how I am a 'raced' person in this society. But I write about being Black the way Woody Allen writes about Jewish New Yorkers. I always write starting with my characters' humanity. I'm not commenting on race or oppression. I don't want everyone to be the same." Explaining that she wishes to represent life as she has never seen it portrayed in books, she added, "I want to fill in that gap." In 2008 Jones received a no-strings-attached $50,000 grant from the United States Artists Foundation. She maintains the blog tayarijones.com.

Tayari Jones was born on November 30, 1970 in Atlanta. (Her name, she has told interviewers, is a Swahili word meaning "she is prepared.") Her father, now retired, was a political scientist and professor at Atlanta University; her mother also taught at the college level and is now an economist at Alabama A&M University, in Hunstville. Her older brother, Patrice Lumumba Jones (named after her father's hero, the African leader Patrice Lumumba), is three years her senior. With the exception of a year her family spent in Nigeria, in West Africa, Jones was reared in southwest Atlanta. "I never met a White person until I was 20," she told Nilsen. "We had a complete community, Black lawyers, Black dentists, Black doctors." Jones developed a passion for writing at an early age; while she was a student at Oglethorpe Elementary School, she began crafting fiction about her friends' lives.

In 1979, shortly before the start of Jones's fifth-grade year, two local African-American boys were abducted and killed—the first of more than two dozen such killings that occurred from 1979 to 1981 and that became known as the Atlanta child murders. (An African-American man, Wayne Williams, was later convicted of two of the killings.) The murders had a profound and lasting effect on Jones's family, life, and work. "My lexicon was constantly growing with the frightening terms . . . pronounced each night on the evening news: asphyxia, decomposition, ligature . . . ," Jones wrote in an essay for the *Atlanta Journal-Constitution* (May 22, 2005). "My capable, sensible mother was preoccupied with the safety of her own children, and of the other kids in our school. . . . Once my father pointed out that the ornamental bars on our windows would prevent my abduction in my sleep, I was able to rest easily. But I doubt that he ever did." Jones's father helped search for victims, who included two of Jones's school mates.

Jones went on to attend Benjamin Mays High School in southwest Atlanta, known for its excellent science and math program and its gifted students. She came to feel like an outcast among those students, as science turned out not to be her strength; she once nearly destroyed her parents' basement in an experiment having to do with acid rain. Jones was ready to leave the school when a teacher persuaded her to take part in a statewide writing competition for high-school students sponsored by the nearby Pace Academy, in Buckhead, Georgia. Jones's story, "The Pursuit of Michael Thomas," an autobiographical tale about high-school love, took first prize. At the award ceremony Jones was asked to read from her work, which is how she discovered that authors give public readings.

After graduating from Benjamin Mays, in 1987, Jones enrolled in the writing program at Spelman College, a four-year liberal-arts women's school in Atlanta. There, she studied with the writer Pearl Cleage, who went on to publish one of Jones's first stories, "Eugenics," in a magazine she edited called *Catalyst*. During her time at Spelman, Jones was the victim of a carjacking. She told Nilsen, "He held a gun to my head. Every cliché you hear turned out to be true: I could feel the cold steel. My heart pounded. I couldn't get the keys out to give him. He pulled the trigger and the gun went click. He freaked out and ran away. It undermined my sense of personal security for a long time." Another traumatic episode in Jones's life also took place during her college years. One day the fourth-grade boy she tutored was a few minutes late for his appointment, and Jones was so frantic that she became physically ill. She told her dorm mates what was happening; some were unconcerned, while others became as nervous as Jones. After finding out that the boy was safe, "I realized that all of us who panicked shared a common terror: We had all grown up in Atlanta," Jones wrote for the *Journal-Constitution*. "We all knew that a little boy unaccounted for constituted an emergency. It was then that I knew that if I ever became a writer, I would write a novel about those of us who were children in Atlanta. I would put on paper this memory that we never spoke aloud but carried with us in our bones." Jones graduated magna cum laude from Spelman, earning a bachelor's degree in English in 1991. She next entered a graduate program at the University of Iowa, where she completed her master's degree in English in 1994 and worked for a time toward a doctorate.

A turning point in Jones's life occurred at a writing conference in Portland, Oregon, where she met the author Jewell Parker Rhodes. Jones "literally ran into" Rhodes, as she told Lindy Washburn for the Bergen County, New Jersey, *Record* (January 4, 2004). "She was 4-foot-10, and I'm 5-foot-10, and I knocked her over." Rhodes, who had remembered reading Jones's story "Eugenics," invited her to pursue a master of fine arts degree at Arizona State University (ASU), where Rhodes headed the creative-writing program. Drawn to the prospect of working on her own fiction rather than continuing to study the literary canon, Jones quickly accepted the offer, leaving the University of Iowa. Rhodes helped secure a scholarship for her and became her mentor, noting to Nilsen, "It takes a special kind of person to take you up on it. Tayari is one of those artists who make the choices and take the risks needed to achieve their dreams." Jones earned her M.F.A. degree from Arizona State in 2000. While there she had begun working on the manuscript that would become *Leaving Atlanta*. "When I sat down to write my very first novel—'my baby,' I call it—the project felt more like an urgent matter of truth-telling rather than the academic task of 'filling in the gaps of history,' which is often seen as the 'work' of the African-American writer," she wrote for *State Department Documents and Publications* (February 6, 2009).

Leaving Atlanta was published in 2002. That coming-of-age novel, set during the era of Atlanta's child murders, has three parts, each told from the perspective of a different fifth-grader. One of them is LaTasha Baxter, a high-spirited middle-class girl who struggles to fit in with the popular crowd at school; another is Rodney Green, an unhappy boy whom LaTasha describes as "the weirdest kid in class" and who acts out his frustration at being unable to please his demanding parents; and the third is Octavia Fuller, an extremely bright and confident social outcast referred to by peers as "the Watusi" because of her dark complexion. Commenting on *Leaving Atlanta*, Jones noted for her Web site: "This novel is my way of documenting a particular moment in history. It is a love letter to my generation and also an effort to remember my own childhood. To remind myself and my readers what it was like to [be] eleven and at the mercy of the world. And despite the obvious darkness of the time period, I also wanted to remember all that is sweet about girlhood, to recall all the moments that make a person smile and feel optimistic."

Leaving Atlanta received unanimous praise from critics. VeTalle Fusilier, assessing the novel for *Black Issues Book Review* (August 31, 2002), wrote, "Jones . . . reminds us of how unnerved black children remain growing up amid the racism, ignorance, and violence often perpetuated by police, apathetic teachers, and even family. *Leaving Atlanta* gently describes, through these children, their frustration and despair, with a measure of humor and love. Jones explores the pride and prejudices within the African-American community: skin color, hair envy, wealth and poverty, without apology or judgment." Michael Skube commented for the *Washington Post* (August 18, 2002), "Jones's prose too often is that of someone fresh out of a creative-writing program, and her word choice can be peculiar (I don't know when I've heard a fifth-grader, suburban or inner-city, use 'litigious' or speak casually of 'vichyssoise'). But when she sets the similes aside and simply narrates . . . she conveys powerfully the loneliness of a child no one knew." Roishina Clay noted for the *Mississippi Clarion-Leader* (September 1, 2002), "[Jones] has the magic of hypnotizing the reader with her words in showing that this story could only come from a child." *Leaving Atlanta* received many awards, including the 2003 Zora Neale Hurston/Richard Wright Foundation Legacy Award for Debut Fiction. It was named novel of the year by *Atlanta* magazine and best southern novel of the year by *Creative Loafing Atlanta* and was listed as one of the best novels of 2002 by the *Journal-Constitution* and the *Washington Post.*

Jones's second novel, *The Untelling*, published in 2005, tells the story of a young Atlanta woman, Aria Jackson, who struggles to overcome the loss of her father and younger sister in a car accident that took place during her childhood. Aria tries to patch up her relationship with her mother, who has become addicted to drugs; meanwhile, just as she meets the man of her dreams, she finds out that she is infertile, a discovery she keeps to herself. While working at a local literacy center, Aria becomes envious of a teen who is pregnant with her second child. Commenting on Aria's predicament, Jones told Kerry Lengel for the *Arizona Republic* (May 17, 2005), "The reason people tell big lies is because the truth . . . may well devastate what they've made for themselves. I think it's kind of dishonest the way television works, where a person takes a risk or tells the truth and they're rewarded by everything working out. But the reason people don't do the right thing is because there are consequences to doing the right thing."

Like Jones's first novel, *The Untelling* garnered high praise from critics. Carrie Brown wrote in a review for the *Washington Post* (April 17, 2005), "This might be a disappointing premise for a novel, too small to engage our sensibilities in any significant way, too confined to its small, solipsistic corner of the universe. But *The Untelling* widens and deepens as it goes, becoming not just the story of one woman's regret—but a shrewd and knowing portrait of poverty, racism and the hopelessness of the oppressed and the unlucky. In the end, it is very much about what human beings do when the world turns its back on them." In 2005 *The Untelling* received the Lillian C. Smith Award for New Voices from the Southern Regional Council and the University of Georgia Libraries.

Over the last several years, Jones has dedicated much of her time to her blog, tayarijones.com, which features book reviews, event announcements, writing advice, literary recommendations, and musings on a wide range of subjects. Following the inauguration of Barack Obama as the 44th president of the United States, in January 2009, she posted a blog entry that addressed the importance of Obama's often-repeated call for change. Jones wrote, referring to the celebrations of Obama's ascendance to the White House, "We are going to have to chill with some of the boogie-oogie-oogie and start thinking about the change we want in the world. Yesterday, I was in a store and an older black man said to me, 'Obama has done his job just by getting elected. That's all I need. To see him in the White House with his wife, and those pretty babies. That's all I need.' All around him, people nodded in agreement. . . . Well, that's not all I need and it's not all America needs. . . . As writers, we all dream of losing the day job and doing our writing full time. But can we ever do it as long as health insurance remains tied to employment? Even if you could make enough from your writing to pay your bills, you probably wouldn't make enough to take care of your health. . . . 46 million Americans are without health insurance. This must be our top priority when we think about Change."

Jones lives in northern New Jersey. She is currently an assistant professor in the graduate creative-writing program at Rutgers University, Newark, where she has taught since 2007. Jones has also taught at Prairie View A&M University, East Tennessee State University, the University of Illinois, and George Washington University. She has received grants and fellowships from institutions including the Illinois Arts Council, the Bread Loaf Writers Conference, the Corporation of Yaddo, the MacDowell Colony, the Arizona Commission on the Arts, and Le Chateau de Lavigny International Writers Colony, in Switzerland.

Jones, Van

1968– Lawyer; writer; civil rights and environmental activist

Address: c/o All-American Speakers Bureau,
4717 Knights Arm Dr., Durham, NC 27707-9089

Van Jones is "the Martin Luther King of the green-jobs movement," Gary Kaplan, the executive director of a job-training agency in Boston, Massachusetts, told Elizabeth Kolbert for the *New Yorker* (January 12, 2009). From September 2007 to March 2009 Jones, an attorney, writer, and activist, served as the founding president of Green for All, a national environmental-justice organization "dedicated to building an inclusive green economy strong enough to lift people out of poverty," as stated on the organization's Web site. Through Green for All Jones worked with activists, organizations, policymakers, and business, labor, and community leaders to establish programs to train low-income and minority members of society for "green-collar jobs"—blue-collar jobs that are environmentally sound. As a result of Jones's work, in 2007 Oakland, California, became the first city in the nation to fund the creation of a Green Job Corps, which trains unemployed city residents for jobs connected with building a "green" economy.

Jones's founding of Green for All and his work toward environmental justice grew out of his earlier social-justice efforts. In 1995 he established the Bay Area Police Watch to monitor the conduct of officers in Oakland and San Francisco, California. The following year he renamed the organization the Ella Baker Center for Human Rights, broadened its mission to include all civil rights issues, and began focusing on steering urban youth away from negative influences in their communities and toward education and good jobs. While working at the Ella Baker Center, Jones began to view environmental degradation and urban poverty as interconnected problems. Although environmentalist movements have traditionally been dominated by whites and white-collar workers, many studies had shown that pollution and environmental degradation disproportionately affect low-income members of society, particularly urban blacks; those groups suffer more than others from pollution-induced ailments, including cancer and asthma, often live in neighborhoods that are near power plants, factories, sewage-treatment facilities, or garbage-disposal sites, and often lack access to parks, sources of healthful foods, and job opportunities. Those groups are also less likely to be concerned with or able to afford environmental innovations (energy-efficient light bulbs or solar panels, for example). In October 2008 Jones published *The Green Collar Economy: How One Solution Can Fix Our Two Biggest Problems*, which became a *New York Times* best-seller.

In March 2009 Jones was tapped to join the administration of President Barack Obama as a special adviser on the White House's Council on Environmental Quality. In that position—which he called that of a "green-jobs handyman"—he was charged with developing policy recommendations to help create clean-energy jobs. A few months into his tenure, Jones came under attack from congressional Republicans and conservative pundits for his controversial past associations and statements. In particular, they pointed to his past support for Marxist groups and his disparaging comments about congressional Republicans, which they characterized as "extremist," "coarse," and "incendiary." On September 6, 2009 Jones announced that despite having been "inundated with calls from across the political spectrum urging me to stay and fight," he was resigning from his White House post to avoid becoming a distraction to the Obama administration. According to the Web site VanJones.net, the environmental proposals supported by Jones while he worked in the White House "are in various stages of review and implementation."

Anthony "Van" Jones and his twin sister, Angela, were born in 1968 in Jackson, Tennessee, a small town about 90 miles east of Memphis. His father was the principal of a junior high school, and his mother was a high-school teacher. His grandfather was the leader of the local Methodist Episcopal Church, and Jones often accompanied him to religious conferences. Jones told Kolbert that as a child he was "bookish and bizarre," and his sister added that Jones was "the stereotypical geek—he just kind of lived up in his head a lot." As a boy, when Jones received action figures of Luke Skywalker and Han Solo, characters from the *Star Wars* films, he played with them by pretending that they were running for public office. After graduating from high school, Jones enrolled at the University of Tennessee at Martin. He changed his name the first day of his freshman year, having decided that "Anthony Jones" was too dull. He chose the first name "Van" because "it has a little touch of nobility, but at the same time, it's not overboard," as he told Kolbert. Hoping to become a journalist, Jones majored in communications and political science. During his time at the university, Jones founded several student newspapers, with the goal of building a network of black college students in Tennessee. According to the Web site of Ashoka, an organization devoted to what it calls social entrepreneurship, Jones's college journalism work "took him to Louisiana, where he saw racism and poverty as he had never seen before. He knew then that, to achieve the kind of change he wanted, he would have to be more than a writer." Additionally, internships at a few newspapers convinced him that a career in journalism was not for him. After graduating, in 1990, and serving an internship with the Tennessee state legislature, he enrolled at Yale Law School, in New Haven, Connecticut.

During his years at Yale, Jones witnessed events that helped to shape his worldview and further spurred him to activism. In March 1991, during his second semester, he was particularly disturbed by the infamous police beating of Rodney King, an African-American who, while intoxicated, was pulled over for speeding by Los Angeles police officers. When he resisted arrest, the officers violently subdued him, first with a Taser and then with repeated baton beatings. A bystander captured the event on video camera, and a portion of the footage was broadcast nationally. Jones had taken a semester off from law school and was working as an intern for the Lawyers' Committee for Civil Rights (LCCR) in San Francisco when, in April 1992, a jury whose members included no blacks acquitted the four officers charged with police brutality in the King case. The acquittal sparked widespread outrage, leading to a week of violence and mayhem that became known as the Los Angeles Riots of 1992. Jones, who observed those events for the LCCR, was arrested during the riots, along with many other young men, most of them members of minority groups. His arrest incident underscored for him that African-American men were often victims of wrongful arrest and police abuse. Jones had witnessed similar injustices in New Haven. "I was seeing kids at Yale do drugs and talk about it openly, and have nothing happen to them, or, if anything, get sent to rehab," Jones told Kolbert. "And then I was seeing kids three blocks away, in the housing projects, doing the same drugs, in smaller amounts, go to prison."

After graduating from law school, Jones moved to San Francisco, where in 1995 he founded the Bay Area Police Watch. That group used computer software in an attempt to track unjust practices on the part of officers and precincts and make the information available to lawyers, watchdog groups, and the media. Jones's organization soon received up to 15 complaints per day on its police-misconduct hotline, from residents of San Francisco and neighboring Oakland. In 1996 the Bay Area Police Watch expanded its focus to become a civil rights organization, renamed the Ella Baker Center for Human Rights, in honor of the activist who had pressured the national Democratic Party to confront racial discrimination and, in 1957, helped found the Southern Christian Leadership Conference. One of the center's main goals was to help youths avoid prison and secure good jobs. Through news conferences and sit-ins or other public demonstrations, the center also worked to publicize and protest police and government violations of civil rights.

The first major case the center took on was that of Aaron Williams, a young black man who on June 4, 1995 was arrested for burglary after a violent struggle with San Francisco officers and died while in police custody. Reading a news account of the incident, Jones noticed the name of one of the officers involved in it: Marc Andaya. "At the time I read that story, I had a file several inches thick sitting in my cabinet on Marc Andaya," he told Ken Garcia for the *San Francisco Chronicle* (March 12, 1998), "and when I saw his name in connection with the Aaron Williams death, I made a commitment to myself that I was not going to rest until people knew about this police officer and his record." In 1984 Andaya had shot to death a person whom Jones described to Garcia as a "mentally ill, unarmed black man"; the following year Andaya had been suspended for 30 days for choking a handcuffed suspect; and in 1993 the Oakland Police Citizens Review Board judged that Andaya had used excessive force and racial slurs against an African-American suspect. He had been hired by the San Francisco Police Department in 1994. At the Police Commission disciplinary hearing concerning Williams's death, several witnesses testified to having seen Andaya kick Williams in the head after he was subdued. The charges of police brutality were dismissed, however, when a medical examiner concluded that Williams, a crack-cocaine abuser, had died not from the beating he received from officers but from a heart attack triggered by drugs. Thanks to Jones's efforts to publicize Andaya's record, pressure mounted, mainly from the African-American community, to oust the officer. In 1997 Andaya was fired for lying on his police application about his previous record. For his advocacy work, Jones was honored with a Next Generation Leadership Fellowship from the Rockefeller Foundation and a Reebok Human Rights Award.

In another major accomplishment, the Ella Baker Center prevented an expansion of California's sprawling juvenile-incarceration system. In 2000 Jones learned about a state plan to construct a 540-bed juvenile-detention center in Alameda County, which would have been one of the largest facilities of its kind in the nation. Though the project was presented to the public as a way to improve conditions for young offenders, he saw it as a step that would inevitably lead to many more black teenagers' being incarcerated. Jones began a campaign to stop the construction of the center, using the tag line, "Stop the Superjail." He organized demonstrations involving local teenagers, and the public-awareness campaign worked: in 2003 the construction plans for the center were halted.

For Jones, that triumph was tarnished by what he feared was the selfishness of his motivation for community activism. "I certainly wasn't motivated only by love for the people," he told Kolbert. "I was trying to find some kind of community, or some sense of belonging, or some sense of redemption through heroic deeds. I wasn't being honest with myself about it, and it all just proved to be incredibly fragile." One day Jones attended a lecture at a San Francisco bookstore by Julia "Butterfly" Hill, the environmental activist best known for living in the canopy of a 600-year-old California redwood tree, from December 1997 to December 1999, to prevent Pacific Lumber Co. loggers from cutting it down. Hill saved the tree and later founded a nonprofit organization called Circle of Life. "There was no guarantee she was going to win . . . ," Jones told Kolbert. "I was always looking for clever things I could game out, and she just stepped out on faith, and did it. . . . I wanted to do my work like she had done her work." Jones was also amazed that Hill had felt no bitterness toward those who had opposed her efforts. Jones and Hill became friends and, realizing that they shared similar goals, began delivering lectures together. Hill told Kolbert about Jones, "We fit together like pieces of a puzzle. I brought the piece that we are not separate from this planet. His piece was we need to uplift everyone." "We could see underneath all of it was the idea of disposability," Jones told Kolbert. "The idea that you've got disposable people, a disposable planet."

Jones suggested that the Ella Baker Center work to link civil rights and environmentalism, which he saw as related issues. By involving the poor and minorities—the groups most affected by pollution, excluded from the benefits of technological advances, and in need of jobs—in the environmental movement and training them for jobs "greening" the infrastructure of the U.S., Jones believed that he could address three societal problems at once: poverty, racial inequality, and environmental degradation. His plan was to create a Green Job Corps in Oakland that would train poor and underserved city residents for such jobs as weatherizing buildings and constructing and installing solar panels. Though Jones's suggestion to expand the scope of the Ella Baker Center was not popular among the group's board members, who deemed it unrealistic, he began speaking to environmental organizations and applying for grant money to bring green jobs to Oakland. In 2004 Jones received $215,000 from the New York–based Nathan Cummings Foundation, which he used to fund organizational meetings and retreats. Jones was disappointed, however, when no jobs resulted from all his planning. He applied for and received another $215,000 grant from the foundation, which he again spent on planning meetings and research. Feeling as though he had wasted time and money, Jones realized that changing public policy was the only way he was going to bring green jobs to Oakland.

In February 2007 Jones was invited to a roundtable discussion of global climate change hosted by one of San Francisco's representatives in Congress, House Speaker Nancy Pelosi. Because the invitation specified that each guest was to deliver a brief self-introduction, Jones tried to be as succinct as possible, but as other invitees stood up and introduced themselves with lengthy speeches describing their work and goals, Jones realized he had missed an opportunity to articulate his vision. When Pelosi asked for questions at the end of the meeting, after which there was to be a press conference, Jones said, as quoted by Derrick Z. Jackson in the *Boston Globe* (September 29, 2007), "My question is, at the press conference, will you say four words?" He asked Pelosi to say the words, "Clean Energy Jobs Bill." Jones then launched into an engaging oration, asking Pelosi and all of the invitees to support the passage of a bill to provide funding for the creation of jobs that would contribute to a clean-energy economy. At the press conference Pelosi commended Jones's idea and stated that everyone at the roundtable meeting had agreed that a clean-energy jobs bill should be introduced in Congress.

Pelosi's endorsement inspired local and national support for bills that linked the creation of jobs for minorities with the quest for a green economy. Jones helped form the Oakland Apollo Alliance, a coalition of labor unions and environmentalists that seeks green-collar jobs in Oakland. In June 2007 Oakland became the first city in the nation to pass a law creating a Green Job Corps, a program geared toward building a green economy. The Oakland city government provided $250,000 to the Green Job Corps to create a program to train unemployed residents for jobs in such areas as solar energy, organic food, and wind power. They were also trained to bring existing buildings up to the energy-efficiency standards required by California state law. The first class of 40 graduated from the program in 2007. Jones sees those jobs as valuable because they rely on local labor and, therefore, cannot be outsourced. "You can't take a building you want to weatherize, put it on a ship to China and then have them do it and send it back . . . ," Jones told Thomas L. Friedman for the *New York Times* (October 17, 2007). "Those green-collar jobs can provide a pathway out of poverty for someone who has not gone to college." Also in June 2007 then–U.S. representative Hilda Solis of California (now the U.S. secretary of labor) introduced a measure authorizing the U.S. Department of Labor to spend $125 million to train low-income workers for green jobs. The bill, called the Green Jobs Act, was put under the umbrella of the Energy Independence and Security Act, approved by Congress and signed into law by President George W. Bush in December 2007. While Bush's 2009 budget proposal not only lacked funds for the act but also cut or eliminated money allocated for a range of existing job-training programs, the economic stimulus package passed by Congress in early 2009 and the budget proposed by President Obama in late February set aside billions of dollars for greening the economy.

In September 2007, while remaining the president of the Ella Baker Center, Jones founded Green for All, a national organization aimed at promoting green jobs and environmental justice. He partnered with other organizations with similar goals, including the New York City–based environmental-justice organization Sustainable South Bronx and the American Council on Renewable Energy (ACORE); he delivered many lectures throughout the U.S. to raise public awareness of the potential for green-collar jobs to transform the economy. Jones advocated banning the construction of new coal plants, establishing a national Clean Energy Corps, creating incentives to trade in traditional cars for hybrid cars, and establishing a loan program for "emergency efficiency measures." In October 2008 Jones published *The Green Collar Economy: How One Solution Can Fix Our Two Biggest Problems*, which makes the case for improving the failing U.S. economy and a damaged environment by investing in green-collar jobs. The book became a *New York Times* best-seller and was generally praised, though some critics contrasted Jones's considerable gifts as a public speaker with his workmanlike prose.

Many have questioned the premise of Jones's argument that combating climate change is a good way to lift people out of poverty. For instance, some economists have expressed doubts that the alternative-energy industry would provide more jobs than the number that would be lost in industries such as coal-mining; others question whether a green economy would succeed in providing permanent jobs for the chronically unemployed, a historically difficult task. Matthew Kahn, an economics professor at the Institute of the Environment of the University of California at Los Angeles (UCLA), is among those who have asked whether environmentally oriented public-works programs would be any better run than their traditional counterparts, which have often proven to be inefficient. According to Jones, the way to avoid such pitfalls is to make sure the plan pursues both goals: providing jobs for the poor and creating a greener society. "You can pass all the bills you want to; you can appropriate all the bills you want to," Jones told Kolbert. "You can even start retrofitting buildings. But if I go there and the people who are doing the retrofits are just the people who used to have the jobs anyway, and they're mostly all one color and mostly all one kind of people, then I'm not going to be satisfied."

Jones's ideas soon received support from many Democratic legislators, including Senate majority leader Harry Reid; several dozen governors; and more than 900 U.S. mayors, who expressed their support by signing the U.S. Conference of Mayors' Climate Protection Agreement. In Barack Obama's first months in the White House, the president expressed his support for the allocation of $15 billion per year on renewable energy, weatherization for low-income housing, and carbon-capture and -storage projects. In March 2009 Obama hired Jones as a special adviser for green jobs, enterprise, and innovation in the White House's Council on Environmental Quality. (That month Phaedra Ellis-Lamkins became the chief executive officer of Green for All.) During the six months he held his position in the administration, Jones focused on improving the energy efficiency of Americans' homes. According to VanJones.net, "Toward this end, he led a 12-Department inter-agency process, which designed proposals to weatherize and retrofit millions of American homes, including by leveraging private capital." Jones also headed an interagency group to help Democrats better implement the stimulus programs contained in the American Recovery and Reinvestment Act of February 2009; he worked to tailor the stimulus programs to address the needs of minorities and rural Americans.

Jones had been with the Obama White House for only a few months when he came under attack by conservative pundits, especially the Fox News analyst Glenn Beck, and several congressional Republicans, regarding several of his past associations and statements. Jones was criticized for signing a 2004 petition, sponsored by the controversial 9/11 Truth Movement, calling for an investigation into the actions of President George W. Bush with respect to the September 11, 2001 terrorist attacks; for using a derogatory word to describe congressional Republicans during a speech he delivered a month before he was appointed to his federal position; and for his association in the 1990s with a neo-Marxist organization called Standing Together to Organize a Revolutionary Movement. In the summer of 2009, Color of Change, an Internet-based advocacy organization that Jones co-founded in 2005 with James Rucker, formerly of MoveOn.org, initiated a boycott of Glenn Beck's show after Beck accused Obama of harboring a "deep-seated hatred for white people"; the boycott resulted in several companies' pulling ads from his show. In response to the boycott, Beck stepped up his criticisms, calling on Jones to resign. Congressional Republicans followed suit; Representative Mike Pence of Indiana was widely quoted as calling for Jones's resignation because "his extremist views and coarse rhetoric have no place in this administration or the public debate." As criticism from the right heightened, Jones defended his record and apologized for some of his past statements.

On September 6, 2009 Jones announced his resignation. "On the eve of historic fights for health care and clean energy, opponents of reform have mounted a vicious smear campaign against me," he said in a statement, as quoted on KTVU.com (September 6, 2009). "They are using lies and distortions to distract and divide." Jones stated, however, that he did not want the administration's efforts to defend his record to interfere with the president's agenda. That sentiment was echoed by the White House press secretary Robert Gibbs, who stated, "What Van Jones decided was that the agenda of this president was bigger than any one individual." The seeming reluctance of the administration to defend Jones angered many of Jones's supporters, who thought that his resignation served to legitimize what they called the false and distorted claims advanced by conservatives. "The Obama Administration should have acted like the victors they are and made sure Van Jones stayed just where he was," John McWhorter wrote for the *New Republic* (September 7, 2009, on-line). "I understand that Obama can't rule as the outright lefty many of his fans would prefer. But Jones' presence was a laudable representation of progressivism in the Administration. . . . If the Obama folks are going to throw even people like this off the train just because some silly people make some silly noises, then the bloom really is off the rose." Since he left the administration, Jones has reportedly been working in an office lent to him by the progressive Washington, D.C., think tank the Center for American Progress, where he previously served as a senior fellow; he does not have a salaried position there.

Jones has served on the boards of organizations including the National Apollo Alliance, Social Venture Network, Rainforest Action Network, Bioneers, and Circle of Life. His honors include the International Ashoka Fellowship, the World Economic Forum's Young Global Leader Award, the Paul Wellstone Award from the progressive think tank Campaign for America's Future, the Aspen Institute Energy and Environment Award in the category of individual thought leadership, and the Hubert H. Humphrey Civil Rights Award.

Jones is "tall and imposing, with a shaved head and a patchy goatee," Kolbert wrote. "He wears rimless glasses and favors dark clothing." A talented public speaker, Jones is known for his ability to relate to audiences ranging from unemployed urban youth to business and political leaders. "Green values are very consistent with African and indigenous values in the first place," he told Alwin Jones for *Black Enterprise* (May 2008). "Western society is coming back around to values that were and are a part of our core, our heritage, our history. We shouldn't think about it as jumping on a white bandwagon because it's our bandwagon in the first place." Jones lives in Oakland with his wife, Jana Carter, an employment lawyer, and their two young sons.

Kamber, Michael

Sep. 24, 1963– Photojournalist

Address: New York Times, *Photo Dept., 229 W. 43d St., New York, NY 10036*

Michael Kamber stands out even among the world's best photojournalists, not only because he has been nominated for the Pulitzer Prize three times—once for reporting and twice for photography—but also because he is one of the few photojournalists who also write full-length articles, some of which have appeared on the front page of the *New York Times*. In the last 20 years, he has reported from Haiti, Pakistan, Afghanistan, Mexico, Iraq, Israel, Somalia, Sudan, Kenya, Liberia, and the Ivory Coast. Before he decided to dedicate himself fully to photography, Kamber—who is mostly self-taught—worked as a mechanic and construction worker and attended art school for a year. Since September 2003, the beginning of his career as a foreign correspondent for the *Times*, Kamber has been embedded with U.S. Army forces in Iraq 30 to 40 times (he has lost count), occasionally for as long as a month. He has gone with the troops into streets, houses, military vehicles, and battlefields, documenting the soldiers' emotions, injuries, and deaths. In addition to taking photos and writing stories, he has narrated photo slideshows and shot video footage for the *Times* Web site. "Most [military] units want Americans to know what's going on . . . and they want the press coverage, because they feel like they're there fighting this war and nobody's paying attention, and they want people to know what they're going through," Kamber told *Current Biography*, the source of quotes for this article, unless otherwise noted. But he also acknowledged that many soldiers are "very suspicious" of the *New York Times*. The soldiers are "mostly working class, conservative guys from the South," he said. "They watch Fox News and they think the *New York Times* is the party organ of the Communist Party, and they'll tell you that." During one period of being embedded with a unit in Mosul, in northern Iraq, Kamber and a few other reporters received an impromptu talk from a sergeant major who, while casually holding a gun, told them, "I don't like the media. I don't trust the media. I'm tired of hearing negative stories. I want to see some positive stories." Kamber is used to such sentiments. But he also hears encouraging comments, such as, "I know you don't have to be here. We appreciate you risking your life to be out here with us." Whenever soldiers or commanders engage him in conversation, Kamber explains that the *Times* does not tell him which kinds of stories or photos to submit—that he merely reports what he sees. "There's good days and bad days," he said, "and everything in between."

Michael Kamber was born in Brunswick, Maine, on September 24, 1963. His parents, who were divorced, moved around a lot, and Kamber lived alternately with his father, a professor of foreign languages, and his mother, who was a photojournalist for a few years in the late 1960s; by the time he was 16, he had lived in New Jersey, New York, and Ohio. But he would always return to Maine. His mother's photos stayed at her apartment, and Kamber, especially when he was growing up, would often take them from her cabinets and examine them closely. He recalled one series of photographs that depicted a mental institution in Maine where patients were chained to the floor and forced to endure other forms of terrible treatment. After the photos were published in the *Maine Times*, the state began investigating the institution. "She did a couple of big exposés," Kamber said of his mother. "That kind of stayed with me as I grew up. It kind of gave me the idea of journalism and photography."

Kamber got his first camera at age 12 and began taking pictures of urban and natural landscapes. Two years later he built a darkroom. Although his parents did not discourage him from pursuing his passion, they did not really encourage him, either. Other adults simply told him that it was unrealistic to think he could make a living as a photographer. His peers had a different attitude. "My childhood friends knew me as a photographer," Kamber said. He admired the work of Edward Weston and Ansel Adams. At that time he was not consciously interested in photojournalism or even in photographing people; though he did not realize it, some of the shots he admired were outstanding works of photojournalism, including pictures documenting the civil rights struggle and the war in Vietnam.

Kamber had another passion: like many high-school students in Maine, he was obsessed with cars, and he loved to drag race in his '67 Ford Mustang. When he was 16 he moved to Asbury Park, New Jersey (a town made famous by Bruce Springsteen's 1973 debut album), where he continued his high-school education and worked as a mechanic part-time. Asbury Park was a "depressed town," Kamber said. "It was falling apart. A lot of vacant storefronts. And the guys I worked with were miserable." Whatever college plans Kamber may have had were put on hold after the owner of the body shop told him, "I'll train you as a master re-builder if you hold off on college for a year. I'll give you a raise and promote you." Kamber agreed, working as a mechanic until he was 22, when he decided to give college a try.

Kamber moved to New York City in 1985 and enrolled at the Parsons School of Design, where he studied photography, with a focus on photojournalism. Within a year he ran out of money and dropped out. Although he continued taking photos and trying to get them published, he made most of his money as a construction worker. New York in the late 1980s saw a lot of crime, poverty, political demonstrations, drug activity, and racial tension; on nights and weekends, when he was not doing construction work, Kamber would go out with his camera to document those events and phenomena.

Around 1987 an editor of a small magazine in Boston, *Z*, said that he would publish Kamber's photos if Kamber wrote the story to accompany them. Kamber agreed; he had liked writing in high school and felt equal to the challenge. "I basically faked my way though it," he said. "I just copied the *New York Times* style." The editor liked Kamber's story and asked him to write another article with his next batch of photos.

Also in 1987 Kamber and a fellow photographer—both of them young, ambitious, and desiring an extraordinary experience—decided to go to Haiti in time for the election that was about to take place there. (From 1957 to 1986 the Duvalier family ruled the country as brutal dictators. By early 1986, when Jean-Claude Duvalier was ousted, the country was in turmoil: street violence and other signs of unrest were ubiquitous.) Until then Kamber had never traveled outside the U.S. "It's a shock," Kamber said of his first impressions of Haiti. "People are living in mud huts, scrounging for food—no signs of modern life. And the violence! It's an eye-opener when you first go. I'm not sure that I had ever seen a dead person before, and there were just bodies on the street." The government's military leaders did not want the election to proceed because they saw democracy as a threat. As a result Election Day brought a great deal of violence. "They killed little kids," Kamber recalled. "Young girls hacked to death with machetes." On the morning of the election, Kamber was walking along a street when he saw a corpse. After staring at it, astonished, he reached for his camera and started taking photos. "I didn't really understand the danger," he said. Taking his time and oblivious to his surroundings, he initially did not notice "a car full of guys with guns" pull up next to him. The men stuck their guns out of the car window as if to shoot him, then talked among themselves and drove away. "A bunch of other journalists were shot that day," Kamber recalled. "I don't know why they didn't shoot me."

Upon his return to New York, Kamber sold some of his photographs to *Z* and another small publication. He went back to taking photos of street life, and soon wire services such as Reuters and the Associated Press started buying his photos. His goal was to break into the *Village Voice*, the nation's largest alternative weekly newspaper. He eventually started freelancing for the *Voice*, taking pictures mostly of the city's immigrants, political protests, and the homeless. The grittiness Kamber captured in his photos was also a reality in his neighborhood, the city's South Bronx area, which was very poor, violent, and drug-infested, and Kamber photographed everything he could. "Not that it was all negative," he said. "Some of it was positive. I used to photograph on Sunday mornings. Girls would be going to church in white dresses. There was a lot of nice stuff, too." The South Bronx was, and remains, heavily Hispanic, and Kamber picked up conversational Spanish—which came in handy a few years later.

Kamber quit his construction job in 1990 to dedicate himself to photography full-time. He continued freelancing for the *Village Voice*, and to supplement his income, he did commercial photography—portraits, ads, and coverage of various events and government-sponsored projects. While his financial situation improved, by 1998 he had had enough of such work and wanted to leave the U.S. for a while. In part because he had a cousin who worked in Mexico City, Mexico, Kamber went there and started taking photos for the *Village Voice* and various Web sites. He reported on poverty, politics, bullfighting, and almost anything else he encountered. While in Mexico Kamber became more and more interested in the villages that men had left to work in the United States. Through some research he found Zapotitlán, a village of mostly women and children (the men were working in the Bronx and sending money home). Kamber moved to Zapotitlán, where every day for two months he talked to the villagers about their lives. "People lived in huts made out of kindling wood," he recalled, "and once people started sending back thousands and thousands of dollars from the U.S., it completely transformed life there. New houses were going up every day." (The new houses were built by poor Mexican men from farther south who had not immigrated to New York.)

After leaving the village Kamber spent two months on the U.S.-Mexico border. He would tag along with Mexican men as they tried to cross the border illegally. Sometimes the men would get turned away, but they would try again. Back in New York Kamber spent time with Mexican immigrants. His three-part story of Mexicans' lives in Zapotitlán, on the U.S.–Mexico border, and in New York, for which he took the photos and wrote the text, ran in the *Village Voice* in 2001 and later earned him the Columbia University Graduate School of Journalism Mike Berger Award.

A few weeks after the September 11, 2001 terrorist attacks on the U.S., the *Village Voice* sent Kamber to write and take photos in Pakistan; that country borders Afghanistan, which had given refuge to Al Qaeda, the group that had planned the attacks. It turned out to be a "rough trip," Kamber said. He did not have a satellite phone or enough money for transportation and local guides. His situation might have been easier if he had had months to write one long story, but he was expected to send back photos and a story every week. In Pakistan Kamber experienced not only violence and political instability but fervent anti-Americanism. He also fell ill, losing 30 pounds because of intestinal problems. Worst of all, some of his colleagues were killed.

The most high-profile piece Kamber filed from Pakistan was a cover story for the *Village Voice* (October 16, 2001) with the headline "Why They Hate Us." He had spent weeks talking to Pakistanis of many tribal, religious, and economic backgrounds about their opinions of the United States and of the 2001 terrorist attacks. Speaking about U.S.–Pakistani relations "with a mixture of sadness and hostility," the Pakistanis complained about what they considered to be insufficient support of Pakistan's battles with India (primarily in the Kashmir region); what they saw as unfair sanctions imposed by the U.S. on Pakistan in 1998, after the country's nuclear tests; and what they viewed as unconditional U.S. support for Israel. "To me, the [attack on New York's World Trade Center] seems the design of the Jewish lobby," one aged mullah told Kamber. "The Jewish lobby wants to pit Islam against Christianity. American Jews want to remove the Taliban from Afghanistan, because the Taliban are the true representative of Islam. They did this as an excuse. How do you explain the 5,000 Jews that worked at the World Trade Center that called [in] sick that day?" With regard to the latter claim, the mullah said that he believed it to be true because he had read it in "many newspapers." In his article Kamber wrote that the mullah's views may have seemed extreme to Western readers but were not seen that way in Pakistan. "And his criticism of Israel and American Jews," Kamber wrote, "is echoed all over Pakistan in only slightly more reserved tones."

Kamber and his journalist companions spent three months in Pakistan trying to get into Afghanistan. Eventually they managed to hire drivers. After crossing the border Kamber noticed armed men on the road waving at his car, telling him to stop. His driver slowed down, pretending that he was about to stop, and then quickly took off, raising a large cloud of dust. "I looked back as we drove," Kamber recalled, "and there was unbelievable dust there, so it was very hard to see. I saw them run out and point their weapons, but they didn't shoot. Maybe they heard the other car coming." Behind Kamber was a car with four journalists—Spanish, Italian, Australian, and Afghan. After they stopped at the ad hoc checkpoint, they were all shot.

By his own account, Kamber has gotten used to being in such situations, which he described as triggering "pure fear." Yet he acknowledged that he experiences "a rush" afterward. "People shooting guns at you, that's exciting," he said, lightly laughing, adding that when he survives a brush with death, he "appreciates life a bit more." But sometimes, he said, he becomes inured to the danger, fear, and excitement. "Maybe I'm not as exhilarated as I used to be. I just find it fearful and not fun."

After the *Wall Street Journal* reporter Daniel Pearl—who was known by his captors to be Jewish—was murdered by terrorists in Pakistan after being taken hostage, Kamber wrote a short piece for the *Jewish Journal* (March 14, 2002) in which he recounted his own experience in Pakistan: "I returned in December from reporting for the *Village Voice* from Pakistan, exhausted from being stoned, punched and chased by Islamic fundamentalists. I was burned out—and burned literally—from being pushed into one too many burning George Bush effigies, weary from having to repeatedly explain that Americans do not hate Muslims, and that 'no, it's not true that we enjoy seeing dead Afghan children on television.'" He then discussed his experience of being identified as an American: "Word spread that a Westerner was in the crowd and people became agitated; stones and fists flew my way before my hosts pulled me to safety. These were times you wanted to crawl out of your skin, pretend you were someone else. I tried to buy a fake passport that listed my citizenship as Canadian. Journalists routinely lied when asked if they were American. Guides and interpreters introduced their American clients as Swiss or French." Kamber, whose father is Jewish, always denied any Jewish heritage when asked about it in Pakistan. "To admit to being Jewish in such a climate would have been unthinkable," he wrote. "On occasion, people asked me point-blank if I was Jewish. I denied it, listing instead my polyglot background."

In addition to his work for the *Village Voice*, Kamber started freelancing for the *New York Times*'s Metro section. In late 2002 the *Times* asked Kamber to go to West Africa as a full-time photographer. Since he was not married and his daughter was no longer a child, and he had no other commitments holding him back, in January 2003 he traveled to the Ivory Coast. The *Times* editors "wanted stories about things that are good, about peace, about what's successful," he recalled. "But when we [he and another *Times* reporter] got there, there were all these wars raging, so inevitably I just photographed the wars." Kamber and his colleague, based in the Ivory Coast, also reported from Liberia, Congo, and Nigeria. Kamber spent a few weeks at each location, often interviewing and photographing fighters on the front lines. He was frequently in dangerous situations but avoided getting shot by taking photos from behind concrete walls and staying close to the ground. Some of the journalists he was with—writers and photographers for other major publications and news services—did get hurt, and some were killed. Kamber and the French photojournalist Patrick Robert covered an intense battle between government troops and rebels in Liberia; Kamber and Robert followed the government troops over a bridge on an offensive as hundreds of soldiers were firing automatic rifles and rocket-propelled grenades. Kamber was taking photos from behind a concrete wall when he noticed Robert running out to the street to get a better photographic angle. Robert was immediately shot in the abdomen. Kamber and his fellow journalists ran out and dragged Robert behind the concrete wall. After trying to stop the bleeding, they carried him across the bridge, which was "hard when you're under that much gunfire," Kamber casually admitted. They eventually got a truck and took him to a hospital. Robert survived but lost a lot of blood and a kidney.

Kamber returned to New York in August 2003. A month later, on the strength of the photographic skill and ability to navigate war zones he had demonstrated in Africa, the *Times* sent him to Iraq. (He has been primarily a war and armed-conflict photographer ever since.) In the fall of 2003, a few months after the U.S. invasion, Baghdad, Iraq's capital, was still relatively peaceful. "We would walk downtown and have a kabob," Kamber recalled. "People would say hello to you on the street." After three months in Iraq, Kamber returned to New York. Since then he has gone back to Iraq many times and has also reported from Israel, Haiti, and Africa, witnessing many scenes of violence and cruelty. On the one hand, he suggested, those experiences can have a demoralizing effect. "You realize that man's capacity for violence is just extraordinary," he said. "Once the social strictures break down, people just go crazy; they just begin raping, pillaging, and looting as quickly as they can." On the other hand, Kamber found that in desperate times, some people go out of their way to help others, even people they do not know. He recalled seeing an old woman, lying in a hospital bed in Haiti, who sold her jewelry so that the man in the next bed—a stranger—could get money for lifesaving medicine.

Kamber reported from Israel and Gaza (the Palestinian territory to the south) for a few months in 2006. He found his stay there frustrating; although he faced less physical danger than he had in war zones, he also had to endure a lot of control and manipulation of the media from both sides of the region's conflict—the Israeli army, as representative of the nation's government, and the sociopolitical Palestinian organization Hamas. "Both sides were experts at dealing with the media," Kamber said. "I felt like it was very hard to get anything real." The Israeli army and Hamas would each stage photo ops to look like news events, he said. Kamber offered an example from each side. In 2006 a colleague of his took photos of Israeli soldiers walking out of Lebanon just as the sun was coming up, carrying one lightly wounded soldier while singing a patriotic song. (The army would leak such locations to photographers ahead of time so the photographers would know where to set up their equipment.) Kamber was immediately skeptical of the scene, because the army normally transports wounded soldiers via helicopter. "So rather than airlift him out in a chopper, they carry him out for the cameras," he said, because such an image is "very dramatic." That photo, taken by one of Kamber's colleagues, ran on the front page of the *New York Times*. In Gaza, a Hamas member would bring Kamber to a house, gather many insurgents, and have them stand with guns, wearing masks, chanting slogans in front of a flag. "It's a set-up. It's like a photo shoot," Kamber said. "But if you want to be out on the street photographing what's really going on, it's difficult."

It was also difficult to do so in Iraq, where the U.S. military started to impose stricter media control as the war progressed. During one period of being embedded with troops, after Kamber took a photo of a wounded American soldier, a high-ranking public-affairs officer told the *Times* that it could not publish the photo; regulations for embedded photojournalists allowed the publication of photos of "identifiable" wounded Americans only with the soldiers' written permission. Because the soldier whom Kamber had photographed was temporarily blinded and immediately airlifted to Germany, he could not sign the permission form. Kamber argued that the soldier should not have been required to sign the form to begin with, since he was not identifiable in the photo—his face was bandaged. The military countered that because the faces of several noninjured soldiers and unit patches were visible in the photo, the injured soldier could be identified. Despite the Pentagon's objections, the *Times*, confident of its legal right to do so, published the photo. Kamber believes that the military's policies and American publications' self-censorship prevent the public from seeing much of the harsh reality in Iraq. "If you finance a war with your taxes and reelect a president who supports the war," Kamber said, "then you should have to look at that war once in a while. People want to vote for it, to send 18-year-old kids off, and then go about their lives as if there's nothing happening. . . . If you don't want to look at [war photographs], then maybe you should think about whether or not you want to continue [the war], because there's 27 million Iraqis that have to look at the war every day, and there's upwards of one million American soldiers that have to look at it every day."

Kamber's stories and photos from Iraq show all aspects of the war: soldiers smoking during downtime, perspiring in military vehicles in 125-degree heat, caring for their wounded, crying over killed or badly injured fellow soldiers, and fighting. Kamber has also shown the Iraqi side of the conflict: mothers and fathers grieving for children lost in the war, desperate Iraqi refugees trying to get into Syria, children hiding from exploding missiles, and other scenes of chaos, destruction, and confusion. There were also instances when Iraqis and Americans made contact in peaceful ways, such as when U.S. troops conducted "knock and talks," to get to know their neighborhoods: soldiers would knock on doors at random and politely ask to be let in, not as part of a search but to chat or drink tea.

Spending a lot of time with a unit gave Kamber an insight into soldiers' thoughts and feelings. After spending a few weeks with the 82d Airborne Division, which he called "a very hard-core, elite unit," he learned that nearly everyone in the unit was against the Iraq war. "They were completely disillusioned," he said. Many of them were on their third tours in Iraq and did not see any progress in the war effort; they also did not trust the Iraqi army, which they saw as often sabotaging, rather than contributing to, their missions. After the soldiers told Kamber, off the record, that they had lost faith in the war effort, Kamber told their commander that he wanted to write a story about the subject. The commander agreed, and the story ran on the front page of the *New York Times* in May 2007. Whenever Kamber returned to the U.S., he found it frustrating that much of the truth of the war was unknown to or ignored by the public. "You see these American soldiers put their lives on the line, going through these incredibly difficult things, seeing their friends killed, just doing the hardest job imaginable, and you come back home and nobody's paying any attention."

Two weeks after his interview with *Current Biography*, in March 2009, the *New York Times* sent Kamber to Somalia and then Pakistan and Afghanistan. He spends about nine months of each year on assignment abroad.

Kennedy, Kathleen

June 5, 1953– Film producer

Address: Kennedy/Marshall Co., 619 Arizona Ave., Santa Monica, CA 90401

While shooting the blockbuster 1981 adventure film *Raiders of the Lost Ark*, Steven Spielberg asked his assistant, Kathleen Kennedy, to serve as producer for his next project. That film turned out to be *E.T.: The Extra-Terrestrial*, a story about a lovable space alien who comes to Earth and befriends a group of children. A box-office smash that reigned for over a decade as the highest-grossing movie of all time, *E.T.* was released through Amblin Entertainment, the production company that Kennedy, Spielberg, and Frank Marshall—whom Kennedy would later marry—formed in 1982. Kennedy and Marshall broke from Spielberg and started their own company a decade later, but not before helping Amblin to produce some of the biggest hits of the 1980s and '90s, including the *Back to the Future* trilogy, *Indiana Jones and the Temple of Doom*, and *Who Framed Roger Rabbit?* Leaving Amblin with Spielberg's blessing, Kennedy went on to produce the director's critically acclaimed *Schindler's List*, released in 1993, and his wildly popular *Jurassic Park* films. In all Kennedy has produced more than 60 films, with her other notable credits including the action blockbusters *Congo* and *Twister*; the Academy Award best-picture nominees *The Color Purple*, *The Sixth Sense*, *Seabiscuit*, and *Munich*; and *The Bridges of Madison County*, a love story directed by Clint Eastwood. She has also shown a willingness to make smaller, less commercial films; in 2007 she produced two art-house French-language movies, *The Diving Bell and the Butterfly* and *Persepolis*. In an interview with Michael Sragow for the *Baltimore Sun* (July 3, 2005), the producer Rick McCallum said that Kennedy "is truly one of the very few people in the business who can do it all—set up and manage the day-to-day production on her own and enjoy and relish every challenge and obstacle." Walter Parkes, an executive with the film studio DreamWorks, told Jerry Roberts for *Variety* (June 12, 1998), "There are producers who are good creatively and at developing scripts. Then there are producers who know how this town works. There are also producers who know how to make a movie. Kathy is one of the two or three producers I've ever known who can excel at doing all of those jobs." "I enjoy the process of organizing things and opening a script and saying, 'My god, how are we going to do that?'" Kennedy told Jamie Portman for the Ontario, Canada, *Pembroke Observer* (July 11, 2001). "I enjoy breaking it down and beginning the process of analyzing how we're going to execute it." Among Kennedy's recent projects was *The Curious Case of Benjamin Button* (2008).

Kathleen Kennedy was born on June 5, 1953 in Berkeley, California. (Some sources have the date as January 1, 1954.) She spent much of her childhood in Weaverville, a small town. A standout athlete, she was the quarterback of her school's football team in sixth, seventh, and eighth grades, often practicing with her identical twin sister, who played wide receiver. Kennedy also excelled at baseball, basketball, skiing, and soccer. "Sports teaches you to understand the meaning of a team," she told Sragow. "You need to be able to work with everybody; you don't have to be their best friend. You can experience the fun of competition and driving toward a common goal without pushing to bond in some major way with each individual on a project." Though those skills would later prove useful in the film industry, Kennedy initially had no interest in show business. "I didn't grow up thinking I wanted to be a film producer or even really knowing that much about movies, because where I lived they had only one movie house with only one movie a month," she told Jessie Horsting for *Fantastic Films* (September 1984). When Kennedy was 13 the family moved to Redding, California, a slightly larger town, where, she told Horsting, she discovered "that people actually made careers out of making movies."

After graduating from Shasta High School, in Redding, Kennedy enrolled at San Diego State University, where she planned to study nursing. "I decided I wanted to have a profession where I could travel anywhere in the world," she told Sragow. She was not sure she wanted to be a nurse, though, and she studied a wide range of subjects, hoping to find one that interested her. Eventually she took a broadcasting course and became involved with the campus's Public Broadcasting Service affiliate. "I'd found something that I loved enormously and was pretty good at," she said. "I suppose I was always attracted to the producing function—trying to put things together and make things happen." Kennedy also took a sociology course that allowed her to make a documentary film about prisons. "Those two experiences made me start looking at 'the media' as something I wanted to pursue, even though at that time I still hadn't really considered moviemaking as a career," she told Horsting.

In 1972, before she graduated from college, Kennedy got a job at the television station KCST, San Diego's NBC affiliate. In the five years she spent at the station, she had an opportunity to perform a number of tasks, including operating cameras at professional baseball and football games, editing videos, and producing a local talk show, *You're On*. "It was terrific," she told Horsting. "Practically every year I was doing something different, so it gave me a nice overview of the broadcasting business in general." She might have stayed in the television industry if, in 1977, she had not gone to see Spielberg's science-fiction film *Close Encounters of the Third Kind*. Kennedy was "so completely blown away that I felt I needed to participate in some way in creating something like that," she told Sragow. After seeing the movie she started looking for a way to get into the film business, and she learned from a friend, Mary Ellen Trainor, that Spielberg was in need of a production assistant for his next film, *1941*. "They might think you're overqualified, so say you just graduated from college," Trainor told Kennedy before her interview. Whether or not because of that advice, Kennedy got the job.

"At first I didn't do anything directly related with the movie," Kennedy told Horsting, describing her first couple of weeks of work on *1941*. She worked mostly in the office and had little interaction with Spielberg, until about three weeks into the project, when the director asked her to visit his house and help organize his handwritten production notes and sketches. Kennedy, who lacked skill as a typist, took Spielberg's notes back to the office, where she organized them into books. "He went on and on about these books; it was an incredible bonding experience," she told Sragow. Spielberg was so impressed with Kennedy's work that he hired her as his assistant. He also asked her to be his associate on his next film, *Raiders of the Lost Ark*, which introduced the character Indiana Jones, a globe-trotting, pistol-packing archaeologist. One of her preproduction duties was to build model trucks for use in planning the film's chase scene, and she and the producer Frank Marshall spent one Thanksgiving break gluing together plastic vehicles. "I found it incredibly frustrating; he was having a blast," she told Sragow. Kennedy and Marshall soon developed a close friendship, and by the time production work ended on *Raiders of the Lost Ark*, the two were dating. The couple kept the romance secret, however, as Marshall did not want Kennedy to face accusations that her success was due to her relationship with him.

Kennedy joined the producers of *Raiders* on location and learned a great deal about the moviemaking process. Spielberg then asked her to produce his next project. That film, *E.T.: The Extra-Terrestrial*, was released under the banner of Amblin Entertainment, the production company founded by Spielberg, Kennedy, and Marshall. At Spielberg's suggestion, the trio created the company at the end of the summer of 1982—the year that both *E.T.* and *Poltergeist*, another Kennedy-Marshall collaboration and box-office hit, were released. "I associate-produced *Poltergeist* and Frank was the production executive on *E.T.*," Kennedy told Horsting. "Frank and I work together on everything, so titles become relatively insignificant."

Kennedy earned another associate-producer credit on *Twilight Zone: The Movie* (1983), and the following year she served as executive producer on two blockbusters, *Gremlins* and *Indiana Jones and the Temple of Doom*. For *Gremlins* Kennedy and Spielberg, who served as co–executive producer, were responsible for putting the story in place; hiring the director (Joe Dante); striking a deal with Warner Bros., the film studio; and supervising the shoot. For *Indiana Jones* Kennedy traveled to Sri Lanka, where the crew shot for three weeks. "Steven relied heavily on her," Harrison Ford, who played Indiana Jones, told Jerry Roberts. "She was always a calming influence and an entertaining presence." He added, "The Indiana Jones movies were very different and full of logistical problems with huge crews but often tight budgets. Much of the maintenance and the control were in the hands of Kathy and Frank. With all they had to do, they always managed to make the sets a pleasant atmosphere."

In 1985 Kennedy was the executive producer for two more highly successful films, *The Goonies* and *Back to the Future*. She also produced *The Color Purple*, which she urged Spielberg to direct, even though it was unlike anything he had done in the past; the film was based on Alice Walker's novel about the self-realization of a poor black woman in the Depression-era Deep South. "I would tell him, 'someone on the outside might not bring you this, but I know it's got elements you'd be attracted to and you'd make a really wonderful movie from it,'" Kennedy told Sragow. The film received an Oscar nomination for best picture. (It lost to *Out of Africa*.)

Two years later Kennedy persuaded Spielberg to take on another project of a sort he did not usually work on: *Empire of the Sun*, adapted from J. G. Ballard's novel about a young English boy confined in a Japanese prisoner-of-war camp. In the process of making the film, Kennedy and Marshall spent more than a year negotiating with the Chinese government, since the film's opening sequences were to be set in Shanghai. Kennedy told Jim Schembri for the *Age* (July 18, 1995) that *Empire of the Sun* "was one of my personal favorites," adding that financially, "it was the least successful picture we've ever made. It was basically a disaster."

Kennedy and Marshall married in 1987. The following year Kennedy served as co–executive producer on *The Land Before Time*, an animated movie about dinosaurs, and executive producer on *Who Framed Roger Rabbit?*, which featured a groundbreaking mix of animation and live action. That film grossed more than $650 million worldwide. In 1989 Kennedy served as executive producer for *Back to the Future, Part II*, the second film about the time-traveling teenager played by Michael J. Fox, and the following year she executive-produced the final installment of the trilogy. In 1990 she also produced *Arachnophobia* and executive-produced *Gremlins 2: The New Batch*, *Always*, and *Joe Versus the Volcano*, the last of which starred Tom Hanks and Meg Ryan. (While a producer has a hands-on role in the moviemaking process, an executive producer is concerned with the business and legal sides of making films.)

In 1992, as Spielberg was in the process of forming the studio DreamWorks with David Geffen and Jeffrey Katzenberg, Kennedy and her husband decided to break from the director and form their own company, Kennedy/Marshall. Soon afterward the couple signed a three-year, nonexclusive deal with Paramount Pictures. "We wanted to have a family," Kennedy, now the mother of two girls, told Rebecca Winters Keegan for *Time* (November 12, 2007). "We didn't want to become movie moguls and move into being executives within a company. We like making movies." The split from Spielberg was amicable, and in 1993, the same year that Kennedy/Marshall launched its first film, the plane-crash-survival drama *Alive*, Kennedy produced Spielberg's blockbuster *Jurassic Park*, about an amusement park that is home to cloned dinosaurs—which soon run amok. The filmmakers used newly emerging digital technology to create the images of the dinosaurs. "What Kathy did from a production point of view helped bring digital filmmaking of age with *Jurassic Park*," Jim Morris, president of the movie special-effects company Industrial Light & Magic, told Roberts. "She had the vision to embrace the technology that solved a myriad of problems. Her role in that was significant. I can't say enough good things about her. She's the role model."

That same year Kennedy served as executive producer for Spielberg's movie *Schindler's List*, a drama about Oskar Schindler, a German businessman who saved more than 1,000 Jews from being killed at Auschwitz, a Nazi concentration camp. In preparation for the film, Kennedy visited Auschwitz, later telling Army Archerd for *Variety* (October 22, 1993) that her trip "was one of the most moving experiences of my life." The film received rave reviews and won the Academy Award for best picture. "*Schindler's List* brings a pre-eminent pop mastermind [Spielberg] together with a story that demands the deepest reserves of courage and passion," Janet Maslin wrote for the *New York Times* (December 15, 1993). "Rising brilliantly to the challenge of this material and displaying an electrifying creative intelligence, Mr. Spielberg has made sure that neither he nor the Holocaust will ever be thought of in the same way again."

In 1994 Kennedy was the executive producer for *The Flintstones*, an adaptation of the popular TV cartoon series, and producer for *Milk Money*, starring Melanie Griffith. The following year she produced *The Bridges of Madison County*, based on the Robert James Waller novel of the same name. Kennedy bought the rights to the best-selling if critically reviled book before it was published, believing that the story—which centers on a rural Iowa woman's extramarital affair with a photographer—would make excellent source material for a film. "I thought it tapped into something very interesting," she told Bob Strauss for the *Los Angeles Daily News*, as printed in the Baltimore *Sun* (June 25, 1995). "I'm not going to get into what I liked or disliked, but the core of it spoke to something that I thought a lot of women think about, which is how women have a complicated, societal responsibility to family and children." Amblin Entertainment, Kennedy's former company, was originally slated to make the film, but Universal Studios, with which Amblin often worked, opted out of the project. Kennedy successfully lobbied Warner Bros. to sign on for the film. When it came time to choose a director, the studio was presented with an unlikely choice, as Clint Eastwood, an actor then best known for hard-edged Westerns, expressed interest. "Very early on, Clint came to us and said, 'I love this book; I know what it is,' and he absolutely, passionately connected to the book and wanted to commit," Kennedy told Strauss. "Needless to say, when somebody of that stature comes to you with that degree of passion, you pay attention. Even though there's been a fair amount of publicity about certain directors that have come and gone, and everybody, whether they were in the movie business or not, was trying to cast this book and had ideas of who should be in it, Clint's feeling was right from the beginning." Eastwood also starred—opposite Meryl Streep—in the movie, which critics deemed far superior to the novel.

At the other end of the spectrum, in terms of both theme and critical reception, 1995 also saw the release of the action film *Congo*, an adaptation of a novel by Michael Crichton, the writer behind *Jurassic Park*. Despite bad reviews, *Congo* enjoyed the biggest opening weekend of any film that year, earning $24.6 million at the box office. Kennedy, who served as producer, had originally wanted to shoot the film in the same central-African jungle used as the location for *Gorillas in the Mist*, but tribal warfare in Burundi made it necessary to find a new place to film. The filmmakers eventually settled on Costa Rica, where constant rainfall proved a challenge. "We kept laughing and saying: 'Well, what do you expect? It's a rain forest,'" Kennedy told Strauss. "But if that was the dry season, I'd hate to think what the wet season's like." Marshall directed the film, marking his second outing at the helm of a picture. (*Arachnophobia* was the first.)

"It's easier to say, 'No, we can't do that,' to Steven Spielberg than it is to say it to Frank," Kennedy said. "I think everybody can imagine, on some level, that you go through a certain adjustment when you're producing for your husband." "When I'm unsure about things, I really trust her judgment," Marshall told Strauss. "She's very good with the script and story side of things." In December 1995 Kennedy and Marshall signed a nonexclusive three-year deal with Walt Disney Pictures.

In 1996 Kennedy produced *Twister*, a box-office smash about a pair of storm chasers. While some critics dismissed the film as mindless entertainment, others enjoyed the special effects. "Another theme park ride of a movie without an ounce of emotional credibility to it, *Twister* succeeds on its own terms by taking the audience somewhere it has never been before: into a tornado's funnel," Todd McCarthy wrote for *Variety* (May 10, 1996). The following year Kennedy served as executive producer of Spielberg's *The Lost World*, the sequel to *Jurassic Park*. The film was a runaway success, earning a record $92.7 million in its opening weekend. *The Lost World* featured more sophisticated special effects than its predecessor, and thanks to computer animation, as well as old-fashioned animatronics, 10 species of dinosaurs roared across the big screen. "Steven has the privilege and the prerogative to come up with any insane idea he wants and it's up to us to figure out if it's possible, or to offer alternatives," Kennedy told Judy Gerstel for the *Toronto Star* (May 16, 1997). Critics were split in their responses to *The Lost World*, with some insisting that the movie was more concerned with special effects than events or characters.

Kennedy's next major film was *The Sixth Sense* (1999). Written and directed by the then-unknown filmmaker M. Night Shyamalan, the picture starred Haley Joel Osment as a young boy with the ability to see the spirits of dead people. While a number of producers had vied for Shyamalan's script, he chose Kennedy/Marshall because he had been a fan of the films *Raiders of the Lost Ark* and *E.T.* since childhood. While *The Sixth Sense* received mixed reviews, many critics saw it as having unusual emotional resonance for a summer thriller. "Writer/director M. Night Shyamalan knows how to build atmosphere—this is clear," Desson Howe wrote for the *Washington Post* (August 6, 1999). "And he does it painstakingly, brick by brick. By the end of the picture, a very powerful design becomes clear, with a twist that will put your head in a swirl." The film earned an Academy Award nomination for best picture. (It lost to *American Beauty*, which was produced by Bruce Cohen, who is godfather to one of Kennedy's daughters.)

In 1999 Kennedy also produced *Snow Falling on Cedars*, a film adapted from a novel by David Guterson about a murder trial and an ill-fated interracial romance, set against the backdrops of World War II and Japanese-internment camps in the U.S. Critics were less than enthusiastic about the film, which starred Ethan Hawke, and much to Kennedy's disappointment, it flopped at the box office. "The film never got a chance," Marshall told Akin Ojumu for the London *Observer* (April 23, 2000). "It didn't catch on in the first weekend and so it didn't stay long enough in the cinemas. These days it's like an election. You know the morning after whether you've won or not." Expressing a different view, Stephen Holden wrote in an assessment of the film for the *New York Times* (December 22, 1999), "Frame by frame the movie . . . isn't just a series of shots but a sequence of exquisitely balanced photographic compositions. The piling on of so much visual beauty, however, only contributes to the sense of the movie as a frozen artifact cut off from the real world and designed to be viewed from behind a glass casement. There's a lesson here about the aesthetics of mass-audience movies. Pretty pictures, as nice as they may be, are finally no substitute for a living, breathing screenplay."

In 2001 Kennedy was named interim president of the Producers Guild of America (PGA). Upon assuming the post, she vowed to help put a stop to studios' practice of giving undeserved production credits on films. "Everyone with the various guilds is questioning fair work for fair credit, the producers included," Kennedy, who several years earlier had formed the Producers Credit Board, told Greg Hernandez for the *Hollywood Reporter* (March 28, 2001). "Our hope in the next year by working with the [Alliance of Motion Picture and Television Producers] is to arrive at simple solutions to a simple problem by implementing an arbitration board similar to that of the Writers Guild model for the determination of producing credits." Several years later the Academy of Motion Picture Arts and Sciences adopted the PGA's criteria for determining producers' eligibility for Oscars.

Also in 2001 Kennedy produced *Artificial Intelligence: AI*, a Pinocchio-like science-fiction epic starring Osment as a sentient boy robot who goes to live with a couple whose son lies comatose. Spielberg directed the film after the death of a fellow filmmaker, the legendary Stanley Kubrick, who had spent more than a decade developing the project. Reviews were mostly positive; many critics felt that Spielberg's usually sunny directorial sensibility mixed well with Kubrick's darker visions. In 2001 Kennedy also produced *Jurassic Park III*, a film that, like its predecessor, was dismissed by many critics.

In 2002 Kennedy served as executive producer on another Shyamalan film, *Signs*. The following year she produced *Seabiscuit*, a drama about the rider (played by Tobey Maguire) and owner (Jeff Bridges) of a Depression-era racehorse. The film was nominated for seven Academy Awards, including best picture. (It lost to *The Lord of the Rings: The Return of the King*.) Kennedy followed *Seabiscuit* with a pair of high-profile 2005 films: *War of the Worlds*, an action picture starring Tom Cruise, and *Munich*, Spielberg's film about terrorism at the 1972 Olympic Games. *Munich* was nominated for five Academy Awards, losing to *Crash* in the best-picture category.

Kennedy spent 2007 producing a pair of uncharacteristically small films. The French-language film *The Diving Bell and the Butterfly* was based on a memoir by the magazine editor Jean-Dominique Bauby. Bauby, who was left completely paralyzed after a stroke, wrote the book by composing prose in his mind, memorizing it, and then communicating the words by blinking his left eye as an assistant reached the needed letter in a recital of the alphabet. Kennedy had hoped that the actor Johnny Depp would play the lead role in an English-language film version of the book, but Depp passed on the project, leading the producer to seek funds for a French-language film—which the film's director, Julian Schnabel, wanted. Kennedy told Anne Thompson for *Variety* (December 10–16, 2007) that she "reacted to the emotional impact" of the story. The film received rave reviews. The critic David Denby wrote for the *New Yorker* (December 3, 2007) that it featured "some of the freest and most creative uses of the camera and some of the most daring, cruel, and heartbreaking emotional explorations that have appeared in recent movies." Kennedy's other 2007 project, the black-and-white animated film *Persepolis*, was based on a graphic novel by Marjane Satrapi about Satrapi's childhood in Iran; Kennedy was intrigued by the artist's unique drawing style. Like *The Diving Bell*, *Persepolis* earned mostly positive reviews. In a critique for the *New York Times* (December 25, 2007), the critic A. O. Scott wrote that the film "is frequently somber, but it is also whimsical and daring, a perfect expression of the imagination's resistance to the literal-minded and the power-mad, who insist that the world can be seen only in black and white."

Kennedy's 2008 projects included the belated fourth installment of the Indiana Jones series, *Indiana Jones and the Kingdom of the Crystal Skull*, and *The Curious Case of Benjamin Button*. The latter film, directed by David Fincher and starring Brad Pitt and Cate Blanchett, focuses on a character who begins life looking like an old man and grows younger in appearance. The film proved to be a critical success. For her work on *Benjamin Button*, Kennedy was nominated as producer of the year by the Producers Guild of America. Kennedy will produce an upcoming Clint Eastwood–directed thriller called *Hereafter* and Steven Spielberg's next project, *The Adventures of Tintin: The Secret of the Unicorn*, a 3-D film based on the comic-book character created by the Belgian artist and writer Georges Remi, who used the pen name Hergé.

Kennedy regularly mentors young people who are interested in forging careers in the motion-picture industry. She has been involved with Communities in Schools/the L.A. Mentoring Partnership since the early 1980s. Robert Arias, the organization's president, told Andra R. Vaucher for the *Hollywood Reporter* (November 2, 1999), "Kathleen has been a guardian angel for mentoring in Los Angeles and the state of California through her deeds and her generosity."

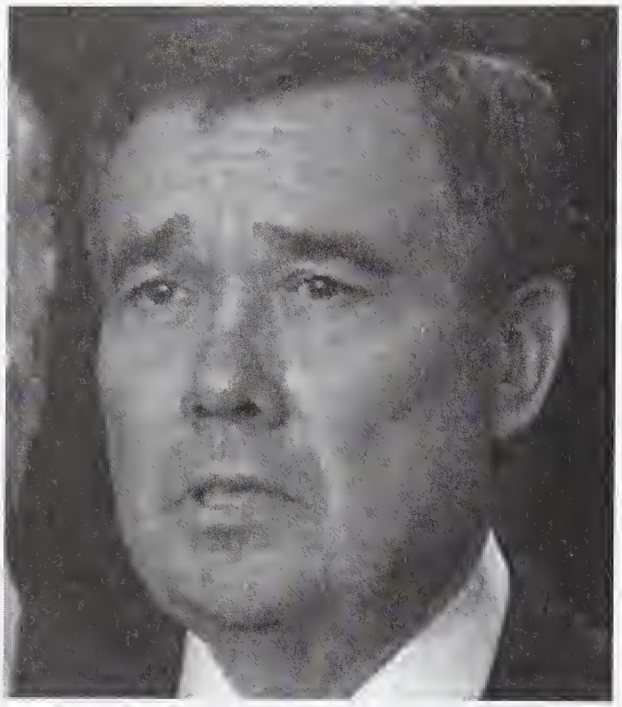
Kerlikowske, R. Gil

(ker-lih-KOW-skee)

Nov. 23, 1949– Director of the U.S. Office of National Drug Control Policy

Address: Office of National Drug Control Policy,
Executive Office of the President, Washington,
DC 20503

On May 7, 2009 R. Gil Kerlikowske was sworn in as the director of the U.S. Office of National Drug Control Policy (ONDCP)—or drug czar, as he is known colloquially. Established in 1988 as an arm of the government's executive branch, the ONDCP oversees the nation's policies regarding outlawed drugs; it strives to reduce the manufacture, trafficking, and use of such drugs, the misuse of prescription drugs, and the crime and health problems associated with illegal drug use. "With escalating violence along our Southwest border and far too many suffering from the disease of addiction here at home, never has it been more important to have a national drug control strategy guided by sound principles of public safety and public health," President Barack Obama stated on March 11, 2009, as quoted in the White House press release that announced his nomination of Kerlikowske to lead the ONDCP. "Gil Kerlikowske has the expertise, the experience, and the sound judgment to lead our national efforts against drug trafficking and use." The Obama administration also announced that the job



Chris Kleponis/AFP/Getty Images

R. Gil Kerlikowske

of ONDCP director would no longer be a Cabinet-level position, as it was during the tenures of Kerlikowske's five predecessors; nevertheless, according to a White House official, Kerlikowske will have "full access and a direct line to the president and vice president," David Stout wrote for the *New York Times* (March 11, 2009, on-line).

Kerlikowske has spent more than four decades in law enforcement. He began to prepare for his profession as a teenager, with a part-time job in his local police precinct. He earned bachelor's and master's degrees in law enforcement and supplemented his education in that field with courses at an FBI school and Harvard University. For 15 years he worked for the St. Petersburg, Florida, police department, starting as a patrol officer and leaving as a commander. He headed the police departments of four cities—two of them small (Port St. Lucie and Fort Pierce, in Florida) and two large (Buffalo, New York, and Seattle, Washington). In each of those cities, the crime rate declined during his years as chief of police. Much of his success has been attributed to his promotion of what is known as community policing; his modernization of the departments; his advocacy of greater use by police of Taser stun guns and similar devices and less reliance on lethal weapons; and his efforts toward fostering better relations among racial groups, both within the ranks of the police and in interactions between the police and members of their communities. Those who know him through his work have also praised his personal qualities: he has been described as thoughtful, kind, and uncommonly organized.

In the March 11, 2009 press release, the Miami, Florida, chief of police, John Timoney, described Kerlikowske as "the perfect person" for the job of ONDCP director. "With his years of experience as a police chief he knows that enforcement alone will not solve the nation's drug problem. It also requires prevention through education. With his background and temperament he will bring great credibility to the bully pulpit." Kerlikowske himself was quoted as saying, "The success of our efforts to reduce the flow of drugs is largely dependent on our ability to reduce demand for them. . . . Our nation's drug problem is one of human suffering, and as a police officer but also in my own family, I have experienced firsthand the effects that drugs can have on our youth, our families and our communities." Kerlikowske was referring to his estranged stepson, Jeffrey, who had been arrested twice for possession and distribution of marijuana and had served time in prison for assault with a deadly weapon; he is currently in prison because of a parole violation.

Those directly involved in matters under the purview of the ONDCP, ranging from public prosecutors to drug counselors to members of organizations fighting to legalize marijuana, have expressed the view that Kerlikowske will devote more of his efforts to prevention and treatment than did his immediate predecessor, John P. Walters, an appointee of President George W. Bush. As Seattle's police chief Kerlikowske opposed a 2003 measure, approved by voters, whose aim was to make arrests for marijuana possession the police department's lowest priority, but he noted that the department already considered marijuana possession a low priority. He also supported needle-exchange programs and rehabilitation in lieu of jail time for low-level drug offenders, and he did not protest Washington State laws that decriminalized the use of marijuana for medical purposes. In an interview conducted a few days after his swearing-in as director, Kerlikowske said that the Obama administration would no longer describe the activities of the ONDCP as a "war on drugs." "Regardless of how you try to explain to people it's a 'war on drugs' or a 'war on a product,' people see a war as a war on them," he said, as Gary Fields reported for the *Wall Street Journal* (May 14, 2008, on-line). "We're not at war with people in this country."

Richard Guilford Kerlikowske was born on November 23, 1949 in Fort Myers, Florida. He was raised by his stepfather, Thomas W. Shands, a circuit-court judge, and his mother, Norma Shands, a secretary at the local courthouse. His biological father was an alcoholic; little else has been made public about him. Trips to the courthouse during Kerlikowske's childhood sparked his interest in law enforcement. While attending Fort Myers High School, he worked part-time at the local police precinct, photographing crime scenes and fingerprinting people under arrest. "From the time I was small, I was fascinated by police work and law enforcement," he told Jack Reed for the *St. Petersburg*

(Florida) Times (November 30, 1992). "I've never [wavered] from what I wanted to do." After completing high school Kerlikowske enrolled at St. Petersburg Junior College (now St. Petersburg College), in Florida, where he studied law enforcement. He also volunteered as a police cadet. After he was drafted into the army, in 1970, he left college and spent the next two years stationed in Washington, D.C., as a military police officer. At the end of his tour of duty, he received a U.S. Army Presidential Service Medal.

In 1972 Kerlikowske got married and adopted his wife's two-year-old son. The couple, who later had a daughter together, settled in St. Petersburg, where Kerlikowske joined the city's police force. During the next 15 years, he worked his way up the ranks from patrol officer, to narcotics agent, to hostage negotiator, to lieutenant in charge of criminal investigations, to commander. Concurrently, Kerlikowske earned both B.S. and M.S. degrees in criminal justice from the University of South Florida in Tampa, in 1975 and 1978, respectively. In 1984, with a yearlong fellowship, he attended the National Executive Institute at the Federal Bureau of Investigation (FBI) Academy, located on the U.S. Marine Corps Base in Quantico, Virginia. Kerlikowske also attended the Executive Session on Policing and Public Safety at Harvard University's Kennedy School of Government, in Cambridge, Massachusetts.

In April 1987 Kerlikowske left St. Petersburg to become the police chief of Port St. Lucie, Florida, a small city (its population was 68,000 then) with a low crime rate. During his tenure he doubled the number of officers, from 42 to more than 80. Kerlikowske was hailed by Port St. Lucie residents for modernizing and improving the department. In 1989, however, he was given a vote of no confidence by the local police union. The vote was said to have stemmed from Kerlikowske's efforts to prohibit officers from taking their patrol cars home, among other unpopular measures. "I received a lot of positive support from the community. . . . It sets the tone that you are going to make decisions based on what's right for the community," Kerlikowske later told a *Fort Pierce Tribune* (January 16, 1994) reporter. The president of the police union later apologized for holding the no-confidence vote.

In January 1990 Kerlikowske became the police chief in nearby Fort Pierce. Though the population of Fort Pierce was about half that of Port St. Lucie, it had persistent drug problems and a high crime rate. (In 1988 there were 28 homicides in Fort Pierce, four in Port St. Lucie, and 30 in Buffalo, New York, a city with 10 times Fort Pierce's population.) Thanks in large part to Kerlikowske's community policing efforts, the city's homicide rate decreased 60.8 percent between 1989 and 1994. The aim of community policing is to build trust between the public and the police by encouraging people to voice their concerns, acting on those concerns, and tackling crime-related problems plaguing neighborhoods by identifying and addressing their root causes. "The closer the police officer is to the community the more trust there is and the more information there is . . . ," Kerlikowske told a *Fort Pierce Tribune* (January 16, 1994) reporter. "Victims that were reluctant to call now call, victims that were reluctant to follow through with prosecution will now follow through with prosecution. The officer gets more information." "Law enforcement does not have all the answers," he told Jane Kwiatkowski for the *Buffalo News* (January 24, 1994). "Even though we may have better equipment and more people, we may not do a better job. People [in the community] must take responsibility." Kerlikowske was also respected for his ability to combat racism within both the police department and Fort Pierce. He actively reached out to members of minority groups and increased the number of nonwhites in the police department.

While in Fort Pierce Kerlikowske made a failed attempt to win the post of police chief in St. Petersburg. In December 1993 he was hired as the police commissioner of the 933-member Buffalo, New York, police department; he assumed the post the following January. Kerlikowske was the first commissioner from outside the department in more than 30 years, and many Buffalo residents doubted that he could shrink the city's crime rate, which at that time was among the highest in the U.S. (It had jumped almost 50 percent since 1988—more than twice as much as the nationwide average.) He proved them wrong, however; during his four-and-a-half-year tenure, violent crime in Buffalo decreased by 38 percent—far more than the average decrease recorded in other U.S. cities in the 1990s. His accomplishment was linked to his steps toward modernization: he had computers installed in patrol cars, supplied bulletproof vests (previously, officers had to buy their own) and new guns, consolidated precincts, and increased officer training. He set up a telephone-reporting system for nonemergency calls, so that officers could concentrate on handling more serious matters; had pay phones removed or modified to thwart drug deals (cell phones were still uncommon then); and, with the help of housing inspectors, demolished or boarded up abandoned houses being used by criminals. He placed more officers on the streets and hired social workers to help troubled teenagers and counselors to help victims of domestic abuse. To raise standards within the department, he introduced random drug testing of officers and supported an FBI investigation of the narcotics division to weed out corruption. Rather than accepting applicants with only a high-school diploma, he required them to have completed at least two years of college. He also initiated regular communication with police departments in suburbs of Buffalo and with Rochester, the state's third-largest city, "to see how they do things," as he told Donn Esmonde for the *Buffalo News* (July 18, 1998). Joseph Riga, Buffalo's homicide chief at the time, told Esmonde, "We went from carbon paper to computers. [Kerlikowske] brought us out of the dark ages in equipment and training."

In Buffalo, too, Kerlikowske developed strong ties in the community. "Sometimes you get a commissioner you can't touch and can't see. That wasn't him," Laura Jackson, a Buffalo community activist, told Ray Rivera for the *Seattle Times* (July 12, 2000). "There was no time we could not call him that he did not respond. You could see his humanness even in his job." Kerlikowske worked with the city's minority groups and regularly attended community meetings in an effort to better serve and inform the public. "I want to educate the public about its role and about what police can and can't do," he told Gregory C. Racz for the *Buffalo News* (July 16, 1995). "Neighborhood watch and crime prevention steps have far more to do with crime reduction than 911 or the police. And anybody expecting miraculous, instantaneous change is going to be disappointed. Quick change is not lasting." Though he was criticized for spending too much time in Washington, D.C., his visits to legislators helped Buffalo: he secured $7 million in federal grants for the city's police department.

In 1998 President Bill Clinton appointed Kerlikowske to the position of deputy director of the Office of Community Oriented Policing Services (COPS). An arm of the Department of Justice, COPS seeks to advance the practice of community policing and provides grants to law-enforcement agencies to hire and train community-policing professionals and develop innovative policing strategies. For two years Kerlikowske oversaw communities' use of federal grants, to make sure they were in compliance with government requirements and rules. During that time he developed a relationship with Eric Holder, then the deputy attorney general and currently, under President Obama, the nation's attorney general. In 2000 Kerlikowske was short-listed for police-chief positions in Memphis, Tennessee, and Seattle. In July he accepted the offer of Seattle's mayor, Paul Schell, to head the city's 1,261-member police department. "I realize, more than ever, that leading a police department to improve the quality of life and provide a safer community is what motivates me," Kerlikowske told Ray Rivera. "The experience in Washington [D.C.] has been worthwhile and fills a void in my background, but is not something I want to end my career doing."

Kerlikowske was sworn in as Seattle's 47th police chief on August 14, 2000. He became embroiled in controversy in February 2001, when riots that broke out during a Madri Gras celebration resulted in the death of one man and injuries to 70 other people. Kerlikowske, who had ordered his officers to keep on the sidelines as the rioting erupted, was blamed for not taking action against the crowd, in which many had been inebriated. In defense of his actions and those of his officers, he maintained that police interference would have worsened the situation. One Seattle police officer, Eric Michl, explained to Alex Tizon for the *Seattle Times* (August 12, 2001), "Had we gone into that mess to stop it, it would have been very, very bad. There would have been seriously injured or dead cops, suspects or both. And with so many of the suspects being black, a lot of controversy would have followed." An investigation conducted by the police union concluded that police commanders had been wrong not to interfere. Kerlikowske impressed many critics when he publicly apologized for his mishandling of the incident.

Kerlikowske was further criticized in January 2002 when he reprimanded an officer who had been cleared of an accusation that his behavior toward a group of Asian-American teenagers had been based on racial profiling. Since the chief had failed to discipline any of the commanders on duty during the 2001 Mardi Gras celebration, union members complained that his system of discipline was unfair. In balloting held in March 2002, 88 percent of the city's police-union members expressed their lack of confidence in Kerlikowske. "The vote of no confidence in Chief Kerlikowske is not because he's not competent, he's very competent . . . ," Edward Tully, a retired FBI agent who at the time headed the Major Cities Chiefs Association, told Lewis Kamb, Mike Barber, and Hector Castro for the *Seattle Post-Intelligencer* (March 29, 2002). "Obviously, the Seattle police officers are not a happy lot and this is one of the few ways they have to demonstrate it." Tully added, "Kerlikowske's pretty good. He's one of the better, brighter chiefs of police in the United States. . . . [The vote] should be perceived as a tactic. It doesn't have that much to do with him personally."

Despite those controversies, Kerlikowske strengthened Seattle's police department. When he left the job, the city's crime rate stood at its lowest level in 40 years. Some of his accomplishments include his creation in 2002 of the Seattle Police Foundation, which has since raised over $1 million for training, technology, and equipment. The foundation set up a statewide database with which officers can access the records of and receive alerts about armed career criminals, and it provided officers with alternatives to lethal force, such as Taser devices. By 2004 Kerlikowske had turned down offers to run police departments in San Francisco, California, and Boston, Massachusetts. He was nominated for the 2004 *Seattle Post-Intelligencer* Jefferson Award for his leadership and compassion in preventing youth crime and violence; in 2006 he received the James V. Cotter Award from the Commission on Accreditation for Law Enforcement Agencies (CALEA) for leading three police agencies (those of Port St. Lucie, Fort Pierce, and Seattle) to achieve national accreditation. Kerlikowske was an adjunct professor at Seattle University, where he taught courses in law enforcement, and he served on the board of directors for the Washington State Criminal Justice Training Center.

Only one member of the U.S. Senate opposed Kerlikowske's confirmation as director of the ONDCP. Kerlikowske assumed the office on May 7, 2009, nearly 40 years to the day after President Richard Nixon, at a press conference, described drug abuse as "public enemy number one" and declared a "war on drugs." President Obama, according to Tim Dickinson, writing for *Rolling Stone* (June 25, 2009), has called the war on drugs an "utter failure." "It now appears that drugs have won," Nicholas D. Kristof wrote in his op-ed column for the *New York Times* (June 14, 2009), noting that in those 40 years, the number of people imprisoned for drug offenses has jumped by more than 1,200 percent, to 500,000, with the result that "the United States now incarcerates people at a rate nearly five times the world average"; the prices of illegal drugs have risen, enriching and impowering drug lords, smaller-scale criminals, and terrorist groups; and of the estimated trillion dollars spent so far in enforcing drug laws, only a small fraction has been devoted to treatment and rehabilitation—an unjustifiable squandering of resources, in Kristof's view.

On June 24, 2009 the U.N. Office on Drugs and Crime made public its 2009 *World Drug Report*, which, in a reversal of previous policy, recommended the decriminalization of drugs. In response to the publication of the report, Kerlikowske declared, in a statement posted on the ONDCP Web site that day, "We are moving away from divisive 'drug war' rhetoric and focusing on employing all the tools at our disposal to get help to those who need it. . . . My top priority is to intensify efforts to reduce the demand for drugs which fuels crime and violence around the world. . . . The earlier we can intervene to get people help, the better—that's why prevention through schools and the media, and screening for substance abuse problems in a wide variety of health care settings is so vital. We will be expanding these existing efforts and working to ensure drug abuse treatment services are incorporated into our national health care reform process. These efforts will include expanded work to address the abuse of pharmaceutical drugs, a problem of increasing concern within the United States." Kerlikowske also emphasized the importance of providing "evidence-based treatment" for drug offenders; reducing drug trafficking and commerce in weapons associated with drug trafficking, in partnership with the governments of nations including Mexico, Colombia, Peru, and Afghanistan; and sharing with other governments the findings of research funded by the National Institute of Drug Abuse. In his remarks Kerlikowske did not talk about the possibility of decriminalizing the use of illegal drugs. Both he and President Obama have specifically rejected proposals to decriminalize the production, sale, and use of marijuana, but the Obama administration has ended law-enforcement officers' raids on medical facilities that distribute marijuana to patients for the control of pain and nausea.

In 1990 the Police Executive Research Forum (PERF) honored Kerlikowske with the Gary Hayes National Memorial Award for Innovation in Policing. He served as PERF's president between 1996 and 1998 and as president of the Major Cities Chiefs Association in 2009. Kerlikowske's first marriage ended in divorce. According to David Saltonstall, writing for the New York *Daily News* (March 13, 2009, on-line), Kerlikowske told another *Daily News* reporter a month earlier that he had not seen or spoken to his adopted son for "well over a decade." In 1995 Kerlikowske married Anna Laszlo. As of mid-2009 Laszlo was the director of research, evaluation, and training for Circle Solutions Inc., "an employee-owned professional services firm providing products and services in support of healthier, safer people and communities," according to its Web site. Kerlikowske is a voracious reader. He and Laszlo enjoy running, bicycling, playing tennis, and attending performances of musicals. They have memorized most of the songs written by the composer Richard Rodgers and the lyricist Oscar Hammerstein. On February 23, 2005 Kerlikowske performed at the 5th Avenue Theatre, in Seattle, as the baton-twirling policeman in a stage production of *Singin' in the Rain*. His daughter, Kim, and her husband are the parents of Kerlikowske's three grandchildren.

Kilar, Jason

(KYE-lahr)

Apr. 26, 1971– CEO of Hulu

Address: Hulu, 12312 W. Olympic Blvd., Los Angeles, CA 90064

"When cable [television] eventually dies, websites like Hulu will be held responsible," a writer for *Time* (November 10, 2008) declared, referring to the on-line video site that is headed by Jason Kilar. Developed jointly by NBC Universal Inc. and the News Corp., Hulu.com debuted on March 12, 2008, and it ranked fourth on *Time*'s list of the 50 best inventions of that year. The site offers, at no cost to consumers, full-length episodes of 1,700 network television shows, ranging from *The Mary Tyler Show* and *Buffy the Vampire Slayer* to *Biography*, *Nova*, and *NBC News Specials*, and more than 400 feature films. Hulu users can stream the videos di-

Jason Kilar

rectly through the Web site, eliminating the need to download programs or plug-ins. Although the shows are interrupted by commercials—the source of Hulu's revenues—there are far fewer commercial breaks than ordinarily occur on television. Kilar, who worked for Disney and Amazon.com after he earned a graduate degree in business, became the chief executive officer of Hulu in 2007. Since then Hulu's roster of content providers has grown to more than 150 and its advertisers to more than 250, among them such corporate giants as American Express, McDonald's, Intel, Johnson & Johnson, and Cisco. As of September 2009 Hulu was the fourth-most-popular video-streaming Web site in the U.S., with 38.5 million individual viewers and 488 million video streams recorded the previous month. Hulu's successful launch and its rapid growth have been attributed in large part to Kilar's foresight and business savvy. Kilar was chosen as one of *Entertainment Weekly*'s "25 Smartest People in TV" in December 2008, and he was named among *TV Week*'s "12 to Watch" in February 2009.

One of the six children of Lance and Maureen (Blake) Kilar, Jason Kilar was born on April 26, 1971 in Pittsburgh, Pennsylvania. His father was an engineer with the Westinghouse Electric Co. Kilar grew up in Murrysville, outside Pittsburgh. He attended the University of North Carolina (UNC) at Chapel Hill, where he was elected to the Phi Beta Kappa honor society and graduated in 1993 with two bachelor's degrees, a B.S. in business administration and a B.A. in mass communication. That year Kilar was hired as an analyst for Disney Design & Development, a division of the Walt Disney Co. For two years he worked in the strategy and marketing groups that handled the Disney Vacation Club. He continued his studies at the Harvard Business School, in Cambridge, Massachusetts, earning an M.B.A. degree in 1997.

Early that same year Kilar joined Amazon.com, the Seattle, Washington–based electronic-commerce company founded in 1994 by Jeff Bezos. His title at Amazon, which was then almost exclusively a seller of books, was product manager. "When I first came to Amazon . . . , it was a private company, and the future was uncertain. But I was very impressed with the quality of the people," Kilar said in an interview for the Web site of UNC–Chapel Hill Kenan-Flagler Business School. "Bezos held the quality bar extremely high in terms of the team he assembled. It's a company that's very much a meritocracy. You run as fast as you can, and you'll be rewarded accordingly. Responsibility at Amazon is accorded simply on your results and your ability to perform. That's very satisfying." Kilar added, referring to the site of the Wright brothers' first successful airplane flight, that part of what attracted him to Amazon was that "the opportunity [was] so immense," like "the Kitty Hawk era in terms of e-commerce."

Rising through the ranks, Kilar developed the business plan for Amazon's expansion into sales of videos and DVDs, in 1998. That new business generated hundreds of millions of dollars in revenues, and Amazon has since grown into one of the world's largest retailers of those items as well as books. In 2001 Kilar was promoted to general manager and vice president of Amazon's North American media businesses, which included the books, music, video, and DVD divisions. Two years later he was named senior vice president of worldwide application software, a position that placed him in charge of Amazon's Marketplace business (through which a customer can buy new and used items from a third party, either a retailer or an individual) and the applications used on Amazon's global Web sites (which include software that suggests products to a user based on his or her personal profile and purchase history). Reporting directly to Jeff Bezos, Kilar oversaw a large group of technologists whose task was to make sure Amazon was user-friendly. He left Amazon in early 2006.

In 2007 network television companies began searching for ways to provide profit-generating content on-line and also prevent the piracy of their programs. CBS invested in the start-up Internet video service Joost (which has thus far failed to capture a large number of Web users, because it requires the viewer to download a player onto his or her computer). Viacom, which owns MTV and Comedy Central, invested in Joost as well as in Google, the latter of which had just bought YouTube, the nation's most popular video-sharing site; Disney, the owner of ABC, provided videos on its own Web site. News Corp., which owns the Fox Entertainment Group, and NBC Universal, which is owned by the General Electric Co., teamed up to create an entirely new Internet video service. The two companies publicly announced their intentions in March 2007. Providence Equity Partners, a private equity fund whose specialty is the media, invested in the venture, and Yahoo!, AOL, MSN, and MySpace soon came on board as distribution partners. Having decided that their fledgling company, called NewSite, needed a chief executive officer with experience in Internet commerce rather than television, News Corp., NBC Universal, and Providence Equity Partners chose Kilar to direct it. "Jason's product and consumer expertise in the world of e-commerce is arguably unrivaled in this business and gives him a great insight into what it takes to create a superior user interface," Peter Chernin, the president and chief operating officer of News Corp., stated in a press release, as reported by *Business Wire* (June 28, 2007, on-line). "We already have access to world-class content and near ubiquitous distribution, and the next step is marrying it with the features and tools that will help define the ideal user experience for video content on the web. We think Jason is the ideal person to lead that effort."

Kilar took command of the Los Angeles–based venture in early July 2007. Drawing on the contacts he had made during his time in Seattle, he hired 28-year-old Eric Feng, a former Microsoft engineer, as the chief technology officer. Feng and his team were charged with developing the Web site and video player. Kilar worked on acquiring television series and films, not only from NBC, Fox, and their affiliated channels but also from other companies, including the film studios Lionsgate and Warner Bros. He persuaded them to become partners in the venture by emphasizing that through the Internet, their audiences would undoubtedly become much broader. Kilar suggested to Frank Rose for *Wired* (October 2008) that if he imagined himself as a network executive, "and I told you here was a tool that enabled your content to be shared, to be forwarded, to make your audience your most powerful marketing vehicle—it would be music to your ears, right? This is a tectonic shift, and what it does is allow network heads to find the audience they always should have had but couldn't reach."

Hulu, as NewSite was now called, officially launched on March 12, 2008. Earlier, in 2007, according to the Marketing Pilgrim and other Web sites, Kilar had explained why he and his colleagues had chosen the new name: "Objectively, Hulu is short, easy to spell, easy to pronounce, and rhymes with itself. Subjectively, Hulu strikes us as an inherently fun name, one that captures the spirit of the service we're building. Our hope is that Hulu will embody our (admittedly ambitious) never-ending mission, which is to help you find and enjoy the world's premier content when, where and how you want it." The day after Hulu's debut, Kilar explained in a Hulu blog that contrary to outsiders' claims that the name meant "snoring" in one of China's languages or "cease and desist" in Swahili, in Mandarin (the official language of mainland China), "Hulu has two interesting meanings, each highly relevant to our mission. The primary meaning interested us because it is used in an ancient Chinese proverb that describes the Hulu as the holder of precious things. It literally translates to 'gourd,' and in ancient times, the Hulu was hollowed out and used to hold precious things. The secondary meaning is 'interactive recording.' We saw both definitions as appropriate bookends and highly relevant to the mission of Hulu."

When it began, Hulu offered about 250 television shows and 100 movies. The site, as described by Chuck Salter for *Fast Company* (February 11, 2009, on-line), "features a larger screen and high-resolution video designed to showcase the content the networks and studios have spent millions of dollars writing, filming, and editing. There's no player to download—the video plays instantly in a Web browser. And the site is clutter-free, avoiding what Kilar calls the 'Tokyo at night' look of sites packed with blinking links." The site also makes it possible for users to embed clips from Hulu's library on their own Web sites. Kilar said, as quoted by Michael Learmonth in *Advertising Age* (November 17, 2008), "Also, my mother had to be proficient in [navigating the Web site] in 15 seconds or less with no help from me."

Hulu's large library, as well as the site's easy-to-use, sleek design, soon silenced critics who had doubted that the venture would find an audience. Indeed, its audience grew steadily in 2008. In October of that year, Hulu registered 24 million unique viewers (that is, its shows were downloaded on 24 million computers), nearly double the number of viewers the previous month. The boost was attributable in part to the site's enormously popular *Saturday Night Live* clips in which Tina Fey offered impressions of the 2008 Republican vice-presidential candidate, Governor Sarah Palin of Alaska. Hulu was also helped by Joss Whedon's three-part musical *Dr. Horrible's Sing-Along Blog*, starring Neil Patrick Harris, which was distributed exclusively by Hulu and became the fifth-most-watched viral video (a video clip that gains widespread popularity through Internet sharing) of 2008. Within six months of its premiere, Hulu had become the sixth-most-popular video Web site in the U.S., with 142 million video streams per month. "It is very understandable that so many journalists and respected bloggers felt that Hulu would have a very difficult time gaining traction," Kilar told Stephen J. Dubner, the co-author of the *New York Times*'s "Freakonomics" blog (May 13, 2009). "It is far more common for start-ups to fail, even without taking into account the unique dynamics that surrounded Hulu in the early days. . . . The Hulu team would be the first to say that we're very much the recipients of good timing and good fortune. . . . Hulu's original business plan did not include phrases like 'and then Tina Fey will impersonate Sarah Palin and an online sensation will ensue.' We're ever thankful for the wondrous and at times wacky things that helped get Hulu to this early point."

By the end of 2008, Hulu ranked third on the *Fast Company* 50, a list of "enterprises that will redefine our future and point the way to a better tomorrow"; it also was *PCWorld*'s "number one product of the year," was named "Web site of the year" by the Associated Press, and was heralded as the "best new way to watch TV" by *BusinessWeek* and *New York* magazines. "In the Wild West that is online video," Jake Coyle wrote for the Associated Press (December 19, 2008), "Hulu.com has proven to be a trailblazing answer to how professional content can thrive on the web." Though Hulu continues to trail the nation's largest video Web site, YouTube, in viewership by a wide margin, it has attracted far more advertisers. (The two sites are often cited as competitors, though YouTube specializes in user-generated content, movie and television clips, and music videos.) Among the advantages Hulu offers to advertisers is a way of targeting viewers by permitting them to choose a specific commercial; Nissan, for example, allowed viewers to choose an ad for an SUV, a coupe, or a sedan, depending on their preference. Another format, aimed at film studios, allows viewers to view an entire television show without commercials as long as they watch a movie trailer first. "One ad agency executive told me that he'd been waiting for this for 10 years," Kilar told Michael Schneider for *Daily Variety* (March 11, 2008).

In January 2009, according to the digital-marketing research firm comScore (March 4, 2009, on-line), Hulu ranked sixth among on-line firms in number of videos watched (250.5 million, or 1.7 percent of the total viewed on the Internet), behind Google sites, Fox Interactive Media, Yahoo! sites, Microsoft sites, and AOL, and it recorded 24.5 million unique viewers. Hulu's rapid growth was attributed to word of mouth until February 2009, when the company began to air advertisements on television. Featuring one or another actor or actress, among them Alec Baldwin, Seth McFarlane, Denis Leary, and Eliza Dusku, the ads mocked television's reputation as intellectually stultifying, with the slogan "Hulu: an evil plot to destroy the world. Enjoy." By the end of March 2009, Andy Fixmer reported for Bloomberg.com (April 28, 2009), Hulu ranked third among most-watched Internet video sites, with 380 million videos viewed in March. On April 30, 2009 Hulu announced a deal with Disney/ABC that has added several ABC series and ABC Family series to its library. As part of the agreement, Disney acquired a 27 percent stake in Hulu. (CBS is now the only major television network that is not signed with Hulu.) According to Screen Digest, which analyzes aspects of the media, Hulu is expected to generate $175 million in ad revenues in 2009, two and a half times the $70 million it earned in 2008.

One of the often repeated complaints about Hulu is that it is available only to viewers in the U.S. Licensing and copyright issues have slowed the Web site's expansion overseas, but Kilar assured the *New Zealand Herald* (May 21, 2008), "I personally would be very disappointed if we don't bring Hulu out in the next several years to countries around the globe."

Recently, there has been a lot of speculation that Hulu may require subscription fees for its content. Some reports suggest that in 2010, the Web site will begin charging users for new shows, while shows that were previously posted to the site will remain free. Chase Carey, the deputy chairman of the News Corp., which is a part-owner of Hulu, addressed the issue during a recent conference. "I think a free model is a very difficult way to capture the value of our content," he said, as quoted by Brian Morrissey for *AdWeek* (October 22, 2009, online). "I think what we need to do is deliver that content to consumers in a way where they will appreciate the value." He added, "We continue to believe that the ad-supported free service is the one that resonates with the largest group of users and any possible new business models would serve to complement our existing offering. There are no details or time lines to share regarding our future product road map."

Kilar and his wife have two children. Most of his consumption of TV shows takes place via his computer. One exception is sports, especially UNC basketball games, which he enjoys watching on his plasma television.

Kimmel, Jimmy

Nov. 13, 1967– Host of Jimmy Kimmel Live*; comedian*

Address: Jimmy Kimmel Live, *6834 Hollywood Blvd., Los Angeles, CA 90028*

The comedian Jimmy Kimmel, the host and executive producer of ABC's popular late-night television talk show, *Jimmy Kimmel Live*, has long been known for his "guy's guy" persona and irreverent sense of humor. As a youth growing up in Las Vegas, Nevada, Kimmel became enamored of *Late Night with David Letterman*, which began airing on NBC in 1982, when he was 14, and he dreamed of one day enjoying a career similar to that of its host. Having learned that Letterman had started his career in radio, he got a job at a college radio station while still in high school. In the 1990s Kimmel made a name for himself on radio stations including KROQ in Los Angeles, California, where he was known as "The Sports Guy." He moved to television as the co-host of Comedy Central's critically acclaimed game show *Win Ben Stein's Money*. He

Kevin Winter/Getty Images

Jimmy Kimmel

next became the co-creator and co-host of the raunchy comedy program *The Man Show*, which celebrated stereotypical loutish male behavior and tastes. Kimmel later co-created and co-produced *Crank Yankers*, the popular Comedy Central show in which puppets act out real prank phone calls. In 2002 Kimmel was tapped to host ABC's late-night talk show, to replace *Politically Incorrect with Bill Maher. Jimmy Kimmel Live* premiered on January 26, 2003, after Super Bowl XXXVII. While retaining his regular-guy charm, he has successfully translated the comic style that he fine-tuned on *The Man Show*—described as "sophomoric," "immature," "gross-out," and "frat-guy humor"—into one acceptable to more-mainstream audiences. His "low-brow style of humor," Thomas Tennant wrote for About.com, "can be wickedly funny and good-natured." Currently, ABC promotes Kimmel as "the king of late-night cool," and his show, now in its fifth season, draws close to two million viewers each night.

The first of the three children of Jim and Joan Kimmel, James Christian Kimmel was born on November 13, 1967 in the New York City borough of Brooklyn. His father, a skilled bowler who dropped out of high school to earn money as a bowling hustler, met Kimmel's mother at a bowling alley. He later joined the U.S. Army and, after his military discharge, worked as both a short-order cook and an Equitable Insurance agent; according to some sources, he also worked for IBM. Kimmel's brother, Jonathan, is a television writer and producer. When Jimmy was nine years old, his family, which includes his sister, Jill, moved to Las Vegas, where his maternal grandparents, his uncle Frank Potenza, and his cousin Sal Iacono had recently moved. A Roman Catholic, he served as an altar boy for seven years. He told Bill Zehme for *Playboy* (December 2007) that he became "obsessed" with the snarky comedian and interviewer David Letterman and watched Letterman's show every weeknight. "The license plate on my first car was L8NITE," he recalled to Zehme. "For my 18th birthday my mom decorated the cake with the old NBC *Late Night with David Letterman* logo, and I posed for the picture with a big Dave-like cigar in my mouth." He told Kevin Cook for *Playboy* (February 2003), "You know how in high school, some guys play football and some are good students? I was the obsessed-with-Letterman guy." Kimmel also came to admire the comedy of the "shock jock" radio personality Howard Stern, after listening to a tape of Stern's show that his uncle had mailed to him.

Kimmel was a student at Ed W. Clark High School, in Las Vegas, when he got his first radio job, at the University of Nevada–Las Vegas (UNLV) station. After his high-school graduation, he attended UNLV for about one year before dropping out and enrolling at Arizona State University at Tucson. There he met Gina Maddy, whom he married two years later, when he was 20 years old. In 1989 he left college without earning a degree, to take a job with the morning radio program *The Me and Him Show*, on KZOK in Seattle, Washington. Kimmel and his on-air partner, Kent Voss, stayed at KZOK for 10 months before they were fired. Kimmel told Cook that he was ousted because he called his boss's idea for a new show "the stupidest idea I ever heard." He moved with his wife back to his parents' home in Las Vegas until, nine months later, he joined Voss and Voss's friend Mike Elliott, to serve as a producer and on-air personality for a morning radio show in Tampa Bay, Florida. Kimmel honed an irreverent on-air shtick that included live prank phone calls. After 10 months he and Voss were dismissed from that job as well. "People laugh about how I kept getting fired," Kimmel told Cook, "but it wasn't funny at the time. I was shocked and felt worthless." In the early 1990s Kimmel worked at a radio station in Tucson and had his own show on KCMJ-FM in Palm Springs, California, where Carson Daly (who later made a name for himself as an MTV video jockey and as the host of NBC's *Last Call with Carson Daly*) interned with him for a while. Kimmel also became the father of two children.

In 1994 Kimmel landed a job as a writer and sports commentator on the radio program *Kevin and Bean*, which aired on the popular Los Angeles modern-rock station KROQ. He adopted the moniker "Jimmy the Sports Guy" and injected humor into his sports commentaries. At KROQ he met Adam Carolla, a co-host with Drew Pinsky of the station's sex-and-relationship call-in show, *Loveline*. He and Carolla became close friends. In 1996 the two collaborated on a three-minute soap-opera parody, "The Cabbisons," that ran briefly as a segment on *Kevin and Bean* one morning each week.

"It's a parody of all sitcoms," Kimmel told Carrie Borziollo for *Billboard* (March 2, 1996). "I write it and make it as bad as possible and put in many unfunny lines and really bad laugh tracks." Kimmel went on: "My philosophy on radio is that you can't guess what people will think is funny. You can only do what you think is funny."

During the five years that he worked at KROQ, Kimmel took steps toward building a television career. In 1997 he began co-hosting Comedy Central's game show *Win Ben Stein's Money*, along with Stein, an attorney, former White House speechwriter, and actor known for his monotone and deadpan humor. On that show three guests competed to win $5,000, supposedly taken from Ben Stein's earnings, by correctly answering a series of questions. (A disclaimer that aired at the end of each installment explained that the prize money came out of the show's budget; any money left over after each season's finale was given to Stein.) Kimmel served as the wisecracking sidekick to the patrician Stein. Known for its irreverent tone and risqué humor, *Win Ben Stein's Money* won six daytime Emmy Awards, including one shared by Kimmel and Stein, in 1999, for outstanding game-show host. Around that time Kimmel began appearing as a guest host on *Fox NFL Sunday*, the pregame show for Fox's Sunday broadcast of National Football League games. In that role he became known for his smart-aleck remarks and for poking fun at the show's regular hosts, Terry Bradshaw, Cris Collinsworth, and Howie Long. His regular appearances on *Fox NFL Sunday* continued until 2003.

Concurrently, in 1999, Kimmel, Carolla, and the producer Daniel Kellison came up with the idea for *The Man Show*, a tongue-in-cheek comedy program geared toward young men and what were identified as their main interests—breasts, beer, masturbation, and farts. ABC commissioned the pilot but turned it down, deeming its contents too crude; Comedy Central accepted it. *The Man Show* debuted in June 1999, in the time slot following the popular and similarly raunchy animated-cartoon comedy *South Park*. One of the series' signature elements was the "Juggy Squad," the group of buxom female models who danced around the audience in revealing outfits at various moments throughout the show. Along similar lines, the closing credits for every episode included footage of young, bikini-clad women jumping on trampolines. Other segments included "Household Hints from Adult Film Stars," in which actors and actresses offered innuendo-laced advice; sing-along drinking songs performed by Bill "The Fox" Foser, who could drink two beers in less than two seconds; and Kimmel and Carolla's man-on-the-street antics. The first installment of *The Man Show* garnered the highest ratings ever for a Comedy Central premiere. Despite drawing criticism for its adolescent humor, the show became popular, mostly with male audiences. Kimmel and Carolla described *The Man Show* to a *Playboy* (August 1999) interviewer as a response to the many successful talk shows that catered to female audiences—Oprah Winfrey's and Rosie O'Donnell's, for example—and to the increasing "feminization" of men. "Our show is about what is true and what isn't," Kimmel told the interviewer. "It's no bullsh*t. I mean, *Baywatch*, *VIP* . . . they pretend to have a plot in all that stuff. We are not pretending; we have girls jumping on trampolines. That's as honest as it gets. We like to watch girls on trampolines." After Kimmel and Carolla left the program, in 2003, *The Man Show* aired for one more season, with Joe Rogan and Doug Stanhope as co-hosts. Drastically diminished audiences led to its cancellation, in 2004.

Meanwhile, in 2002, Kimmel, Carolla, and Kellison had founded a company, Jackhole Productions, and created another show for Comedy Central, called *Crank Yankers*. Developed largely because of Kimmel's love of prank phone calls, the show featured puppets mouthing and reenacting recordings of actual prank calls made by Kimmel and Carolla. Celebrity guests included Andy Dick, Bobcat Goldthwait, David Alan Grier, Seth McFarlane, Kevin Nealon, Sarah Silverman, Eminem, and Snoop Dogg; members of Kimmel's family also made appearances. In a time-consuming, labor-intensive process, each installment of *Crank Yankers* required preparing for and making the calls, obtaining release forms, constructing whatever new puppets were needed, and shooting and editing the puppet scenes. Kimmel and Carolla selected the best out of the 1,000 or so prank calls recorded for each season. *Crank Yankers*, which premiered in 2002, became the second-highest-rated show on Comedy Central, behind *South Park*. It was cancelled in 2005. In 2007 new episodes ran briefly on the MTV2 network; currently, MTV2 broadcasts reruns of the show.

Also in 2002 ABC offered Kimmel his own late-night talk show to replace the political-roundtable talk show *Politically Incorrect with Bill Maher*, which had been cancelled in July of that year. "It was so fast," Kimmel told Lynette Rice for *Entertainment Weekly* (November 28, 2003). "Suddenly I was on a plane to New York, and they were telling me things like 'This has to be a home run. There are a billion dollars of advertising at stake.' I was like, 'I'm hoping for a double. Would everyone be happy with a double?' And they're like, 'No.'" *Jimmy Kimmel Live* was modeled on CBS's *Late Show with David Letterman* and NBC's *Tonight Show with Jay Leno*: Kimmel was to sit behind a desk, recite an opening monologue, banter with celebrity guests, and take part in onstage and prerecorded segments. Unlike its competitors, it would be aired live before a studio audience.

Jimmy Kimmel Live debuted on January 26, 2003, in a special Sunday broadcast following ABC's airing of Super Bowl XXXVII, in an effort to draw a large audience. The show immediately experienced several problems. "It took just 10 minutes for the show to spiral out of control," Rice wrote. "An outdoor concert by Coldplay snarled traffic and enraged nearby businesses, while the plan to serve alcohol to the studio audience turned sour when a woman vomited off camera." Writing for *Time International* (February 10, 2003), James Poniewozik noted that the show's guests that night, among them the actor George Clooney, appeared uncomfortable with Kimmel's "tasteless jokes." Airing after Ted Koppel's news program, *Nightline, Jimmy Kimmel Live* received low ratings in its first season and was panned by critics. After 10 months its ratings lagged well behind those of its late-night competitors. Kimmel had trouble attracting celebrities to serve as guests, and ABC affiliate channels began to pull the show from the air and replace it with reruns of other shows. Kimmel grew frustrated and anxious. In early 2004 ABC's chairman, Lloyd Braun, one of Kimmel's biggest supporters, left the network—or was ousted, according to many reports. "It was definitely scary to lose Lloyd," Kimmel told Paige Albiniak for *Broadcasting & Cable* (June 28, 2004). Nevertheless, Albiniak wrote, ABC continued to support Kimmel and remained committed to improving the show's ratings. In early 2004 *Jimmy Kimmel Live* ended live broadcasts; according to the show's Web site, it is taped at 7:45 p.m. Pacific time and airs the same day. (All other late-night shows are recorded in the afternoon.)

On June 8, 2004 Kimmel joined the ABC sportscaster Mike Tirico to offer commentary during Game Two of the five-game National Basketball Association finals, which pitted the Los Angeles Lakers against the Detroit Pistons. At halftime Kimmel remarked, as quoted by Albiniak, "I realize that they're going to burn the city of Detroit down if the Pistons win, and it's not worth it." Tirico, who was then a Michigan resident, immediately objected to Kimmel's comment, and ABC received calls and e-mail messages from viewers condemning his words. ABC cancelled the June 9 installment of *Jimmy Kimmel Live*, and that day Kimmel issued through the network a written apology that read, according to *USA Today* (June 10, 2004, on-line), "What I said about Pistons fans during halftime was a joke, nothing more. If I offended anyone, I'm sorry. Clearly, over the past 10 years, we in L.A. have taken a commanding lead in post-game riots. If the Lakers win, I plan to overturn my own car." That statement, in turn, was criticized as a tasteless joke, and on June 10 Kimmel offered a second apology, distributed by ABC's publicity department, which read, as quoted in *USA Today*, "When you're 2,000 miles away from a city you've never lived in, it's hard to understand the sadness people feel from something that happened in their town—even if it happened many years ago. It was never my intention to cause anyone pain. I was trying to make a joke and I'm sorry it resulted in anything other than laughter."

Despite the difficulties Kimmel and *Jimmy Kimmel Live* experienced during the show's first season, it was renewed for a second. The 2005–06 season witnessed a 17 percent jump in its ratings among adults ages 18–49 and a 6 percent increase in overall ratings. After Jill Leiderman, a former producer for *The Late Show with David Letterman*, was hired as executive producer, in April 2006, she helped to reinvent the show, tailoring its humor to appeal to a broader audience. Critics and viewers responded favorably, and the show has continued to gain popularity. By March 2008 Kimmel's audience had reached just under two million viewers.

Kimmel's boyhood friend Cleto Escobedo III, a saxophonist and singer, leads Cleto and the Cletones, the *Jimmy Kimmel Live* band; Cleto Escobedo Jr., also a saxophonist, is a member of the band, too. (Father and son both had successful careers as musicians before joining Kimmel's show.) Kimmel's uncle Frank Potenza, Frank's former wife, Concetta (nicknamed Chippy), and Kimmel's cousins Micki and Sal have also appeared regularly, and his parents have been guests from time to time. Some of the popular recurring segments on *Jimmy Kimmel Live* include "This Week in Unnecessary Censorship," in which Kimmel presents a television clip in which an innocuous word or words have been bleeped, suggesting falsely that the material is scandalous. In another segment, "Uncle Frank and Aunt Chippy's Adventures," Kimmel's aunt and uncle paint nude models, take classes in self-defense, or engage in other potentially funny or ridiculous activities. Kimmel's daughter, Katherine (called Katie), and son, Kevin, both of whom are teenagers, have also appeared on *Jimmy Kimmel Live*; years ago they were occasionally seen on *The Man Show* and were heard making phone calls on *Crank Yankers*. Another segment featured the comedian Andy Milanokis; Kimmel later served as an executive producer of *The Andy Milanokis Show*, which ran on MTV in 2005–06.

In September 2008 Kimmel hosted an ABC special featuring celebrities including Ryan Seacrest, Tracy Morgan, Salma Hayek, Michael Phelps, Kobe Bryant, William Shatner, and Rachael Ray. Observers noted that the network's selection of Kimmel to host the show demonstrated its commitment to allowing his late-night show to continue. (Some people had speculated that Kimmel was to be replaced by Jay Leno.) In May 2009 Kimmel delivered what Dave Itzkoff, writing for the *New York Times* (May 19, 2009, on-line), described as a "withering, blistering monologue" at ABC's upfront presentation, in which potential advertisers watch samples of the next season's shows. In the much-talked-about monologue, Kimmel said in part, as quoted by Itzkoff, "Let's get real here. Let's get Dr. Phil-real here. These new fall shows? We're going to cancel 90 percent of them. Maybe more." Referring to advertisers' efforts to have their products appear on sets or as part of story lines, he said: "Next year on *Grey's Anatomy*, your product could kill Dr. Izzie. It just depends on how much you want to pay." According to an ABC press release, the total number of viewers of *Jimmy Kimmel Live*, and, in particular, the total number of viewers ages 18 to 49, was greater during the 2009 February/March "Sweeps" period than in the same period in 2008. In at least five consecutive weeks during the summer of 2009, the show garnered higher ratings than its time-slot competitor, NBC's *Late Night with Jimmy Fallon*, which premiered in March.

Kimmel's marriage ended in divorce, in 2003, after more than a year of separation. Kimmel and the comedian Sarah Silverman became romantically involved in about 2002. Kimmel became a topic in Silverman's stand-up routines, and Silverman was a frequent guest on Kimmel's show. During the show's fifth-anniversary special, on January 26, 2008, Silverman presented Kimmel with a satirical music video in which she "confessed" to having had an affair with the actor Matt Damon. The video was replayed millions of times on the Internet and brought Kimmel's show nationwide attention. (In September 2008 Silverman's video earned a Creative Arts Primetime Emmy in the category of outstanding original music and lyrics.) Kimmel responded on February 24, 2008 with a similar, star-studded music video, in which he confessed to having had an affair with the actor Ben Affleck, a longtime friend of Damon's. The following July representatives of both Kimmel and Silverman confirmed that the pair had broken up. Kimmel and Silverman reunited later in 2008 and split up again in early 2009.

Zehme described Kimmel as "a man of considerable heart and generosity who loves much, loves enthusiastically and loves nothing more than the ever fertile prospect of Good Times—the two hopeful words he reflexively employs most often in life, especially during awkward conversations, in dashed e-mail sign-offs and when nothing else interesting comes to mind." Kimmel lives in Los Angeles, less than a mile from the home of his ex-wife and children. He enjoys cooking, golfing, watching sports, and hosting large gatherings than often center on football games viewed on his big-screen television.

Knox, Simmie

Aug. 18, 1935– Portrait artist

Address: Knox's Portraits and Fine Arts, 13801 Ivywood Ln., Silver Spring, MD 20901

The artist Simmie Knox has painted portraits of some of the most influential and prominent figures in modern America. His subjects have included the U.S. Supreme Court justices Thurgood Marshall and Ruth Bader Ginsburg, the boxing champion Muhammad Ali, and the baseball Hall of Famer Hank Aaron. The highlight of his career thus far came in 2001, when he became the first African-American artist to be commissioned to paint an official presidential portrait. His portraits of former president Bill Clinton and Hillary Rodham Clinton were unveiled in 2004.

Knox, who grew up in Alabama in a poor family of sharecroppers, went on to study at the Tyler School of Art at Temple University and taught art for 18 years in schools in Pennsylvania, Delaware, Maryland, and Washington, D.C. He nonetheless describes himself often as a "self-taught" portrait artist. "When I graduated from Tyler, I was an abstract painter. At that time, abstract painting was in vogue," he explained to James Auer for the *Milwaukee Journal Sentinel* (June 16, 2004). "I'd had no classes in figure painting. I had to read some books and just kind of practice. I'd been taught elements of design and principles of composition, and this, coupled with my skill at drawing, enabled me to train myself to do the figure." Knox has said that he switched to portraits because he found them to be far more challenging than abstract art. "You have to get the exact likeness of a person you're striving to please, whereas in an abstract, things just happen. This requires a [certain] skill. The older I get, [the more] I realize that I have a special skill. I'm blessed," he told Betsy Peoples for the *Crisis* magazine (May/June 2002).

In the early 1980s Knox's family sold his art at a local public market in Washington. He has often credited the comedian Bill Cosby with helping to raise his profile in the city's art community. After a meeting in 1983, Cosby commissioned Knox to paint portraits of his family members and referred the artist to his friends. Elaine Bachmann, curator of the Maryland Commission on Artistic Property, said to Tamela Wallace for the Annapolis, Maryland, *Capital* (February 28, 2005), "Simmie Knox's portraits will emerge as some of the most insightful images of public servants. His work has the realism of photography, but clearly shows the hand of the artist. . . . Knox's portraits . . . have a timeless quality that places him within the great tradition of American portraiture." After almost three dec-

Simmie Knox

ades as a portrait artist, Knox remains passionate about his work. "I can look at something and render it just the way I see it," he told Foster Klug for the Associated Press (June 18, 2004). "That's a rush you never get tired of."

Simmie Lee Knox Jr. was born on August 18, 1935 in Aliceville, Alabama, the only child of Simmie Knox Sr., who worked as a carpenter and mechanic, and Amelia Knox. When Knox was three his parents divorced, and his father sent him to Leroy, Alabama, to live with his grandfather and a paternal aunt. Knox's father lived and worked in another city while young Knox was put to work on the family farm. "We worked, literally, from sunup 'til sundown, in the field. Whatever there was to be done. You didn't go to school. You worked on the farm," he told Peter Jennings on the ABC program *World News Tonight* (June 18, 2004, on-line). When Knox was nine he moved to Mobile, Alabama, to live with his father and stepmother, Lucille. Enrolled at Most Pure Heart of Mary, a Catholic grade school, Knox attended class seven days a week, making up for the schooling he had missed. He showed an interest in drawing at a young age and would often draw humorous versions of comic-book characters to amuse family members.

Knox's first love as a child, however, was playing baseball. He would spend his afternoons playing with neighborhood children, who included the future baseball legend Hank Aaron. One day, when Knox was in fourth grade, he was struck in the eye by a ball and taken to a doctor. "That ended my baseball career," he told Russell Nichols for the *Birmingham (Alabama) News* (June 27, 2004). His eye took over a year to heal, and his doctor suggested taking up a hobby that would help his eye regain the ability to focus. The nuns at the Heart of Mary School noticed Knox's artistic talent and encouraged him to draw. In the 1940s South he was banned from art classes due to his race; the nuns instead arranged informal Saturday-morning art lessons with a mail carrier.

Knox graduated from Central High School in 1956 and, unable to pay for college, enlisted in the U.S. Army. After his discharge he enrolled at Delaware State College, in Dover, attending classes in the morning and working at a textile mill in nearby Milford during the afternoon. Though he enjoyed drawing, Knox did not consider art a viable career option, so he majored in biology. While his work in that subject was less than stellar, the accurate drawings of animals and plants he made to accompany his written work led some of his professors to suggest that he take art classes.

Having grown up in the segregated South, where African-Americans were forced to use bathrooms and water fountains separate from those of the white population, Knox struggled with questions about his identity throughout his adolescence and beyond. His first attempts at portrait work, in the early 1960s, were a series of self-portraits in which he tried to express his internalized anger and confusion. Knox soon discovered that he had found his true passion, as well as an identity, in art.

Deciding that he wanted to become an art teacher, Knox transferred to the University of Delaware, in Newark, in 1963 to major in art education. Shortly after receiving his bachelor's degree, in 1967, he moved to Philadelphia, Pennsylvania, and began teaching in public schools. At night Knox attended art classes at the Tyler School of Art at Temple University. Although he had become interested in portraits, the faculty, who at the time considered representational art to be outdated, encouraged him to focus on abstract art. "You'd bring a figure painting into class, they'd laugh at you: 'What are you bringing that junk in here for?' So I said, 'I got to get with the program,'" he told Foster Klug. At the Tyler School Knox painted large-scale abstract works, which he later credited with helping him to perfect his portraits. "It forced me to really take a thorough look at the elements of design, which is very fundamental to making anything visual," he explained to Voice of America News (March 10, 2005, on-line). He received his bachelor of fine arts degree in 1970. In the following year he exhibited some of his abstract artwork at the Thirty-Second Biennial of Contemporary American Painting at the Corcoran Gallery of Art, in Washington, D.C., alongside work by the celebrated artists Roy Lichtenstein and Philip Pearlstein. In 1972 Knox earned his master of fine arts degree from the Tyler School.

Knox moved to the Washington, D.C., area and began teaching at Bowie State College, now known as Bowie State University, in Prince George's County, Maryland. "Art is a fantastic way of building character," he told Daniel Connolly for the Associated Press (November 4, 2005, on-line). "It's a fantastic way of teaching confidence. And once [the students] get that feeling of confidence they will excel and they can take on anything." In those years Knox dabbled in portraits, producing one of Martin Luther King Jr. in 1974 and one of Frederick Douglass (now a part of the Smithsonian's Museum of African Art collection) in 1975, while continuing to paint abstracts as well as still-lifes. Knox served as the director of the National Museum of African Art in downtown Washington in 1974 and left Bowie State in 1975 to teach art at the Duke Ellington School of the Arts, in Washington. The school did not renew his contract, and in 1980 he was without a job. He began to devote himself entirely to portraits and found a renewed love for the art form.

During that period Knox, his wife, Roberta, and their two young children, Amelia and Zachary, lived in a two-bedroom apartment in the Adams Morgan neighborhood of Washington. (He has another daughter, Sheri, born in 1961, from a previous marriage, to Marceline Ward.) One bedroom was transformed into Knox's studio, and the family leased a small space at the city's Eastern Market on the weekends to sell his paintings. In 1983 David Driskell, an artist and art historian, introduced Knox to Bill Cosby, who was then looking to hire a portrait artist. "Back in 1983, the Cosbys asked me to seek a person who could render a likeness of them," Driskell, who has served as curator of the Cosby Collection of Fine Art, told Betsy Peoples. "I knew of Knox's work. I saw the competency of his work and his technical ability—he's able to render an excellent likeness. [Knox's] art just isn't a form of realism, but it imprints a certain kind of feel; you see the character of an individual."

The meeting proved to be a turning point in Knox's career. Cosby commissioned the painter for 12 portraits of his family members over the course of eight years. Soon afterward Knox began receiving more commissions, including those for portraits of Dorothy Height, then the president of the National Council of Negro Women, and Supreme Court justice Thurgood Marshall, both in 1989. With his portrait of Marshall, Knox became the first African-American commissioned to paint an official portrait of a Supreme Court justice. Knox soon became a locally known and respected artist. Among his more famous subjects are the writer Alex Haley (1977), former New York City mayor David Dinkins (1993), Muhammad Ali (1995), Bishop John T. Walker (1995), Hank Aaron (1996), and the historian John Hope Franklin (1996).

Knox's realistic portraits are filled with detail and evoke their subjects' personalities. Betty C. Monkman, the chief White House curator during the Clinton administration, told Lynette Clemetson for the *New York Times* (June 15, 2004), "He paints beautiful faces that really say something to you." "Every face is different, and that's what I love about it," Knox told Kathy Adams for the Wilmington, Delaware, *News Journal* (June 7, 2007). "I don't think I've ever seen anything more fascinating than the face, the human face—it's the joy and the sorrow and the pain, and whatever is going on with the person you can read it in their face." As for his technique, Knox has said that he likes to meet his subjects in person (or, in the case of subjects who are deceased, their surviving relatives) and get a feel for their personalities. He starts his portraits by working on the subjects' eyes. "[The eyes] say more about a person than anything else," Knox explained to Betsy Peoples. "I like for my subject to have eye contact with the viewer. I like for the eyes to follow you. I want people to be able to say, 'I don't know that person, but I would like to meet them.'" Though Knox is an artist, he is attuned to the business side of his profession—particularly customer satisfaction. "I remind myself, I'm in a service capacity," he told Steve Inskeep for the National Public Radio program *Morning Edition* (June 14, 2004). "You know, you have to please your clients because you live and die on your reputation and, in fact, I get all of my work by word of mouth, so I try and be sure that when I let it go, it's what they would like to see." Although he claims not to take artistic liberties, he also believes that touching up subjects' features is sometimes warranted. "If you have to strengthen some things, you do. Sometimes you can leave out a few lines, you're trying to show a person at their best," he told Kathy Adams.

In 2001 Knox was selected to paint President Bill Clinton's official presidential portrait. President Clinton chose the painter, shortly before leaving office, once he had viewed Knox's portfolio and spoken to Supreme Court justice Ruth Bader Ginsburg, who loved the portrait Knox had painted of her the previous year. "It is rare in life that realization exceeds high expectation," Ginsburg told Betsy Peoples. "Viewing Simmie Knox's portrait of me was one of those rare occasions." Knox has said that he felt a connection with the former president, who also grew up in a poor southern family, and told David Hammer for the Associated Press (June 11, 2004, on-line), "I think that's why he has the compassion he has. He knows how it feels to have lived a certain life and to have been deprived of things. I knew the day [Clinton] came into office, if I ever have the chance to paint a president I think this is the one. Somehow I felt that." Even so, Knox was still in awe of the situation. "My mind hasn't completely wrapped around it yet," he told Hammer. "Just imagine: I was born in 1935 in Aliceville, Alabama, a sharecropper, and now I'm painting the president. Can you imagine that?" In preparation for the portrait, Knox visited the White House five times to discuss poses as well as sketch and take photos of President Clinton. A traditional sitting for the portrait was not possible because of Clinton's schedule, so Knox painted mostly from photographs. ("How are you going to tell a president that he's got to sit down for two hours for weeks in the same clothes?" Knox asked Russell Nichols.) After viewing the painter's mockups of her husband's portrait, then–First Lady Hillary

Rodham Clinton asked Knox to paint her official portrait as well. Although it is common for official portraits of presidents and First Ladies to be unveiled at the same time, it is rare for both to be done by the same artist.

Knox's work was unveiled before the Clintons, President George W. Bush, and First Lady Laura Bush in the East Room of the White House on June 14, 2004. His 48-by-58-inch, oil-on-linen portrait of the former president depicted Clinton in a dark blue suit, standing before his desk in the Oval Office, one hand in his pocket, the other resting on the table beside him. It is the first presidential portrait to include the American flag and also features Clinton's military-medallion collection, as he had requested. Senator Clinton's 36-by-48-inch portrait is not only the first to depict a broadly smiling First Lady, but also the first to show a First Lady wearing a pantsuit. The portrait also features a copy of Senator Clinton's best-selling book *It Takes a Village* (1996) placed on a table beside her. At the ceremony she remarked, in a widely quoted statement, "One thing that has never been said about either my husband or I . . . is that we are patient people. . . . And Simmie was more than understanding as he worked with us over the last several years. I'm very grateful to him, not only for his artistry, but for his humanity."

Knox, who enjoys listening to jazz while he paints, now works in a converted garage outside his four-bedroom home in Silver Spring, Maryland. While a student in Delaware, he sold his art pieces for $5 to $10 each; his portraits, which are always done in oil on oil-primed linen, now command prices starting at $20,000. At 74 Knox is grateful for his continued success and hopes he will be able to do what he loves for years to come. "It's been like having to run a marathon and having to run it uphill all the way," he told Kathy Adams. "Today, it's still uphill. The shoes are a little better. The food's a little better. The bills are paid now." His most recent commissions have included portraits of South Carolina congressman Joseph Rainey, the first African-American to serve in Congress, for the U.S. Capitol, in Washington, D.C. (2005); the media mogul Oprah Winfrey for Morehouse College, in Atlanta, Georgia; and the philanthropist James H. Gilliam Jr. for St. Johns College in Annapolis, Maryland (2008). Knox was also asked in 2006 to sculpt a bronze bust of the late Morgan State University music director Nathan M. Carter Jr. for the university. About that project, his first commissioned sculpture since the 1970s, he told Gadi Dechter for the *Baltimore Sun* (January 7, 2007), "I was glad to be able to reconnect with sculpture, something that I have wanted to do for years." Knox has said that he hopes to paint a portrait of the Nobel Prize winner and former South African president Nelson Mandela.

LaBeouf, Shia

(la-BUFF, SHY-uh)

June 11, 1986– Actor

Address: c/o Beverly Hecht Agency, 3500 W.
Olive St., Suite 1180, Burbank, CA 91505

"In an age when potential action heroes seem to be either rugged '80s relics like [Harrison] Ford and Sylvester Stallone or sensitive thespians willing to double up on their bench presses like Tobey Maguire and Orlando Bloom, [Shia] LaBeouf is that rarest of screen creatures, the scrappy kid next door," Rebecca Winters Keegan wrote for *Time* (July 5, 2007, on-line). The filmmaker Steven Spielberg, who directed LaBeouf in *Indiana Jones and the Kingdom of the Crystal Skull*, told Keegan, "Shia is within everyone's reach. He's every mother's son, every father's spitting image, every young kid's best pal and every girl's possible dream." In a similar assessment, the film critic Claudia Puig wrote for *USA Today* (April 12, 2007, on-line), "Shia LaBeouf is the kind of youthful everyman who brings to mind a young Jimmy Stewart. He has an ease on camera and a low-key sense of humor that makes him likable and relatable." LaBeouf's skills as an actor have been linked to his highly unconventional upbringing, by parents whose way of life harked back to the 1960s counterculture: his mother and father rejected salaried jobs and lived from hand to mouth; passed the hat at street performances; and, in his father's case, alternately succumbed to and battled drug addiction. LaBeouf, who turned 23 this past June, started performing by himself in coffee shops and a comedy club when he was 10. At 12 he secured an agent and got work in commercials and occasional television shows. At 14 he won a leading role as one of the title characters in the Disney TV series *Even Stevens.* He has since starred in films including *Holes*, *Disturbia*, *Transformers*, *Transformers: Revenge of the Fallen*, *Indiana Jones and the Kingdom of the Crystal Skull*, and *Eagle Eye.* With very few exceptions critics have greeted his performances with high praise. D. J. Caruso, the director of *Disturbia* (2007), which was filmed when LaBeouf was 20, told Barry Koltnow for the *Orange County (California) Register* (April 13, 2007, online), "When you look into his eyes, you can see an old soul. There is a lot of depth there because of his background, and that sets him apart from other actors of his generation."

The only child of Jeffrey Craig LaBeouf and Shayna Saide LaBeouf, Shia Saide LaBeouf was born on June 11, 1986 in Echo Park, a section of Los Angeles, California; he grew up in that neighborhood, which was largely Latino at that time and also had a fair number of artist residents. LaBeouf was named for his maternal grandfather, a Holocaust survivor who performed comedy routines at Jewish resorts in the so-called Borscht Belt, a vacation area in the Catskill Mountains, in New York State. His paternal grandmother reportedly associated with Allen Ginsberg and other Beat poets. LaBeouf described his parents to Keegan as "old hippies. They're not really worker bees. They're artists who just didn't have enough bureaucrat in them to get it all wrapped up in a nice little package to be able to feed to the American public." His mother, who is Jewish, studied modern dance until an injury forced her to give up that pursuit; afterward, she became a visual artist and jewelry maker. His father, who is of Louisiana Cajun descent, was a veteran of the Vietnam War. During his son's childhood he struggled with heroin addiction and had difficulty holding onto jobs; sometimes he would work as a clown or a mime. He also sold illegal drugs. "He was tough as nails and a different breed of man," LaBeouf told Koltnow. In an interview with Shannon Harvey for the Perth, Australia, *Sunday Times* (April 14, 2007, on-line), LaBeouf said, "It was a bad life. We were broke, really broke." Sometimes, in order to make ends meet, the family performed on the street. When LaBeouf was a toddler, his father stole a housekeeping cart from a hotel and set it up with hot dogs and buns; then, with the three of them dressed as clowns, the family would perform in a local park. "I hated selling hot dogs. I hated dressing up in clown," LaBeouf told Keegan. "But the minute somebody would buy into my thing and buy a hot dog from my family because of my shtick, my parents would look at me like, 'All right, man.' Besides performing, I've never had that validation from anything else I've ever done in my life."

By his own account, when LaBeouf was 10 he began smoking cigarettes, including marijuana cigarettes his father rolled. He also watched action films starring Steve McQueen and accompanied his father to Rolling Stones concerts and meetings of people who, like his father, were trying to give up their addictions. "When you're 10 years old and watch your father going through heroin withdrawals, you grow up real fast," he told Koltnow. "You become the parent in the relationship. But I must give him credit because he always told me that he didn't want me to be like him." That year LaBeouf's parents divorced; afterward, he lived with his mother, who eked out a living by selling her homemade jewelry on the street.

LaBeouf attended the 32nd Street/USC Visual and Performing Arts Magnet School, on the campus of the University of Southern California, in Los Angeles. Inspired by a schoolmate who had a role in the CBS family drama *Dr. Quinn, Medicine Woman*, he resolved to become a performer. His schoolmate, he explained to Keegan, "had all the stuff I wanted, materially. When you're in school, if you've got the new Filas [sports shoes] on, no one's gonna punch you that day." He began performing comedy in coffee shops, and after awhile he talked his way into a standup gig at the Ice House, a comedy club in Pasadena, a short distance from Los Angeles. Wearing overalls and his hair in a bowl cut, LaBeouf attempted to shock his audience with obscene jokes about adolescent sexuality. "My thing was the 50-year-old mouth on the 10-year-old body," LaBeouf told Keegan. "Sometimes I would bomb. I'd talk about personal stuff and instead of laughing, people would look at me like, 'Oh, man, I'm so sorry.'" Eager to make more money and gain greater attention, LaBeouf set about securing an agent. "I went to the Yellow Pages, called up an agent and pretended to be a manager called Howie Blowfish," he told Harvey. "I said I had this great client named Shia, and that he should come in for meetings and auditions. The agent knew I was a kid, but she said she'd never had a kid try to sell himself and that I should come in." The agent, Teresa Dahlquist, who had bought the Beverly Hecht Agency a few years earlier, signed him on. (As posted on the agency's Web site, Shayna LaBeouf stated that she brought Shia to Dahlquist, who she knew "was the best agent in town.") Dahlquist, who still represents LaBeouf, paid for headshots, transportation to and from auditions, and, when necessary, the LaBeoufs' rent.

LaBeouf soon got jobs in commercials. He broke into film in 1998, with small roles in *The Christmas Path* and *Monkey Business*; he also appeared in the made-for-television children's movie *Breakfast with Einstein* and the sitcom *Jesse*. He had a minor role in 1999 in an episode of the sitcom *Suddenly Susan* and appearances in the series *Touched by An Angel* and *The X-Files*. By that time he had become a student at Alexander Hamilton High School, in Los Angeles. Also in 1999 he landed a major role, in a new Disney Channel show called *Even Stevens*. He was cast as Louis Stevens, a geeky middle-school student and the rambunctious brother of Ren, a subdued, overachieving older sister, played by Christy Carlson Romano. The series, which premiered a few days after LaBeouf's 14th birthday, became popular with preteen and teenage audiences, and LaBeouf was hailed for his work in it. Carole Horst wrote for *Variety* (June 19– 25, 2000) that LaBeouf and Romano "should start plotting the rest of their careers, as these two young thesps bring polish and excellent timing to the material." LaBeouf won a Daytime Emmy Award for his portrayal of Louis in 2002, a year before the show went off the air. During its run, because he was a minor, he had needed an adult to accompany him to the set and remain there while he worked, and Disney had paid his father a weekly salary to serve in that capacity. "For three years we lived in a motel, and that's when we started to get our relationship back on track," LaBeouf told a reporter for the Perth, Australia, *Sunday Times* (May 7, 2008). "In a very real sense this business gave me my father back and I'll always be grateful for that." In 2003 LaBeouf appeared in *The Even Stevens Movie*. Earlier, in 2002, he had appeared as a mentally disabled child in the Disney Channel's family movie *Tru Confessions*.

In 2003, the year he graduated from high school, LaBeouf starred in the Disney film *Holes*, whose screenplay was Louis Sachar's adaptation of his award-winning 1998 same-titled novel for young people. LaBeouf portrayed the palindromically named Stanley Yelnats IV, a teenager sent to a desert boot camp after being wrongly accused of theft. Every day he and the other campers are forced to dig deep holes, leading him to suspect that the villainous camp warden (played by Sigourney Weaver) is searching for something that she knows has been hidden there. When Yelnats discovers a treasure chest that bears the name of his great-great-grandfather and is rightfully his, the warden and her sadistic assistant (Jon Voight) attempt to keep it. The film, which examined greed, racism, friendship, and the importance of holding onto dreams, was generally praised and brought LaBeouf both excellent reviews and much attention in the film industry. "Mr. LaBeouf, with his soft face and curly hair, rises to the challenge of depicting a coddled, sensitive young man who must prove his toughness without sacrificing his decency," A. O. Scott wrote for the *New York Times* (June 12, 2003). *Holes* brought LaBeouf close to Voight, who encouraged him to view acting as more than just a way to earn money. "He became my mentor," LaBeouf told Koltnow. "He took me under his wing at the exact time that I needed some serious adult guidance."

Also in 2003 LaBeouf had small roles in the action comedy *Charlie's Angels: Full Throttle* and the widely panned comedy *Dumb and Dumberer: When Harry Met Lloyd*. In the same year he starred in *The Battle of Shaker Heights*, which aired on TV during the second season of HBO's *Project Greenlight*, a reality series that documented the work of amateur filmmakers. Written by Erica Beeney and directed by Kyle Rankin and Efram Potelle, *The Battle of Shaker Heights* got a lukewarm critical reception, but LaBeouf's performance, as a teenage war reenactor bent on defeating the local bully through military tactics, was praised. The documentary showed that he maintained a professional demeanor despite the first-time filmmakers' difficulties. "Accustomed to hanging out with creative, chaotic grownups, LaBeouf came off as a charmer, a good sport, and one of the smarter people on set," Keegan wrote. In 2004, with his friend Lorenzo Eduardo, he wrote, directed, and produced the wordless, six-minute film *Let's Love Hate*. Also that year LaBeouf had a small role alongside Will Smith in the futuristic thriller *I, Robot*, followed by a similar part the next year, opposite Keanu Reeves, in the action/horror film *Constantine*.

In the biographical movie *The Greatest Game Ever Played* (2005), LaBeouf was seen as the amateur golfer Francis Ouimet, who beat top players in the 1913 U.S. Open. "As Ouimet, the always-terrific Shia LaBeouf is an oasis of depth in a film that otherwise can't pass up a sports-film cliché," Keith Phipps wrote for the *A.V. Club* (September 28, 2005, on-line). LaBeouf lent his voice to the character Asbel in the dubbed English version of Hayao Miyazaki's animated film *Nausicaä of the Valley of the Wind* (1984). He next appeared as the younger self of Dito Montiel, the character played by Robert Downey Jr., in the semiautobiographical coming-of-age drama *A Guide to Recognizing Your Saints* (2006), which Montiel wrote and directed. Before LaBeouf and Montiel met, LaBeouf's association with Disney productions led Montiel, like many others, to doubt that he was capable of the gritty performance the role demanded. "Immediately I said I'd like to come in and read [at an audition], they said 'No, no, no, he's the Disney kid,'" LaBeouf recalled to Neala Johnson for the Melbourne, Australia, *Herald Sun* (April 12, 2007, on-line). "It worked against me. But there's nothing I can do about that other than change people's opinion when I come in and read." Montiel's film was a critical success, while the response to LaBeouf's performance was mixed. Praise came from A. O. Scott, who wrote for the *New York Times* (September 29, 2006), "The casting of these two itchy, inventive actors [LaBeouf and Downey] in a single role is nothing short of revelatory. . . . Mr. LaBeouf has a watchful, excited demeanor, and his character, miserable as he sometimes is, is also curious and adventurous, savoring the funny, strange and beautiful things the world throws in front of him." By contrast, Robert Khoeler wrote for *Variety* (January 22, 2006, on-line), "If there's a casting hiccup, it's LaBeouf in effect playing a young Robert Downey Jr. Appearing more baby faced than streetwise, LaBeouf seems wrong for the role." *A Guide to Recognizing Your Saints* helped LaBeouf separate himself from the Disney image. "Disney is great," he told Neala Johnson, "it's been great to me and many other actors, it's a great place to cultivate your skills. But it can be debilitating because it's very one-notey, it doesn't stray, its goal is to create children-friendly entertainment. And a lot of 20-year-olds don't live children-friendly lives."

In the reality-based *Bobby* (2006), written and directed by Emilio Estevez, LaBeouf portrayed a drug-addled member of the campaign staff of U.S. senator Robert F. Kennedy of New York during his run for the Democratic presidential nomination in 1968, which ended with Kennedy's assassination. LaBeouf and the other actors in the film, among them Martin Sheen (Estevez's father), Harry Belafonte, Sharon Stone, Laurence Fishburne, and Demi Moore, were nominated for a Screen Actors Guild Award in the category "outstanding performance by a cast in a motion picture." Steven Spielberg, who had been impressed with LaBeouf's work in *Holes*, was instrumental in having him cast as the hero in LaBeouf's next film, the teen thriller *Disturbia* (2007). Executive-produced by Spielberg and directed by D. J. Caruso, *Disturbia* was a new version of Alfred Hitchcock's classic suspense film *Rear Window* (1954), starring James Stewart as a reporter whose broken leg has kept him housebound. LaBeouf played Kale Brecht, a teenager who, while confined to his room, takes to spying on his neighbors. After observing evidence of a murder in a nearby house, Kale becomes entangled in a game of cat and mouse with the killer. While the film received mixed reviews, most critics agreed that LaBeouf excelled in his role.

In *Transformers*, which grew out of a popular 1980s cartoon series, LaBeouf was cast as Sam Witwicky, who is unwittingly swept up in a war between opposing forces of robotic creatures that can change into technological devices—such as automobiles—to avoid detection on Earth. The main features of the film, directed by Michael Bay, were its special effects. "Alone among the human characters in *Transformers*, Witwicky makes an impression," Chris Kaltenbach wrote for the *Baltimore Sun* (July 2, 2007, on-line). "In part, that's because he's given all the best lines. But mostly, the credit goes to LaBeouf's spirited performance. Historically, director Bay has never paid much attention to his actors, and it shows; to say most of them sleepwalk through their performances would be to shortchange somnambulists everywhere. But LaBeouf, bless him, forces life into Witwicky, refusing to let us pin him down or to let the movie's relentless action overwhelm him."

LaBeouf played Mutt Williams, the rebellious sidekick of Indiana Jones (Harrison Ford) in *Indiana Jones and the Kingdom of the Crystal Skull* (2008), the fourth installment of the Indiana Jones series, which was launched in 1981. According to Kenneth Turan, writing for the *Los Angeles Times* (May 19, 2008, on-line), the film introduced Mutt "as a total copy of Marlon Brando on a motorcycle in *The Wild One*," adding, "LaBeouf doesn't seem completely comfortable in his disaffected teen role, a part that does not play to the innate likability that is one of his strengths." Others found LaBeouf's character more appealing and thought that he and Ford were perfectly paired. Michael Sragow, for example, wrote for the *Baltimore Sun* (May 29, 2008, on-line), "LaBeouf suffuses the young and restless Mutt with a ripe avidity that recalls 1950s idols like Tony Curtis as much as it does James Dean. . . . LaBeouf and Ford have ideal chemistry: Ford snarls with the experience of age, LaBeouf glitters with the fool's immortality of youth."

In September 2008 LaBeouf appeared in the thriller *Eagle Eye*. In the film, which received mixed reviews, he played a slacker who finds himself caught up with a stranger in a series of mysterious and sinister events. His next motion picture, *Transformers: Revenge of the Fallen*, debuted in 2009 to predominantly negative reviews, with critics taking Bay, its director, to task for placing greater emphasis on special effects and pyrotechnics than on acting. Ray Bennet wrote for the *Hollywood Reporter* (June 15, 2009, on-line), "LaBeouf gets little chance to show what charm he might have," and Carrie Rickey wrote for the *Philadelphia Inquirer* (June 23, 2009, on-line), "*Transformers 2* morphs from teen adventure into lumbering war movie. Bay and his screenwriters squander their human capital in order to show us scenes of 20-ton toys crushing 10-ton toys." Later in 2009 LaBeouf appeared in *New York, I Love You*, a film comprised of vignettes set in New York City. Around that time he also began work on Oliver Stone's *Wall Street 2: Money Never Sleeps*, a sequel to Stone's well-received *Wall Street* (1987). *Wall Street 2* will star Michael Douglas as the greedy financier Gordon Gekko and LaBeouf as a young stockbroker engaged to Gekko's daughter. In 2009 LaBeouf also directed a music video for "I Never Knew You," a single by the rapper Cage. He has been cast in a third *Transformers* film and an adaptation of John Grisham's novel *The Associate*.

Earlier, in November 2007, LaBeouf was arrested in the early morning hours for trespassing in a Walgreens store in Chicago, Illinois, before it opened and after refusing a security guard's orders to leave. The guard claimed LaBeouf was intoxicated, but Walgreens declined to press charges. In July 2008 LaBeouf's pickup truck collided with another vehicle at an intersection in Los Angeles. The actor suffered a broken hand and his passenger, the actress Isabel Lucas, received minor injuries. He was arrested on suspicion of drunk driving and, although police later stated that the driver of the other vehicle was at fault for running a red light, LaBeouf's license was suspended for a year because he refused to take a breathalyzer test. His injury was written into the storyline for *Transformers: Revenge of the Fallen*, but it forced him to abandon what would have been his next project, *Dark Fields*.

A tattoo on LaBeouf's right wrist reads "1986–2004." The actor told Keegan that it represents his childhood: "I've been working since I was 10; 2004 is when I decided I became an adult." LaBeouf was accepted to Yale University but has never enrolled there. Although he has told interviewers that he abstains from hard partying, LaBeouf admitted to a writer for *Details* (September 2008) that he had a drinking problem. As of May 2009 he was attending Alcoholics Anonymous meetings. LaBeouf lives in Burbank, California.

Courtesy of the office of Ray LaHood

LaHood, Ray

Dec. 6, 1945– Secretary of the U.S. Department of Transportation; former U.S. representative from Illinois (Republican)

Address: U.S. Dept. of Transportation, 1200 New Jersey Ave., S.E., Washington, DC 20590

On January 3, 2009, the last day of the 110th Congress, Ray LaHood ended his seventh term as the representative of Illinois's 18th Congressional District and relinquished his seat in the House, as he had announced in July 2007 that he would do. The 63-year-old LaHood has not retired, however, as had been his intention: in December 2008 then-President-elect Barack Obama nominated him to be the next secretary of the U.S. Department of Transportation. On January 22, 2009 the Senate Commerce and Transportation Committee confirmed his nomination, and on January 26 he was sworn in. LaHood and U.S. senator Judd Gregg of New Hampshire, whom Obama tapped to head the Department of Commerce, were the only Republicans nominated by the president to serve in his Cabinet. (Gregg withdrew his nomination in February. Obama's next choice for commerce secretary, Gary Locke, who currently holds that position, is a Democrat. Secretary of Defense Robert M. Gates, a registered Independent who has identified himself as a Republican, is a holdover from the previous administration, that of George W. Bush.) When he entered Congress, in 1995, LaHood—whose previous jobs include teacher, city planner, and member of the Illinois state legislature—succeeded Robert H. "Bob" Michel, for whom he had worked for 12 of Michel's 38 years as a representative. In the House LaHood became known for thinking independently, treating others fairly, fostering friendly relations, and promoting bipartisanship. When Republicans held a majority in the House, LaHood, thanks to his reputation for evenhandedness and his solid knowledge of parliamentary procedure, often presided over House sessions as a temporary replacement (officially, Speaker pro tempore, or "for the time being") for the House Speakers—Newt Gingrich, in the 104th and 105th Congresses, and Dennis Hastert, in the 106th through 109th. Those qualities also led to LaHood's presiding over part of the impeachment proceedings against President Bill Clinton, in 1998. "More than once" during the impeachment debate, as Democratic representative Anna Eshoo of California told John Hughes and Julianna Goldman for Bloomberg.com (December 28, 2008), "the entire House stood up and applauded how he comported himself in the chair." In a speech on the floor of the House in October, then-congressman Rahm Emanuel of Illinois, with whom LaHood worked closely, said that the framers of the Constitution might have had someone like LaHood "in their mind's eye" when they "thought of a member of Congress," as quoted by Michael A. Fletcher and Philip Rucker in the *Washington Post* (December 18, 2008). "He is an individual who, while firm in his principles, [is] very flexible about his opinions," Emanuel added. In his new post LaHood has focused on Obama's economic-recovery projects related to transportation and the president's push for "livable communities," high-speed rail, and a reduction of automobile emissions and oil dependence.

Raymond H. LaHood was born into a Maronite Catholic family on December 6, 1945 in Peoria, Illinois, where hundreds of immigrants from Lebanon, including at least one of his grandparents, settled in the early 1900s. His parents, Edward and Mary (Vogel) LaHood, managed a restaurant and tavern. LaHood was raised in the East Bluff, a blue-collar neighborhood in Peoria, where he attended St. Bernard's Grade School. He graduated from the Spalding Institute, a Catholic High School in Peoria. He then enrolled at Canton Junior College (now called Spoon River College), in Canton, Illinois, and later transferred to Bradley University, in Peoria, where he majored in sociology and education. He got married in 1967 and had become the father of his first two children by the time he earned a B.S. degree, in 1971. He next taught social studies at the junior-high-school level and, concurrently, served as a director of the Rock Island County Youth Services Bureau, a delinquency-prevention agency. From 1974 to 1977 he worked as a chief planner for the Bi-State Metropolitan Planning Commission (now the Bi-State Regional Commission), which addresses matters concerning both Iowa and Illinois.

For five years beginning in 1977, LaHood was the district representative for Thomas "Tom" Railsback, a Republican from Illinois's 19th Congressional District. "That's a very big job, because that person has to deal with all of the people in the district," Railsback told Brandy Donaldson for the Quad-Cities, Illinois, *Dispatch-Argus* (December 29, 2008, on-line). "He's your spokesman and your communicator. Ray came in and had this shaggy hair. But he was very articulate, very positive. After meeting with him for 15 or 20 minutes, I thought, 'This guy is great.' So I brought him into congressional politics and service."

In May 1982 LaHood was appointed to fill the seat in the Illinois State House of Representatives vacated by Ben Polk, who had resigned. After serving the remainder of Polk's term, LaHood ran to retain the seat; he lost by a narrow margin to another Republican, Bob DeJaegher. In 1983 LaHood was hired as an aide to the veteran U.S. representative and Peoria native Bob Michel, who represented Illinois's 18th Congressional District (which contains 11 of the counties of the district that Abraham Lincoln represented in Congress); at that time Michel was the House minority leader. In 1990 LaHood became Michel's chief of staff. When Michel retired, in 1994, LaHood made a successful bid to succeed him; in a contest against the Democrat G. Douglas Stephens (who had previously lost two races against Michel), LaHood captured 60 percent of the votes. In his most recent reelection, in 2006, he won more than 67 percent of the ballots cast.

LaHood was one of only three Republicans (the others were incumbents) who did not sign the Contract with America. Written a few weeks before the November 1994 election, with much of it taken verbatim from President Ronald Reagan's 1985 State of the Union Address, the contract (referred to by some of its opponents as the Contract on America) was presented as the Republicans' promise to the American people to pass, within 100 days of Congress's opening day in 1995, legislation aimed at shrinking the federal government, lowering taxes, limiting the role of the United Nations in U.S. foreign policy, and reforming welfare, among other goals. In other areas in which he broke with his party's stance, in October 2001 LaHood was one of only three House Republicans to vote against the Patriot Act, an antiterrorism bill whose provisions many critics viewed as violations of civil liberties. (Five years later, however, he voted in favor of renewing the act.) In 2007 he and 10 other Republicans visited the White House to warn President George W. Bush that the war in Iraq was becoming increasing unpopular among members of the American public. In matters in which LaHood adhered to the GOP line, he voted to prohibit the noncitizen children of illegal immigrants from attending public schools, to lift the ban on private ownership of certain types of assault weapons, and to weaken certain Clean Water Act regulations, among other stands.

During his years in Congress, LaHood served on the House Agriculture Committee and introduced legislation supporting the expansion of ethanol production in Illinois. As a member of the Appropriations Committee, he was credited with securing funding for highway-improvement and airport-expansion projects. LaHood opposed striker-replacement legislation, which would allow employers to hire replacement workers when their employees go on strike, and he opposed the deployment of U.S. troops to Kosovo, a disputed region in what was once Yugoslavia, as part of a 1990s U.N. peacekeeping mission. He has introduced legislation to abolish the Electoral College and was outspoken in denouncing the racial profiling of Arab-Americans.

In Congress LaHood developed a reputation as a centrist, publicly criticizing as well as praising Republicans and Democrats alike. He fostered strong relationships with members of both parties, among them two Democratic legislators from Illinois: then-congressman Rahm Emanuel and then-U.S. senator Barack Obama. Making it his mission "to restore civility to Capitol Hill," as Kathy Kiely wrote for *USA Today* (December 18, 2008), he helped to organize a series of bipartisan retreats; one, held in March 1997, drew more than 200 Democratic and Republican members of the House and people in their families. With Emanuel, he regularly invited groups of six Democratic and six Republican representatives to have a meal together, "to bridge the partisan divide," in Kiely's words.

In July 2007 LaHood announced that he would retire from Congress at the end of his seventh term. Then, a few weeks after Obama's victory in the presidential election, Obama chose him to be the next U.S. secretary of transportation. Some critics of LaHood's appointment complained that he lacked the administrative experience necessary to oversee a complex Cabinet-level department. Although LaHood supported several measures aimed at preserving the Illinois River and enhancing or expanding two national wildlife refuges in his home state, other detractors worried that LaHood's largely conservative voting record on environmental issues gave little hope that he would push for "green" solutions to transportation-related problems, and that his close ties with certain corporations would place consumers at a disadvantage. Most prominent among those firms is Caterpillar, a Fortune-100 company that is headquartered in Peoria; though it is commonly associated most closely with the production of tractors, Caterpillar is also "the world's leading manufacturer of construction and mining equipment, diesel and natural gas engines and industrial gas turbines," according to its Web site. Despite such criticism, on January 22, 2009 the U.S. Senate approved LaHood's nomination by voice vote, and he was sworn in the next day.

The Department of Transportation (DOT) employs almost 60,000 people and oversees 11 agencies: the Federal Aviation, Federal Highway, Federal Transit, and Maritime Administrations; the Federal Railroad Administration, which deals with railway safety, and the Surface Transportation Board, which judicially settles railroad rate and service issues (and certain rate matters involving trucking and moving companies, intercity passenger buses, and ocean-shipping companies); the Federal Motor Carrier Safety Administration, which deals with the safety of large trucks and buses; the Pipeline and Hazardous Materials Safety Administration; the National Highway Traffic Safety Administration, which monitors safety issues involving light trucks and passenger cars; the Saint Lawrence Seaway Development Corp.; and the Research and Innovative Technology Administration. In addition, the DOT, like all Cabinet-level departments, has an Office of Inspector General, whose responsibility is to ensure that all divisions act lawfully.

As DOT secretary LaHood plays a major role in the Obama administration's proposed massive public-works projects, part of the $787 billion stimulus package (officially, the Economic Recovery and Reinvestment Act) that the president signed into law in February 2009. The projects were designed both to stimulate the economy, providing thousands of jobs, and repair the nation's badly deteriorating roads, bridges, and other aspects of infrastructure. Decisions emanating from his department also affect the way in which the Chrysler and Ford corporations spend the billions of dollars in federal bailout funds recently lent to them. In addition, LaHood's agenda includes trying to improve the badly strained labor-management relations at the Federal Aviation Administration (FAA), modernizing the air-traffic-control system, and ameliorating congestion in and around airports.

LaHood oversees a $70 billion budget, $48 billion in funds from the stimulus package, and $61.5 billion authorized by the extension, in July 2009, of the so-called highway bill, which funds transportation projects. Aside from steering recovery money into highway and bridge projects, LaHood has approved investments in mass transit and airports and $8 billion for high-speed rail. He is in favor of creating "livable communities" in which residents walk, ride bicycles, and use public transit instead of driving; he told Amanda Ruggeri for *U.S. News.com* (June 12, 2009), "This is a transformational president, and the department is following the president's lead. People haven't really been thinking about these things. They have been thinking about how to build roads, how to build interstates, how to build bridges. People now are thinking differently about where they want to live, how they want to live, and how they want to be able to get around their communities." The DOT is actively pushing for passage of the Clean Energy Jobs and American Power Act, sponsored by Democratic U.S. senator John Kerry of Massachusetts.

In July and August 2009, the DOT oversaw the $3 billion "Cash for Clunkers" program—officially, the Consumer Assistance to Recycle and Save (CARS) program—which allowed owners of "gas guzzlers" (cars that use gasoline inefficiently) to turn in their vehicles for $3,500–$4,500 vouchers to be used to purchase more fuel-efficient cars. The program boosted auto sales, and some auto factories that had closed reopened to replenish shrinking inventories. The White House estimated that the purchases of some 690,000 cars by those who took advantage of the vouchers would boost the economy by .3 to .4 percent in the third quarter of the year and would save or create 42,000 jobs.

The Ray and Kathy LaHood Scholarship for the Study of American Government is awarded annually to a junior at Bradley College, LaHood's alma mater. In 2001 LaHood won the Frank Bellrose Illinois River Valley Conservation Award from the Illinois chapter of the Nature Conservancy; in 2005 he earned the Charles B. Shuman Distinguished Service Award from the Illinois Farm Bureau. He has also received four honorary degrees from Illinois institutions. LaHood and his wife, Kathy, have two sons, Darin and Sam; two daughters, Amy and Sara; and seven grandchildren. Darin LaHood, an attorney, has served as a federal prosecutor and an assistant Illinois state prosecutor. Sam LaHood, who has a master's degree in Middle Eastern studies from American University in Lebanon, is employed by the Office of Strategic Communications and Planning in the U.S. State Department's Bureau of Public Affairs. Amy LaHood is a physician.

Layton, Jack

July 18, 1950– Canadian politician; leader of the New Democratic Party

Address: House of Commons, Ottawa, Ontario
K1A OA6, Canada

Since 2003 Jack Layton, one of Canada's best-known politicians, has been the leader of one of that country's four main political parties, the left-leaning New Democratic Party. The social-democratic NDP, sometimes described as "the moral conscience of Canada," has traditionally been seen more as a minority party in opposition to the country's two major parties—the Liberals and the Conservatives—than as a governing body in its own right. (The NDP has only slightly fewer seats in Canada's Parliament than the Bloc Québécois.) For instance, many Canadians agree that without the NDP in opposition, universal access to health care and education might no longer exist in the country; Layton has famously and repeatedly portrayed the party as advocating policies from "the kitchen table, not the boardroom table." Layton first made his name as an outspoken left-wing activist and municipal politician in Toronto, Ontario, in the 1980s and 1990s. Perceived initially as a brash and uncompromising socialist with a penchant for grandstanding, he gradually came to be seen as a skillful, media-savvy politician and power broker able to take advantage of flexible alliances in order to achieve the goals of his party. In 2005, for example, Layton offered political support to the then-governing but badly ailing Liberal government in exchange for greater funding of education, affordable housing, programs aimed at energy efficiency, and other NDP causes. (At times his support of coalitions in exchange for policy changes has angered some of the stauncher socialist members of the NDP.) More recently, he has focused on changing his party from one of opposition to one that can genuinely contest for power. "There are some people who think that if you win seats, you must've done something wrong," he told Aaron Wherry for *Maclean's* magazine (September 8–15, 2008). "You must have betrayed some principle. The most principled person wouldn't win any seats. Well, I'm not that kind of leader. . . . Winning seats, I thought that was the purpose." Layton, who had virtually no national profile when he ran for the position of NDP leader in 2003, was seen as a gamble for a party that had been almost completely decimated in the 1990s and early 2000s. Under his leadership, however, the NDP has doubled its support and consistently improved its position in Parliament, coming close to the numbers it boasted at its peak, in the 1980s.

The NDP was created in the early 1960s to advocate for agrarian, labor-union, working-class, and social-justice causes. Its first major contribution to public life—the championing of universal public health care—came under its first, charismatic leader, the Reverend Tommy Douglas, premier of Saskatchewan. Over the years, and especially at the height of its popularity, under Ed Broadbent, from 1975 to 1989, the party broadened its constituency to include New Left concerns, including the environmental, feminist, gay-rights, antiglobalization, and peace movements. After the party's popularity dipped in the 1990s, along with that of many other social-democratic movements in the West, the NDP began to be pulled in different directions, between labor-union and New Left inclinations on the one hand, and pragmatic calls for a shift to the center, in the manner of U.S. Democrats and U.K. New Labor politicians, on the other. Layton, as Margaret Wente explained for the Toronto *Globe and Mail* (June 12, 2004), was voted leader of the party at that uncertain juncture: "The NDP has three distinctly different constituencies. One is the Prairie heartland, where Tommy Douglas invented medicare. One is the world of labour unions and the working man. And one is Latteland, where socially conscious urbanites dream of a greener, gentler world. A good NDP leader needs to straddle all three. But most of all, he needs to make the party sexy again." In the view of many, Layton did exactly that, bringing a contagious and seemingly boundless energy to his campaigns. In his run for his party's leadership, Layton addressed what he called the prevailing but misleading notion that radical ideas cannot be implemented efficiently. He said, as quoted by Doug Ward for the *Vancouver Sun* (July 27, 2002), "Some people say to me: 'Are you left or are you pragmatic?' I say that's a false dichotomy."

The eldest of Doris and Robert Layton's four children, Jack Layton was born on July 18, 1950 in Montreal, Quebec, and raised in nearby Hudson, a prosperous anglophone enclave in Canada's francophone province. Much has been made of his family background, which features a long line of Canadian politicians. His mother is a descendant of one of the fathers of the Canadian Confederation, William Steeves. It has been said that Layton inherited his activist streak—as well as his flair for the dramatic—from his great-grandfather Philip Layton. A British immigrant, Philip Layton had been blinded in his youth and founded the Montreal Association for the Blind, which later became the Canadian National Institute for the Blind; his actions led to the creation of one of the country's first social programs, after he spearheaded a campaign for disability pensions during the Great Depression—and threatened to show up outside the Parliament building with hordes of blind people if the measure was not adopted. Layton is said to have inherited his political skill from his father and paternal grandfather. That grandfather, Gilbert Layton, a cabinet minister in Maurice Duplessis's Union Nationale government in Quebec, was an ardent antifascist who resigned in 1939 over the government's opposition to conscription in World War II. Jack Layton's father, an engineer who reportedly had a hand in building Canada's first hybrid car, was an activist in the Liberal Party in the 1960s and 1970s; after shifting rightward to join the Conservatives in the 1980s, he was elected to Parliament in 1984, serving in the cabinet of Conservative prime minister Brian Mulroney.

As John Geddes wrote in an in-depth profile of Jack Layton for *Maclean's* (December 5, 2005), "His boyhood and youth seem defined by the cliches of two eras: an idyllic 1950s small-town nurturing, followed by an exhilarating 1960s campus-activist coming-of-age." A top student and popular varsity athlete whom friends described as being rebellious and able to inspire others, Layton was president of his high-school student council and was highly involved in community service. He once led an ultimately unsuccessful campaign to have a youth center built in Hudson. "At one point Jack thought he might go in the ministry," his mother told Kathleen Harris for the *London (Ontario) Free Press* (June 6, 2004). "Then he thought he might go to Africa with the Peace Corps." Upon graduating, in 1967—after writing for his high-school yearbook that he would become prime minister someday—he traveled to the west coast of Canada with his friend Bert Markgraf to attend a national youth parliament. The two hitchhiked back across the country in what both would describe as a formative experience. "We were very earnest. . . . We stayed up all night discussing all kinds of philosophical things, a lot of existentialist things—at least as far as we could at 17," Markgraf told Geddes. "That was our centennial project, to get to know Canada," he told Hubert Bauch for the *Montreal Gazette* (June 13, 2004).

Layton then studied political science at McGill University, in Montreal, where he supported the Liberal Party before turning further leftward. As Graham Fraser pointed out in the *Toronto Star* (January 26, 2003), "Layton identifies his involvement in politics with some key events in recent Quebec history." As with many of his contemporaries in the late 1960s, Layton took part in university sit-ins and campaigned for a variety of causes, including affordable housing. His most important intellectual and political mentor at McGill was the renowned political philosopher Charles Taylor, who had run unsuccessfully for Parliament in 1968 as an NDP candidate. As a Liberal Layton had met several candidates at the party's leadership convention in 1970, including Pierre Laporte, who was kidnapped and murdered by radical Quebec separatists later that year in what came to be known as the October Crisis. (James Cross, a British trade commissioner, had been kidnapped earlier.) When the Liberal government of Prime Minister Pierre Trudeau, in response, introduced the War Measures Act, Tommy Douglas's NDP was the only political party to oppose the act, on the grounds of its threat to civil liberties. The NDP's stance inspired Layton to join the party in 1971.

Layton had graduated from McGill with a B.A. degree in 1970 and had moved to Toronto to pursue master's and Ph.D. degrees in political science at York University. He has said that he got "hooked" on politics in 1972, when he worked on the successful campaign of Michael Goldrick, his professor of urban studies at York, who was running for Toronto city council. In the same election David Crombie, a professor of urban politics at Ryerson University, in Toronto, was elected mayor, and Layton was hired to fill his teaching position. Layton spent the next decade teaching political science, municipal politics, sociology, and urban and environmental studies at Ryerson, York University, and the University of Toronto, while getting more involved in municipal politics and activism. He was also completing his Ph.D. thesis, a study of how countries have addressed the international flow of capital, entitled "Capital and the Canadian State: Foreign Investment Policy, 1957–1982." Layton was awarded a doctorate in 1983. He has written books on homelessness—proposing a subsidized national housing policy—and on environmental politics and green energy. In *Speaking*

Out: Ideas That Work for Canadians (2004), Layton outlined the development and trajectory of his political views and the mix of idealism and pragmatism in his strategies.

In 1982 Layton was elected to the Toronto city council as the running mate of former mayor John Sewell, who became an alderman. For the next three years, he was known as Sewell's understudy. Layton quickly got a reputation as a scruffy, outspoken left-wing council member, often seen wearing blue jeans and riding his bicycle; his actions, some felt, got attention but often fell short of accomplishing their stated goals. Layton opposed the building of the Skydome Stadium (to house the Toronto Blue Jays of Major League Baseball) as well as the city's Olympic bid, arguing that they would be a waste of public funds. He wore a black gag to protest other politicians' ignoring his opposition to what he denounced as an exploitative government deal with the Shell Oil Co. in Nigeria. His profile on the CBC (Canadian Broadcasting Corp.) Web site notes that Layton alternately "threatened and cajoled his way into getting official sanction for such things as curbside recycling, bike lanes and a downtown windmill."

Layton has said that he experienced an epiphany in 1985, when he decided to shift his focus from merely criticizing policies to offering solutions to problems. "I realized I was in the process of being typecast," he told Fraser. "I decided, 'We're going to switch from opposition to proposition.'" That year he was elected chairman of Toronto's board of health and "went on a rampage of proposition," as he recalled to Fraser, introducing an extensive plan to fight AIDS and restrictions on smoking in the workplace. In 1988 Layton and his left-leaning allies won control of the Toronto city council. By the time of the 1991 mayoral election, he had adopted a new suit-and-tie image, as part of his effort to show that he was serious enough for the post. Due in part to the unpopularity of the NDP leadership of Ontario, which was blamed—unfairly or not—for failing to respond effectively to a profound recession, Layton was soundly defeated in the mayoral election by June Rowlands. After that loss Layton continued teaching and also spent a few years in the private sector, founding the Green Catalyst Group, an environmental consulting firm that outlined sustainable policies for energy conservation. In 1993, in a campaign he later admitted to knowing he could not win, he ran unsuccessfully for the federal Parliament as an NDP candidate in the Toronto riding (or district) of Rosedale. The following year he returned to municipal politics, where he would slowly gain a larger national profile for his work with—and later stewardship of—the Federation of Canadian Municipalities; he became known for pressing progressive urban causes. In 1997 he ran again as an NDP candidate in the federal elections, this time to represent what is now called the Toronto-Danforth constituency; he was beaten by the Liberal member of Parliament (MP) Dennis Mills.

In 2003, with the NDP suffering a crisis of direction, a lack of appeal among voters, and a decade's steady erosion of its support base, Layton decided to seek the post of national leader. Countering critics who pointed to his lack of experience and qualifications, particularly when it came to national issues, he campaigned as a badly needed fresh face. Layton persuaded several influential voices to back him, including those of the popular band the Bare Naked Ladies, who played at some of his rallies, and, perhaps more importantly, the former NDP leaders Audrey McLaughlin and Ed Broadbent. In an opinion piece for the *Globe and Mail* (November 28, 2002) entitled "Why I Am Supporting Jack Layton," Broadbent, who was easily the most popular living NDP figure, wrote, "I want a revival of progressive politics in Canada and a rejuvenated NDP. Jack Layton is crucial to both. Once, pressure from the left on Canada's all-things-to-all-people parties (Liberals and Conservatives) brought us pensions, health care and progressive taxation. . . . We desperately need to restore a commitment to the public good after a decade of attempts to assess all political projects by the market criteria of profitability. We need to get excited about politics again. . . . It is true that millions of Canadians hold social democratic values on public health care, a fair distribution of wealth and measures to protect our air and water. . . . Having the right policies is important. But it's not enough. Any good intellectual can win the debate. More is needed from a political leader. He or she must have substance—and must, through language, attitude and approach, get the people's interest in that substance. . . . More than any other candidate, Jack Layton has demonstrated that he would be this kind of leader." Layton was elected head of the party on January 25, 2003, defeating NDP members of Parliament Bill Blaikie and Lorne Nystrom on the first ballot. Layton, who did not have a seat in the federal Parliament, refused to run in a by-election or try to unseat another MP in a "safe seat," instead appointing Blaikie as the NDP's interim parliamentary leader and vowing to win the 2004 election for Parliament against Mills in the Toronto-Danforth riding. Still, Layton managed to stay in the media spotlight, usually attacking the Liberal Party as having shifted rightward (making it, according to Layton, indistinguishable from the Conservative Party) during its virtually uncontested decade in power. By the end of 2003, enthusiasts were pointing to a considerable increase in NDP support, which they attributed in large part to the "Layton effect" as well as Liberal Party "fatigue" among voters and the effective collapse of the Conservative groups, the Canadian Alliance and the Progressive Conservatives (which later united as the Conservative Party of Canada).

Layton entered the 2004 election campaign as both national party leader and parliamentary candidate, outlining his priorities as including increased funding for cities, opposition to the privatization of health care, proportional representation in Parliament, support of the international Kyoto environmental agreement, and investment in development in Afghanistan rather than participation in the U.S.-led war there. Some of Layton's statements proved controversial, including those he made during a heated tirade in which he accused Prime Minister Paul Martin of killing the homeless with his policies; a few miscues he made in discussing the hot-button issue of separatism in Quebec also caused some to call him a political novice. Nonetheless, the elections in June 2004 were considered a partial success. The party claimed 15 percent of the popular vote—its highest percentage since the late 1980s—but gained only five seats in Parliament (claiming less than a 6 percent share of the power), less than half of what Layton had predicted. Many observers said that NDP supporters had been scared in the end into voting for the Liberal Party, in order to avoid a Conservative victory. Again complaining about a lack of proportional representation, Layton noted that while the NDP had won almost half a million more votes than the Bloc Québécois, they gained 35 fewer seats in Parliament than their French-Canadian rivals. Layton managed to squeak into Parliament, narrowly beating Mills in Toronto-Danforth. (Layton's wife, Olivia Chow, failed to win in the Toronto riding where she ran.)

The Liberals remained in power but had been reduced to a minority government—that is, they had more seats than any other party but fewer than the others combined, making them vulnerable. When a scandal involving Liberal Party corruption broke out in the winter of 2004–05, the Conservatives and the Bloc Québécois saw an opportunity and called for a vote of no confidence, which would lead to new elections. It was at that point, most observers agreed, that Layton emerged as an effective politician and a credible national leader. In return for his party's essential support in propping up the Liberal government, Layton asked the prime minister for major concessions: to cancel $4.6 billion in corporate tax cuts and increase funding for affordable housing, education, public transit, environmental and energy-efficiency programs, international aid, and social programs in Canada. Many called the 2005 federal budget "the NDP budget," as Layton achieved many of his party's stated goals. "Not bad for a guy who commands only the fourth party in the House, a mere 18 MPs out of 308," Geddes wrote. At the end of 2005, when the scandal further damaged the Liberal Party, Layton offered continued backing in exchange for several more concessions, including a ban on private health care. When his proposals were rejected, Layton backed the opposition parties in calling for a no-confidence vote, which led to the 2006 federal elections. In that campaign Layton appeared more polished than in his 2004 race, sticking to talking points. He focused attacks on the Liberals, arguing that "Canadians have a third choice," noting that the NDP was the only party to safeguard health care, and pointing to his success in changing the previous budget; he asked Liberals to "lend us your vote and we'll earn it next time round." The Liberals had been intensifying a campaign of strategic voting, arguing that all progressives should vote for them to avoid a Conservative victory, and were even able to persuade the Canadian Auto Workers head, Buzz Hargrove, to campaign for them, landing a major symbolic blow against the NDP. Even so, the NDP won 10 more seats in Parliament, bringing their total to 29 (still well behind the other three main parties, with the Conservatives winning a minority government).

Layton, who had presided over a virtual renaissance of the party, boasted almost unanimous support later that year in the NDP leadership vote. On the other hand, he was facing considerable criticism, with many liberal and progressive Canadians blaming him directly for the Conservative victory; in some increasingly loud circles, Layton's shrewd politicking was being seen more as a naked desire for power than an effective way to secure his party's goals. "The New Democrats' 29 MPs now hold the balance of power, meaning they can stop the other opposition parties from defeating [Stephen] Harper's [Conservative] government," Frances Russell wrote for the *Winnipeg Free Press* (January 10, 2007). "Beginning with the last election, the NDP and the Conservatives have been, well, indecently cosy." For example, Layton offered his support to the minority Conservative government in exchange for concessions on the environment. Without much of a mandate in its minority-leadership role, the Conservative government called an early election for October 2008, to try to better its position. In the campaign, which climaxed as the country and the world were on the verge of a major financial crisis, Layton proposed redirecting the more than $50 billion corporate tax cut put forward by the Conservatives toward a national child-care policy and a child-benefit rebate for families, among other core goals of the NDP. "What we've seen on Wall Street this week is what happens when the rich and powerful are allowed to do whatever they want with other people's money," Layton said, as quoted by Mike Blanchfield and Juliet O'Neill in the *Edmonton Journal* (September 29, 2008). "Can we afford to let Stephen Harper take us down that George Bush road?" In fact, many observers noted that Layton seemed to be emulating the rhetoric successfully employed by Barack Obama, the U.S. Democratic presidential nominee at the time. While Layton responded that working people in both countries were merely facing similar issues, he attended the U.S. Democratic National Convention in Denver, Colorado, and his campaign officials admitted that he was benefiting from comparisons to the charismatic Obama. (Others sneered at the comparison. In a blog post Bob Rae, a former NDP provincial leader of Ontario who had turned to the Liberal Party, wrote, "Jack Layton thinks he's Obama. What a joke. He's Ralph Nader." He was referring to the progressive U.S. presidential candidate whom many saw as the spoiler in the 2000 race, in which the Democrat Al Gore lost to the Republican George W. Bush.)

Layton signaled a change in goals in the 2008 election. For the first time he stated publicly that he was running for the post of prime minister (or at least leader of the opposition). "For decades, the NDP has debated about whether we're running for government or running to be a strong third party or the principled party in the House of Commons, and I think [Layton] has decided since the last election that, 'By golly, we're going to run for government and let the chips fall where they may,'" Dick Proctor, Layton's former chief of staff, told Mike Desouza for Canwest News Service (October 12, 2008). "I think that was a bold decision, and probably, in the long term, the right decision." On October 14, 2008 the NDP gained another eight seats, bringing their total to 37. It remains the country's fourth-largest party, though not far behind the Bloc Québécois. Within weeks of the elections, the opposition parties were calling for still another vote of no confidence, proposing a coalition government between the Liberals and the NDP and supported by the bloc.

In December 2008 Governor General Michaëlle Jean granted a request by the Conservative leadership to prorogue Parliament—and thus delay a no-confidence motion—until the end of January. In the interim, the Liberals had a leadership change, with the new head of the party, Michael Ignatieff, deciding to side with, and thus save, the Conservatives—and distance himself from the coalition. In the summer of 2009, at the NDP federal policy convention, Layton received another significant vote of confidence from his party and went essentially unchallenged as its leader. In September, in what some observers called a reversal on the part of both Liberals and New Democrats, the Liberals announced that they would end their support of the minority Conservative government and put forward a motion of no-confidence, forcing a new election. In response, Layton announced that he would support the Conservatives and prevent an election in exchange for $1 billion allocated to unemployment benefits for those hardest hit by the global economic recession of 2008–09. To some, that move was another example of Layton's pragmatism: again presenting his smaller party as the indispensable power broker between the two major parties, with each having to court and make concessions to the NDP in order to gain the upper hand against the other. "When . . . Michael Ignatieff announced earlier this month that he would end his support for Harper's minority government, my party saw an opening to help the thousands of Canadians who are counting on us. Harper can't govern alone," Layton wrote in an op-ed piece for the *Toronto Star* (September 27, 2009). "We told him he needed to reach out or he'd have to call an election. He did reach out. The $1 billion he is proposing to spend on improving EI [Employment Insurance] benefits isn't enough, of course. Too many unemployed won't benefit from these changes. . . . For us, though, the real question is how to use political leverage responsibly when you have it." While his critics lashed out at what they called his hypocritical opportunism, Layton argued that he could not ignore the opportunity to push through legislation that was at least a "step in the right direction," and that the NDP was supporting unemployment benefits, not the Conservative government.

Layton married his first wife, his high-school sweetheart, Sally Halford, in 1969. Although the marriage, which produced two children, Sarah and Michael, ended in 1983, they remain close. In 1988 Layton married then–Toronto school-board trustee Olivia Chow. Over the years he and Chow have become one of Canada's best-known political couples; currently, both are federal MPs representing Toronto ridings. "We are the political partnership," Layton told Fraser. "No one has more influence on the way I think and work than Olivia. We have almost never had even an argument." He and Chow live with Chow's mother and their cat, George, in the Chinatown section of Trinity-Spadina, the riding that Chow represents.

Lee, Cliff

Aug. 30, 1978– Baseball player

Address: Philadelphia Phillies, Citizens Bank Park, 1 Citizens Bank Way, Philadelphia, PA 19148-5249

It was not for nothing that the Major League Baseball player Cliff Lee won the 2008 American League (AL) Comeback Player of the Year Award. In 2007, while with the Cleveland Indians, the pitcher—whose accuracy does not always match his formidable power—had an injury-plagued season that was spent partly in the minors, ended with a win–loss record of 5–8, and once saw him booed off the mound. The following year, demonstrating his often-cited ability to overcome pressure, he pitched well enough to win the AL Cy Young Award. Though he struggled somewhat in the first weeks of the 2009 season, many observers blamed his mediocre win–loss record (4–8 as of early July) on the Indians' lack of offensive support. On June 14, 2009 he had a strong showing when he held the St. Louis Cardinals to eight hitless innings, helping

Cliff Lee

the Indians to a shut-out victory (3–0) and marking the longest no-hit performance of his career. On July 29, 2009 Lee was traded to the Philadelphia Phillies, and he has went on to help lead that team to its second World Series berth in two years; the Phillies lost to the New York Yankees. In the series opener, on October 28, 2009, Lee pitched for the entire game and allowed no earned runs, leading the Phillies to beat the Yankees, 6–1. With that game Lee became the first pitcher since the Pittsburgh Pirates' Deacon Phillippe in Game One of the 1903 World Series to pitch a complete World Series game with 10 or more strikeouts and no walks. Throughout the postseason observers were impressed with the performance by Lee, who allowed just two earned runs in 33 1/3 innings in his first four play-off starts and appeared remarkably composed—even casual—on the mound. Writing for the *New York Times* (October 30, 2009, on-line) after the Phillies' victory in Game One, Lynn Zinser observed: "It was possible to stumble into Game 1 of the World Series and believe the Phillies' Cliff Lee was pitching a game in May. Against a beer league team. He shrugged. He caught a pop-up while rolling his eyes. He never once stopped chewing his gum, even while snaring a line drive behind his back. He did everything but yawn and check his text messages."

One of the three children of Steve Lee, a firefighter, and Sharon Lee, Clifton Phifer Lee was born on August 30, 1978 in Benton, Arkansas, a suburb of Little Rock. He has a sister, Cara, and an older brother, Chad. Doug Crise reported for the *Arkansas Democrat-Gazette* (June 8, 2008) that Lee's father "raised his boy to be polite and respectful and to value people over games and superlatives." Still, Steve Lee told Crise, Cliff Lee does not "put up with much nonsense. . . . He's pretty low-key. He gives you one warning. When he tells you that's enough, that's enough." As a pitcher playing Little League baseball, Lee won recognition for his strength before he developed control of his pitches. "He was always the guy who threw hardest in Little League," Mark Balisterri, Lee's baseball coach at Benton High School, told Crise. "You always said, gosh, if he could just throw strikes he could be dominating." His control improved toward the end of his junior year of high school.

After graduating, in 1997, Lee was chosen in the eighth round of the amateur draft by the Florida Marlins, but he instead decided to attend and play baseball at Meridian Community College, in Mississippi. In 1998, after he had been there a year, the Baltimore Orioles attempted to draft Lee, but he turned down that offer as well. After graduating from junior college, in 1999, he enrolled at the University of Arkansas and pitched for their team, the Razorbacks. In 65 innings Lee had a record of four wins and three losses and an earned-run average (ERA) of 4.45. ("ERA" refers to the average number of earned runs, or runs scored by opposing batters without the aid of field errors, per nine innings pitched.) He threw 77 strikeouts and held opposing batters to a .208 batting average. After the 2000 season Lee accepted an offer from the Montreal Expos after being selected in the draft's fourth round. His college play, he hold Rick Fires for the *Arkansas Democrat-Gazette* (June 6, 2000), "helped prepare me to where I think it's time."

Lee was sent first to play for Montreal's Class-A farm team, the Cape Fear Crocs, in the South Atlantic League, where he went 1–4 in 11 starts. In 2001 he spent his first full professional season with Montreal's single-A team in the Florida State League, the Jupiter Hammerheads, winning six games and losing seven but giving up only 78 hits in 109.2 innings pitched with 129 strikeouts, which was the third-best total in the league. His average of 10.53 strikeouts per nine innings put him in first place in that category among the league's starters. Lee spent the first three months of 2002 with Montreal's double-A team, the Harrisburg Senators, where his numbers improved: in 15 starts he went 7–2, led the league with 105 strikeouts, and maintained a 3.23 ERA, which was seventh-best in the league. In May he was named minor-league player of the month. On June 27, 2002 Lee, along with the Expos' shortstop Brandon Phillips and outfielder Grady Sizemore, was traded to the Cleveland Indians in exchange for Bartolo Colón and Tim Drew. The trade was seen as an attempt by the Indians to fill their roster with young talent. Lee's stellar performance with the Senators earned him a spot in the Class AA All-Star Game, played on July 10 in Norwich, Connecticut.

Joining the Indians in late June, Lee began playing with their Class AA team, the Akron Aeros. In 16.2 innings, Lee allowed only 11 hits and led the

Eastern League with 18 strikeouts. In mid-July he was promoted to Cleveland's triple-A team, the Buffalo Bisons. Lee made his major-league debut with the Indians in a game against the Minnesota Twins on September 16, 2002. Though he allowed just two hits and one earned run in over five innings, the Indians suffered from a weak offensive performance, and the Twins won the game, 5–0, clinching first place in the American League Central Division. Despite the loss, Cleveland's interim manager, Joel Skinner, was reportedly pleased with Lee's ability to place his fastball over different areas of the plate. Lee made his second and final 2002 start on September 21 in an away game against the Kansas City Royals, allowing one run and four hits in five innings. In light of his fine performances in those two starts, Lee was named the fifth-best prospect in the Indians organization by the magazine *Baseball America*.

During the team's winter workouts in the months that followed the 2002 season, Lee strained one of his lower abdominal muscles. When the pain did not subside after a week's rest, he was placed on the disabled list for 60 days, beginning on March 29, 2003. Because of his injury, he stayed in extended spring training for most of April and May, before reporting to Cleveland's Class A team in Kinston, North Carolina, on May 29. In June he split his time between the double-A Akron Aeros and the Bisons. Brought up to pitch for the Indians in a game against the Royals on June 30, Lee threw for six scoreless innings and secured his first major-league win. Though he had hoped the performance would earn him a permanent spot on Cleveland's pitching rotation, he was sent back to Buffalo the same day. He was brought back to pitch for the Indians on August 16 and started seven more games during that month. At the season's end, at the request of the Indians' management, Lee underwent surgery for a hernia, which he had suffered in junior high school and had never had surgically repaired—and which was thought to be the cause of his abdominal pain. After the surgery, on October 8, 2003, Lee was unable to work out for six weeks.

Lee's performance in spring training in 2004 led to his becoming the third starting pitcher on the Indians' roster. Early in the season he began to establish himself as a young talent on the mound and became known for his well-placed fastball. He also proved his ability to pitch through difficult situations. For example, he was able to maintain his focus and throw strikes even after a disappointing walk. "There's no quit in that guy . . . ," the pitching coach Carl Willis told Scott Priestle for the *Columbus Dispatch* (May 30, 2004), after a game against the Oakland Athletics, in which Lee walked five batters but managed to throw eight strikeouts, a career high, contributing to the Indians' ninth-inning win. "He has a history of problems with pitch counts because of the walks," Willis said. "But he's getting closer to the zone. He's getting more refined with his control." Lee's main weakness, his occasional loss of control, got him into trouble when he faced the famed Cincinnati Reds slugger Ken Griffey Jr., in Griffey's second at-bat in a game on June 13, 2004. In his first at-bat, in the third inning, Griffey had hit a home run off Lee, increasing Griffey's career home-run total to 499 and setting the stage for a possible 500th. Lee had pitched inconsistently in the game; he had allowed seven runs on six hits and walked four batters in just 3 2/3 innings. When Griffey stepped to the plate for the second time that game, Lee pitched a wild fastball that sailed over the batter's head and hit the backstop. Perceiving Lee's inaccurate pitch as an attempt to hit Griffey, the plate umpire, Matt Hollowell, ejected Lee without a warning, making for Lee's shortest-ever starting appearance. Lee did not argue with the umpire but contended that he had not meant to hit Griffey. (The Indians won the game, 10–8.) On June 19, 2004 Bob Watson, the vice president of Major League Baseball (MLB) on-field operations, penalized Lee for the wild pitch with a $1,000 fine and a six-game suspension. At first Lee appealed the decision, but he gave up that effort at the request of Cleveland's manager, Eric Wedge, so that the pitching rotation would not have to be adjusted, which might have been necessary if Lee had delayed the suspension with his appeal.

Lee embarked on a five-game winning streak from June 18 to July 16, 2004, giving him an impressive record of 10–1, which was at the time the best of the Indians' starting five pitchers. Lee's pitches became inconsistent near the end of July, however, and stayed that way through September, as he lost seven straight contests. His bad streak began on July 21, against the Chicago White Sox, when he allowed seven runs and nine hits in four innings in what culminated in a 14–0 loss. In his next start, against the Detroit Tigers on July 26, 2004, Lee was pulled from the mound after just two-thirds of an inning, having allowed six runs and six hits. Lee became so frustrated during an August 2, 2004 game against the Toronto Blue Jays, after having given up nine hits in $4^1/_3$ innings, that he threw his hat and glove into the stands when the game ended in a 6–1 loss for the Indians. By September the Indians had been dubbed "Team Streak," because of their alternating series of wins and losses, and Lee, who had posted a 1–6 record and a ghastly 9.69 ERA in the second half of the season, became known as "Kid Streak"—or, as Paul Hoynes put it for the Cleveland *Plain Dealer* (September 3, 2004), "the ultimate hot-and-cold pitcher."

The 2005 and 2006 seasons were far more successful for Lee. By July 18, 2005 Lee led the Indians' pitching squad with 10 wins and just four losses. By August 21 he had improved those marks to 13–4. In great contrast to his reputation from the previous season, by September—as the Indians drew closer to the New York Yankees in the race for the wild-card spot in the play-offs—Lee's pitching became known for its consistency. He attributed his improvement to his ability to focus on a few key ideas. "When I pitch, I keep it as simple as possible. I try not to let the other team score," Lee told Priestle for the *Columbus Dispatch* (September 7, 2005). "I try not to walk guys. I throw strikes and let them put the ball in play. That's really all I'm thinking about: Locate my pitches, don't walk guys, don't let them score." Finishing the 2005 season with 18 wins and five losses and a 3.79 ERA, Lee was the winningest left-handed pitcher in the American League and the first Cleveland pitcher since Bob Feller in 1951 to lead that league in winning percentage. He also came in fourth place for the Cy Young Award, an honor, voted on by the Baseball Writers Association of America, that recognizes the best pitcher in each major league. (The winner was the Los Angeles Angels' Bartolo Colón.) The Indians finished the 2005 season with a record of 93–69, falling just short of the American League wild-card spot, which went to the Boston Red Sox.

In the 2006 season, with 33 starts and 200 innings pitched, Lee had a record of 14–11. Though Lee's ERA rose to 4.40 by season's end, he managed to hold opposing batters to an average of .278. David Sabino wrote for *Sports Illustrated* (March 20, 2006), "Lee has an odd arm angle, making his pitches hard to pick up, and he's not afraid to challenge hitters." As quoted by Sabino, Wedge described Lee's pitching as "sneaky, aggressive, and very smart." On August 8, 2006 Lee signed a contract extension with the Indians through 2009, which included the possibility for him to stay until 2010.

Lee had plans to expand his range and experiment with a new arsenal of pitches during the spring training before the 2007 season. But in the first few weeks of training, Lee again strained his abdominal muscle. The injury led to him to miss virtually all of spring training and begin the 2007 season on the disabled list. He pitched for the Class A Kinston team before spending time in extended spring training in Winter Haven, Florida, and throwing for the Class AAA Bisons through mid-April. He returned to Cleveland's starting rotation in May 2007, but after he won his first two starts, his record went sharply downhill. Observers noted that Lee had great difficulty in controlling the speed and placement of his pitches, resulting in his throwing fastballs across the middle of the plate, among the easiest pitches to hit. On May 23, 2007, in an away game against the Royals, opposing batters hit a career-high eight runs off Lee. That loss was followed by a four-game Indians' losing streak. On July 21, 2007, in an away game against the Texas Rangers, Lee argued from the mound with the Indians' catcher Victor Martinez after giving up five runs on six hits in the game's first inning. The two argued again in the third inning, when Lee hit the Rangers batter Sammy Sosa in the head with a fastball. Sosa, who had been honored before the game by family, friends, and politicians from his native Dominican Republic for hitting his 600th home run on July 20, 2007, was forced to sit out the rest of the game. Though Lee contended that he had not intended to hit Sosa, Martinez reportedly thought that Lee had not shown enough remorse for the dangerous pitch. Though Lee recovered from his pitching troubles to throw five scoreless innings, the altercations between Lee and Martinez led to a 25-minute private team meeting in the locker room following the game. Lee hit his low point in the 2007 season in a home game against the Red Sox on July 26, when he allowed eight runs to score in just four innings. When he was pulled from the game, after the fourth inning, the home crowd booed and jeered at him. The loss capped a four-game losing streak in which Lee allowed 26 earned runs and 32 hits in 20 innings. When Lee telephoned Wedge that night to discuss the loss, Wedge informed him that he was being sent down to the Class AAA league for the rest of the season. After the Indians finished first in their division and earned a spot in the play-offs, Lee learned that he would also be left off the Indians' play-off roster and replaced by the left-handed pitchers Aaron Laffey and Jeremy Sowers. "Obviously I wasn't happy," Lee told Jodie Valade for the *Plain Dealer* (May 18, 2008). "I didn't want to go to Buffalo. But the team was trying to play in the play-offs. And that's the honest thing—if you're not getting the job done, there's someone else behind you. That's how it should go." In Lee's absence the Indians defeated the Yankees in the American League Division Series and went 3–1 against the Red Sox in the American League Championship Series before losing three straight games to the Red Sox, who became that year's World Series champions.

Despite his recently signed contract, in the off-season sports analysts predicted that Lee would be traded. The pitchers who had replaced him, Sowers and Laffey, had performed well, and because each had spent less than two years in the major leagues, their lower salaries would save the Indians money. Despite trade rumors that linked Lee to several other teams, the Indians' management expressed confidence in Lee. "His stuff is still there," Cleveland's general manager, Mark Shapiro, told Hoynes. "His competitiveness is still present. I still feel he can be a 200-inning pitcher again and a valuable contributor to our staff."

Lee was not traded, but he had to work hard to earn back his spot on the Indians' five-pitcher starting rotation. He began a streak of remarkable pitching that continued throughout the season. When he earned his sixth straight win, on May 7, he became the first Indians pitcher to do so since Greg Swindell, in 1988. At that point Lee's strikeout-to-walk ratio peaked at an astonishing 11–1. "More than any time in his career, when he goes out and falls behind in the count or doesn't execute a pitch, he's able to take a step back, slow things down, get back together and execute the next pitch . . . ," Willis told Valade. "He has much better focus." Lee was voted to play for the American League team in the All-Star Game, held at New York's Yankee Stadium. The Boston Red Sox manager, Terry Francona, who had been selected to manage the American League squad, chose Lee to be the team's starting pitcher. Lee finished the season with an astounding 22–3 record and won both the AL Cy Young Award and the AL Comeback Player of the Year Award.

Lee made 22 appearances in the 2009 season as a member of the Indians. He amassed a record of 7–9, with 107 strikeouts, and an ERA of 3.14—less impressive figures than those of the year before. On July 29, 2009, two days before the trade deadline, the Indians traded Lee, along with the outfielder Ben Francisco, to the Philadelphia Phillies, the reigning World Series champions, in exchange for the pitchers Jason Knapp and Carlos Carrasco (both minor-league prospects), the catcher Lou Marson, and the shortstop Jason Donald. The trade was characterized by the Indians' management as part of an effort to make room in the team's budget for future acquisitions and to rebuild its roster for 2010 and beyond. On July 31, 2009, in his first appearance on the mound with the Phillies, Lee pitched a complete game, in a 5–1 victory over the San Francisco Giants. He went on to pitch a total of 79.2 innings with the Phillies in the 2009 season, amassing a 7–4 record, 74 strikeouts, and a 3.39 ERA. Lee's efforts helped lead the Phillies to finish the season with record of 93–69, the best in the National League East. The team defeated the Colorado Rockies and the Los Angeles Dodgers in the play-offs to advance to the World Series for the second year in a row. The Phillies' manager, Charlie Manuel, named Lee as the team's starting pitcher in Game One of the series, after Lee's wins in his two play-off appearances. In that game, on October 28, 2009, Lee put on a stunning performance, allowing no earned runs and racking up 10 strikeouts and zero walks, helping his team secure the 6–1 win. The Phillies went on to lose the next three games of the series, with final scores of 3–1, 8–6, and 7–4. Lee returned to the mound as the Phillies' starting pitcher for Game Five, which was held in Philadelphia's Citizens Bank Park, on November 2. On the mound Lee exhibited what Tyler Kepner, writing for the *New York Times* (November 3, 2009), described as "the rapid pace he had set while mastering the Yankees in Game 1" as he "cruised through the middle innings." Lee held the Yankees to just two runs in the first seven innings, as the Phillies' offense scored eight, establishing a six-run lead. In the eighth inning, however, the Yankees managed three hits off Lee, each of which resulted in a run scored, and Lee was replaced by Ryan Madsen, who held the Yankees to one more run and closed Game Five with an 8–6 victory. In Game Six the Yankees defeated the Phillies, 7–3, and claimed victory in the 2009 World Series. Lee was one of only two pitchers (the other was Roy Halladay of the Toronto Blue Jays) in the major leagues who managed to defeat the Yankees three times during the 2009 season. On November 5 it was reported that the Phillies were discussing the possibility of signing Lee, who is on contract with the team for $9 million through the 2010 season, to a longer-term contract.

An avid hunter and fisherman, Lee makes his off-season home in Benton, Arkansas, with his wife, Kristen, his son, Jaxon, born in 2001, and his daughter, Maci, born in 2003. When Jaxon was four months old, he was diagnosed with leukemia; he underwent chemotherapy and a stem-cell transplant before the cancer went into remission. Maci was born three months premature. Given those problems, which coincided with the first few years of Lee's professional career, the athlete and his wife have been able to keep his professional struggles in perspective. Referring to Lee's temporary demotion to the minor leagues in 2007, Kristen told Mel Antonen for *USA Today* (May 29, 2008) that the children's troubles "brought us back to reality and helped us remember what is really important. The season wasn't all that bad. We know what real struggles are when you have a child that almost dies of leukemia. [Lee] wasn't pitching well, but compared to everything else, it was minor." Lee was nominated by his team in 2005 for the John Hancock Roberto Clemente Award, in recognition of his community service. Lee runs a free baseball clinic for children at Cleveland State University; he also contributes his efforts to the Providence House, the Grand Slam Literacy Program, and other local charities. He and his wife were honorary chairs of the Light the Night Walk, held in Jacobs Field on September 17, 2006, to raise funds for cancer research and patient services for the Leukemia & Lymphoma Society.

Leo, Melissa

Sep. 14, 1960– Actress

Address: c/o Agency for the Performing Arts,
9200 Sunset Blvd., Suite 900, Los Angeles, CA
90069-3604

In the majority of her film and television roles, Melissa Leo, a celebrated character actress, has played strong women who adapt to difficult situations. Although Leo has been acting professionally since the mid-1980s, it was not until she portrayed the Baltimore police sergeant Kay Howard on the se-

Melissa Leo

ries *Homicide: Life on the Street*, from 1993 to 1997, that audiences began to take note of her talent. While most female television characters (even those in such gritty professions as law enforcement) were unrealistically manicured, coiffed, and garbed in designer fashions, Leo refused to portray Howard in that way. "The makeup-free, no-nonsense actress played Howard as a no-nonsense, makeup-free woman during her four years on *Homicide*," Tamara Ikenberg wrote for the *Dallas Morning News* (June 5, 1998). Leo's take on the detective—sensible, competent, plainly dressed—instantly made Howard a role model and icon for the show's small but devoted fan base.

Despite her character's popularity, in 1997 Leo was fired from the show, and more conventionally attractive actresses were added to the cast. She returned to appearing in supporting roles, mostly in independent films and television series. Leo re-emerged in 2003 with a high-visibility supporting role in the film *21 Grams*, and in 2008 she had her first starring role, in the independent hit *Frozen River*, playing a downtrodden woman whose resolve to escape poverty leads her to take part in an illegal smuggling operation. The movie won the Grand Jury Prize for best drama at the Sundance Film Festival, and the universal praise lavished on Leo's performance has attracted increased interest from casting agents.

Melissa Chessington Leo was born on September 14, 1960 in New York City. Her father, Arnold, was an editor who later in life turned to commercial fishing, and her mother, Peggy, worked as a teacher. When she was very young, her mother enrolled her in the Peter Schumann Bread and Puppet Theater Workshop, one of the oldest nonprofit theatrical companies in the country. "Peter would teach us to not just manipulate the puppet but to be the puppet. It freed the inhibited child that I was," Leo told a reporter for *Vanity Fair* (February 11, 2009, on-line). "I found there was a space and a people that I knew and felt comfortable with, inside the darkened theater. And I learned, slowly, what it is to be an actor and how an actor can be employed and all of those things."

When Leo was nine her parents divorced, and she moved with her mother and older brother, Erik, to the town of Putney, Vermont. She continued her training as an actress under Arthur Lithgow, the actor John Lithgow's father, at the Brattleboro Center for the Performing Arts. Five years later Leo's family moved to London, England, where Peggy found a job supervising American students studying abroad. In London Leo enrolled in theater classes, and when Peggy was ready to return to the U.S. a year later, Leo asked if she could stay behind to continue her studies. Her mother granted her permission and helped her rent a flat. "People say, 'Did you leave home?'" Leo told Pam Lambert and Sarah Skolnik for *People* (December 4, 1995). "No, home left me."

Leo returned to the U.S. in 1980 and began attending classes on the Purchase campus of the State University of New York (SUNY). She dropped out of school during her junior year and moved to New York City in search of work. She found a job as a waitress and started to audition, unsuccessfully, for television and film roles. Leo tried out for a part in the film *Razor's Edge* (1984), and while she did not get the role, the picture's lead actor, Bill Murray, was impressed by her performance. "[Murray] told me: 'Wow, you got something. If you want to do this, go do it,'" Leo recalled to Rebecca Rothbaum for the *Poughkeepsie (New York) Journal* (January 25, 2004). "I took it to heart and quit my waitressing job that afternoon."

In 1984 Leo won a role on *All My Children*, a popular soap opera that has been broadcast on the ABC network since 1970. (She beat out the now-famed actress Julia Roberts for the part.) Although her character, Linda Warner, was on the show for only a few episodes, Leo's visibility increased, and she began to get work more frequently. In 1985 she appeared in the semi-confessional comedy *Always*, directed by Henry Jaglom, an independent filmmaker with whom she continues to work. (*Always* was released on video under the title *Always, But Not Forever.*) That year she also had a role in an episode of the crime series *The Equalizer* and appeared in the film *Streetwalkin'* as a runaway teen who becomes a prostitute in New York City's then-seedy Times Square.

Over the next few years, Leo took on numerous minor roles. She appeared in the horror film *Deadtime Stories* in 1986, an episode of the cop drama *Miami Vice* in 1988, and the television action film *Nasty Boys* in 1989. From 1989 to 1990 she played the character Emma Shannon in *The Young Riders*, a show based on the exploits of the Pony Express, a 19th-century mail service. In 1992 Leo appeared in Jaglom's dramatic film *Venice/Venice*, and in 1993 she had a role in the Western drama *The Ballad of Little Jo*.

That year Leo became a regular cast member on the critically acclaimed NBC crime series *Homicide: Life on the Street*. From 1993 to 1997 Leo portrayed Detective Sergeant Kay Howard, a tough, hard-working homicide investigator. Based on the former *Baltimore Sun* journalist David Simon's nonfiction book *Homicide: A Year on the Killing Streets* (1991), the show focused on the daily lives and challenging investigations of Howard and the other officers on the streets of crime-ridden Baltimore, Maryland.

Leo played the only female member of the show's homicide unit, and her portrayal was praised by both critics and fans for its realism. Tim Goodman wrote for the *Hamilton (Ontario, Canada) Spectator* (February 8, 1997), "This is the perfect example of what other women on cop shows could only hope to be. Howard knows it's a man's world in the department, but uses that to motivate herself to new heights. She keeps her personal life out of the office as much as possible. She's not always invited into the boys' club, but keeps knocking on the door." Alan Sepinwall wrote for the Cleveland, Ohio, *Plain Dealer* (June 15, 1997), "Leo was a breath of fresh air when *Homicide* debuted in the spring of 1993. Then-Detective Howard was not only a believable cop who wasn't sleeping with any of her male colleagues, but she was actually the best detective in the homicide unit." Sepinwall continued, "She was tough, she was smart, and, thanks to Leo's insistence that a real cop wouldn't waste time in the morning trying to look like a fashion model . . . she had an interesting look all her own: almost no makeup, a wardrobe of bargain-basement men's sports coats and ties, and a shock of curly red hair that made her still seem feminine without sacrificing her credibility as 'one of the guys.'" Lon Grahnke wrote for the *Chicago Sun-Times* (August 13, 1995), "Brilliantly played by Melissa Leo, Baltimore detective Kay Howard is television's finest female cop."

Leo told Tamara Ikenberg that she took cues from real-life female homicide detectives to develop the character. "There are very few female homicide detectives," she observed. "There are some, and they are very particular women. They are bright women. They are deeply involved in their work. They are not vain women. They are not concerned about what the fellas think." She told Scott Tobias for the *A.V. Club* (July 31, 2008, on-line), "It's not that I don't like wearing dresses, because geez, I'm a girl, and I love to put a dress on from time to time. But I went to [the producers] when we first started, and I . . . said, 'Okay, you take me into court, I'll put a skirt on, but you can't show up to work in a homicide unit in skirts and heels. You've gotta have trousers on.'" While Leo became inextricably linked to the role of Howard, she told Lambert and Skolnik that she was unlike her character in many ways. "I don't slow down at [a car] accident," she said. "I don't like to look at the horror that's in the world."

While *Homicide: Life on the Street* aired, Leo also appeared in other projects, including two episodes of the TV miniseries *Scarlett* (1994) and Jaglom's film *Last Summer in the Hamptons* (1995). In 1997 NBC removed Leo from the show. Although network executives never fully explained their reasons, Leo has discussed her guesses with reporters. Explaining that she felt that the show's writers were trying to make her conform to the standards of conventional female television roles, she told Ikenberg, "I won't ever know what the truth is. . . . I staunchly maintained the original premise, and they thought that I was being difficult." She later told Scott Tobias, "There had never been Kay Howard on TV before she was on TV, and you see her all over the place now. Aspects of Kay Howard. Her hair, her pants, her suits, all of it. As a matter of fact, there are several movie-star actors who are doing television shows now. And those characters—and the actors and the producers are aware of this—are going after something that got my ass fired." (In 2000, however, Leo reprised the role of Howard in *Homicide: The Movie*.)

In 1999 Leo appeared alongside Rosie Perez in *The 24 Hour Woman*, and in 2000 she starred in the film comedy/drama *Fear of Fiction*. In the latter movie she played a novelist who embarks on a road trip to get over a bout of writer's block. The film as a whole received lukewarm reviews, but Leo's performance garnered praise. Bob Campbell wrote for the Newhouse News Service (July 12, 2000), "Better known for her *Homicide: Life on the Street* TV stint than her scattershot movie roles, the flinty, flame-haired actress unsentimentally sketches a hard-edged New York novelist in rebellious flight from herself."

In 2003 Leo appeared in the director Alejandro González Iñárritu's *21 Grams*, which followed the struggles of three characters brought together by a tragic car accident. The picture was generally well-received by critics. Lee Ann Gilan wrote for the *Halifax (Nova Scotia) Daily News* (November 27, 2003), "It's a rather silly movie-of-the-week-style story transformed into something much more moving," and Elvis Mitchell wrote for the *New York Times* (October 12, 2003): "The depths of intimacy that . . . Iñárritu plumbs here are so rarely touched by filmmakers that *21 Grams* is tantamount to the discovery of a new country."

In the film Leo played the supporting role of Marianne Jordan, the wife of Jack Jordan, a deeply troubled man played by Benicio Del Toro. Although Marianne was not a main character, critics praised Leo's poignant performance. Mitchell wrote, "As Jack's wife, Melissa Leo makes her relationship to a man given to tremendous and simultaneous hostility and remorse so real it's absorbing and painful to watch." Charles Britton Valenzuela wrote for the Torrance, California, *Daily Breeze* (November 21, 2003), "It's a terrific performance for someone who is best known for her TV work . . . and if she doesn't get a supporting actress nomination, there's no justice in the world." Focus Features, the film's U.S. distributor, mounted a campaign to win Leo an Academy Award nomination, and although those efforts proved futile, Leo was named the runner-up in the best-supporting-actress category by the Los Angeles Film Critics Association.

Between 2004 and 2007 Leo took on numerous roles in films and television shows, including an episode of the popular TV drama *CSI: Crime Scene Investigation*, in 2004, and three episodes of the acclaimed series *The L Word*, in 2005. She had a role in the Western film *The Three Burials of Melquiades Estrada* (2005), directed by Tommy Lee Jones, and appeared in Jaglom's *Hollywood Dreams* (2006). In 2007 Leo was featured in the family drama *Black Irish* and appeared alongside Billy Bob Thornton in the comedy *Mr. Woodcock*, a box-office disappointment.

In 2008 Leo starred in the independent film *Frozen River*, the first feature by the director Courtney Hunt. In the film, which won the Grand Jury Prize for best drama at the Sundance Film Festival, Leo played Ray Eddy, an upstate New York resident who assists a Native American woman (Misty Upham) in smuggling illegal immigrants into the U.S. from Canada. Ray, a poverty-stricken mother of two, reluctantly agrees to the illegal operation as a means to secure a much-needed down payment on a new trailer. The movie was widely praised for its verisimilitude. "There's a moment in the film, a small moment, when Ray has to give her sons lunch money because they're off to school," Leo told Tobias. "I remember growing up in Vermont, and I was on a meal plan myself up there, and with my meal-plan ticket and $.50, I could get my lunch. But I had to have that $.50. . . . If I had information that I could bring to the film, or if I could imagine myself in a situation I may have been in, I would bring that to the table."

Reviews of the film were almost entirely positive. "The biggest thrill for many fans will be watching Ms. Leo perform with enough room to explore one of the complicated, surprising women she's so good at sketching in smaller roles," Karen Durbin wrote for the *New York Times* (July 27, 2008). "Ray is vulnerable to life's punches, but she's no sentimental construct. For one thing she's a bigot, though not overtly—at least toward most of the people she and [her smuggling partner] Lila shovel into the trunk of her car. But she's furious at having to transport a Pakistani couple she suspects of being Muslim terrorists and soothes her conscience by treating them horribly. At the same time she embodies the almost invisible heroism of someone continually pecked at by poverty. She not only keeps going, but her dogged problem-solving concentration also makes it clear that the thought of quitting doesn't enter her mind." Robert Koehler wrote for *Variety* (January 20, 2008, on-line), "No trendsetter or breakthrough, this [film] is more than anything else a welcome chance for the fine actor Melissa Leo to finally dominate a film in a terrific and affecting lead role." He continued, "The movie . . . belongs to Leo, a [thespian] of considerable flinty character and honesty who brings all of her reserves to bear on a big, complex role. Unafraid to show herself weathered by the cold, harsh elements and never working to make [audiences] love her, Leo builds the kind of [performance] that invites concentration, and then high respect." Leo was nominated for an Academy Award as best actress for her role in *Frozen River* but lost to Kate Winslet, who had played an illiterate concentration-camp guard in *The Reader*.

In 2008 Leo could also be seen in an episode of the popular TV show *Law & Order*; the big-screen thriller *The Alphabet Killer*, which starred Eliza Dushku and Timothy Hutton; *Santa Mesa*, a movie about the plight of a Filipino orphan; the basketball picture *Ball Don't Lie*, which featured the rapper Ludacris; *Lullaby*, a film about kidnapping and the drug trade, set in South Africa; and *This Is a Story About Ted and Alice*, a short master's-thesis film by a Columbia University student. The next year Leo appeared in independent films including *Stephanie's Image*, *True Adolescents*, *Don McKay*, *Greta*, and *Dear Lemon Lima*. She also had a part in Kirk Jones's *Everybody's Fine*, a remake of Giuseppe Tornatore's *Stanno Tutti Bene* (1990); starring Robert De Niro, it was scheduled for release in December 2009.

Leo currently has several projects in various stages of development, most of them small, independent films. In 2010, however, she will appear with Sarah Michelle Gellar in the relatively large-budget film *Veronika Decides to Die*, whose protagonist, a young woman confined to a mental institution after a failed suicide attempt, regains her will to live.

Leo told Tobias that she was "perfectly comfortable" with being labeled a character actress. "I've always been somebody who is much more invested in who I am playing than how they look," she noted.

Leo lives in Ulster County, New York, and has a son, John, whose father is the actor John Heard. In 1997 Heard was sentenced to 18 months probation and ordered to seek psychological treatment after he was convicted of harassing Leo by phone and trespassing on her property.

Llinás, Rodolfo R.

(yee-NAHS)

Dec. 16, 1934– Neurophysiologist; educator; writer

Address: New York University Dept. of Physiology and Neuroscience, 550 First Ave., New York, NY 10016

"Groups of neurons, millions strong, act like little hearts beating all on their own. It's like a Riverdance performance." That description of neurons came from Rodolfo Llinás, the chairman of the Department of Neuroscience and Physiology at the New York University (NYU) School of Medicine, during an interview with Sandra Blakeslee for the *New York Times* (December 2, 2008). Also called nerve cells, neurons are cells in the brain, spinal cord, and other parts of a vertebrate's nervous system; they process and transmit information by electrochemical signaling, in a manner that Llinás, in that interview, was likening to traditional Irish step dancing. Elaborating on that analogy, he said, "Some cells are tapping in harmony and some are silent, creating myriads of patterns that represent the properties of the external world. Cells with the same rhythm form circuits to bind information in time. Such coherent activity allows you to see and hear, to be alert and able to think." Llinás is an expert on the electrophysiology of the brain—the way the brain carries out its jobs by means of electrochemical activity. At the beginning of his career, in the early 1960s, he worked at the Australian National University with the Nobel Prize–winning neuroscientist John C. Eccles and other members of the first team to construct a physiological chart of an entire region of the brain—the outer layer of the cerebellum, known as the cerebellar cortex. Later, successively, between 1965 and 1976, he joined the faculties of the University of Minnesota; the American Medical Association Institute of Biomedical Research; Northwestern University; Wayne State University; the University of Illinois; the University of Iowa; and New York University, where since 1976 he has been the chairman of the Department of Physiology and Neuroscience and is in addition the Thomas and Suzanne Murphy professor of neuroscience.

The brain is the most complex organ in the human body and the most "expensive" in terms of energy. At about three pounds, it constitutes about 1/50th of body mass but consumes 25 percent of the energy resources. The different parts of the brain communicate with one another by firing electrochemical signals from one neuron to another in neural chains. A neuron is composed of a cell body, or soma, a long arm known as an axon, which conducts electrochemical signals to the cell body, and branched projections known as dendrites. A neuron's action is either excitatory, meaning that it passes a signal to the next neuron, or inhibitory, meaning that it stops a signal. Each signal begins with an electrical event, when ions (charged molecules) generate a so-called action potential; that triggers chemical events involving synapses, the gaps that exist between neurons. The presynaptic ending at one end of a synapse contains neurotransmitters, mitochondria, and other so-called organelles; the postsynaptic ending at the other end of the synapse contains receptor sites for neurotransmitters. The brain is divided into sections according to function. The cerebral cortex, as part of the thalamocortical loop, is the central processor and is responsible for consciousness, memory, language, and reasoning. The brainstem consists of the hindbrain and the midbrain and acts as a relay center for such involuntary activities as the beating of the heart and breathing. The cerebellum (Latin for "little brain") plays a major role in the integration of sensory perception and motor control. It receives information, in the form of electrochemical signals, from other parts of the brain through input fibers. The job of the cerebellar cortex, the outer layer of the cerebellum, is to modulate the information it receives from clusters of neurons within the cerebellum, known as deep nucleii, and transmit the information to other parts of the brain, by way of climbing fibers. Those fibers wrap around Purkinje neurons in the cerebellum, causing them to fire. Other structures involved in the process of sensory integration include the inferior olivary bodies, or olives, and the thalamus. The two olives (often referred to in singular form, as the IO), located in the brain stem, also transmit information to the cerebellum through mossy and climbing fibers. The thalamus, located just above the brainstem, relays information from the cerebellum to the cerebral cortex.

Llinás's research has helped to elucidate the electrophysiological activities that link the cerebellum to other parts of the brain. One of his most controversial findings threw into question the generally accepted notion that neurons do not act independently but only react to stimuli. Also a matter of dispute is his theory that the IO and the thalamus are constantly communicating with other parts the brain via oscillations. Llinás has found evidence suggesting that, when those oscillations occur at high or regular frequencies, a person's motor and cognitive skills indicate that he or she is fully awake and functioning at a high level. The thalamus enters into low-frequency oscillation after a person has been awake and active for many hours, and he or she falls asleep. Llinás believes that when abnormal rhythms—called thalamocortical dysrhythmias—link certain parts of the brain, a variety of maladies may result: Parkinson's disease, epilepsy, depression, chronic pain, tinnitus, obsessive-compulsive disorders, and some symptoms of schizophrenia. Llinás has suggested treating those disorders with deep brain stimulation (DBS), in which pinpointed parts of the brain are stimulated with a few volts of electricity through implanted electrodes. DBS has been used with notable success in some victims of Parkinson's disease; it has also been used successfully to treat some victims of movement disorders or intractable depression, and it is currently being tested on people suffering from one or another of dozens of other disorders. Among his other achievements, Llinás discovered in mammalian neurons what are called dendrite calcium spikes ("spikes" in the sense of a sudden burst of activity) and dendritic inhibition, and he has shown the existence of presynaptic calcium current in giant squids. An essay by Llinás about his life and work is included in the series *The History of Neuroscience in Autobiography* (Volume 5, 2006); as of mid-2009 that essay was posted on the Web site of the Society for Neuroscience.

Rodolfo Riascos Llinás was born to Jorge Enrique Llinás and Bertha Riascos Llinás on December 16, 1934 in Bogotá, Colombia. His father, a thoracic surgeon; his paternal grandfather, a psychiatrist; and an uncle were all professors at the National University School of Medicine in Bogotá. "From very early on," Llinás told Philip J. Hilts for the *New York Times* (May 27, 1997, on-line), "I was thinking and talking about the mind, because that is what the subject was in our house." For a year when he was four, Llinás lived with his grandfather. One day Llinás witnessed a client of his grandfather's collapse in an epileptic seizure in his grandfather's waiting room; later, he asked his grandfather why a person would behave like that. His grandfather explained that the man did not want to flail about; rather, his brain was controlling his actions. "He doesn't want to," Llinás thought, as he recalled to Hilts. "How can he do something he doesn't want to? Such an incredible event!" Llinás told Hilts, "I began to wonder, when I move, how do I know whether I want to or not?" When he posed such questions to his grandfather, the older man acknowledged that he could not explain how the brain worked. Back at his parents' home, Llinás began to conduct experiments in the basement; for example, he would attach electrodes to mice and rats and observe what happened. "My mother kept after me, to make sure I was not unkind," he told Hilts, "but there it is, I was already started."

In 1952 Llinás earned a B.S. degree in general studies (equivalent to a high-school diploma in the U.S.) from Gimnasio Moderno, a private school in Bogotá where, he wrote in his autobiographical essay, he learned "intellectual rigor." At age 17 he enrolled in a combined undergraduate/graduate medical program at the Pontificia Universidad Javeriana, in Bogotá. As he had planned to do for years, he focused on nervous-system physiology.

During his undergraduate years Llinás met the neurosurgeon Walter R. Hess, a pioneer in hypothalamic electrical stimulation—the use of electrodes to stimulate the hypothalamus, the part of the brain that, among other functions, regulates the automatic nervous system. During visits to Hess's laboratory in Switzerland in 1954 and 1956, Llinás assisted in experiments that showed that electrical stimulation of specific areas of cats' brains could induce behavior typical of that species. An electrical signal imparted to a cat at rest, for example, could cause the animal to leap up with an arched back and erect fur, as if it had been threatened. Back in Bogotá he was unable to replicate such experiments for his thesis because he lacked the proper equipment and set-up—and even Bogotá's stray cats, he has recalled, proved to be uncooperative. Instead, he earned a doctoral degree with a dissertation about circuit analysis of the visual system, a more theoretical subject. He was awarded an M.D. degree in 1959.

Llinás then traveled to the U.S. to study neurosurgery. He took courses at the Massachusetts Institute of Technology (MIT), in Cambridge, and conducted research at Massachusetts General Hospital (MGH), in Boston. He was disappointed to discover that "for the most part, and rightly so," the MGH neurosurgeons "were more interested in saving lives than in figuring out how the brain works," he wrote in his autobiographical essay. After a year and a half at MIT, he left for the University of Minnesota, supported by a grant from the National Institutes of Health (NIH). In Minnesota, under the supervision of the electrophysiologist Carlo Terzuolo, he studied the electrical properties of motor neurons (or motoneurons), which originate in the spinal column and affect the movement of muscles. "I was basically left on my own," he wrote in his essay. "I would report to [Terzuolo] once a week. I cannot overstate the importance of having had Carlo be as tough as nails concerning science and as hands-off as he was during this time." Within about a year and a half, Llinás and Terzuolo had made several significant discoveries concerning inhibitory responses in the brain. One was that an inhibitory response could take place at either the level of the cell body or on a dendrite. The finding regarding dendritic inhibition was particularly controversial, because it countered the assumption that motoneuron electrical activity was driven exclusively by synaptic input directly into the soma. In general scientists had dismissed the notion that synapses could occur by way of a dendrite.

Llinás and Terzuolo presented their findings about dendritic inhibition at the 1962 International Physiological Conference, in Amsterdam, the Netherlands. Following the presentation Llinás was approached by the renowned neuroscientist John C. Eccles, who told him that he and Terzuolo were "clearly wrong," as Llinás wrote; nevertheless, Eccles invited him to work in his laboratory in Canberra, Australia. Llinás spent the next two years in Canberra, collaborating with Eccles and another researcher, Kazuo Sasaki, in an investigation of the physiology of the cerebellar cortex. Shortly after Llinás began his research there, in 1963, Eccles was awarded the Nobel Prize for physiology or medicine, in conjunction with Andrew Huxley and Alan Hodgkin, for his work on synapses. Eccles's team of researchers spent years mapping the synaptic interactions that occurred in the cerebellar cortex and characterizing them as either excitatory or inhibitory. Among their most surprising findings was that the climbing fibers elicited huge synaptic electrical potentials that were activated by a single input fiber, rather than the summation of many fibers acting in unison, which was formerly thought to be the case. By 1966 Llinás and his colleagues had completely mapped the cerebellar cortex, making it the first region of the brain to be physiologically charted. The group's findings were published in several papers in the *Journal of Physiology* and the *Journal of Experimental Brain Research*, as well as in two articles for *Nature*. They were also presented at the International Physiological Congress in Tokyo, Japan. Llinás completed a second dissertation on the functioning of the cerebellar cortex and earned a second Ph.D., in 1966, from Australian National University.

Meanwhile, around that time Llinás had met Gillian Kimber, who was finishing her Ph.D. at the university on the philosophy of mind and shared his ideas about the mind. Llinás and Kimber married in December 1965 and then moved to Minneapolis, Minnesota, where Llinás became an associate professor of physiology at the University of Minnesota. In 1966, under the auspices of the American Medical Association Education and Research Foundation (AMA/ERF), Llinás joined Eccles at the newly established Institute for Biomedical Research (IBR) at the University of Chicago. There, until 1970, Llinás and a team of postdoctoral fellows investigated the physiology and anatomy of the cerebellum in various species. Llinás and his colleagues studied the cerebellums of vertebrates including frogs, fish, reptiles, birds, and mammals. Among Llinás's conclusions was that although the cerebellum is more complex in higher animals, it nonetheless has evolved to function in a similar way in many vertebrates.

In 1968 Eccles left the AMA/ERF, and Llinás became the IBR's director of neurobiology. About a year and a half after that, to the great outrage of the scientific community, the AMA decided to close down the institute. Shortly before the closing Llinás hosted an international symposium on the evolution and development of the cerebellum; the significant findings presented there were published in 1969 in a book that he edited. In 1970 Llinás and his research group, with whom he had worked for five years, relocated to the University of Iowa, in Iowa City. In an effort to stay connected to two Chicago institutions—the University of Illinois and Northwestern University, with which he had become affiliated—Llinás and two of his research partners obtained pilot's licenses, bought a small plane, and sometimes flew there from Iowa.

Continuing their research of comparative cerebellar physiology, Llinás and his co-workers focused on the IO, which share information with the cerebellum and help control voluntary body movements. Over the next 10 years, Llinás conducted research and wrote papers on neuronal networks and their relationships to the IO. Challenging the accepted dogma that dendritic spikes—the rapid firing of electrical current in dendrites—could be triggered only by sodium currents, Llinás proved that spikes in Purkinje cell dendrites were calcium-current dependent. Llinás recalled in his autobiographical essay that when he presented that unexpected finding at a conference, a onetime friend of his, Rafael Lorente de Nó, declared in front of the large audience, "Do you really believe that those are calcium spikes? Well, you are wrong." Lorente de Nó later declared to Llinás in a letter: "You have either lost your mind or your honesty." As many studies by other scientists as well as Llinás have since shown, it was Lorente de Nó who was in the wrong.

In 1976 Llinás accepted a position as the chairman of the Department of Physiology and Biophysics at the New York University School of Medicine.

His continuing research found that IO neurons were electrically coupled. Some years later, in collaboration with Yosef Yarom, he discovered slow, self-generated sinusoidal voltage changes in IO neurons—dubbed "subthreshold oscillation." That finding was so surprising that, again, some of Llinás's peers suggested that there was a flaw in his research. In his studies Llinás used harmaline, a hallucinogenic drug known to cause tremors and impaired coordination in humans and other animals. Working with brain slices, he introduced harmaline to the IO and observed an increase in currents sent to the thalamus. Then Eric J. Lang, one of Llinás's doctoral students, discovered that damage to cerebellar nuclei generated an increase in the coupling of the IO neurons, as Llinás had theorized in the 1970s. That finding was in complete disagreement with the accepted theory—that the cerebellum was the center for motor learning—and emphasized motor timing as the main role of the cerebellum.

In the 1980s Llinás began to suspect that the relationship between the IO and the thalamus might be one of the most important in the brain. He discovered that the neurons from both the thalamus, the major entry point into the cerebral cortex, and the IO exhibited low-threshold spikes. When the thalamus's neurons were hyperpolarized—or separated—they, like the IO, entered a state of subthreshold oscillation. Further research suggested that high-frequency activity, called "gamma," in both the cerebral cortex and the thalamus corresponded with high-level cognitive functioning, and that low-frequency activity in those regions corresponded with states of sleep or motor malfunction. In the conviction that thalamocortical oscillations were responsible for sleep/wake cycles, the dream state, and humans' moment-to-moment internal perception of the world, in the 1980s Llinás began to test his theories on the human brain by means of magnetoencephalography (MEG), a then-new imaging technique used to measure magnetic fields produced by electrical activity in the brain. His studies supported his earlier findings of a correlation between cognition and the brain's electrical activity, suggesting that "different cognitive events can be related to specific electrical events at brain level," as Llinás wrote in his autobiographical essay.

In the 1990s Llinás began working with Daniel Jeanmonod, professor of neurosurgery at the University of Zurich, in Switzerland, who had come to the same conclusions he had regarding low-threshold thalamic oscillation. Both concluded that the symptoms of Parkinson's disease—including impaired motor skills and speech—were likely related to low-frequency oscillation of the thalamus. In studies of patients with various brain diseases, Llinás and his colleagues noticed that specific regions of their thalamuses were disconnected from parts of the cerebral cortex, resulting in abnormally low oscillations, as if those regions of the brain were asleep. Llinás and Jeanmonod came up with the hypothesis that many neurological and psychiatric diseases originate when different parts of the thalamus or the cortex begin to exhibit abnormally low frequency of oscillation. They theorized that, in addition to Parkinson's disease, disorders including petit-mal epilepsy, seemingly irreversible depression, phantom-limb disorders (in which people with amputated limbs, hands, or feet experience pain where those parts of their bodies used to be), chronic pain, tinnitus, obsessive-compulsive disorders, and some aspects of schizophrenia are caused by a disconnection between parts of the thalamus and the cortex that leads to a long-term state of thalamocortical dysrhythmia. Llinás also speculated that the disorders might be treated by implanting electrodes into the thalamus to break the abnormal oscillation patterns. (For some years electrodes have been used to treat Parkinson's-disease victims who have not responded to drug therapy.)

In 1999 Llinás and Jeanmonod and three other scientists presented their hypothesis in a paper, "Thalamocortical Dysrhythmia: A Neurological and Neuropsychiatric Syndrome Characterized by Magnetoencephalography," published in the *Proceedings of the National Academy of Sciences* (Volume 96, Number 26, 1999). "This work is very important," Edward Jones, the president of the Society for Neuroscience and the director of the Center for Neuroscience at the University of California, told Sandra Blakeslee for the *New York Times* (October 26, 1999). "What makes it so compelling is that it doesn't come completely out of left field. It builds on a body of work that's been growing for some time. Everyone will say wow, yes!" Since then many neurosurgeons have successfully treated other neurologic and psychiatric disorders by implanting electrodes into the cortex or thalamus and stimulating carefully located parts of them. As of December 2008 some 40,000 people around the world had been treated, mostly for movement disorders. The treatment is currently being applied to patients with schizophrenia, epilepsy, Tourette's syndrome, dystonia, chronic pain, depression, phantom pain, and traumatic brain injuries. Llinás has noted that even if the treatments alleviate the symptoms of those disorders, they should not be regarded as cures; moreover, they sometimes produce unwanted side effects (which subside when the electrodes are removed). In *Science* (March 20, 2009) Miguel A. L. Nicolelis, a neuroscientist at Duke University, presented the results of a study showing that stimulating the spinal cords of rodents suffering from Parkinson's disease with a mild electrical charge reduced the severity of the their worst symptoms. Nicolelis suggested that the therapy could present a safer alternative to deep-brain stimulation for treating humans suffering from Parkinson's disease. Llinas, who was not involved in the study, told Sandra Blakeslee for the *New York Times* (March 20, 2009, on-line) that the treatment "makes good sense." He added, "How successfully it will translate to humans is an important issue. The human spinal cord is much more complex than the rodent counterpart, and long-term stimulation might result in nasty secondary effects."

On another front, with the goal of understanding the biophysics and molecular biology of synaptic transmission, Llinás has spent summers since 1962 at the Marine Biological Laboratory (MBL) at Woods Hole, Massachusetts, studying transmissions in the giant-squid synapse. That species is particularly useful, because its axons and synapses are far larger than those of humans and have been the focus of many successful studies concerning the mechanisms with which nerve cells communicate with each other. Llinás's book *The Squid Giant Synapse: A Model for Chemical Transmission* was published in 1999. Llinás is also the author of *I of the Vortex: From Neurons to Self* (2002), about the evolution and development of consciousness from scientific and philosophical points of view.

In the 1980s Llinás, the physiologist and biologist Frank M. Sulzman, and the neurophysiologist James Wallace "Wally" Wolfe proposed to NASA that a shuttle flight be devoted to the study of the nervous system in microgravity. The result was the NeuroLab, a 16-day mission, completed in April and May 1998, in which seven astronauts studied the effects of weightlessness on the nervous system and sleep and breathing in rats, fish, snails, and crickets as well as in themselves.

Llinás's "most striking feature, besides his easy smile," Hilts wrote, "is his head of white hair." His favorite writers include Fyodor Dostoyevsky, Guy de Maupassant, and Gabriel García Márquez, a friend of his. Llinás and his wife live in New York City. They have two sons: Rafael, a neurologist, and Alexander, an ophthalmologist.

M.I.A.

July 17, 1975– Musician; visual artist; fashion designer

Address: c/o Interscope Records, 2220 Colorado Ave., Santa Monica, CA 90404

"I've got the bombs to make you blow, I got the beats to make it bang," M.I.A. sings on "Pull Up the People," from her 2005 debut album, *Arular*. Since the release of that record, the London-born Sri Lankan M.I.A.—who began her career as a visual artist—has emerged as a uniquely multicultural musician who complements her political and social commentary with danceable, often funky, beats. With the release of her 2008 single "Paper Planes," found on her sophomore album, *Kala* (2007), M.I.A. became a dominant force in the American music industry; the song was played continuously on radio stations across the nation and earned the musician her first Grammy Award nomination, in 2009. She was also nominated for the 2009 Academy Award for best original song for her collaboration with the Indian composer A. R. Rahman on "O . . . Saya," a song from the 2008 film *Slumdog Millionaire*.

The singer's stage name, M.I.A., besides being a play on her nickname, Maya, stands for both "missing in Acton"—a reference to the London suburb where she once lived—and "missing in action." The daughter of a member of the Tamil separatist movement, M.I.A. spent much of her childhood in Sri Lanka. (The separatist movement seeks to create an independent Tamil state in northern Sri Lanka. The Sinhalese, who are primarily Buddhists, are the country's majority ethnic group, making up about 74 percent of the population, while the mostly Hindu Tamils comprise about 9 percent; Tamils have long accused the Sinhalese of discrimination, and tension between the two groups, which had grown in the 1970s, sparked a civil war in 1983. The fighting between the Sri Lankan government and the Tamil separatists, led by the Liberation Tigers of Tamil Eelam, or LTTE—referred to in the West as the Tamil Tigers—continued for 26 years, until May 2009, when the nation's military defeated the LTTE. It is estimated that the war claimed between 80,000 and 100,000 lives.) M.I.A. witnessed violence and death at a young age. Her family escaped to England when she was around 11 years old, and though she was removed from the violence that had plagued her earlier childhood, M.I.A.'s struggles continued in the notoriously racist part of London in which she grew up. She channeled her frustration through vi-

M.I.A.

sual art and later through music. "For years when I moved to England, I was so embarrassed about being Sri Lankan and never talked about it," she told Susan Carpenter for the *Los Angeles Times* (February 20, 2005). "The reason I started talking about my life is because I'd gone out thinking I was British for so long, I felt I owed it to inform myself on what was happening to the people I left behind. On a personal level, I feel guilty that I got away and so many kids didn't."

M.I.A.'s genre-melding sound has been a favorite of critics and independent-music fans since 2003, when her song "Galang" became an underground hit in the U.K. Referring to M.I.A.'s songs as "multicultural mashups," Richard Harrington wrote for the *Washington Post* (September 16, 2005) that her music is "a pastiche of hip-hop, electro, Jamaican dancehall, reggaeton, garage rock, Brazilian baile funk, grime, Bollywood bhangra and video game soundtracks." Greg Kot noted for the *Chicago Tribune* (April 3, 2005) that M.I.A.'s lyrics on her early recordings, such as "Galang," were "unconventional, a patchwork of street slang, nursery rhymes, political commentary and feel-good gibberish."

After M.I.A.'s familial connection to the Tamil separatist movement came to light, the artist was repeatedly questioned about her ties to what many countries consider a terrorist organization. (The movement is said to be the first to use suicide bombers.) Her lyrics are known to reference acts of violence, and her artwork often depicts guns, bombs, and tigers. (Though some have argued that the image of a tiger represents the Tamil population as a whole, the tiger has also become known as a symbol of the militant movement.) While M.I.A. has vehemently denied supporting terrorists of any kind, she has acknowledged that the subject is complex. "I wanted [*Arular*] to be about how confusing it is to talk about things as a civilian when you are caught up in something like [a civil war]," M.I.A. told Ben Sisario for the *New York Times* (August 19, 2007). "You can never say good and evil, and 'We'll fight the axis of evil,' because it's a confused line. Eighty percent of that argument is actually gray matter." "I don't want to represent what I've been through in a negative, victimized light," M.I.A. told Joan Anderman for the *Boston Globe* (March 13, 2005). "I want it to be fun because there is beauty in it, and that's really all I was interested in. I'm proud of being a refugee, which makes people uncomfortable. It's important to point out the good things that come from the outside, from the margins."

M.I.A. was born Mathangi Arulpragasam on July 17, 1975 in the Hounslow suburb of London, England. Her parents, ethnic Tamils, had had an arranged marriage in their native Sri Lanka and moved to London in 1971, when her father, A. R. Arulpragasam, found work as an engineer. When M.I.A. was six months old, her family returned to Sri Lanka. Her father had become involved in the Tamil separatist movement and helped found the Eelam Revolutionary Organization of Students (EROS), the first militant Tamil separatist group, in 1975. It is said that he trained with Palestinian militants in Lebanon in 1976; adopting the nom de guerre Arular, he became increasingly active in EROS and left M.I.A.'s mother, Kala, a seamstress, to raise and care for M.I.A., her older sister, Kali, and younger brother, Sugu. Arular's involvement with EROS made him a target of the Sri Lankan Army, and he rarely made contact with his family. On the rare occasions when he visited, M.I.A. and her siblings were told that he was an uncle in order to protect his identity. Even so, violence was still very much a part of M.I.A.'s childhood. "Although [my father] didn't live with us or spend any time with us, we suffered all the consequences of having him as a dad," M.I.A. told Hattie Collins for the London *Guardian* (August 18, 2007, on-line). "Our houses would get extra bombed and the people in our neighbourhood would get extra tortured and the army would come round and beat my mum up. All for this mythical dad figure that I never had." (Though Arular was an active member of the now-defunct EROS for many years, he never joined the LTTE. He is now a writer.)

Hoping to escape the violence, Kala moved her children to Jaffna, a Tamil-dominated city in Sri Lanka's Northern Province. In 1983 the fighting between the Sinhalese and Tamil separatists erupted into a civil war. Bullets and bombs became a part of daily life—aerial bombing on the part of the government wrecked a school M.I.A. attended—and M.I.A. and her family, without her father, sought refuge in Madras, India. They struggled in their new home, however: Kali became ill with typhoid fever, and the family suffered from malnourishment. An uncle, growing concerned for the family, moved them back to Jaffna. In 1986 M.I.A., her mother, and her siblings were able to flee Sri Lanka and settle in London as refugees.

M.I.A.'s family was placed in a poverty-stricken housing project in the South London town of Mitcham. As one of the area's few Asians, M.I.A. experienced persistent racism. She was placed in special-education classes to learn English, supplementing her lessons by watching TV and listening to the radio. She also discovered hip-hop. (As a young child she had listened to Bollywood tunes, Michael Jackson songs, and little other music; Harrington reported that when she arrived in England, M.I.A. "knew only four words in English, two of them 'Michael Jackson.'") "Where I lived [in England]," she told Harrington, "there was one black family and they lived next door to us. And they had a kid who listened to hip-hop all the time with his mates. It was a bit rowdy, a bit dangerous, listening to unknown music, but eventually I wanted to hang out, and that's how I learned hip-hop." Though M.I.A. grew to admire such groups as Public Enemy and N.W.A., she did not consider becoming a musician for some years. Instead, she focused on visual art as a means to express herself. "Coming from Sri Lanka, you can become so addicted to drama that when things are great you don't know how to deal with it," M.I.A. explained to Rashod D. Ollison for the *Baltimore Sun* (September 15, 2005). "It's like looking for trouble. In art, you look for a world where you can tap that without getting in jail."

Following high school M.I.A. studied fine art, film, and video at the Central St. Martins College of Art and Design, in London. During the late 1990s and early 2000s, she began to exhibit her artwork. (At her first show she sold all of her paintings.) Her art consisted largely of stencil graffiti depicting images from her childhood in Sri Lanka—palm trees, tigers, hand grenades, helicopters, and tanks—all in neon-bright colors. Her work was shortlisted in 2002 for the inaugural Alternative Turner Prize, a response to the famed Turner Prize, an annual visual-art award that recognizes contemporary British artists. (The Alternative Turner Prize seeks to recognize young British artists, ages 13 to 25, in a wider range of artistic mediums.) Earlier, M.I.A.'s art had caught the attention of Justine Frischmann, the lead singer and guitarist of the English band Elastica, who commissioned the young artist to design the cover of the band's second (and final) album, *The Menace* (2000). That year M.I.A. also directed the band's music video for their single "Mad Dog God Dam." The following year Elastica asked her to record their North American tour for a documentary. While on the road with the band, M.I.A. became close friends with their opening act, the Toronto electronica musician Peaches, who introduced M.I.A. to the Roland MC-505 Groovebox, a sequencing machine with which a user can program and arrange drum beats and other synthesized sounds. Peaches encouraged M.I.A. to experiment with the machine, and the artist returned to London with a newfound passion.

M.I.A. used a Groovebox, a four-track recorder, and a microphone to record her music. She initially hired other women to sing her lyrics but, unhappy with the results, decided to use her own vocals instead. By 2003 M.I.A. had produced her own six-song demo tape. One of the songs, "Galang," only the second song she had ever written, became enormously popular on Internet file-sharing Web sites. The independent label Showbiz Records made 500 CDs of the song, which was soon heard in dance clubs across the United Kingdom. "Galang" (the word means "go on" in Jamaican patois) is an infectious, slang-filled dance tune that blends elements from Indian pop, Jamaican dancehall, and American gangsta rap. *Rolling Stone* named "Galang" one of the year's best singles, and M.I.A. was soon signed to the British label XL Recordings. The music video for "Galang" was harshly criticized for showing M.I.A. dancing with images of tanks, fighter jets, and bombs in the background. The filmmaker Ruben Fleischer, who directed the video, told Robert Wheaton for *PopMatters* (May 6, 2005, on-line) that in his view, "the [principal] idea behind M.I.A.'s artwork is to have pretty heavy/political ideas, but to present them in a poppy candy-coated wrapper. So someone might buy her painting because it is pretty to the eye, and not necessarily consider that it is a rebellious image that she is presenting. However, after they've had it for a while, they might start to think—why do I have a pink tank on my wall?"

Though M.I.A.'s debut album was originally to be released in September 2004, legal issues regarding songs she had sampled delayed its sale by six months. As a way to promote the album, M.I.A. teamed up with the songwriter American DJ Diplo to produce the mixed tape *Piracy Funds Terrorism Volume 1*, which featured vocal tracks from M.I.A.'s coming debut together with samples of other songs, including "Walk Like an Egyptian" by the Bangles and "Push It" by Salt-n-Pepa. Starting in December 2004 the tapes were distributed for free during many of M.I.A.'s live shows.

M.I.A. next signed a distribution deal with the American label Interscope Records, and *Arular* was released in the U.S. in March 2005. (It went on sale in the U.K. a month later.) M.I.A. had titled her debut album after her father "because my mom, she raised me and all she ever said was, you know, 'Your father, he's ruined your life and all he gave you was his name, you know?' And then eventually I was, like, OK, fine. If that's all he gave me, then I'm going to use it," she told Christian Bordal for the National Public Radio program *Day to Day* (March 17, 2005, on-line). Upon reading about M.I.A. in the *Sri Lankan Times* newspaper, Arular contacted his daughter for the first time since 1990, sending her an e-mail message that read, "I'm very proud of you, but you have to change the name of the album." M.I.A. did not change the title. "What can you do?" she asked Richard Harrington.

"There's many things I'm not pleased about that he's done, so hey . . ." (M.I.A. remains out of contact with her father.)

Arular was a critical success and peaked at number three on the U.S. *Billboard* Top Electronic Albums chart. It was shortlisted for the 2005 Nationwide Mercury Prize, a prestigious award recognizing the year's best album by a U.K. artist, and both *Spin* and *URB* magazines named M.I.A. artist of the year. Controversy soon arose, however, regarding M.I.A.'s link to the Tamil separatist movement. The music video for her second single, "Sunshowers," was banned from the music-video channel MTV for lyrics that referenced the Palestine Liberation Organization (PLO), which has been classified as a terrorist organization by the U.S. government. "You wanna go? You wanna winna war? Like PLO I don't surrendo," M.I.A. sang. She told Robert Wheaton, "There's so much confusion about what I stand for and what I'm saying that that's the whole point: there *have* to be discussions; there *has* to be people talking, and there has to be young people talking about politics if they want. They have to have a chance to hear different opinions. And that's really what it's about." M.I.A.'s songs generally deal with war, refugees, and immigration, and she hopes that her music will start conversations that could lead people to form new ideas about (or a better understanding of) those issues. For example, M.I.A., having grown up seeing combatants and victims on both sides of the Sri Lankan civil war, questions the way in which some nations are quick to label certain groups or people "terrorists" before understanding their causes.

In 2006 U.S. immigration officials denied M.I.A. a work visa. She was forced to abandon her plans of recording her sophomore album, *Kala*, with the Grammy Award–winning American producer Timbaland. Instead she traveled the world, visiting India, Jamaica, Trinidad, and Australia, finding inspiration in local music scenes and recording bits of her album along the way. "The resulting songs feel airborne and deliberately rootless," Ben Sisario wrote. "The enormous drums of [the song] 'Boyz,' for example, were recorded in India, but the rest of the song—a Bollywood-tinged club banger about the rowdy, war-starting sex—was made in Trinidad. 'World Town' rewrites a Baltimore hip-hop anthem for a violent third-world ghetto; the dizzyingly abstract percussion loop of 'BirdFlu' is spiked with Indian dhol drums and chicken squawks." *Kala*, named in honor of her mother, was released in August 2007. (M.I.A. was granted a visa in 2007 and went to the U.S.)

Once again M.I.A. received favorable reviews. *Rolling Stone* and *Blender* both named *Kala* the best album of 2007, and in Canada the singer was nominated for two Independent Music Awards, for International Album of the Year and International Artist of the Year, in 2008. The album's first single, "Boyz," peaked at number three on the U.S. *Billboard* Hot Dance Singles Sales chart and was number nine on *Rolling Stone*'s list of the 100 best songs of 2007. However, it was the song "Paper Planes" that secured M.I.A.'s popularity in the U.S. In his description of the song, Darryl Sterdan wrote for the *Calgary (Alberta) Sun* (August 19, 2007), "M.I.A. adds reggae-style vocals—along with finger snaps and yes, gunshots—to a lazy Afro-Caribbean cooler built atop The Clash's 'Straight to Hell.'"

In his review of her second album, J. Freedom du Lac wrote for the *Washington Post* (August 21, 2007), "If M.I.A. felt any pressure, externally or otherwise, to craft an album with crossover potential, it doesn't show on *Kala*. Assembled by M.I.A. and a forward-thinking team of producers . . . the tracks often seem more like rhythm-based sound collages than songs, eschewing pop conventions—melody, for instance—for something more primal and visceral. Still, the songs jump out of the headphones, exploding with verve." Du Lac called the album "outrageously good." Though it was released as *Kala*'s third single in early 2008, "Paper Planes" did not become a commercial success until June, when it was used in a trailer for the Judd Apatow movie comedy *Pineapple Express*. The song reached number one on the U.S. *Billboard* Dance Sales chart and number four on the U.S. *Billboard* Hot 100. It was nominated for the 2009 Grammy Award for Record of the Year and was featured in the Oscar-winning film *Slumdog Millionaire* (2008). Typically for M.I.A.'s work, "Paper Planes" is a mellow pop tune on the surface but offers social commentary—in this case, on immigrant stereotypes. She told Alex Wagner for *Fader* (August 7, 2007, on-line), "People don't really feel like immigrants or refugees contribute to culture in any way. That they're just leeches that suck from whatever. So in the song I say, 'All I wanna do is [sound of gun shooting and reloading, cash register opening] and take your money.' I did it in sound effects. It's up to you how you want to interpret. America is so obsessed with money, I'm sure they'll get it."

Around the time "Paper Planes" was appearing on the music charts, M.I.A. discovered that she was pregnant by her fiancé, Benjamin Brewer. (Brewer is the singer and guitarist for the New York City rock band the Exit. He is also a son of Warner Music Group's CEO, Edgar Bronfman Jr.) On February 8, 2009 M.I.A. surprised many by appearing at the 51st Grammy Awards ceremony in Los Angeles, California, on her due date. With the American rappers Jay-Z, Kanye West, Lil Wayne, and T.I., she performed "Swagga Like Us," a popular song by T.I. and Jay-Z that sampled "Paper Planes." "Swagga Like Us" went on to win the Grammy for best rap song. M.I.A. gave birth to her son, Ikhyd Edgar Arular Bronfman, three days later.

In May 2009 M.I.A.'s name appeared on *Time* magazine's annual list of the world's 100 most influential people. The next month she won the 2009 BET Award for best female hip-hop artist. M.I.A. recently started her own record label, the Interscope imprint N.E.E.T., which stands for Not in Education, Employment or Training; she has signed the Baltimore rapper Rye Rye. The first album released on N.E.E.T. was the *Slumdog Millionaire* soundtrack, in December 2008. M.I.A. also has her own fashion line, Okley Run, with items of clothing available for purchase on her Web site. She lives in New York City, in the Bedford Stuyvesant neighborhood of Brooklyn. In a post to her Web site announcing the birth of her son, M.I.A. wrote that she is working on new songs as well as planning tour dates for 2010.

Maddow, Rachel

Apr. 1, 1973– Television and radio host

Address: Air America Radio, 641 Sixth Ave., Fourth Fl., New York, NY 10011

Rachel Maddow, the host of the popular MSNBC program *The Rachel Maddow Show* and the Air America Media radio show of the same name, is an unusual cable-news personality in several ways. In a format that often lends itself to combativeness, with programs sometimes degenerating into shouting matches, the left-leaning Maddow tempers her wit with civility and a down-to-earth demeanor. And Maddow, a six-foot-tall former Rhodes scholar, is not only a woman in a male-dominated area of television, but the first openly lesbian host of a national prime-time news broadcast. *The Rachel Maddow Show* had its first MSNBC telecast in September 2008, in the period leading up to that year's presidential election; the timing of its debut, and a time slot following that of the popular MSNBC show *Countdown with Keith Olbermann*, helped Maddow's program achieve very high ratings very quickly. While her viewership has declined somewhat since the election, the program still has an enviable number of watchers—including much-sought-after 25-to-54-year-olds. Julia Baird wrote for *Newsweek* (December 1, 2008), "Maddow seems to have genuinely charmed younger viewers, a Twitter-savvy, podcasting generation that has hankered for someone more like them and delights in her use of 'duh,' her obvious intelligence and authenticity, and her ability to be both idealistic and skeptical about politics. She eschews vanity and insists she won't stop dressing 'like a 13-year-old boy' when she can."

One of two children, Rachel Anne Maddow was born on April 1, 1973 in Castro Valley, California, to Elaine Maddow, a school administrator, and Bob Maddow, a lawyer. Her parents told Baird that Maddow was a serious-minded child who rarely uttered baby talk and began reading the newspaper by the age of four. Maddow told Baird that she had political leanings even as a young girl, recalling her negative reaction to watching the Republican soon-to-be president Ronald Reagan on television during the 1980 campaign season, when she was only seven. "All I remember is the feeling of dislike," she said. "Maybe I have reverse-engineered it into my memory." Maddow's interest in media was partially influenced by her father, who had a habit of following sports events by watching television and listening to a transistor radio—at the same time. "He wanted to listen to the radio sound . . . and [watch] the TV with the sound off, even when they were out of sync," she told Robert Sullivan for *Vogue* (January 2009). "And I thought, Oh, right, radio is harder. He's getting a higher-level audio experience from people who know you can't see the picture. I also just thought, like, Oh, my dad's awesome; he has higher standards." Maddow's father served as a U.S. Air Force captain during the Vietnam War. Maddow herself has a strong interest in national security and defense policy. "I'm a national security liberal, which I tell people because it's meant to sound absurd," she told Jacques Steinberg for the *New York Times* (July 17, 2008). "I'm all about counterterrorism. I'm all about the G.I. Bill."

While attending Castro Valley High School, Maddow took to sports, participating in swimming, basketball, and volleyball. She had aspirations of becoming an Olympic athlete before a series of injuries dashed her hopes. She told Sullivan, referring to characters in John Hughes's 1985 film *The Breakfast Club*, "I was a cross between the jock and the antisocial girl who bit people. . . . I wanted to be the outsider so bad. But I was the jock and that bad-hair girl." In 1987 Maddow, who had not yet come out as gay, volunteered to work at an AIDS services center in nearby San Francisco. "I had a very acute sense that something was happening to 'my' people even before I knew I was gay," she told Louise France for the London *Guardian* (February 8, 2009, on-line). "I was very moved by what was going on. Growing up in the Bay Area as a gay kid was devastating. It defined the world in a very serious way for me, in a life-or-death sort of way. I had a lot of older friends and many of them died. There was a sense of: look, your life is happening now. This may be all you get."

After high school Maddow attended Stanford University, in California, graduating with a degree in public policy in 1994. Roger Noll, a onetime director of the public-policy program at Stanford, told Jessica Pressler for *New York* magazine (November 10, 2008), "She was a brilliant student, one of those that only come around every few years or so." Maddow wrote her undergraduate thesis on the change in societal perceptions of AIDS victims, and one Stanford professor, Debra Satz, told Pressler, "I still send students to that thesis as a model." As a 17-year-old freshman at Stanford, Maddow came out as a lesbian, in a way that was, by her own admission, confrontational: she made posters about her sexuality and placed them in the bathroom of her dorm. "I didn't want any drama," she told Baird. "I didn't want any personal touchy-feely BS from anybody. I just wanted to get it over, and make a joke about it, and move on." (After someone anonymously mailed Maddow's parents a student-newspaper account of their daughter's announcement, Bob and Elaine Maddow were stunned but, ultimately, supportive.)

After graduating from Stanford Maddow worked in San Francisco for a year with the AIDS-awareness organization ACT UP and the AIDS Legal Referral Panel. She also focused her activism efforts on prison reform for AIDS patients. She then received a John Gardner Fellowship and a Rhodes Scholarship, which allowed her to attend Oxford University, in England, to pursue a doctorate in political science. She was the first openly gay American to win a Rhodes scholarship. After a few months at Oxford, feeling out of her element and wanting a break from her studies, Maddow moved out of her Oxford apartment and into a rent-free part of a basement in London, where she worked as the general manager of an organization called the AIDS Treatment Project. She soon moved back to the U.S., where she settled in western Massachusetts to finish her dissertation. She took up a number of odd jobs to support herself, working as a landscaper, unloading trucks, and cleaning barrels at a coffee-bean factory.

While working at a friend's coffee shop in Northampton, Massachusetts, Maddow heard a radio announcement about open auditions for the on-air sidekick to a local radio personality, Dave Brinnel, the host of *Dave in the Morning*, on WRNX-FM. Maddow went into the station on a whim, won the audition, and spent the next few years on the show reading the day's news and setting up punch lines for Brinnel's jokes. "She was one of the wittiest, smartest people I've ever met," Brinnel told Pressler. In 2001 Maddow left *Dave in the Morning* to finish her doctorate, which focused on AIDS victims in prison. She then returned to the show, staying until 2004. From 2002 to 2004 she also hosted the radio show *Big Breakfast*, on WRSI, in Northampton.

In 2004 Maddow was tapped to host a show called *Unfiltered*, with the *Daily Show*'s co-creator Lizz Winstead and the rapper Chuck D, on the recently launched progressive radio network Air America (now Air America Media). The show was cancelled a year later. Maddow then got her own Air America program, *The Rachel Maddow Show*. The show, which premiered on April 14, 2005, proved to be popular; Maddow quickly began to build her reputation as a liberal through the show's content, taking on many of the day's issues with a tone similar to the one she would later bring to her MSNBC show. Her Air America program included interviews with journalists and politicians as well as segments such as "Ask Dr. Maddow," in which the host would address listeners' questions on various topics. The time slot for *The Rachel Maddow Show* was eventually increased from one hour to two; the program aired from 5 a.m. to 6 a.m. and then moved to a more prominent position in the morning time slot before its switch to evenings. From March 10, 2008 to September 5, 2008 the show ran for three hours, then returned to the two-hour format when Maddow began hosting her MSNBC show. As of mid-2009 the show's content consisted primarily of the audio portion of the previous night's MSNBC broadcast. Currently, the radio show airs on weekday mornings on Air America affiliates. It is also available on XM Satellite Radio and the Air America Web site.

In 2005 Maddow successfully auditioned for the MSNBC show *Tucker*, to provide left-leaning opposition to the program's conservative host, Tucker Carlson. *Tucker*'s producer, Bill Wolff, told Pressler, "She was unbelievably prepared. And she just killed [Carlson]." Aside from her regular spot on *Tucker*, Maddow spent the next three years serving as a guest commentator on other MSNBC shows and was seen frequently on CNN's *Paula Zahn Now*. By 2006 she was a regular guest and political analyst on both MSNBC and CNN; in 2008 she signed an exclusive agreement with MSNBC. That year *Tucker* was cancelled, and Maddow began to appear regularly on *Countdown with Keith Olbermann*. She also became a regular panelist on *Race for the White House* and took over hosting duties when the show's regular host, David Gregory, was absent. On occasion Olbermann asked Maddow to serve as the guest host for his show, as he felt that she shared his political and social views. In July 2008 Maddow hosted Olbermann's show for eight nights while he was on vacation. Maddow had filled in for Olbermann before, but never for so long; she was greeted with positive reviews and speculation about the possibility of her getting her own show on MSNBC. While hosting the show Maddow echoed Olbermann's sharp criticism of conservative figures. On a July 7 installment, for example, she criticized U.S. senator John McCain of Arizona, the soon-to-be Republican nominee for president, for saying that the U.S. economy was "slowing." Maddow said, "Slowing, senator? Try grinding to a halt."

In August 2008 it was announced that a new show hosted by Maddow would replace Dan Abrams's *Verdict* in the 9 p.m. Eastern Standard Time (EST) slot, immediately following *Countdown with Keith Olbermann. The Rachel Maddow Show* premiered on September 8 and surpassed the ratings of *Countdown* to become MSNBC's highest-rated evening program. By December 2008 the show had more than doubled the ratings of *Verdict*, with 1.9 million total viewers. It also fared better in the ratings than the popular CNN show *Larry King Live*, winning more viewers in the coveted 25-to-54 age range for 27 out of 44 nights. In her first six weeks of hosting her show, Maddow was also able to retain more than 90 percent of Olbermann's audience—an impressive feat for a new host. Much of her success has been credited to her welcoming demeanor and avoidance of the aggressive tone that has dominated cable news in the past few years. Unlike the hosts of other fast-paced cable-news shows, Maddow prefers to host only one guest at a time, to avoid the shouting matches that often erupt when personalities clash. With the latter scenario, "you're essentially watching for the kinetic activity of the fight rather than listening to what anybody says about the issue," she told Pressler. "And I think what people end up cheering for is winning, you know, rather than getting something out of it. I think there's more intelligent ways to entertain people." Alessandra Stanley wrote for the *New York Times* (September 25, 2008, on-line), "Ms. Maddow's deep, modulated voice is reassuringly calm after so much shrill emotionalism and catfights among the channel's aging, white male divas."

The Rachel Maddow Show features a combination of hard news analysis and lighter segments. The segment "Ms. Information" contains news stories that Maddow feels have been underreported by the press; "GOP in Exile" covers the Republican Party; and "Just Enough" covers pop-culture and entertainment news. Maddow's opinions and commentary are showcased in "Rachel Re," in which the host offers viewers a comprehensive discussion of a given topic; and the segment "Cocktail Moment" finds Maddow relating a bit of interesting or little-known nonessential information. *The Rachel Maddow Show* debuted during the months leading up to the historic 2008 presidential election. As a result, Maddow got the benefit of a large television-news audience and was able to establish her show's tone and her own views through discussion and criticism of the candidates. France wrote, "In the same way that [the conservative pundit] Ann Coulter emerged as the public face of the Bush era, Maddow swiftly emerged as the go-to media figure in the most picked-over election in American history." In the show's debut installment, Maddow introduced her biting sarcasm when she questioned the nature of the references to God in public-policy speeches given by the Republican vice-presidential nominee, Alaska governor Sarah Palin. Referring to a quote in which Palin suggested that God supported her proposal for an oil pipeline, Maddow said, "God's will is the pipeline? . . . Palin was also in church on August 17th, just three weeks ago, the day Jews for Jesus founder, David Brickner, gave a guest sermon in which he said the deaths of Israelis killed by a terrorist who commandeered a bulldozer were the result of, quote, 'God's judgment of unbelief against the Jews.' Governor Palin did not get up and walk out . . . she listened to the assertion that God uses terrorism to express judgment against Jews for not believing in Christ. So, on the one hand, we got some extreme inflammatory religious views, on the other hand, we got assertions that God's will is being done through Governor Palin's chosen public policies. I'm worried."

Although Maddow appeared to support Obama during the election (she aired her interview with him on the October 30, 2008 installment of her show), she has since been critical of some of his decisions. She found fault with his choice of Reverend Rick Warren, who has condemned homosexual behavior, to give the invocation at the presidential inauguration; she even dedicated a segment of her television show on December 18, 2008 to the matter. Maddow has also criticized the Obama administration for failing to repeal the government's controversial policy of "Don't ask, don't tell," which is spelled out in 1994 legislation authorizing spending for defense and forbids any homosexual person in the armed services from revealing his or her sexual orientation. In May 2009 Maddow aired several segments in which she interviewed U.S. servicemen who had been discharged from the military because they were gay.

Maddow is known for welcoming right-wing pundits to her shows and, despite the ensuing debates, treating them fairly. The controversial, conservative pundit and onetime presidential candidate Pat Buchanan is a frequent guest on her MSNBC show, appearing on the semi-regular segment "It's Pat" (whose title is possibly a reference to an old *Saturday Night Live* segment about a gender-neutral character, according to Pressler—a reference she felt certain was lost on Buchanan). Although Buchanan's 1992 "culture-war" speech, which focused in part on what he saw as the threat posed by the gay-rights movement, helped to galvanize Maddow's activism, the two have never traded insults on the show. "Even though I can be harsh in my criticism and I can be strong in my beliefs, I try not to be mean," Maddow told Pressler. "And I don't have a very high tolerance for other people who are cruel or personally insulting in a way that I think is meant to humiliate people."

Just as unusual as the civility Maddow brings to her job are her casual displays of erudition. "Ever heard of something called Dada?" she said during an October 2008 installment of her program, referring to an early-20th-century cultural movement. "Deliberately being irrational, rejecting standard assumptions about beauty or organization or logic. . . . Why am I trying to explain Dadaism on a cable news show thirteen days from this big, giant, historic, crazy, important election that we're about to have? Because that's what I found myself Googling today, in search of a way to make sense of the latest McCain-Palin campaign ad!" Pressler noted that Maddow's explaining Dadaism on her show was "something of a challenge considering she only [had] about twelve seconds. . . . It's hard to imagine many other cable news hosts going down that particular rabbit hole. . . . But then again, Rachel Maddow is not like other cable news hosts."

Maddow has received criticism for hosting what has been called a partisan cable news show. Just prior to the debut of Maddow's MSNBC show, Sacha Zimmerman wrote for the *New Republic* Web site (August 20, 2008), "I really like Maddow and have found her thoroughly compelling throughout this latest campaign season, but I am not so thrilled about this trend toward partisan networks and news. By all means we should have progressive and conservative commentators and analysts, but is there no room for argument between the two? Where have all the iconoclasts gone? With this split in the networks and a near perfect red-blue divide nationwide, it seems that we are more and more retreating to our comfortable trenches and refusing to acknowledge anything but spite, paranoia, and conspiracy theory when it comes to the other side. And, since cable news is not exactly renowned for its nuance or intellectual rigor, knee-jerk reactions can pass for smart commentary. I think Maddow will be a wonderful host (and God knows MSNBC could use a smart woman), but how exciting is it really if she is just preaching to the choir?" Baird observed that the popularity of Maddow's show has led her to become more visibly left-leaning, writing, "While she has long had the reputation of being the liberal whom conservatives like, some now say she's biased and theatrical." Maddow, however, has argued that she is not a hard-line liberal and is willing to challenge the views of any politician she disagrees with—Democrat or Republican. "My job of asking questions and being critical doesn't stop depending on who is in the White House," she told the *Austin (Texas) American-Statesman* (April 27, 2009). Maddow's ratings saw a drop in March 2009 from 1.9 million viewers during the leadup to the presidential election to 1.1 million in March 2009. Some have attributed that drop to the fact that Maddow now hosts a left-leaning show in the time of a liberal presidential administration, and there is thus little conflict to keep viewers interested. Maddow told the *American-Statesman* that her focus is not on numbers. "My main concern is keeping the quality of the show high," she said. "We don't debate the ratings very much." In 2009 Maddow's show was nominated for a Television Critics Association Award in the category of outstanding achievement in news and information. That year Maddow was listed on the *Advocate*'s "Forty Under 40" list of gay media professionals and on *Out*'s "Power 50" list.

Maddow's partner is Susan Mikula, a photographer and artist. Maddow and Mikula live in a house in Cummington, Massachusetts; Maddow stays in an apartment in Manhattan during the week to prepare and film her shows. She is writing a book for the Crown Publishing Group about the changing role of the military.

Mam, Somaly

(MAHM)

1970(?)– Human-rights activist

Address: Somaly Mam Foundation, P.O. Box
1272, Wheat Ridge, CO 80034

Somaly Mam is an advocate for victims of sex trafficking, the worldwide, illegal industry that reaps billions of dollars for exploiters who force men, women, and children to perform sex acts for very little or no money. The sex-trafficking industry thrives in impoverished cities, where job opportunities are scarce and government and many law-enforcement officials are corrupt; it is most common in Southeast Asian countries, particularly Cambodia, Vietnam, Laos, and Thailand. Mam is the co-founder of the organization Agir pour les Femmes en Situation Precaire (AFESIP), which translates as Acting for Women in Distressing Cir-

Somaly Mam

cumstances, based in Phnom Penh, Cambodia; she also founded the United States–based Somaly Mam Foundation. Both organizations aim to rescue and rehabilitate victims of human trafficking and raise awareness of the growing global problem of sexual slavery. Mam, a former sex worker herself, was born into a rural tribe in Cambodia in the early 1970s, during the height of the oppressive Khmer Rouge regime, led by the violent dictator Pol Pot. The regime imposed a radical form of agrarian communism under which the population was forced to work on collective farms and elsewhere; the Khmer Rouge tried systematically to eliminate every person thought to be involved in free-market activities, including professionals, college graduates, urban residents, and many others. Mam wrote in her memoir, *The Road of Lost Innocence*, that during that brutal period in Cambodia's history, children were "a kind of domestic livestock," and there was "only one law for women: silence before rape and silence after." Abandoned at a young age, Mam was raised by a cruel man who sold her when she was 14 years old to an abusive husband, who in turn sold her to a brothel in Phnom Penh when she was 16. There, she was forced to have sex with numerous men each night and was beaten if she resisted. After escaping from the brothel four years later, she married a French aid worker and moved to France. She later returned to Cambodia and, in 1996, founded AFESIP, which has rescued and rehabilitated more than 4,000 former sex-trafficking victims. Mam, who has put herself in great danger for her cause, and whose 14-year-old daughter was briefly kidnapped by traffickers in 2006 in retaliation for her work, has received many international awards, including the Roland Berger Human Dignity Award, presented to her in November 2008. Mam wrote in her memoir, as quoted by Claire Armitstead in the London *Guardian* (February 9, 2008): "People ask me how I can bear to keep doing what I do. I'll tell you. It's the evil that was done to me that propels me on. Is there any other way to exorcise it?"

Somaly Mam does not know exactly how old she is but estimates her birth year to be 1970 or 1971. She was born a member of the Phnong tribe, in Mondulkiri, a province in eastern Cambodia known for its mountains, dense forests, and waterfalls. The farming-based tribe was so remote that it had no schools or doctors and did not even use money. Because the tribe seemed to live collectively and was untouched by Western habits, it was not targeted by Pol Pot's regime. Mam lived with her parents and grandmother before she was abandoned at a young age. In her book Mam pondered the possible reasons for her parents' absence, taking into account the violence and chaos that ravaged the country during the Pol Pot regime: "Perhaps they were seeking a better life, or perhaps they were forced to leave. . . . There are many reasons why my parents might have left the forest." She spent years living on her own, foraging for wild fruits in the forest and seeking shelter with neighbors. When Mam was about 10 years old, a man claiming to be her grandfather took her in. He forced her to become his servant, regularly beat her, and, when she was 12 years old, accepted money from an older man in exchange for permitting the man to have sex with her. During that time Mam met and befriended a local teacher, who tried to offer the young girl comfort but was powerless to protect her. Mam, having no name that she was aware of, took the woman's name, Somaly Mam, as her own. When Mam was 14 years old, the man who claimed to be her grandfather sold her to another man, who married her. He too was cruel; he would get drunk, then beat and rape her. Sometimes he fired bullets at her, narrowly missing her head and feet.

When Mam was 16 years old, her husband sold her to a brothel in the Cambodian capital, Phnom Penh. Told by her captors that she needed to work to pay off her "grandfather's debts," Mam was sometimes forced to have sex with a half-dozen men in one night. Today, although prostitution is officially illegal in Cambodia—one of Southeast Asia's poorest countries—most brothels in Phnom Penh, a center of trafficking activity, operate in the open. The sex industry is generally tolerated by government and law-enforcement officials, in part because of the perceived economic benefits reaped from "sex tourism," which include bribes of local authorities. Many sex workers are sold into slavery by their husbands or parents for the equivalent of as little as $10; others join the brothels with the false hope that they might earn enough money to escape their impoverished surroundings. Their pimps—who are often women—take most of their earnings, leaving them with a meager salary of about $15 per month. Women are often beaten, tortured, or even murdered if they refuse customers. Brothel owners often give the women amphetamines or other drugs, so that they will form addictions, making them less likely to try to leave their circumstances. There is high demand for young girls (some are as young as five years old) in part because of a cultural belief that sex with a virgin is beneficial; many people even believe that the act destroys HIV, the virus that causes AIDS. Sexually transmitted diseases are rampant in brothels; an estimated 29 percent of sex workers have HIV.

If Mam refused to have sex, she was beaten or subjected to torture that involved such things as snakes or maggots. "I never thought, just lived hour by hour," Mam said to Bruce Finley for the *Denver Post* (April 6, 2008), describing her psychological state in the brothel. "I played with nothing. In my head: nothing. It was dark, dark, dark. I never trusted people. . . . I was dead." Mam remained at the brothel for four years. Over that time she felt her spirit break and even tried to commit suicide. A turning point in her life came when she saw the pimp who ran the brothel murder one of Mam's best friends, a woman named Srymom, for refusing a customer. Realizing that she needed to escape and help others, too, Mam stole the keys to the brothel door and helped two newcomers to get away. (For that she was beaten and her skin was burned with a car battery.) Mam befriended one of her customers (or "Johns"), a European aid worker named Dietrich, who was not violent with her and eventually gave her enough money to buy her way out of slavery. (According to some sources, Mam was set free when she became too old to attract customers as a prostitute.) In her memoir Mam recalled showering for the first time in her life, in Dietrich's hotel room. "He . . . turned on a shiny thing, like a snake, and it flashed to life, spitting at me," she wrote, as quoted by Paula Bock for the *Seattle Times* (September 16, 2008). "That was the first time I ever used proper soap, and I remember how good it smelled, like a flower."

After escaping the brothel, in 1991, Mam worked as a midwife at Cambodia's Choup District Hospital. That year she began dating a French relief worker, Pierre Legros. The two married in 1993 and moved to France. Mam recalled in her book being initially terrified by aspects of the modern world, such as airplanes and the tall buildings in cities. She was also surprised by the love and respect she received from her husband and was perplexed when he encouraged her to spend her time doing whatever she wanted. Mam attended school and earned money by cleaning houses and hotels. She later worked as the director of personnel at a restaurant and as a social worker at a retirement home. During that time Mam and Legros had three children. In 1995 Mam returned to Cambodia with her husband and began working for the Swedish nongovernmental organization (NGO) Médecins Sans Frontières (Doctors without Borders), a group that provides medical care to people in war-torn regions of developing countries.

In 1996 Mam and Legros founded Agir pour les Femmes en Situation Precaire to help prostitutes and other trafficking victims escape brothels and make the transition to self-sufficiency. The organization also works to improve the conditions in brothels. Mam became the group's president and worked at its headquarters, in Phnom Penh. At its main refuge, located in the countryside about three hours outside the city, Mam provides girls and women who have been rescued from brothels with free medical care and access to education. Many of the rescued girls have undergone such intense physical and psychological trauma that they require extensive medical and psychiatric care; for the many infected with HIV, Mam tries to make their lives as comfortable as possible. The refuge also provides the women with training, in weaving, sewing, and hairdressing, in an effort to build their confidence and skills. "If girls have financial independence, they can say no to the brothels," Mam explained to Susan Dominus for *Glamour* (December 2008). "So we have a hairdressing shop and sewing machines for them to learn skills." After the girls and women are rehabilitated, Mam and her colleagues typically return them to their families—but only if it appears that they will not be sold back to the brothels or return there on their own. Mam explained that many women return to brothels because they do not feel that they have other options. "Sometimes the women themselves, they think that it is normal that they have been sold in a brothel," she told David Montgomery for the *Washington Post* (September 22, 2008). "It's like me. Before, I think it's normal that I have been sold. . . . I never knew that I had rights." The brothel owners allow Mam's staff to visit the brothels because they bring condoms, soap, toothpaste, and other supplies related to hygiene; they also teach the women safe-sex practices. As the organization's mission became known, its reach expanded to Laos, Vietnam, and Thailand. In 1998 Mam founded AFESIP International, with additional bureaus in France and Switzerland. Also in 1998 she was made a member of the jury that judged performers at the First International Festival of Solidarity of the European Commission, held in Spain. That year, in addition, she was given Spain's Prince of Asturias Award as well as the Premio Principe de Asturias-Cooperacion Internacional, which honors contributions to mutual understanding or fraternity among peoples. In 1999 she was elected president of the Confederation of Women's Organizations in the Association of Southeast Asian Nations (ASEAN).

Mam's work is dangerous, and it is not unusual for her and her staff to receive death threats. In 2004 Mam worked with police to launch a raid of a hotel that ran one of Phnom Penh's biggest brothels, where about 200 women were held. A few days later a mob of men broke into Mam's refuge and took away 90 of the women and girls who were staying there; Mam never saw any of them again. Around that time a friend in France telephoned

Mam and urged her to flee Cambodia, because of the danger she was clearly in, but she refused to leave. Instead, Mam spent three days recording her life's story on cassettes, to ensure that someone would know about it in the event that she was silenced. She sent the tapes to a friend in France, who passed them on to a ghostwriter. Mam's story was thus published in France in 2005 under the title *Le Silence de l'innocence*, which was translated into English by Lisa Appignanesi as *The Road of Lost Innocence* (2008). The book's first half is devoted to the story of Mam's life; the second half focuses on the women and girls she cares for and the broader issues of sexual slavery and human trafficking. One of her observations is that the "moral bankruptcy" that exists within present-day Cambodia is linked to the violence and chaos the country experienced under Pol Pot. During the Khmer Rouge regime, she wrote, "people detached themselves from all kind of human feeling, because feeling meant pain. They learned not to trust their neighbors, their family, their own children." The memoir, which has appeared in many languages, was acclaimed by reviewers for its "matter-of-fact storytelling, which is strengthened by Mam's detachment and humility," as Charmaine Chan wrote for the *South China Morning Post* (September 28, 2008). A reviewer for the Irish *Sunday Business Post* (January 27, 2008) wrote that although Mam "is not a naturally gifted writer," the memoir "is a corrective for anybody who might somehow think there is anything consensual about foreign prostitution."

Mam's work received mainstream attention in August 2006, when the French journalist Marianne Pearl published an article in *Glamour*, as part of a year-long series dedicated to discovering "who changes the world and how." (Pearl is the widow of the journalist Daniel Pearl, who was kidnapped, held captive, and killed by Islamic militants in Pakistan in 2002.) When Pearl met with Mam in Cambodia, in May 2006, Mam's 14-year-old daughter, Ning, had been missing for 24 hours. Two days later police discovered Ning in Battambang, a province near the border of Thailand, known as a human-trafficking hub. She had been kidnapped, drugged, and raped, likely in retaliation for Mam's work. Pearl's article, which included painful stories of women in brothels and in Mam's refuge, shone a media spotlight on the atrocities of sexual slavery in Southeast Asia. Mam was named one of *Glamour*'s 2006 Women of the Year and was honored at a ceremony held at New York City's Carnegie Hall. During that visit Mam met with philanthropy-minded celebrities, including the actress Susan Sarandon, to seek help with fund-raising. (In October 2009 Sarandon received the first Somaly Mam Voices for Change Award, for her advocacy work on behalf of victims of human trafficking. The advisory board for the Somaly Mam Foundation also includes the actor Ron Livingston, the actresses Daryl Hannah and Laurie Holden, and the model Petra Nemcova.)

In 2008 Mam was contacted by two U.S. Air Force Academy cadets, Nic Lumpp and Jared Greenberg, who, after learning about human trafficking, had resolved to fight it. After visiting Mam's operation in Cambodia, they worked with her to found a U.S.-based group to stop human trafficking. The Somaly Mam Foundation, located in Denver, Colorado, is a nonprofit organization that raises money to dissuade foreign "sex tourists" from entering Southeast Asia and to fund continued rescue-and-rehabilitation efforts for girls and women at shelters in Cambodia and neighboring countries. The organization's current goals for Mam's three centers in Cambodia include providing micro-financing opportunities to newly released victims who want to start their own businesses and, in collaboration with Regis University in Denver, Colorado, creating a program to teach English as a second language. As of April 2009 the organization's Tom Dy Center contained a child-care house, to provide care for the young children of residents who were taking part in rehabilitation and vocational training. As of April 2008 the group had raised $400,000 from celebrities and corporations, including LexisNexis, which has taken up Mam's cause as part of its philanthropic support of "rule-of-law" projects. "We need the United States. Americans are more active," Mam told Finley. "Cambodia's own efforts to combat the sex trade have been crippled by corruption of police and courts." In March 2009 a group of 25 took part in Futures '09 Cycling Challenge, a 500-kilometer bike tour through Cambodia, to raise awareness and money for the Somaly Mam Foundation. According to the group's Web site, the event succeeded in raising $79,562. In June 2009 the Somaly Mam Foundation graduated its first class from its Voices for Change program, which trains survivors of slavery to become activists for the foundation. That same month the AFESIP Cambodia welcomed Carol Rodley, the U.S. ambassador to Cambodia, who visited the Siem Reap center. In August 2009 the Siem Reap center also hosted a U.S. delegation, which included Robin J. Lerner, the counsel to the Senate Committee on Foreign Relations, and Janice V. Kaguyutan, the senior counsel to the Senate Committee on Health, Education, Labor and Pensions, among others.

Mam continues to be honored for her work. In April 2008 she received the World's Children's Prize, established by the Swedish NGO Children's World and awarded by a jury of former child soldiers, street children, bonded workers, and refugees from 17 countries. Mam was also the winner of the 2008 Global Friends' Award, which is determined by a worldwide vote among some 6.6 million children. In November 2008 Mam was the recipient of the first Roland Berger Human Dignity Award, from the Munich, Germany–based Roland Berger Foundation, which documents human trafficking and slavery around the world. That award included a grant worth 1 million euros (the equivalent of about $1.3 million). For years Mam has lobbied U.S. lawmakers to pass stronger legislation against human trafficking. In December 2008 President George W. Bush signed such a bill—sponsored by New York congresswoman Carolyn B. Maloney, who chairs the Congressional Human Trafficking Caucus—into law. Among other functions, it increases penalties against traffickers, expands protections for trafficking victims and their families, requires that the Department of Justice develop a new state-level law to investigate and prosecute cases of human trafficking, authorizes increased assistance for victims, and establishes a presidential award for extraordinary anti-trafficking efforts. In December 2008 Mam was named one of *Time* magazine's people of the year, and in April 2009 the editors included her on the magazine's list of the 100 most influential people.

Mam is still haunted by memories of her past. She has difficulty sleeping, showers repeatedly every day, and wears copious amounts of perfume in an effort to forget the smells of the brothel. Though many have called her beautiful—"outshin[ing] supermodels at foundation fundraisers," according to Paula Bock—Mam wrote in her book, "I still feel that I'm dirty and that I carry bad luck." She finds solace in her ability to help and comfort the girls and women at her refuges. "I'm not sure what being happy really means," Mam told Pearl. "But when I cuddle with the girls, giving them the love I never received, then I do feel happy." Mam is constantly in danger of retaliation from the powerful forces she is fighting. Though she has been offered safe haven in other countries, Mam has refused to leave Cambodia. She wrote in her book, as quoted by Catherine Price for *Salon.com* (September 23, 2008): "I don't feel like I can change the world. . . . I don't even try. I only want to change this small life that I see standing in front of me, which is suffering. I want to change this small real thing that is the destiny of one little girl. And then another, and another, because if I didn't, I wouldn't be able to live with myself or sleep at night." Mam and Legros divorced several years ago.

Martin, Demetri

May 25, 1973– Comedian; writer; actor

Address: c/o Comedy Central, 1775 Broadway, New York, NY 10019

"With his anorexic build, boyish face and mop of hair . . . Demetri Martin looks like he should be playing hackeysack on some college green. Instead, he's poised to become comedy's next superstar," Neal Justin wrote in a profile of the rising comedian for the Minneapolis, Minnesota, *Star Tribune* (February 8, 2009). Nearly devoid of references to politics or pop culture, Martin's humor is based on wordplay and offbeat observations that follow their own, highly unusual logic. Martin first received national exposure in 2005, as one of the correspondents on the satiric news program *The Daily Show*, which airs on the cable network Comedy Central; his humor struck a chord with younger audiences, and he was tapped to host his own weekly half-hour sketch-variety program. Since its February 2009 debut, *Important Things with Demetri Martin* has earned critical and commercial success, drawing an average of 2.3 million viewers a week during its first season, making it Comedy Central's most-viewed new program since *Chappelle's Show*, in 2003. *Important Things* has since been renewed for a second season.

Kevin Winter/Getty Images

Demetrios Evan Martin was born on May 25, 1973 to Lillian Martin, a nutritionist at a nursing home, and Dean Martin, a Greek Orthodox priest, in New York City. (Orthodox priests are permitted to marry before they are ordained.) His parents, who raised their three children in Toms River, New Jersey, also spent several summers managing Shorty's Shish-Kabob, a family-owned concession stand, located near the Jersey Shore. They later bought the Sand Castle Diner in Toms River, where Demetri Martin reluctantly performed busboy duties and often spent his free time with his head buried in puzzle books, absorbed by the various mathematical or linguistic challenges. That planted the seed for what would later become Martin's trademark comedy style. "I think I like one-liners and shorter jokes because they're like little puzzles," Martin told Vanessa Farquaharson for the Ontario, Canada, *National Post* (July 19, 2006). "They can encapsulate a larger idea, and instead of a solution, there's a punchline. . . . Later I started to realize a thread—the economy of words, or of images that simplify things appealed to me a lot." His other childhood pursuits included breakdancing, skateboarding, and playing basketball.

While growing up Martin served as an altar boy at his father's parish. He has credited his father, who was a fan of the comedian Bill Cosby, the comedically gifted actor Peter Sellers, and the NBC sketch-comedy series *Saturday Night Live*, as an early influence. "His sermons, in retrospect, I realize, they were like 20-minute sets . . . anecdotal, very personal and just really funny," Martin told Terry Gross during a September 24, 2007 interview for the National Public Radio (NPR) program *Fresh Air*. He continued: "There were no notes. He didn't read his sermon or have this big prepared thing. He'd have a couple of ideas jotted down on an envelope or something I'd see up there on the pulpit. And then he would just go."

After being elected president of his sixth- and eighth-grade classes, Martin developed an interest in law. He remained actively involved in student government at Toms River North High School, where he was voted student-council president during his senior year. By then he had also been elected president of the Greek Orthodox Youth Association's New Jersey chapter. While in high school he attended a stand-up comedy performance by Steven Wright, whose trademark deadpan humor and wry wordplay made an immediate—and lasting—impression on Martin.

Martin completed high school in 1991, then studied history at Yale University, in New Haven, Connecticut, where he served on the Yale College Council, ran a soup kitchen, and started a youth group with a local Greek Orthodox church. During his junior year Martin began writing a lengthy palindromic poem, "Dammit, I'm Mad," which consisted of more than 200 words. (Palindromes are words or sentences that read the same backward and forward.)

At about that time Martin also experienced a life-changing event—his father's death, from cancer, at the age of 46. At the funeral Martin had a profound realization about the fleetingness of life. While the unexpected death led many members of his family to seek psychological counseling, Martin did not. "That was the puzzle-solver in me," he told Aidan Smith for *Scotland on Sunday* (August 17, 2003). "I wanted to work it out for myself."

Martin earned his bachelor's degree in 1995, then received a full scholarship to attend the New York University (NYU) School of Law. He also became engaged to his high-school sweetheart, Jen, who together with Martin had been voted "most likely to succeed" by their classmates; Jen planned to become a doctor. During his first year of law school, Martin began to seriously reconsider his career path. "I realized, 'Oh my God. This is not for me. I can't believe I made such a miscalculation. I'm bored . . .,'" he told Alan Sepinwall for the Newark, New Jersey, *Star-Ledger* (February 10, 2009). "And I didn't know what to do. . . . My whole identity was based on the idea that I was going to be this guy." Bored and restless, Martin devoted himself more fully to his extracurricular activities, which included painting and drawing. In the spring of 1997, near the end of his second year of law school, the 24-year-old Martin decided to leave NYU and embark on a career in comedy. By then he was married, and his wife, like Martin's own family, thought he was making a big mistake. "And strangely I found my family's disapproval a kind of freedom," Martin said to Stephanie Merritt for the London *Observer* (October 12, 2003). "For the first time I realized how much of what I did was to feel I was a success in other people's terms." (He and his wife divorced in the late 1990s.)

After leaving NYU Martin held a series of odd jobs, including stints as a freelance worker for an advertising agency and as an intern with *The Daily Show*, which was then hosted by the comedian Craig Kilborn. In July 1997 Martin made his stand-up debut during an open-mic night at a New York City comedy club, where the audience laughed at half of his dozen jokes. "I was thrilled," he recalled to Anthony Weiss for the *Yale Alumni Magazine* (January/February 2008). "I left the stage thinking, 'Oh man, I'm a comedian.'" (One of the jokes he told that night remained in his act for years afterward: "I was riding an escalator and I tripped. I fell down the stairs for an hour and a half.") Martin was not as successful the next night. "I get on stage, do the same set," he continued. "Silence. Bombed, just died. I was shocked. I leave the stage, sweating, thinking, 'What happened?' The next day I get back to the *Daily Show* and they say, 'How'd it go?' I say, 'I bombed.' And they said, 'Now you're a comedian.'"

During the early part of the next decade, the young comic started to garner attention. In 2000 Martin was invited to appear on *Late Night with Conan O'Brien*, and the following year he was a featured comic on the Comedy Central series *Premium Blend*, a showcase for promising stand-up comedians. Martin's big break came in the summer of 2001, when he performed at the Just for Laughs festival in Montreal, Canada, which was attended by several TV network executives. Martin recalled to Adam Sternbergh for *New York* (February 16, 2009) about the festival, "People would do these sets that were like, 'My mom is such a character! And my neighbor . . .' so the executives in the audience could say, 'Yes, we can see your show. It's your mom, and your neighbor, and you?' But my set was just one-liners." Nonetheless, shortly afterward Martin signed a one-year development deal with NBC to star in a sitcom and flew to Los Angeles, California, to film the pilot episode, which he had also co-written. After NBC executives failed to greenlight the series, in which his character lives next door to a single mother, Martin returned to New York City, where he continued to hone his stand-up routine. To connect with his audience in a deeper, more personal way, Martin decided to create his own one-man show. He not only wrote jokes but drew charts and painted posters; he also learned to sew so he could make his own costumes, taught himself to play guitar, piano, and harmonica so he could accompany his jokes with music, and sprinkled the show generously with anagrams, palindromes, and other kinds of wordplay.

In 2002 Martin premiered his well-received one-man show, entitled *If I . . .*, which featured his now-celebrated palindromic poem "Dammit, I'm Mad." "I looked up 'if' in the dictionary, and there were five different meanings of the word if, and that's my show—explaining how they apply to my life and my future. That's generally where it came from. It's an honest show and kind of a confessional," he told the *Yale Daily News* (September 5, 2003). The show premiered at Manhattan's Upright Citizens Brigade Theatre; Martin later performed it at comedy venues around the world, including the Aspen Comedy Festival, in Colorado, where he won the Jury Prize (2003), and the Edinburgh Fringe Festival, in Scotland, where he received the Perrier Comedy Award (2003), becoming only the second American to win that prestigious honor. (Rich Hall won it in 1981.) His one-person show was adapted into a nearly hour-long special that aired on British television in January 2004.

Following his performance in Edinburgh, Martin was contacted by the renowned filmmaker Woody Allen to audition for the lead role in his movie *Melinda, Melinda* (2004)—a part that eventually went to Will Ferrell. From 2003 to 2004 Martin was a member of *Late Night with Conan O'Brien*'s writing staff, which earned a 2004 Emmy Award nomination, in the category of outstanding writing for a variety, music, or comedy program, and won a 2005 Writers Guild of America (WGA) Award, in the category of comedy/variety (including talk) series. After his writing stint had ended, he returned to the show over the next several years as a guest comedian.

Also in 2004 Martin was featured on *Comedy Central Presents*, a half-hour special during which he performed traditional comedy, used humorous drawings as visual aids, and told jokes while strumming his guitar. Martin also continued to perform stand-up in front of live audiences. Other projects that year included the comedic short *12:21*, for which he served as star and screenwriter, and *Spiral Bound*, another one-man show that touched upon personal topics, such as his family, his decision to leave law school, and the breakup of his marriage. The editors of *Entertainment Weekly* included Martin in their 2004 list of the 25 funniest people in America.

In November 2005, following appearances on the late-night series *Last Call with Carson Daly* and *The Late Late Show with Craig Ferguson*, Martin rejoined *The Daily Show* (now called *The Daily Show with Jon Stewart*) as the program's senior youth correspondent. In that role Martin hosted a segment called "Trendspotting," during which he mocked various trends among young people, including hookah lounges, the Xbox 360 video-game console, and the social-networking site MySpace.com. Martin, who does not keep up with politics or pop culture, found it difficult to blend his idiosyncratic, observational humor with that of the news-parody series, which features commentary on current events, politics, and pop culture. "I am typically not that relevant as a performer," Martin told Adam Sternbergh. "Political stuff is not a good fit for me. I like to daydream."

Elaborating on his approach to comedy, Martin explained to Sean O'Neal for the *A.V. Club* (November 29, 2006, on-line), "Usually, I walk around and think about things. When I come across a thought that makes me laugh, I write it down. Then, at night, I say the thought to people through a microphone. I don't think about politics or pop culture much, so those thoughts don't often make it to the microphone." The following are a few of the comedian's one-liners: *I was in this building and there's a door, and on the door it said, "This door must remain closed at all times." I was like, dude, you're thinking of a wall. . . . I'm going to open a store called Chasm. We're going to be just like the Gap, but way bigger. . . . I went into a store and the saleslady said, "If you need anything, I'm Jill." And I said, "Wow, I've never met anyone with a conditional identity before." . . . I was walking down the street and this guy waved at me. Then he said, "I'm sorry. I thought you were somebody else." And I said, "I am."*

In September 2006 Martin released his debut comedy album, *These Are Jokes*. His one-man show *Dr. Earnest Parrot Presents Demetri Martin* received the prize for best show at the 2006 Melbourne International Comedy Festival. After hosting his final "Trendspotting" segment, in November 2006, Martin returned to *The Daily Show* the following year. From March 2007 to February 2008, he appeared as a senior youth correspondent for another recurring segment, called "Professional Important News with Demetri Martin." In October 2007 Comedy Central executives announced that Martin would follow in the footsteps of Stephen Colbert, another former correspondent of *The Daily Show*, and headline his own series.

In February 2009 *Important Things with Demetri Martin* debuted on Comedy Central. The show mixes stand-up, quirky songs, anagrams, charts, animation, and sketches, most of which feature Martin. In a review for the Associated Press (February 5, 2009), Frazier Moore wrote, "As he proves anew in *Important Things with Demetri Martin,* this important rising comic has a gift for the shrewd but daydreamy. His material tingles with random micro-truths, each observation a dotty shared discovery with his audience." In one sketch, "Time Gigolo," Martin played a shady janitor who uses a time machine to pursue his romantic interests in different centuries. In another sketch his character got into a shouting match with another man over a parking spot; the action was frequently paused so that on-screen captions could convey the thoughts of the two angry men, making the skit appear somewhat cartoonish. Matthew Gilbert wrote for the *Boston Globe* (February 11, 2009), "*Important Things* is packaged with an extreme consciousness of language, which is Martin's trademark and what distinguishes him from other slacker comics." In June 2009 Comedy Central's president, Lauren Corrao, announced that the series had been renewed for a second season. (The first season was scheduled to begin airing in the U.K. in the fall of 2009.)

Martin has also launched an acting career. After supporting roles in the comedies *The Rocker* (2008) and *Paper Heart* (2009) and a guest turn in the HBO series *The Flight of the Conchords,* Martin made his leading-man debut in *Taking Woodstock* (2009), in which he played Elliot Tiber, the gay-rights activist who helped organize the 1969 music festival. He has several other projects in various stages of completion, including the films "Moon People" and "Will," both co-written by Martin.

Martin has appeared in several on-line comedic shorts promoting Microsoft's Windows Vista operating system. Additionally, he has been featured in music videos for the Fountains of Wayne single "Someone to Love" and the rock band Travis's song "Selfish Jean." He lives in New York City.

Martin, Roland S.

Nov. 14, 1968– Journalist; commentator

Address: TV One Cable Network, Creators
Syndicate, 5777 W. Century Blvd., Suite 700, Los
Angeles, CA 90045

"I represent the post–civil rights movement," the columnist, CNN commentator, and author Roland S. Martin told the *Chicago Reader* (September 17, 2004). "I have no living memory of Martin Luther King, of the civil rights movement, of actual marches." Accordingly, Martin—who has worked for or headed a dizzying variety of publications and Web sites—does not adhere to black orthodoxy, or dogma of any other sort, in his public views. For example, while his past support for some Republicans might lead observers to label him a conservative, he has also criticized both the Catholic Church and the black clergy for what he calls their inadequate response to the AIDS crisis. The only consistent element in his views is the forthright way that he airs them. Martin told a reporter for eurweb.com (March 12, 2009), "I get stopped by African Americans, by whites, by Hispanics, Democrats and Republicans who all say the same thing: 'Thank you for being real. Even if I disagree with you, I'm going to get somebody who's going to say it unapologetic, and is not going to compromise.'"

Before he became a regular and prominent presence on CNN, in the mid-2000s, Martin held positions including reporter for the *Austin American-Statesman* and the *Fort Worth Star-Telegram,* radio host in Dallas, Texas, managing editor of the *Houston Defender*, editor of BlackAmericaWeb.com, editor of the *Chicago Defender*, editor at *Savoy*, and blogger for *Essence* magazine—occupying some posts simultaneously. He also provides commentary for the radio program *The Tom Joyner Show*. His mother, Emelda Martin, told David Barron for the *Houston Chronicle* (March 7, 2009), "The drive he has is overwhelming to me. Some people just have that in them. They don't have time to get discouraged." "I've never wanted to allow the limits of any medium to dictate whether I had any power. . . . I am a hybrid," Martin said to Barron. "Call me what you want . . . but I am a true 21st-century multimedia, multi-platform journalist. There is no box you can put me in, and if you put me in a box, I will kill you to try to get out of it." Chuck Smith, Martin's former boss at KKDA radio station in Dallas, commented to Johnathon E. Briggs and Rob Kaiser for the *Chicago Tribune* (September 26, 2004), "One of the things that [Martin] has is a very great interest in himself. That's what egotistical people do, and I don't mean that in a negative way. If you're going to change stuff, you have to have some sense that you're right and you have some higher cause." For his part, Martin told Barron, "I don't have doubts. I don't wonder if things are going to work. As long as I am my own authentic self, that's all I focus on. Nobody who has ever hired me would have hired me if I gave the impression that I was going to fail. I have literally talked myself into jobs on the sole basis of 'I will do this.' And I see the looks on the faces of people asking how I will do this, and my deal is, 'Just watch me.'"

Roland Sebastian Martin was born on November 14, 1968 in Houston, Texas, to Reginald and Emelda Martin. His father worked for Amtrak and his mother for an insurance company; both were committed community organizers in the Clinton Park neighborhood of Houston. Reginald Martin also devoured newspaper and television news, and Roland Martin has traced his own interest in journalism to his father's influence. In the mid-1980s Martin attended Jack Yates High School in Houston, a magnet school specializing in communications. "Roland knew who he was. He knew the innermost part of his being," Mary Waites, one of Martin's teachers at Yates, told Barron. "He was persistent and always thought he was the best. You always knew he was there. There was a large bank of brilliant students who were as smart as he was, so he didn't always win. But he saw what it took to win, and you could bet your money that the next time, he would win. He learned by tripping and losing opportunities, and his willingness to pick himself up and press on is to his credit."

Martin started working and interning at television, radio, and newspaper outlets while still in school, demonstrating an interest in acquiring skills in multiple mediums. According to Barron, he was also an expert networker from an early age and, at Yates, "loved nothing more than to grill visiting dignitaries and then chat them up as he escorted them to the next class, leaving them, he hoped, with a name and an impression they would remember down the line." Martin, who maintains close ties to the school, told Barron, "I would not be where I am at this age had I not gone to Yates. Everything I'm dong right now was planted, was fertilized, was encouraged based upon what happened at Yates. Everything."

After graduating from Yates, in 1987, Martin enrolled as a journalism student at Texas A&M University, in College Station, on an academic scholarship. Some considered that choice an odd one; Texas A&M was not known for either its journalism program or the diversity of its student body. "A lot of people ask me all the time, 'Man, how in the world did a black guy from Houston decide to go to Texas A&M'," Martin said in a speech. The occasion was his induction into the university's Journalism Hall of Honor. He added, as quoted by Steve Fullhart on the Web site of KBTX News, a Texas television station (October 12, 2008), "I said, 'Because of what it stood for and what it represented.' . . . I want people to look at the reality that you can be an African American student, you can be Hispanic, you can come to this school and not play football or basketball." While at the university Martin interned at KBTX-TV and at a local radio station. During that time he persuaded the former Texas secretary of state George Strake, whom he had met at Yates, to fund his trip to the 1989 convention of the National Association of Black Journalists. There, Martin has recalled, he made some of the most important connections of his professional life. "Nearly every job I've ever gotten is a result of the relationships that came out of that first [NABJ] convention," he told Barron.

After graduating from Texas A&M with a degree in journalism, in 1991, Martin found work as a county, government, and neighborhood news reporter at the *Austin American-Statesman*. Even in that entry-level reporter's position, he covered the 1992 Republican National Convention and reported on the aftermath of Hurricane Andrew. In 1993 he moved on to the *Fort Worth Star-Telegram*. In addition to reporting on city hall, he wrote sports and general-news pieces, covering the deadly 1993 encounter between FBI agents and members of the Branch Davidian religious cult near Waco, Texas, as well as the 1995 Oklahoma City bombing. For his reporting on the latter story, he was given an award from the Texas Associated Press Managing Editors group. Stan Jones, one of Martin's editors at the *Star-Telegram*, described him to Al Brumley for the *Dallas Morning News* (October 7, 1995) as "one of the most energetic guys that I've ever come across. His positive attitude is just almost overwhelming, to the point that he will infect you."

According to Barron, Martin left both the *Statesman* and the *Star-Telegram* "because he was not advancing quickly enough to suit his rate of ambition." In 1995 Martin moved to KRLD, an all-news radio station in Dallas, where he spent a brief stint as a morning reporter, before moving on to station KKDA, also called Soul 73, which catered primarily to African-American audiences. Earlier, he had been offered a talk show on KKDA, but his superiors at the *Star-Telegram* would not allow him to accept it; then, in the summer of 1995, after the news director of the station resigned, KKDA offered the position to Martin. While some felt that Martin, at 26, was too young to lead a newsroom, he jumped at the opportunity. "Clearly, it was a hell of an opportunity to be a news director," he told Brumley months later. "I felt I had a vision of the direction we could go in. And it's always been a goal of mine to be in management." As news director, editor, and morning anchor at KKDA, Martin broke the story of the drug-possession charges against the Dallas Cowboys star football player Michael Irvin. For his sports reporting, Martin—by most accounts a demanding boss in his three years at the station—won a 1997 award from the National Association of Black Journalists.

After leaving KKDA, in 1998, Martin took on jobs at publications serving mainly African-American readerships. He worked as managing editor of the *Dallas Weekly* before returning to Houston to become managing editor of the weekly *Houston Defender*, the first place he had ever interned. Next came a trying period for Martin: in 1999, while in the process of divorcing his wife, he returned to Dallas for a job that fell through. In mid-2000, while he was covering the Democratic National Convention, in Los Angeles, California, Martin suffered a ruptured appendix, and the resulting medical costs forced him to file for bankruptcy.

Bouncing back, in 2001 Martin became the first editor of BlackAmericaWeb.com, a site launched as an information hub and community portal by the popular radio talk-show host Tom Joyner, whom he had met at the 1989 NABJ Conference. Martin, who set up the Dallas-based Romar Media Group to handle his many projects, also worked as a news correspondent for the American Urban Radio Network and as a sports reporter for a Washington, D.C., radio station. In 2002 he started writing a regular news column that was picked up and distributed to various papers across the U.S. by the Creators Syndicate. In one of his columns, after it became clear that then–U.S. senator Barack Obama was very likely to run for president, Martin wrote about the African-American community's need to rise above what he saw as its self-defeating tendency to demand that successful African-Americans prove their "blackness." "One of the insidious rituals any high-profile African American must endure in order to establish his or her credibility with some other African Americans is [to] show that they are 'down with the brothers and the sisters,'" Martin wrote in a column posted on the Creators Syndicate Web site (January 26, 2007). "We have reached the day when black folks are going to have to quit forcing others to pass a black test to establish their worthiness. Every black person in America doesn't have a 'hood' experience. . . . Segregation no longer limits where we live, work and play. So if Jim Crow is dead, why do we allow the system to continue to pervade our minds? The day has come when we judge a black man or woman for who they are, where they stand on issues and what they believe in. If Obama offers a political agenda that speaks to the needs of African Americans, good. If he chooses to offer one that is broad and more universal, that doesn't make him any less of an African American. . . . There is too much work to be done to raise the collective black community in the areas of education, economics and healthcare. And worrying about whether Obama or anyone else is black enough to do so should not be a part of the dialogue."

Also in 2002 Martin became news editor at the newly established, short-lived *Savoy* magazine, an African-American lifestyle publication based in New York. Keith Clinkscales, *Savoy*'s owner, described Martin, who worked for him until 2004, as a confrontational but professional editor. "He clashed in the spirit of bettering the work, in his opinion," Clinkscales told Briggs and Kaiser. "He was the kind of guy you could have a clash with and go out and have a drink with afterwards." In 2003 Martin left BlackAmericaWeb and, under the Romar Group, purchased the *Dallas–Fort Worth Heritage*—a faltering Christian monthly newspaper with a circulation of 28,000—for $75,000. The purchase represented Martin's first major business investment; as owner and publisher he aimed to revitalize the paper but was forced to shut it down after a year due to lack of interest among advertisers.

That experience would prove useful nonetheless: Martin left Texas for Illinois in the summer of 2004, when he was hired as a consultant by the *Chicago Defender*, historically one of the largest and most influential black newspapers in the country but one that had fallen on hard times. Soon he succeeded the editor. First published by Robert S. Abbott in 1905, the daily paper, focusing on the South Side of Chicago, is known for playing an important role in covering and supporting the civil rights movement. Its circulation had dwindled from 250,000 at its height to under 20,000. Martin reintroduced editorial standards at the paper, where there had come to be virtually no editing—in the process clashing with staff, many of whom either quit or were fired. He also expanded local coverage, to appeal to a wider readership, changed the paper's look, added auto and business sections, and revamped the Web site. In May 2005 the paper celebrated its centennial. According to Briggs and Kaiser, most observers felt that the paper would, "like nearly all of the country's 200 black newspapers," be forced to become a weekly. Under Martin's leadership, the paper remained a daily, although it continued to struggle; in December 2008, about a year after Martin had left, the paper announced that it would be publishing weekly.

In August 2004 Martin made national headlines when, at a conference held in Washington, D.C., by Unity: Journalists of Color, he questioned then–President George W. Bush on the subject of college-admissions policies. Bush, who had come out against what he referred to as "quotas" that benefited minority or other students in the admissions process, had been admitted to Yale University as a "legacy" student, because his father, President George H. W. Bush, had attended the school. Martin asked Bush why, if he opposed affirmative action, he had never spoken out against legacy policies, which give advantages to the children of alumni. As quoted in FDCH Political Transcripts (August 6, 2004), Martin asked the president, "If you say it's a matter of merit and not race, shouldn't colleges also get rid of legacy? Because that's not based upon merit. That's based upon if my daddy or my granddaddy went to my college." Pressed by Martin, Bush agreed that colleges should discontinue legacy-based admissions.

Martin had already had limited national exposure when he made his first appearance on CNN, in 2002. Beginning in 2004 he made more frequent guest appearances on the cable-TV news channel. On CNN Martin usually commented on issues affecting the African-American community; for example, as quoted in a CNN transcript (October 3, 2003, on-line), Kyra Phillips asked him about the potential tensions between Hispanics and blacks in the U.S., to which he responded: "This is one of the things I've covered for the last 12 to 13 years. And what you see is a fight as it relates to who is going to be the dominant minority group. Right now, Hispanics as a whole outnumber African-Americans. . . . You have African-Americans, namely activist[s], who feel as if Hispanics did not put in the sweat, blood and tears for a lot of the rights that folks are taking advantage of today. So then you have Hispanics who are saying that wait a minute, we fought the same fights, we have some of the same grievances. And because our numbers are now increasing, we have a right for a fair share in elected offices, in contracts and other forms of assistance across the country."

In 2005 Martin began a three-year stint as the host of a three-hour weekday talk-radio show on Chicago's WVON. After stepping down from his role at the *Defender*, in 2007, he began working as a commentator and documentary producer at TV One, a cable-TV network offering programming mainly for African-American audiences, and signed on as a regular contributor to CNN, with plans to develop his own show in the future. While moonlighting as a special correspondent for *Essence* magazine with a bimonthly column and a blog, Martin hosted a series on CNN entitled *What Would Jesus Really Do?* As the 2008 presidential-election season intensified, he began focusing almost exclusively on politics. His respective interviews with the candidate Barack Obama and with his wife, Michelle Obama, both won awards. Martin was an increasingly visible Chicago-based member of the CNN panel of pundits, getting increased airtime in 2008. In April 2009, when Campbell Brown, host of CNN's primetime show *No Bias, No Bull*, went on maternity leave, Martin was asked to fill in for her. CNN also announced that it was developing a weekend program around Martin, which was expected to debut after Brown returned to her on-air duties.

Brown returned from maternity leave in early June 2009 to replace Martin, but he did not immediately launch a weekend show of his own on CNN. Instead, in September 2009, while continuing to work as a commentator for CNN, Martin began broadcasting *Washington Watch*, an hour-long Sunday public-affairs program on TV One. The show, advertised as a *Meet the Press*–style program with a focus on African-American issues, features interviews with government and administration officials, policy makers, journalists, experts, and newsmakers and is seen as a response to the well-documented lack of racial and ethnic diversity on network shows, especially in weekend programming. "I am reminded of the founders of the first black newspaper in America, *Freedom's Journal*, who wrote in their lead editorial in 1827, 'We wish to plead our own cause; too long have others spoken for us,'" Martin told Othor Cain for the *Mississippi Link* (October 1, 2009). "The same applies today. The voices of African American elected officials, policy makers, [analysts] and journalists are important, and need to be a part of the discussion on a weekly basis, and on most Sunday morning shows, they are not."

Also in 2009 Martin left his radio show at WVON to join the hugely popular *Tom Joyner Morning Show* as a senior analyst and commentator. The show is the country's top-rated nationally syndicated "urban" radio program, boasting between eight million and 10 million listeners.

Martin is the author of two books: *Speak, Brother! A Black Man's View of America* (2002) and *Listening to the Spirit Within: 50 Perspectives on Faith* (2007), a collection of his columns on religious issues, both published by Romar. Martin has long been interested in religious issues, and in 2008 he earned a master's degree in Christian communications from Louisiana Baptist University. Recently, in one of his on-line columns for CNN (March 18, 2009), Martin strongly criticized Pope Benedict XVI and the African-American religious community, accusing them of "ignorance of reality" in their stances on HIV/AIDS. He charged that the black church, "primarily because of its opposition to homosexuality, has abdicated its responsibility and totally disregarded the human toll that HIV/AIDS has had on the members it largely serves." He also faulted the Catholic Church for its opposition to the use of condoms and other forms of birth control, writing, "For the church to continue to ignore the definitive research that condoms play a huge role in decreasing the spread of HIV/AIDS and other sexually transmitted diseases is mind-boggling." Martin has made the argument that while he has strong views, he is not biased, partisan, or dogmatic and is particularly opposed to being "pigeonholed," especially in politics. "I voted for George H. Bush. I voted for his son when he was Governor in Texas," Martin told the reporter for eurweb.com. "I've voted for Democrats. I've voted for Republicans. I've voted for white folks, black folks, Hispanics, women. I look at the individual and what they have to say and the policies that I'm concerned about." After supporting Obama for president in the 2008 election, for instance, Martin criticized his performance in office, as well as that of Democrats in general. In an on-line CNN commentary (March 11, 2009) about many Democrats' opposition to a voucher system that would allow lower-income students to attend private schools, he wrote, "I would have more confidence if President Obama and members of Congress truly walked the walk and sent their kids to public schools. If they have so much faith in them turning around with reform, entrust their own children to public education. . . . If it's good enough for yours, then surely it's good enough for mine. But preaching to the rest of us about the virtues of a public education, then sending your own children to private school and denying the use of vouchers so others can do the same, is frankly hypocritical."

Martin has won several journalistic awards, including the Edward R. Murrow Award from the Radio-Television News Directors Association, a 2008 NAACP Image Award for best interview for "In Conversation: The Senator Barack Obama Interview," a 2009 NAACP Image Award for best interview for "In Conversation: The Michelle Obama Interview," and a 2008 President's Award from the National Association of Black Journalists. In August 2009 Martin was elected secretary of the National Association of Black Journalists, and in October 2009 he was named Broadcaster of the Year by Rainbow PUSH, an organization headed by the civil rights activist Jesse Jackson that is dedicated to addressing civil rights and social-justice issues. *Ebony* magazine named him one of the 150 Most Influential African-Americans in 2008, and the British publication *Daily Telegraph* named him one of the top 50 political pundits. In 2008 he was inducted into the Texas A&M University Journalism Hall of Honor; upon receiving the award, he announced a donation of $10,000 to the program.

Martin, whose plans include starting another media company, has been married since 2001 to the Reverend Jacquie Hood Martin. His wife, who previously served at a Houston church and is now the dean of Kennedy King College, in Chicago, is the author of *Fulfilled! The Art and Joy of Balanced Living*. The couple have homes in Dallas and Chicago.

Mashouf, Manny

June 6, 1938– Founder and chairman of bebe Stores Inc.

Address: bebe Stores Inc., 400 Valley Dr.,
Brisbane, CA 94005

The founder, chairman, and former president of bebe Stores Inc., Manny Mashouf, has emphasized both sex appeal and functionality in clothing offered by bebe (pronounced "beebee" and spelled by the company with a lowercase "b"). "Sexiness is part of our look," Mashouf told Mary Gottschalk for the *San Jose Mercury News* (October 12, 1998). "If we provide suits without that element, we'd look like [the clothing stores] Talbot's and Ann Taylor. And who needs another one of those?" Bebe became both popular and notorious in the mid-1990s for manufacturing and selling "impossibly short" skirts, as Gottschalk put it, and other items of apparel that proved highly popular among young, fashion-oriented women. Gabrielle Saveri wrote for *BusinessWeek* (May 31, 1999) that "the stores' reputation for sexy, trendy clothing at mall prices has spawned a growing fan club among its target audience of women in their 20s and 30s, including actresses." In 2008 the company launched a lingerie line and a collection of lower-priced clothing aimed at a younger clientele. The next year it introduced a new fragrance and announced a forthcoming line of shoes. As a result of such innovations, the Brisbane, California–based company has grown significantly since Mashouf opened the first few stores in San Francisco in the 1970s; at the end of 2009, bebe operated 307 retail stores internationally, including 215 bebe stores; 33 2b bebe outlets; one bebe accessories store; and 61 bebe Sports stores, the last of which were scheduled to be replaced by new stores offering streetwear. The new outlets were to be called PH8 (pronounced "fate"). Since 1989 bebe has been vertically integrated—that is, all aspects of the business are under the direct control of the management, including the manufacture of the materials used to produce its products. Mashouf has designed clothing himself, including many items that became instantly popular and made bebe a fixture in most major shopping districts and malls in the United States.

Manny Mashouf

Manoucher "Manny" Mashouf was born in Iran on June 6, 1938 and spent his early years in the country's capital city, Tehran. In an interview with Mikael Jehanno for savoirmag.com, he described his family as "fashion-conscious." He recalled that because of the predominantly Muslim country's strictly observed custom requiring a female to be accompanied in public by a male, "I was dragged on by my sister, sometimes against my own wishes, and often found myself in fabric and tailor shops at a very young age," as he told Jehanno. "Even though I resented it at the time, it somehow left a deep impression on my brain." His family later immigrated to the United States, where Mashouf attended San Francisco State University, earning a B.A. degree in political science in 1966. He told Jehanno that he was the most fashion-savvy member of the school's student body. "Whatever I was wearing seemed to become a trend," he said.

After graduating, Mashouf, having supported himself in college by working in restaurants, took over a steak house in San Francisco, which he renamed Barbary Coast. His business later expanded to include three other locations in the area. Nonetheless, he told Jehanno, "My heart was not into it. I would constantly go shopping for men's clothes for myself and women's for my girlfriends. I quickly noticed there was a gap, a void, in women's fashion at the time." In 1971 he opened a clothing store, Caspian Corner, on San Francisco's Polk Street. "My first inclination was to make men's clothing in the basement of the store," Mashouf told Joanna Ramey for *Women's Wear Daily* (November 29, 2006). "I bought three machines, hired a master tailor and patternmaker. Then I realized by the time I'd make enough clothing to fill the store, it would be out of fashion." He thus began to sell established brand-name clothing instead. When Mashouf opened another store on Union Street, in 1977, he dubbed it "bebe," as an homage to the famous first words of a soliloquy from William Shakespeare's *Hamlet*, "To be or not to be."

With bebe Mashouf hoped to profit by specializing in clothing for trend-following women in their 20s and 30s, saying to Jehanno, "There was nothing between junior and missy styles, nothing like what you would call now 'contemporary women's fashion.' I remember going from one showroom to another in New York, San Francisco and Los Angeles, and here and there, I found items that would fit these proverbial characteristics, but never all under one roof. A customer was being ignored." Between 1977 and 1989 Mashouf opened five bebe stores in the Northwest. While enjoying moderate success, Mashouf found it difficult to compete with large department stores. "Every time I would discover a [clothing] line or bring something new, they would come into the stores, pick up the labels and kill the business for me," he told Jehanno. As a result, Mashouf decided in 1989 to manufacture the company's apparel in-house, designing the earliest bebe originals himself. Vertical integration benefited bebe by allowing the company to control production costs; Mashouf and his fellow designers were able to monitor clothing items from the initial design stages to completion, making for consistent quality. Mashouf told Jehanno that the success of the earliest original designs was "enough to put bebe on the map."

In 1990, in a successful attempt to bolster bebe's image, Mashouf began to offer up-and-coming Hollywood actresses free clothing in exchange for appearing in the company's advertisements; among the actresses was Charlize Theron, who later won an Oscar for her role in the film *Monster*. Mashouf also announced that year that the company would expand to 20 new stores nationwide by 1993. By 1991 there were eight bebe stores in California, and the company was generating $8 million in total sales annually. In September of that year, bebe began to open stores in Southern California, featuring both original bebe clothing and that of Southern California designers including Helios, Nina K., Van Buren, Holly Sharp, and Leslie Hamel. Much of the bebe clothing was designed by Mashouf, in collaboration with his wife, Neda, and the company's buyer, Renee Bell.

By 1995 the company had 61 stores in malls and street-front locations in a number of states, including Illinois, Arizona, Florida, South Carolina, and New York as well as California and states in the Northwest; there were three boutiques in New York City. That year Mashouf announced that the company had generated sales of $65 million. The first appearance of bebe clothing on prime-time television occurred in 1995, worn by the actress Heather Locklear on the popular Fox network soap opera *Melrose Place*. That visibility helped increase the association of bebe clothing with female celebrities. Locklear's attire on the show consisted of tailored suits and miniskirts, a look that became known as "the Melrose suit," and bebe, according to Gottschalk, "was on the lips of the fashion savvy as the source." The year 1998 saw the company's initial public offering (IPO), which raised enough money to underwrite the opening of more retail stores and fund the later development of such bebe products as foot and eyewear. Also that year bebe expanded beyond U.S. borders, opening a store in Mexico City, Mexico.

In February 1999 the company unveiled plans for stores in the United Kingdom, Canada, and Israel. Later in the year it announced that it would open outlets in Singapore, the United Arab Emirates, Kuwait, Bahrain, Qatar, Oman, and Saudi Arabia as well. By that time bebe's list of celebrity clientele had grown to include the actresses Brooke Shields, Calista Flockhart, Ashley Judd, and Cameron Diaz and the pop megastar Madonna. Those names pushed bebe's popularity to new heights; in 1997, for example, $300 bebe tweed suits sold out within a week in New York after Shields wore one during an episode of the sitcom *Suddenly Susan*. More recently bebe featured the actress Rebecca Romijn as the "face" of its summer and fall 2007 lines, and the actress Eva Longoria was featured in the bebe Sport campaign for spring and summer 2007 as well as summer and fall 2008. In 2009 the company returned to using fashion models for its ad campaigns—Anne Marie Van Dijk in the spring and Diana Moldovan that summer.

In January 1999 bebe's vertical-production model met with a challenge when a style of pants with three-quarter-length legs, known as capris, sold out quickly at bebe stores; through the Los Angeles factory that had produced bebe suits, however, the company was able to supply enough capris to keep up with demand. That year *Forbes* ranked bebe as number two on its list of "200 Best Small Companies." Much of bebe's success is the result of a rapid manufacturing-and-delivery system that has enabled the company to bring high-demand products to the retail floor quickly. Most of the production is done through contracts with factories in San Francisco and Los Angeles, with a smaller portion in Canada, Europe, and Asia; a system of testing and, when necessary, reordering allows for quality control.

By August 2000 bebe had 126 retail stores, but it was reported that same-store sales had fallen, and by the end of June, sales were down to $54.1 million from $54.2 million the year before. ("Same-store sales" refers to sales at stores open for a year or more.) The company's stock had also fallen sharply, from about $50 in 1999 to $10. Blair Lambert, then the chief financial officer (CFO) of bebe, told Matthew Swibel for the Santa Clara Valley *Business Journal* (August 11, 2000) that the cause of the slip was that bebe had not "focused enough on fashion" that year. Some, however, felt that investors who had grown accustomed to bebe's higher-than-average earnings had exaggerated the significance of the lower numbers. Two of bebe's high-level employees, Heather Vandenberghe, the marketing director, and Gregory Scott, the merchandising vice president, had left the company earlier in the year. Bebesport, a store launched by the company in Minneapolis, Minnesota, in 1999 to carry sportswear, was also "not performing to expectations," as Mashouf told Swibel. Mashouf stepped down from his position as president of bebe in 2000, and John Parros, formerly a vice president at Saks Inc., joined bebe as president and chief operating officer. Parros resigned from his post in 2002; Walter Parks, the company's chief financial officer, took on the additional duties of chief operating officer in 2006. Mashouf continued on as chairman and chief executive. Gregory Scott currently serves as chief executive officer.

In 2002 bebe filed a suit against May Department Stores of St. Louis, Missouri, alleging that the department giant's apparel line, "be," was a trademark infringement. Bebe claimed that May's brand trademark, font style, and apparel were so similar to bebe's that they confused customers. Bebe sought a preliminary injunction against May Department Stores, and on October 21 United States District Judge Catherine D. Perry of the Eastern Division of the Eastern District of Missouri granted the injunction, writing, as quoted by *Business Wire* (October 23, 2002), "If the injunction is not granted, bebe stands to lose the goodwill and customer base it has grown through investment in advertising and through savvy marketing and the provision of a good quality product to its customers over the last 26 years. Bebe does just this one thing, and it has done it very well over the last 26 years, and it stands to lose it all if May is not enjoined." Mashouf was pleased, saying, according to *Business Wire*, "This injunction not only protects our rights, but safeguards our customers from devious corporate greed. We have spent 26 years establishing a brand that people equate with high fashion and high quality. For a giant retailer such as May Company with its hundreds of stores, billions of dollars in sales and unlimited resources to misappropriate bebe's reputation to enrich its bottom line is disgraceful. We are glad the judge recognized this plot and put a stop to it." In December of that year, May Department Stores was barred entirely by a federal appeals court from using "be" as the name for its clothing line. In November bebe had reported that same-store sales had declined, and Mashouf told *Women's Wear Daily* (December 24, 2002), "This clearly shows that any success May stores had with this line is because our customers associated it with bebe."

In 2005 bebe opened Neda, a store featuring accessories, handbags, and shoes, in San Francisco. The concept was Neda Mashouf's. Mashouf and his wife also donated $10 million to San Francisco State University that year for a new building and performance space to be dubbed the Mashouf Creative Arts Center. In 2007, following her divorce from Mashouf, Neda resigned from the company, and the Neda store was renamed bebe Accessories.

Meanwhile, by 2006 bebe had 228 stores, and Mashouf's family, holding 73 percent of the company's outstanding stock shares, was ranked at number 242 on the *Forbes* "400 Richest Americans" list. A new line of limited-edition luxury apparel, Collection bebe, was introduced at Los Angeles Fashion Week that year. In 2007 Mashouf and his family were ranked at number 754 on the *Forbes* world billionaires list. That year he took a 60 percent stake in a London, England–based clothing and accessories label, Biba International Ltd.; Mashouf also sits on Biba's board of directors. In December 2008 bebe partnered with Robin Antin of the pop group the Pussycat Dolls to launch a line of lingerie called "Shhh." According to a press release available on businesswire.com (December 2, 2008), the line "features nautical looks, animal prints, rock-and-roll styles, and frills. It covers every cut from boy shorts to micro-minis to delicate tops and bottoms."

Although bebe's net sales and income decreased during the fiscal year that began in 2008 due to underperforming stores and store closures, the company continued to offer new products. In August 2009 bebe launched a new fragrance, which went on sale in all its U.S. stores. PH8 stores, which offer streetwear, replaced bebe Sports stores in November 2009. "We believe that the conversion to PH8 is relevant and timely, especially now, when the market is flat and economy-conscious consumers are looking for new ideas and innovations," Mashouf said in a bebe press release, according to Reuters Business Wire (July 14, 2009, on-line). The company also announced plans for a new shoe collection, to be unveiled in the spring of 2010.

Mashouf is the father of Paul Mashouf, formerly the vice president of manufacturing and sourcing for bebe Sport, and Karim Mashouf, who serves bebe as an independent contractor; he is also the uncle of Hamid Mashouf, bebe's vice president of information systems and technology. Mashouf told Ramey that success had not altered his personality: "I don't think money will ever change me, no matter how much it is. I'm still the same person I was . . . when I was in college."

McAdams, Rachel

Nov. 17, 1978(?)– Actress

Address: c/o Gersh Agency, 232 N. Canon Dr.,
Beverly Hills, CA 90210

In the mid-2000s, when the actress Rachel McAdams appeared in a string of critically acclaimed hit movies, including *Mean Girls*, *The Notebook*, *Wedding Crashers*, and *Red Eye*, *Entertainment Weekly* and *Newsweek* dubbed her Hollywood's next "It girl" and "the next Julia Roberts." Since then McAdams has delivered on the promise of those films, with well-received performances in such movies as *Married Life*, *The Lucky Ones*, *State of Play*, and *The Time Traveler's Wife*. Often noted for her good looks and natural charisma, she has also won praise for her ability to perform in a variety of genres, from dark to screwball comedy, romance to psychological thriller. Growing up in a Canadian city, she received training in classical theater as a child and graduated from college before landing her first big Hollywood role, opposite Rob Schneider, in the comedy *The Hot Chick* (2002). Although her films have varied nearly as much as her hair color, McAdams—a self-described "hopeless romantic"—has admitted that there is one element, transcending genre, that she looks for in movie scripts. "I'd like to dabble in every genre. But I rarely enjoy a film that doesn't have some kind of love story to it," she told Bob Strauss for the Toronto, Canada, *Globe and Mail* (March 17, 2008). "It doesn't have to be the focus and it doesn't have to be sweeping or typical. But when love isn't involved, I'm not as interested."

Alberto E. Rodriguez/Getty Images

The oldest of three children, Rachel McAdams was born on November 17, 1978 (many sources say October 7, 1976) in London, Ontario, about 120 miles southwest of Toronto. She has described her parents—Sandy, a nurse, and Lance, a truck driver—as being very supportive of her. As a child McAdams played volleyball and soccer and was a competitive figure skater. Showing an early interest in acting, she coordinated performances with her younger siblings for her parents in the family's backyard. During her elementary-school years, McAdams joined the Original Kids' Theatre Company, taking classes during the academic year and attending the program's summer camp. She felt embarrassed that she was inexperienced compared with many of her peers. "I was with these 8-year-olds who were going to be Broadway stars, singing at the top of their lungs, dancing since they were 2," McAdams recalled to Robert Abele for the *Los Angeles Times* (May 8, 2005). "I was so clumsy I would just go home and cry." McAdams eventually found confidence and inspiration through performing in Shakespeare plays at the camp.

In high school, unlike the character she portrayed in *Mean Girls*, McAdams was nearer to the bottom of her school's social hierarchy. "I think shyness was my problem," she told Judy Bachrach for *Allure* (November 2005). "I was nervous about approaching people. Therefore I became unapproachable." She found her niche in high-school theater productions and won an award for her performance in the student-written play *I Live in a Little Town*. McAdams had planned to pursue "cultural studies" in college until a high-school theater teacher persuaded her to focus on theater. She attended York College in Toronto, graduating with a B.F.A. degree with honors in 2001. One of her professors there, David Rotenberg, recalled to Shanda Deziel for *Maclean's* (July 18, 2005) that at first McAdams was "shy, but sort of had a twinkle." He added, "By the time she got to me in the fourth year, she was landed, she had feet." That year he gave her one of the lead roles in the school's production of Frank Wedekind's *Lulu*. "It was fascinating to watch the agents watch her, their eyes rolling back into their heads," Rotenberg said of their reaction to her performance. "They came chasing me after the first act." For McAdams the theater program relaxed its rules against taking outside acting jobs; earlier, she had violated the rules by appearing in the Disney TV show *The Famous Jett Jackson* and shooting a pilot for an MTV television series that was never picked up.

McAdams began her career with small roles in several films, among them *Guilty by Association* (2002), *My Name Is Tanino* (2002), and the Canadian movie *Perfect Pie* (2002). Her first major movie role was as a popular cheerleader who inadvertently switches bodies with a middle-aged man (Rob Schneider) in the poorly reviewed *The Hot Chick*. She next snagged a role on the Canadian television series *Slings & Arrows*, about a theater company performing Shakespeare plays. For her portrayal of the character Kate McNab, who appeared in episodes from 2003 to 2005, McAdams was honored with a Canadian Gemini Award.

McAdams rose to Hollywood stardom in 2004, the year she had leading roles in two very different box-office hits, *Mean Girls* and *The Notebook*. Directed by Mark Waters, *Mean Girls* follows Cady Heron (Lindsay Lohan), a very smart, formerly homeschooled girl who enters high school's vicious social hierarchy, at the top of which is a group of popular girls known as "the Plastics." The group is headed by McAdams's character, Regina George, a beautiful, cruel social tyrant and "queen bee," who befriends and then turns on Cady. McAdams claimed to have modeled her character after Alec Baldwin's in the 1992 film *Glengarry Glen Ross*. "It's fun to be mean!" she told Jay Boyar for the Biloxi, Mississippi, *Sun Herald* (July 8, 2004). "I know that sounds so horrible . . . but I really wanted to explore her as a sociopath."

McAdams made the transition from comedy to romance with *The Notebook*. Directed by Nick Cassavetes and adapted from the same-titled 1996 novel by Nicholas Sparks, *The Notebook* is the 1940s-era story of Allie Hamilton (McAdams), a privileged southern belle who falls in love with a lumber-mill worker (Ryan Gosling) but then loses him. She later falls for an equally kind, upper-class man (James Marsden), whom her family considers to be a more suitable mate for her. To prepare for the role, McAdams read widely about the attitudes of rich southern women and spent several weeks, along with Gosling, exploring southern culture. She also took classes in ballet, tennis, and etiquette and interviewed several debutantes. McAdams was attracted to the film because of her emotional reaction to its unabashedly romantic story. (The day after getting cast, she "devoured" Sparks's book.) Critics took note of the film's performances, with Abele writing, "McAdams' expressive beauty moved thrillingly between rapture and heartbreak." At the 2005 MTV Movie Awards ceremony, McAdams and Gosling, who is also from London, Ontario, shared the prize for "best kiss" for a scene in *The Notebook*; while accepting the award, the pair, who had for months been denying rumors of an off-screen romance, reenacted their passionate kiss. Shortly afterward they confirmed their romantic relationship. McAdams also took home the MTV prize for best breakthrough performance for her role in *Mean Girls*.

In 2005 McAdams solidified her place as a Hollywood star. In that year's comedy *Wedding Crashers*, about two friends (Owen Wilson and Vince Vaughn) who make a hobby of crashing weddings and seducing female guests, McAdams played Claire, the daughter of a diplomat (Christopher Walken), with whom Wilson's character falls in love. The role gave McAdams the opportunity to improvise with her three comedic co-stars. "I was really excited about watching these guys," she told Hugh Hart for the *Philadelphia Inquirer* (April 14, 2005). "They kept lobbing the curveballs and I appreciate that because when you keep things spontaneous, it just makes for better acting." *Wedding Crashers* was immensely successful, grossing over

$209 million in the U.S. In his review for *Rolling Stone* (July 14, 2005, on-line), Peter Travers wrote, "McAdams is a showstopping beauty with the talent to bend a laugh line to do her will."

That same year McAdams expanded her range when she starred opposite Cillian Murphy in Wes Craven's *Red Eye*, a psychological thriller about a woman who finds herself seated next to a terrorist on a plane. McAdams, who did not ride in an airplane until she was 22 years old, told Jamie Portman for the Montreal *Gazette* (August 17, 2005) that she was attracted to the film's premise. "It struck me as an incredible acting challenge to have to sit in one spot and be held hostage without letting anyone else know what is going on. It's a pretty dire situation." Although the thriller genre was new territory for her, both the film and McAdams's performance earned a warm critical reception. Writing for the *Chicago Sun-Times* (August 19, 2005), Roger Ebert found her work "convincing because she keeps it at ground level; thrillers are invitations to overact, but she remains plausible even when the action ratchets up around her." McAdams next appeared in the comedy *The Family Stone* (2005), as the daughter in a family that aims to foil the marriage plans of the son, Everett (Dermot Mulroney), and his fiancée, Meredith (Sarah Jessica Parker). Diane Keaton played the mother of McAdams's character. "I went to the set when I wasn't needed just to watch [Keaton] work," McAdams told Louis B. Hobson for the Manitoba *Winnipeg Sun* (August 13, 2005). "It's awe-inspiring. It was like sitting in on a master class in acting." In 2005 McAdams won a Hollywood Breakthrough Award at the Hollywood Film Festival.

With several successful movies under her belt, McAdams reportedly turned down roles in a few high-profile films, including *Mission: Impossible III* (2006), *Casino Royale* (2006), and *The Devil Wears Prada* (2006), deciding instead to spend a year with her family and friends and choose her next role carefully. That role came in *Married Life* (2007), a dark comedy set in the 1940s, which features both romance and murder. She played the beautiful peroxide-blond Kay, with whom the middle-aged Harry (Chris Cooper) has fallen in love and begun an affair. Instead of disclosing the painful truth to his wife, Pat (Patricia Clarkson), he decides to spare Pat emotionally—by killing her. All the while, Harry's friend Richard (Pierce Brosnan) also pursues Kay. The film's director, Ira Sachs, was impressed with the depth of McAdams's portrayal. "Rachel is extremely ambitious with the emotional life of her characters," he told Strauss. "There's also this emotional level that I think she has as an actress which is just beneath the surface. It's something that the audience wants more of, and on that level, she really understands the nature of what it is to be a movie star, which is to provide something but, also, to hold something back."

McAdams covered new ground with her next film, Neil Burger's *The Lucky Ones* (2008), the story of three soldiers returning home from the Iraq war. For the *New York Times* (September 26, 2008, on-line), Laura Kern wrote that McAdams was "luminous as always" in her role as the physically wounded Colee Dunn, who has a "determinedly sunny outlook on life."

In *State of Play*, a thriller inspired by the same-titled BBC series, McAdams played Della Frye, a young newspaper blogger who helps her coworker, the reporter Cal McAffrey (Russell Crowe), investigate the murder of a mistress of a congressman (Ben Affleck). Released in April 2009, the film received generally positive reviews and earned over $37 million in U.S. box offices. Later that year McAdams starred in the romantic drama *The Time Traveler's Wife*, adapted from the novel by Audrey Niffenegger. In that film McAdams played Claire, the love interest of Henry DeTample (Eric Bana), a librarian with a gene that causes him to travel inadvertently through time. Though many reviewers credited McAdams and Bana with sincere and effortful performances, the film was generally derided for its convoluted plot and for being "dull and sappy," in the words of Claudia Puig, a reviewer for *USA Today* (August 13, 2008, on-line). McAdams was cast in the Guy Ritchie–directed film *Sherlock Holmes*, as the love interest and rival of the famous fictional detective (played by Robert Downey Jr.); the picture was slated to premiere in late 2009. In 2010 she was to appear opposite Harrison Ford in *Morning Glory*, a comedy about a morning-news program.

McAdams has avoided the pitfalls—such as drug or alcohol abuse—that have tarnished the reputations of many of her peers. She is usually reticent about personal matters, including her two-year romance with Gosling (the pair reportedly broke up in 2007). McAdams maintains her home in Toronto, where she likes to ride her bicycle, watch movies, garden, cook, and play ultimate Frisbee. "I just think it's helpful in terms of maintaining some kind of normalcy and balance," she told Gayle MacDonald for the *Globe and Mail* (July 7, 2004) about her choice not to live in Los Angeles. "This is where my family and friends are. It's just home. I feel very Canadian. I just can't leave it."

McChrystal, Stanley

Aug. 14, 1954– U.S. Army general; commander of U.S. forces in Afghanistan

Address: U.S. Central Command, 7115 S. Boundary Blvd., MacDill AFB, FL 33608

The September 11, 2001 terrorist attacks on New York City and Washington, D.C., preceded the U.S.'s entry into two wars. Later that year President George W. Bush ordered the invasion of Afghanistan, where the terrorists, members of the group Al Qaeda, had trained and found a haven; he also ordered the invasion of Iraq, in March 2003, based on the stated belief—later proved erroneous—that that country was stockpiling so-called weapons of mass destruction. (Some administration officials suggested that there was a connection between Iraq and Al Qaeda, a theory that was also later discredited.) After initial success in Afghanistan, where U.S. forces drove the Islamic fundamentalist group known as the Taliban from power, the military's focus was mainly on Iraq, even as the Taliban and its allies regrouped and posed a steadily increasing threat. With his election to the presidency, in 2008, Barack Obama promised to reduce the level of U.S. troops in Iraq and concentrate more heavily on Afghanistan, which has seen an increase in violence in the past year. His choice to lead U.S. forces in that country, announced in May 2009, was the U.S. Army general Stanley McChrystal.

In his position as commander of both the International Security Assistance Force (ISAF) and the U.S. Forces Afghanistan (USFOR-A), McChrystal replaced David McKiernan, a shakeup indicating that the U.S. was in need of new solutions to the growing problems in Afghanistan. McChrystal, a former Green Beret commander and Army Ranger, is known for having transformed the military's Joint Special Operations Command (JSOC) into an elite counterterrorism force responsible for capturing the deposed Iraqi president, Saddam Hussein, and killing a high-level Al Qaeda agent, Abu Musab al-Zarqawi, among other operations. According to the BBC News Web site (May 11, 2009, online), McKiernan's "removal from command in Afghanistan suggests President Obama does not believe Gen McKiernan is 'the guy' to turn around the coalition's deteriorating military position in central Asia. He clearly believes that Gen McChrystal's special ops tactics are more likely to get the job done." McChrystal has also been praised for pushing the traditionally secretive JSOC to work with the FBI and CIA. Henry Crumpton, a CIA official, told Elisabeth Bumiller and Mark Mazzetti for the *New York Times* (May 13, 2009) that McChrystal "knows intelligence, he knows covert action and he knows the value of partnerships."

McChrystal graduated from the U.S. Military Academy at West Point in 1976 and worked his way through the army's ranks, becoming a Green Beret, Army Ranger, and Special Operations commander. He served in Saudi Arabia during the Persian Gulf War in 1991 and was posted in Afghanistan as chief of staff of military operations in 2001 and 2002. He served at the Pentagon as vice director of operations for the Joint Staff from 2002 to 2003 and was then appointed commander of the JSOC. When he was confirmed as commander of forces in Afghanistan, in June 2009, he was promoted from lieutenant general (or three-star general) to full (four-star) general. Although he gives few interviews and was unknown to the general public until the assassination of al-Zarqawi, in 2006, McChrystal is highly praised in the military community. "He's lanky, smart, tough, a sneaky stealth soldier," the retired major general William Nash told Bumiller and Mazzetti. "He's got all the Special Ops attributes, plus an intellect." Despite such praise, McChrystal is also something of a controversial figure. JSOC officers serving under him have been disciplined for prisoner abuse, and although later cleared of wrongdoing, he was the subject of an investigation after one of his units provided false information about the shooting death of Corporal Patrick Tillman in 2004.

In September 2009 McChrystal requested an additional 40,000 U.S. troops in Afghanistan (62,000 were stationed there at that time), citing the danger of failure if more forces were not committed within the next year. His request reinforced the perception that achieving a stable Afghanistan was becoming increasingly elusive, and it renewed debate within the Obama administration and the U.S. Congress as to the necessity of further troop commitments and what might constitute "success" in Afghanistan.

The fourth of six children, Stanley A. McChrystal was born on August 14, 1954 into a military family. His siblings, four brothers and a sister, have all either served in or married into the military. His father, Herbert J. McChrystal Jr., was a two-star (or major) general who served in Germany during the U.S. occupation that followed World War II. He also later served at the Pentagon. McChrystal told Peter Spiegel for the *Wall Street Journal* (June 12, 2009, on-line), "When I was young, I admired my dad a lot, and when people would ask me what I wanted to do I'd say I wanted to be in the Army. I don't ever remember making a decision to go into the Army. It was just something I expected myself to do, although I never got any pressure or encouragement from my dad."

McChrystal graduated with a B.S. degree from West Point, in New York, in 1976. That June he was promoted to the rank of second lieutenant, and from November 1976 to February 1978 he served at Fort Bragg, North Carolina, as weapons platoon

Stanley McChrystal

leader for C Company, 1st Battalion, 504th Parachute Infantry Regiment, 82d Airborne Division. Promoted to first lieutenant in 1978, he served as rifle platoon leader from February until July of that year. He was executive officer from July to November, then enrolled in the Special Forces Officer Course at the Special Forces School at Fort Bragg, completing his course work in April 1979. Then, until 1980, he commanded a Green Beret team. The Green Berets, officially known as the United States Army Special Forces, are devoted to waging "unconventional warfare." McChrystal told Spiegel that he had wanted to command a Green Beret team since he learned about their actions in the war in Vietnam, in which his father and brother served: "That seemed to me—off by yourself requiring a lot of judgment, initiative from young leaders—something I would find interesting and challenging."

After commanding the Green Beret team, McChrystal achieved the rank of captain and studied at the Infantry Officer Advanced Course at the U.S. Army Infantry School in Fort Benning, Georgia, until February 1981. That month he arrived in South Korea to take up a post in intelligence and operations for the United Nations Command Support Group. In March 1982 he left for Fort Stewart, Georgia, where he served, for A Company, as a training officer in the Directorate of Plans and Training. In November 1982 he moved to A Company's 3rd Battalion, 19th Infantry, 24th Infantry Division (Mechanized) at Fort Stewart, where he served as commander. He held that post until September 1984, when he became an operations officer. From September 1985 to January 1986, he served at Fort Benning as liaison officer for the 3rd Battalion, 75th Ranger Regiment. He told Spiegel, "The Rangers were much better resourced, much better equipped in every way" than conventional forces. "They were a unit that was very based on discipline. I liked the direct action part of it; I liked the ethos of the unit. It just became a comfortable fit for me." He decided to remain with the Rangers instead of returning to the conventional forces. "I got a lot of advice not to do it," he told Spiegel. "I had some very close friends and respected people who said, you've already been in the Rangers, you've commanded a battalion already, go on and grow up. That was really tough. I waited literally until the last day to tell them whether I wanted to be considered [as a candidate to return to the Rangers as a battalion commander]." McChrystal became the commander of A Company, 75th Ranger Regiment, in January 1986, returned to his former post as liaison officer with the Rangers in May 1987, and then became the operations officer in April 1988. In June 1987 he was made a major.

For a year beginning in June 1989, McChrystal attended the Naval War College in Newport, Rhode Island, where he took the Command and Staff course. During the subsequent Persian Gulf War, he was deployed to Saudi Arabia as an Army Special Operations action officer. He became a lieutenant colonel in 1992. From April 1993 to November 1994, he commanded the 2nd Battalion, 504th Parachute Infantry Regiment, 82d Airborne Division, at Fort Bragg. He then commanded the 2nd Battalion, 75th Ranger Regiment, at Fort Lewis, Washington, from November 1994 to June 1996. He became a full colonel in September 1996 and, for a year, from June 1996 to June 1997, was a senior service college fellow at the John F. Kennedy School of Government, at Harvard University, in Cambridge, Massachusetts. He then became commander of the 75th Ranger Regiment, at Fort Benning, from June 1997 to August 1999. He was a military fellow at the Council on Foreign Relations, in New York City, from August 1999 to June 2000.

Between June 2000 and June 2001 McChrystal was assistant division commander for the 82d Airborne Division at Fort Bragg. He was made a brigadier (one-star) general in January 2001 and was also part of a joint assignment as commander of the Combined Joint Task Force at Camp Doha, in Kuwait. From June 2001 to July 2002 he was chief of staff of the XVIII Airborne Corps and also served as chief of staff for Combined Joint Task Force 180. In July 2002 he became vice director for operations of the Joint Staff, which assists the chairman of the Joint Chiefs of Staff. He held that post, based in Washington, D.C., until September 2003. He then became commanding general of the JSOC, based at Fort Bragg, serving in that capacity from September 2003 to June 2008. During his tenure in that position, McChrystal spent little of his time at Fort Bragg; most of it was devoted to directing counterterrorism efforts in Iraq and Afghanistan. In that period he received two promotions, to major general in 2004 and lieutenant general in 2006. He became the director of the Joint Staff in August 2008.

During his five years as commander of the JSOC, McChrystal was, as an article on the *Washington Times* Web site (October 2, 2006) put it, "Defense Secretary Donald H. Rumsfeld's chief terrorist pursuer in Iraq and Afghanistan." In those years McChrystal was responsible for hunting down numerous terrorists through so-called "direct action" forces, or SMUs (Special Mission Units). Among other actions, his JSOC forces captured the deposed Iraqi president, Saddam Hussein, in 2003 and killed Abu Musab al-Zarqawi, a high-level Al Qaeda operative, in 2006. McChrystal's team successfully located al-Zarqawi and enabled the air strike that killed him; the *Washington Times* article noted that McChrystal was "so personally involved in the hunt that he went with his men to the bombed-out hut near Baqouba [Afghanistan] to make sure they got their man. A source close to the special-operations community said Gen. McChrystal's eyes-on identification is representative of the three-star general's hands-on approach." McChrystal told Spiegel, "Counterterrorism, effective counterterrorism, is about networking. It's about building a really effective network so you can gather information and then you can act on it rapidly and precisely. Counterinsurgency still requires the ability to build a network, gather information, understand what you're trying to do. . . . The thing I believe in most is understanding what you're trying to do and the effects of what you do."

Some have credited the JSOC under McChrystal—rather than the troop "surge" that President Bush implemented in 2007—with the progress in winning Iraq over from insurgent forces. In 2003 the JSOC was given greater autonomy from U.S. Special Operations Command, and McChrystal wasted no time in transforming it into an elite terrorist-hunting force. Tim Heffernan wrote for *Esquire* (May 19, 2009, on-line) that JSOC "became a focused and highly active machine" that "accomplished a great deal." Heffernan wrote that in addition to capturing Hussein and killing al-Zarqawi, McChrystal's revamped JSOC captured and killed "dozens, if not hundreds, of others: the bombers, bomb-makers, spies, spotters, and assassins who created and sustained the bloody street war against U.S. soldiers and Iraqi civilians."

McChrystal's forces located Hussein and al-Zarqawi with help from various "intel groups"—intelligence officers from the CIA, FBI, and Defense Intelligence Agency. The covert activities of the JSOC have long been kept under wraps, and many details of McChrystal's career, including his time leading the JSOC, are classified. Making several references and comparisons to the *Star Wars* films, Michael Hirsh and John Barry wrote for *Newsweek* (June 26, 2006, on-line) that the "JSOC is part of what Vice President Dick Cheney was referring to when he said America would have to 'work the dark side' after 9/11. To many critics, the veep's remark back in 2001 fostered his rep as the Darth Vader of the war on terror and presaged bad things to come, like the interrogation abuses at Abu Ghraib and Guantánamo Bay. But America also has its share of Jedi Knights who are fighting in what Cheney calls 'the shadows.' And McChrystal, an affable but tough Army Ranger, and the Delta Force and other elite teams he commands are among them." For many years the Pentagon would not acknowledge the existence of JSOC. As Bumiller and Mazzetti wrote, "When McChrystal took over the Joint Special Operations Command in 2003, he inherited an insular, shadowy commando force with a reputation for spurning partnerships with other military and intelligence organizations." In fact, McChrystal's name was not widely known to the public until 2006, when President Bush announced publicly that it was McChrystal's teams that had found al-Zarqawi.

JSOC's clandestine activities have sparked much criticism. In 2004 a task force overseen by McChrystal converted one of Hussein's bases into a top-secret detention center known as the Black Room, which was part of a larger site called Camp Nama. Prisoners there were beaten, shot at with paintball guns, and treated to other forms of physical and mental abuse. According to Heffernan, at least three prisoner deaths occurred at the detention center; at least 34 of the soldiers who abused prisoners were later punished. Though McChrystal has denied being present for or authorizing any form of torture or abuse, Heffernan noted that "whether or not he was present during the actual abuse—and it seems unlikely that he would need or want to put himself in that exposed position—as commander of JSOC, Stanley McChrystal oversaw them." According to an editorial in the *New York Times* (June 1, 2009, on-line), "Special Operations task forces operated in secret, outside the normal military chain of command and with minimal legal accountability . . . [and] General McChrystal's command substantially overlaps this troubled period. . . . While there is no suggestion that General McChrystal was personally involved in any misconduct, he has a clear responsibility to illuminate what went wrong, what if anything was done to stop these horrors, and what he intends to do to ensure that they are not repeated under his command in Afghanistan." McChrystal was also investigated for his actions in the aftermath of the 2004 shooting death of the army corporal and former National Football League (NFL) player Patrick Tillman. Although Tillman had been killed by friendly fire, Tillman's unit, which was under McChrystal's command, asserted that the death was due to enemy fire, and McChrystal signed off on a commendation letter containing the false information. Several inquiries took place after the truth came out, and McChrystal was later cleared of any misconduct, since he was found to have had no reason to question the information in the letter and because he had later alerted his superiors to evidence of misinformation.

McChrystal's appointment as commander of both the ISAF and USFOR-A was announced by Defense Secretary Robert Gates in May 2009 and confirmed by the Senate on June 10. He replaced General David D. McKiernan, who had held the posts for less than a year. The Obama administration selected McChrystal in an attempt to find a different approach to the war in Afghanistan, which was launched by President Bush in late 2001, following attacks on the U.S. by Al Qaeda terrorists who had trained and found a haven in Afghanistan; though the U.S. and its allies initially succeeded in driving out the Taliban, the Islamic fundamentalist group that had ruled the country, the U.S. war effort had grown increasingly challenging in the months prior to McChrystal's appointment. Fred Kaplan wrote for *Slate.com* (May 11, 2009), "McKiernan's ouster signals a dramatic shift in U.S. strategy for the war in Afghanistan. . . . An intellectual battle is now raging within the Army between an 'old guard' that thinks about war in conventional, force-on-force terms and a 'new guard' that focuses more on 'asymmetric conflicts' and counterinsurgency. McKiernan is an excellent general in the old mold. McChrystal . . . is an excellent general in the new mold." McChrystal formally assumed command of U.S. and NATO forces in Afghanistan on June 15, during one of the most violent periods of the eight-year-old war. In the first week of June, for example, U.S. and NATO forces suffered more than 400 attacks by insurgents, eight times the number recorded in January 2004. In addition to the attacks, the U.S. forces were also criticized for the large number of civilian casualties that resulted from counterinsurgency efforts. Speaking at the headquarters of NATO's International Security Assistance Force, McChrystal said, as quoted by Laura King in the *Los Angeles Times* (June 16, 2009), "The Afghan people are at the center of our mission—in reality, they are our mission. We must protect them from violence, whatever its nature."

In Afghanistan McChrystal has been working to win the trust of the civilian population and avoid the use of aggressive military force as much as possible. According to Evan Thomas, writing for *Newsweek* (September 26, 2009, on-line), the general has asked ISAF personnel to obey local driving laws (previously, troops routinely broke speed limits and forced other vehicles off the roads), instructed his officers to think twice about opening fire on any target, and asked officers not to call in airstrikes or support fire unless necessary for self-defense. There have been fewer civilian casualties as a result, according to Thomas.

Despite his efforts, McChrystal has had little success in Afghanistan since June. Dexter Filkins wrote for the *New York Times* (October 18, 2009, on-line), "Success takes time, but how much time does Stanley McChrystal have? The war in Afghanistan is now in its ninth year. The Taliban, measured by the number of their attacks, are stronger than at any time since the Americans toppled their government at the end of 2001. American soldiers and Marines are dying at a faster rate than ever before. Polls in the United States show that opposition to the war is growing steadily." Adding to the challenge is the widespread fraud that has taken place, mostly by supporters of the U.S.-backed president, Hamid Karzai, during the 2009 presidential race. The vote count, which resulted in Karzai's reelection, was deemed invalid; a new election, between Karzai and his main competitor, Abdullah Abdullah, was scheduled to take place on November 7, 2009. Before the election could take place, however, Karzai was declared the winner by default, after his opponent withdrew from the race—reportedly because he believed that the new election, too, would be tainted by fraud.

On August 30, 2009 McChrystal submitted to Defense Secretary Robert Gates a report in which he warned that without additional troops and a comprehensive counterinsurgency strategy, the U.S. would lose the war in Afghanistan. The next month McChrystal specified that 40,000 additional troops were necessary. His request became a major political issue when Obama and many congressional Democrats expressed reluctance to commit more troops. The administration was still debating McChrystal's request in late October, which had by then turned into the deadliest month yet for Americans in Afghanistan, with 55 killed, mostly by roadside bombs. "The magnitude of the choice presented by McChrystal, and now facing President Obama, is difficult to overstate," Filkins wrote. "For what McChrystal is proposing is not a temporary, Iraq-style surge—a rapid influx of American troops followed by a withdrawal. McChrystal's plan is a blueprint for an extensive American commitment to build a modern state in Afghanistan, where one has never existed, and to bring order to a place famous for the empires it has exhausted. Even under the best of circumstances, this effort would most likely last many more years, cost hundreds of billions of dollars and entail the deaths of many more American women and men."

McChrystal is in command of the largest international force ever to serve in Afghanistan. As of September 2009 it numbered 109,000 men and women, with 62,000 U.S. troops and 39,000 troops from 41 other countries.

McChrystal's military decorations include the Defense Distinguished Service Medal, the Legion of Merit with two Oak Leaf Clusters, the Bronze Star, and the Army Commendation Medal. He is known for his asceticism and physical endurance; he sleeps for only a few hours a night, eats only one meal a day (to avoid lethargy), and keeps in shape through rigorous exercise. In 2000, when he was a fellow at the Council on Foreign Relations, he ran 12 miles every day from his home in Brooklyn to the council offices. Leslie H. Gelb, the president emeritus of the council, told Bumiller and Mazzetti, "If you asked me the first thing that comes to mind about General McChrystal, I think of no body fat." McChrystal is also known for his commitment to his fellow soldiers. In 1994 18 of his troops were killed when an F-16 jet crashed into a parked cargo plane at Pope Air Force Base, in North Carolina.

McChrystal and his wife, Annie, attended the funeral and memorial service for each victim. "That was real moral courage," Dan McNeill, McChrystal's commander at the time, told Mark Thompson for *Time* (July 10, 2009). "I don't know if I could have done that."

McClinton, Marion

1954(?)– Playwright; theatrical director; actor

Address: c/o Bret Adams Ltd., 448 W. 44th St., New York, NY 10036

In spite of the racial qualifier, Marion McClinton does not mind being described as one of the best black stage directors in the United States. "I'm up there in very good company," he told Elaine Dutka for the *Los Angeles Times* (September 10, 2000). "My mom is black. I don't view myself as a second-class citizen. And I want people to know who I am." McClinton's reputation rests heavily on his direction of nine of the 10 plays in August Wilson's monumental chronicle of the experience of African-Americans in each decade of the 20th century, works whose characters, with a few exceptions, live in the Hill District of Pittsburgh, Pennsylvania: *Gem of the Ocean* (set in 1904); *Joe Turner's Come and Gone* (set in 1911); *Ma Rainey's Black Bottom* (1927); *The Piano Lesson* (1936); *Seven Guitars* (1948); *Fences* (1957); *Two Trains Running* (1969); *Jitney* (1977); and *King Hedley II* (1985), the last of which earned a Tony Award nomination for McClinton in 2001, when it ran on Broadway. (The final play in Wilson's cycle, *Radio Golf*, which is set in 1997, premiered five months before Wilson's death, in 2005; McClinton has not yet directed a production of it.) The distinctive vision displayed in McClinton's staging of *The Piano Lesson* in 1993 greatly impressed Wilson, who for many years was a mentor, inspirer, and close friend of McClinton's as well as a frequent collaborator. "It blew me away," Wilson told Don Shewey for the *New York Times* (April 29, 2001, on-line). "I saw a director who was willing to try very bold things." Speaking of McClinton during rehearsals of the Broadway production of *King Hedley II*, Wilson commented to Shewey, "I honestly don't know anyone more passionate than he is about the theater." In 2000 McClinton won an Obie Award for his direction of *Jitney* Off-Broadway, at the Second Stage Theatre. He has also directed in many other prestigious theaters, among them the Joseph Papp Public Theatre, in New York City; the Goodman Theatre, in Chicago, Illinois; the Mark Taper Forum, in Los Angeles, California; the Yale Repertory Theatre, in New Haven, Connecticut; the Guthrie Theater, in Minneapolis, Minnesota; and the Royal National Theatre, in London, England.

McClinton has also directed plays by other contemporary black writers, among them Kia Corthron (*Breath, Boom*), Cheryl L. West (*Jar the Floor*), Aishah Rahman (*Unfinished Women Cry in No Man's Land While a Bird Dies in a Gilded Cage*), Keith Glover (*Thunder Knocking on the Door* and *Dancing on Moonlight*), Eugene Lee (*East Texas Hot Links*), Michael Henry Brown (*Generations of the Dead in the Abyss of Coney Island Madness*), Oyamo (*I Am a Man*), Jerome Hairston (*Live from the Edge of Oblivion*), and the Nigerian Nobel Prize winner Wole Soyinka (*Death and the King's Horseman*). In addition, he has written seven plays—*Walkers, Who Causes the Darkness?, Stones and Bones, Police Boys, The Ghosts of Summer, Enlightenments on an Enchanted Island*, and *Hunters of the Soul*—all of which have been presented either in regional or Off-Broadway theaters or in staged readings at drama workshops. A resident of St. Paul, Minnesota, since his birth, McClinton has been a member of the Penumbra Theatre Company, based in that city, for three decades. He holds the title of associate artist–director/playwright at Baltimore's Center Stage, the state theater of Maryland. Although he never attracted much notice as an actor, he has found performing onstage to be more rewarding in some ways than directing and playwrighting. "The lights go out, and it's just you and the audience," he told Dutka. "Writing is so private. And while directing pays the bills, it's hard being the captain of the ship—particularly when the waters are rough."

Marion Isaac McClinton was born in St. Paul in about 1954. He grew up in that city's Selby-Dole neighborhood, an area he described to Elaine Dutka as "tough but beautiful." Because he suffered from severe asthma throughout his childhood, he avoided playing outdoors; as one alternative, he developed an interest in old movies. One weekend before his adolescence, he watched three films starring the actor Marlon Brando: *On the Waterfront*, *A Streetcar Named Desire*, and *The Wild One*. "After having grown up watching movies with John Wayne, who was John Wayne in every movie, this Brando guy was something else," McClinton told Shewey. "What he did was exciting, it was real." The 1963 film *Lilies of the Field*, starring Sydney Poitier, also made a powerful impression on him. McClinton decided that he wanted to be a Hollywood actor, director, and writer—a triple threat, like Orson Welles. That remained his goal even after he saw a mounting of the play *The Great White Hope*, by Howard Sackler, a fictionalized account of events in the life of the champion boxer Jack Johnson. The production "floored me with the power of theater," he told Shewey. (In his conversation with Dutka, he traced his passion for theater to his seeing a production of Shakespeare's *Julius Caesar* at the Guthrie Theater, in Minneapolis, when he was in eighth grade; before that, he recalled to Dutka, the only other live performance he had seen was a touring company's production of the musical *Funny Girl*.)

When McClinton was 13 his parents divorced; thereafter, he was raised by his mother, Lenora. "She was tenacious, indefatigable—the only person who ever scared me," he told Dutka. McClinton attended Catholic schools, including, briefly, the College of St. Thomas (now the University of St. Thomas), in St. Paul. He left that school in 1973, "by mutual agreement" with administrators, as he told Dominic P. Papatola for the St. Paul *Pioneer Press* (May 23, 2008), and enrolled at the University of Minnesota. He dropped out at the age of 21 and then entered a period of heavy drinking and drug use. During that time he took on what turned out to be a decade-long job as a counselor to troubled teenagers in public high schools. In 1976 he successfully auditioned for a role in a local production of Joseph A. Walker's drama *The River Niger*. "*Niger* turned things around for me," he told Dutka. "I became part of a world in which I was accepted." "It kept me sane. It kept me focused," he recalled in an interview with N. Graham Nesmith for *American Theatre* (May 1, 1993).

McClinton soon joined the newly formed Penumbra Theatre Company, a black troupe in St. Paul. "Our style of acting was based on rhythm," he told Shewey, comparing Penumbra's "bebop" feel to the "rock-and-roll" sensibility of the famed Steppenwolf Theatre Company, in Chicago, Illinois. At a poetry reading in about 1978, McClinton met August Wilson, who was then beginning his career as a playwright. In a conversation with J. Wynn Rousuck for the *Baltimore Sun* (January 3, 1999), Wilson recalled, "We had a nice poetry reading here and then someone with a saxophone, in a tuxedo, jumps up on the bar and starts reciting some stuff." That "someone" was McClinton, who read aloud a short story by Alice Walker (the saxophone serving as a prop). Before long McClinton became convinced that Wilson was on the verge of greatness. "I remember saying, 'Hey, this guy can write,'" he told Mike Steele for the Minneapolis *Star Tribune* (February 27, 1998). "He was taking naturalism and stretching it, giving it music and poetry." He added, "It was because of August I decided to start writing myself." In 1979 Wilson wrote *Jitney*, a play that McClinton admired so highly that he tried to pitch it to theaters in the Twin Cities, Minneapolis and St. Paul. Every theater turned him down, and it was not until 1982 that *Jitney* premiered (at the Allegheny Repertory Theatre, in Pittsburgh, Pennsylvania).

In the meantime McClinton had continued to act, as a member of both Penumbra and Mixed Blood, another local troupe. In 1981 he made his directorial debut, at the Park Square Theater, in St. Paul, with a production of Samuel Beckett's *Waiting for Godot*. "I was petrified, but I learned a valuable lesson: If you cast very, very well, the actors will cover your shortcomings as a director," he told Steele. "They can make you look like an Einstein of the theater." His experience with *Waiting for Godot* led him to consider himself a director and think about creative ways he might bring plays to the stage. "I was rooted in naturalistic theater up until then," he told Steele. "I had to learn how to stretch beyond that, past what I knew, to open my own imagination and to follow the play."

In 1981, at the Penumbra Theatre, McClinton was cast as the narrator in *Black Bart and the Sacred Hills*, the first of August Wilson's plays to reach the stage. He directed Charles Fuller's *Zooman and the Sign* at the Penumbra in 1982. Three years later he portrayed the alcoholic character Fielding in Penumbra's staging of Wilson's *Jitney*. Set in 1977 in a dilapidated storefront from which unlicensed cabs are dispatched, the drama was part of what would become a 10-play series, known as the Pittsburgh Cycle and, more recently, published in a boxed set, the Century Cycle. At around that time McClinton began writing plays himself. The first, the two-character drama *Walkers*, is about a seemingly upstanding black detective, Walker Gillette Walker, who suddenly kills nine people, among them members of his family. Immediately after the murders he loses his memories of both the homicides and everything else in his past. During sessions with a police psychiatrist, he remembers many painful incidents from his early years, involving rape, incest, and murder. *Walkers* debuted in 1989 at the Hudson Guild Theater, Off-Broadway, with McClinton as director. Stephen Holden, who reviewed the production for the *New York Times* (April 16, 1989), described the play as "enraged but exasperatingly sketchy" and wrote that it "tackles so many serious themes that only a four-hour epic tragedy could begin to develop them into a cohesive dramatic tapestry. Racism, black self-hatred and inherited patterns of family violence are only the three most obvious issues among those raised by the play. . . . Instead of creating a sprawling family history, the playwright has telescoped a story with overtones of Greek tragedy into a two-hour psychological mystery that makes a lot of noise but conveys little emotional resonance." The New York *Newsday* (April 12, 1989) reviewer, Leo Seligsohn, expressed similar complaints. "Ultimately, the painful emergence of Walker's self-awareness becomes a metaphor for heightening black consciousness in general. Unfortunately, the trip down memory lane involves too much heavy baggage. . . . Awkward dialogue stymies the playwright's efforts to link the mass murderer to his troubled past and lost African heritage. Explaining Walker on several levels has the paradoxical effect of turning him into a one-dimensional dispenser of rhetoric."

McClinton followed *Walkers* with *Who Causes the Darkness?* (1991), which he described to Dutka as being, like its predecessor, about the "difficulty of surviving when society denies one's humanity." His next drama was *Police Boys*, about a group of black police officers and their efforts to combat gang violence. The play debuted at the Center Stage in Baltimore in 1992, with McClinton directing, and opened in New York City three years later, with Donald Douglas at the helm. It earned mixed reviews, some of which echoed the criticisms that had greeted *Walkers*. Lloyd Rose, who described *Police Boys* for the *Washington Post* (April 6, 1992) as "heartfelt, at times wrenchingly so," and McClinton's direction as "melodramatic but vivid," felt that the play was "overwrought." "McClinton has enough energy to power three plays, and he pours it into his characters: They're going off in all directions . . . ," Rose wrote. "It's all too much, and yet you can feel the playwright's concern boiling in this excess—the mistakes aren't lazy or foolish, they spring from an extreme of passion." In an assessment for the *New York Times* (May 15, 1995), Vincent Canby wrote, "McClinton's *Police Boys* seems like the work of a very ambitious playwright who, having no clearly defined goal, has lost his way in magic realism, apocalyptic melodrama and the urban jungle of his own words. . . . *Police Boys* is shapeless, its unchanneled anger having little emotional or intellectual force." Such negative views notwithstanding, the National Arts Club, in New York City, awarded McClinton its Kesselring Prize, which recognizes promising new playwrights, and some critics dubbed him the "next August Wilson." McClinton's drama *Stones and Bones* earned the Heideman Award when it was produced, under his direction, at the Humana Festival of New American Plays, in Louisville, Kentucky, in 1994.

Earlier, in 1993, McClinton had made his debut as the director of a Wilson play: the Pulitzer Prize–winning *The Piano Lesson*, whose plot hinges on the fate of a piano that, before the emancipation of slaves in the U.S., was sold in exchange for the children of a slave. The piano is now owned jointly by two of the slave's descendants: Berniece Charles and her brother, Boy Willie. Yearning to buy the land in Mississippi on which he has toiled as a sharecropper for many years, Boy Willie journeys 1,800 miles to Berniece's house in Pittsburgh to implore her to sell the piano, but she fiercely refuses to part with it. In addition to revealing family dynamics, their heated discussions offer conflicting views about slavery's legacy. The play contains mystical elements as well. *The Piano Lesson* had premiered in 1987 at the Yale Repertory Theatre under the direction of Lloyd Richards (the theater's artistic director and the dean of the Yale School of Drama). McClinton, who staged the play at the Penumbra Theatre, told Shewey, "I'd taken some liberties with the play"—in terms of set design and use of music, for example—"and I was petrified that [Wilson] would hate it." McClinton was in New York City on the night that Wilson first saw the Penumbra production. When he knew that the last act would be over, he called an associate in St. Paul from his hotel room and learned that Wilson had "loved" it. "He was on his feet clapping at the end, came up onstage with the actors, took us out, told us it was the best production he'd ever seen," his informant said, as McClinton told Shewey. In a conversation with Shewey, Wilson noted approvingly that with *The Piano Lesson*, McClinton had had the confidence to take risks. "Most directors don't trust themselves," he said. "Instead of coming up with a concept for the play, they would just duplicate Lloyd's production." By contrast, in the case of his interpretation of Wilson's *Two Trains Running* at the Center Stage in Baltimore in 1994, McClinton later questioned the success of his efforts to make the play more exciting. "Working with August directly, I realized that sometimes your improvements aren't improvements, they're a contradiction of what he's saying," he told Shewey. "So what I've learned is: follow the text."

Since 1996 McClinton has directed at least a dozen productions of *Jitney*, in the U.S. and England. According to Christopher Rawson, writing for the *Pittsburgh Post-Gazette* (November 23, 1998), one of them represented *Jitney*'s "true professional premiere": a 1996 mounting at the Pittsburgh Public Theater, for which Wilson had expanded the original version of the play from 90 minutes to two hours. When the Huntington Theatre Company, in Boston, mounted *Jitney* under McClinton's direction, the play ran for an additional half-hour. After the curtain came down at the matinee performance Rawson attended, the audience gave the cast and crew a standing ovation. Ben Brantley, who wrote a review for the *New York Times* (April 16, 2000) of McClinton's new staging of *Jitney* at the Second Stage Theater, described the production as "thoroughly engrossing." "Under Mr. McClinton's sensitive and democratic direction, which treats all the performers equally as both soloists and members of a chorus, *Jitney* holds its audience in charmed captivity for its two and a half hours. . . . Mr. Wilson, Mr. McClinton and their excellent band of actors make us feel that we have known these people . . . for most of our lives." Brad Bradley, in an assessment for CurtainUp.com of the April 25, 2000 performance of *Jitney* at the Second Stage , wrote that McClinton's "tight production provides appropriate pacing to insure that the characterizations are powerful, and even touching in certain moments." The London *Independent* (October 21, 2001) critic Kate Bassett described the production presented at the Royal National Theatre as "one of 2001's theatrical high points" and wrote, "Wilson's early play, performed by a superb visiting US ensemble under director Marion McClinton, is a funny, heart-rending and morally knotting portrait of black guys scraping [out] a living."

Earlier, in 1999, at the Pittsburgh Public Theatre, McClinton had guided the premiere production of *King Hedley II*, a finalist for that year's Pulitzer Prize in drama. "It's operatic, Greek in size and structure," he told Dutka, describing the story, which centers on an ex-convict's search for redemption. "[Wilson is] wrestling with something huge this time." He also said, "I consider August one of the three most important American playwrights, along with Tennessee Williams and Eugene O'Neill. When it's your watch, you have to safeguard that legacy. I don't feel intimidated by that prospect, but I do take it very seriously." Also in 1999, Off-Broadway, McClinton directed Cheryl L. West's *Jar the Floor*, about four generations of African-American women. Despite rave reviews, the play failed to make the transition to Broadway. "There's a sector that believes that black plays don't work on Broadway unless there's singing and dancing," McClinton told Shewey. "Sometimes I believe that's a self-fulfilling prophecy."

King Hedley II, however, was brought to Broadway, in 2001, under McClinton's direction. In a *New York Times* (May 2, 2001, on-line) review of that production, the theater critic Ben Brantley wrote, "However flawed *Hedley* may be in its particulars, it has a collective ferocity and passion rarely found in new plays today." He went on to praise McClinton for doing an "admirable job of sustaining a melodic fluidness." McClinton earned a Tony Award nomination for his efforts. Also in 2001 he directed *Breath, Boom*, by Kia Corthron. In a review for the *New York Times* (June 11, 2001), Bruce Weber wrote that the show was "forcefully directed," and he commended McClinton for giving it an "everyday rhythm," which he felt kept the hardships faced by the 16-year-old female protagonist, a gang member, from becoming overwhelming. In 2003 McClinton returned to Broadway to direct a revival of Wilson's *Ma Rainey's Black Bottom* starring Charles Dutton and Whoopi Goldberg. During rehearsals three actors quit, and he himself was hospitalized because of dangerously low blood-potassium levels. In a review of the show for the *New York Times* (February 7, 2003, on-line), Ben Brantley referred to additional pre-opening-night problems, writing, "Plagued during rehearsals by highly public arguments among its creative and managerial teams, this *Ma Rainey* . . . rarely gets past the level of an orchestra still tentatively tuning up. . . . While the innate tragic grandeur and gritty, stinging humor of this story of racial exploitation and musicians at loggerheads can be discerned in fitful flashes, the production never achieves the rushing momentum required to capture Mr. Wilson's astonishing feel for the convergence of character and cultural destiny."

In 2004 McClinton was slated to direct a Broadway revival of Lorraine Hansberry's *Raisin in the Sun*, but when its producers expressed their desire to cast the comedian Martin Lawrence and the pop singer Janet Jackson in lead roles, he dropped out, believing that decisions were being made with ticket sales, not artistic integrity, in mind. In Febuary 2004 McClinton directed *Drowning Crow*, a play by Regina Taylor that was inspired by Anton Chekhov's *The Seagull*. Later that year McClinton, who suffers from diabetes, fell ill and had to withdraw from directing the premiere of Wilson's *Gem of the Ocean*, which was to open at the Huntington Theatre, in Boston, Massachusetts.

In 2006 McClinton led a production of Dael Orlandersmith's *Yellowman*, a 2002 finalist for the Pulitzer Prize, at the Guthrie Dowling Studio, in Minneapolis. He remained in the Twin Cities to direct a 2007 production of Samm-Art Williams's play *Home*. "This is where the work gets done," he told Rohan Preston for the *Star Tribune* (October 5, 2007). "London and New York have the glamour and money. But when you are working on Broadway, you are as much a director as a manager solving people's problems. Here, I get to concentrate on the art, without distractions. Of course, I would be lying if I said I ain't missing the pay." Another reason for McClinton's desire to stay in the Minneapolis–St. Paul area, where he lives, was that after years of touring with Wilson's plays, he wanted to spend more time with his son, Jesse, who was nearing his high-school graduation. "I feel like I've missed so much of my son's growing up, he's almost out the door now," he told Preston. "I don't want to miss any more of it." In 2008 he directed *Bud, Not Buddy*, adapted by Reginald Andre Jackson from the same-named young-adult novel (1999), by Christopher Paul Curtis, that McClinton had once read to Jesse. That directing job took on special meaning, he told Preston for the *Star Tribune* (June 18, 2008), because "it's a way of saying goodbye to my son." In May 2008 McClinton directed Eisa Davis's *Bulrusher*, another Pulitzer Prize finalist, at the Pillsbury House, a small theater in St. Paul. Asked by Papatola why a director of his renown would choose to work in such a low-profile theater, McClinton responded, "There aren't finer actors anywhere else in the country, and there aren't people I trust more."

In May 2009 McClinton directed, Off-Broadway, Carlyle Brown's play *Pure Confidence*, which is set in the 1860s and 1870s. Centered on the life of an enslaved horse jockey and his relationship with his master's house slave, *Pure Confidence* was a hit with most audiences and critics. McClinton was praised for carefully controlling the play's dramatic tempo.

McClinton's honors include a half-dozen grants and fellowships, among them an Amblin Commission Grant from Playwrights Horizons. He is married to Jan Mandell, a public-high-school drama teacher. Mandell directs the Central Touring Theater Company, which mounts productions of student-created plays in Minnesota and nearby states. She is the co-author of the book *Acting, Learning, and Change: Creating Original Plays with Adolescents*. In 2007 she earned an Ambassador Award from the Saint Paul Foundation for her achievements in teaching multiculturalism through the dramatic arts. The couple's son, Jesse Mandell-McClinton, who was born in about 1990, has performed for several years as a student at Circus Juventas, a St. Paul performing-arts circus school for young people. He is also a pianist and composer.

McCullough, Gary E.

(mih-KUL-uh)

Nov. 29, 1958– President and chief executive officer of Career Education Corp.

Address: Career Education Corp., 2895
Greenspoint Pkwy., Suite 600, Hoffman Estates,
IL 60169

Gary E. McCullough is the president and chief executive officer of the Career Education Corp. (CEC), which owns for-profit vocational and postsecondary schools on 85 campuses in the United States, Great Britain, France, Italy, the United Arab Emirates, and cyberspace. In a press release (March 6, 2007, on-line) announcing his appointment, the company described him as "a highly experienced operations and brand-management executive." For two decades after he entered the corporate world, in 1987, McCullough oversaw aspects of the manufacture, marketing, and sale of tangible commodities, during his 13 years (1987–2000) at Procter & Gamble; three as a William Wrigley Jr. Co. senior vice president (2000–03); and four as the president of the Ross Products Division of Abbott Laboratories (2003–07). At CEC McCullough is responsible for the marketing and sale of an intangible product—education. The "brands" in his purview include American InterContinental University; Briarcliffe College; Colorado Technical University; the International Academy of Design & Technology; Le Cordon Bleu Schools of North America; International Academy of Design & Technology; and Sanford-Brown College or Institute, each of which has two or more campuses (in the case of Sanford-Brown, more than two dozen). About 430,000 people have graduated from CEC schools since the company was founded, in 1994. Currently, about 95,000 students are enrolled, one-third of them at American InterContinental University Online or Colorado Technical University Online.

When McCullough joined CEC, the company was grappling with serious problems on several fronts: it was being investigated by the U.S. Department of Justice and the Securities and Exchange Commission; the CBS newsmagazine *60 Minutes* had recently broadcast a segment presenting CEC in a highly unfavorable light; a half-dozen former students had brought lawsuits against it; and the value of the company's stock had dropped substantially from its one-time high. In addition, soon after McCullough assumed leadership of CEC, a long article appeared in the *San Francisco Weekly* (June 6, 2007) cataloging complaints about its adminis-

Gary E. McCullough

tration and classes. Less than two years later, Sonia Alleyne, Annya M. Lott, and Brittany Hutson wrote for *Black Enterprise* (February 2009), "McCullough has led CEC through substantial challenges, focusing on building a foundation for growth through improved organizational effectiveness and efficiency." At the 2009 William Blair & Co. Growth Stock Conference, McCullough said, as quoted on the FD (Fair Disclosure) Wire (June 10, 2009, on-line), "We've spent time over the last two years really positioning our organization to go forward. We had to move through a number of issues in the organization, but largely, the heavy lifting of the things that we had to do are behind us." He also said, "Our goal is by 2010 . . . to make sure that we're in a position that we're delivering sustainable, predictable growth going forward and that we have sustainable double-digit margins, which is not where we started our journey in 2007." In an interview with Adam Bryant for the *New York Times* (August 8, 2009, on-line), McCullough declared, "I will outwork, and have over the course of my career, about anybody. If you're clear about what you want, if you're strong, if you're resilient, if you're well prepared and you're willing to work—I mean really work—then good things can happen."

Gary E. McCullough was born on November 29, 1958 and raised in Fort Knox, Kentucky. His father, a career U.S. Army officer, was a strict disciplinarian. Once, on the grounds that Gary's grades were too low, his father refused to allow him to join his eighth-grade basketball team and demanded that he return his uniform. "I was crushed," McCullough told Steven R. Strahler for *Crain's Chicago Business* (January 21, 2008, on-line). "There were certain things that could get you into the club"—that is, make you popular—"and taking back your uniform was not one of them." Similarly, when, as a senior in high school, McCullough was drafted to play shortstop for the Cincinnati Reds baseball organization, his father refused to allow him to accept the position, because he did not want his son to pursue a career in sports. "I was angry. I wondered awhile if I could have made it" in baseball, McCullough told Strahler. "But life's turned out pretty well. I'm no longer wistful about the whole thing."

McCullough earned a B.S. degree in business at Wright State University, in Dayton, Ohio, in 1981. He then enlisted in the military, serving as a U.S. Army Ranger for five years. He told Adam Bryant that he learned an important lesson in leadership during one of his commanding general's visits to the platoon of privates whom McCullough supervised. The day was cold and rainy, and the ground was saturated from a week of rain, making conditions difficult and unpleasant for vehicle drivers. When the general questioned one driver about the day's exercise, the man said, "It stinks," explaining that he thought such weather was unsuitable for the exercise. "What can I do to make it better for you?" the general asked. "Sir, I sure could use a Snickers bar," the private answered. A few days later a box of Snickers chocolate bars arrived, enough for the whole platoon. "We would've followed that general anywhere," McCullough told Bryant. "It was a very small thing, and he didn't need to do it, but it impressed upon me that small gestures are hugely important"—"little things like saying 'please' and 'thank you'—just the basic respect that people are due, or sending personal notes. I spend a lot of time sending personal notes." McCullough was discharged from the army in 1986 with the rank of captain and a medal for meritorious service. In 1987 he earned an M.B.A. degree from the Kellogg School of Management at Northwestern University, in Evanston, Illinois.

That year McCullough joined Procter & Gamble (P&G), a Fortune 500 company headquartered in Cincinnati, Ohio. Founded in 1837, P&G manufactures many consumer goods in two dozen categories. Thanks in part to extensive advertising, many of P&G's products are widely known: Charmin toilet paper, Bounty paper towels, Pampers disposable diapers, Old Spice deodorant, Clairol hair dyes, Ivory soap, Crest toothpaste, Pepto-Bismol anti-nausea medication, and Gillette shavers, to name a few; other P&G products are sold only outside the U.S. For years McCullough made known his desire to become a brand manager in the soaps-and-detergents division but was repeatedly rebuffed, "because of his race, he suspected," Strahler wrote. "Everybody was promoted ahead of me," McCullough told Strahler. "I was never asked to play golf. I wasn't invited to people's homes." (When Strahler tried to discuss McCullough's experience with P&G representatives, he was told only that *Black Enterprise* had named the company one of the nation's 40 best in terms of ethnic and racial diversity of employees.) McCullough told Bryant, "I believed early in my career that if I just worked hard, put my head down and did my job, everyone would notice and good things would happen. And in fact, that's not true, necessarily. You can do your job and you can toil along in anonymity without anybody noticing for a real long time. . . . I would attribute part of that to the fact that I just wasn't very savvy politically."

McCullough acquired that practical know-how in 1995 under the tutelage of Edwin H. "Ed" Rigaud, an African-American who was then a vice president and 30-year veteran of P&G. According to Strahler, McCullough created a business plan that "streamlined the product portfolio and focused on high-volume customers"; the plan so impressed P&G executives that they promoted him to marketing director of laundry and cleaning products for Venezuela in December 1995. In September 1996 he was named marketing director of P&G's drink Sunny Delight. In December 1998 he became the general manager of P&G's North American home-care division, a position he held until March 2000.

Later in 2000 McCullough left P&G to join the Chicago, Illinois–based William Wrigley Jr. Co. (better known simply as Wrigley) as a senior vice president for North, Central, and South America. Founded in 1891, Wrigley is the world's largest manufacturer of chewing gum (bearing brand names including Juicy Fruit, Wrigley's Spearmint, Orbit, and Freedent); its product line also includes Life Savers and Altoids. According to the company's Web site, Wrigley gum and candies are sold in 180 countries—nearly every nation in the world. McCullough supervised 3,300 employees and a $1.2 billion product portfolio (that is, an array of products whose sales totaled that amount in one year). He succeeded in making Orbit the top-selling gum in the U.S., and he helped to boost sales of several other products, among them Big Red, Eclipse, and Juicy Fruit chewing gum. Under McCullough's leadership Wrigley's share of the gum market in the Americas grew from 47.5 percent to 58.4 percent in three years.

In 2003 McCullough changed jobs again, to become the senior vice president of the Ross Products Division of Abbott Laboratories. The division, now called Abbott Nutrition and based in Columbus, Ohio, is a leading provider of infant and adult nutritional products. Well known among them are Similac, for infants; Ensure, for adults; and Glucerna, for diabetics. All three products are available in various formulations for infants or adults with particular problems—for example, infants with fat intolerance or protein sensitivity, and adults diagnosed with HIV/AIDS or kidney disease. In his new post McCullough oversaw 5,300 employees and roughly $2.6 billion in annual sales. He reorganized Ross's departments and sales force and hired managers who had worked at such successful firms as the Coca-Cola Co. and the Campbell Soup Co. He then focused on new ways of marketing Abbott's products, because "where Ross has failed historically is their products have looked too much like medicine," Bruce Cohen, a consumer-goods analyst at Kurt Salmon Associates, told Tom Matthews for the *Columbus (Ohio) Dispatch* (January 23, 2005). "We've got wonderful strengths," McCullough told Matthews. "We have terrific brands and unbelievable science. But we have to be innovative. Each of our brands will have to have something new or different to survive in the marketplace." In addition to repackaging, McCullough negotiated some profitable acquisitions, including the purchase for $320 million of Experimental Applied Sciences, the makers of the health and fitness products Myoplex and Body for Life. Within a year of his arrival at Ross, the company's annual sales reached a record $2.3 billion—9 percent more than in the previous 12 months. During his three years with the company, McCullough saw annual sales increase a total of 23 percent.
